The Union Steamship Co. of British Columbia's s.s. Cardena, built recently at Glasgow, Scotland, for the company's coastal service, arrived at Vancouver, June 11, having averaged a little more than 14 knots an hour, on the voyage out.

The Grand Trunk Pacific Coast Steamship Co. commenced its summer service three times a week with the steamships Prince Rupert and Prince George, between Vancouver and Prince Rupert, early in June. The s.s. Prince Albert is running on her summer schedule between

Vancouver and Prince Rupert via Queen Charlotte Islands.

The Hudson's Bay Co's auxiliary powered schooner Lady Kindersley sailed from Vancouver, June 6, on her annual trip to the Arctic. Last year she was unable to reach Coronation Gulf, on account of the ice conditions, and had to put in at Herschell Island. The waters between Herschell Island and Coronation Gulf are only open for about six weeks between July 31 and Sept. 10.

The C.P.R., as owner of the s.s. Princess Beatrice, has entered action in the Admiralty Court at Vancouver, against the s.s. Camosun, owned by Union Steamship Co. of British Columbia, for approximately \$15,000, cost of repairing the Princess Beatrice, which was damaged recently, when the two ships were in collision. At the wreck commissioner's enquiry, both ships were found equally to blame.

The automobile ferry traffic with Vancouver Island is assuming very considerable proportions, the building and placing in operation of the C.P.R. Motor Princess between Sidney, B.C., and Bellingham, Wash., having stimulated this class of tourist traffic. The service given by the Victoria-Anacortes Ferry Co., with the ferry City of Angeles, between Sidney and Anacortes, Wash., is to be augmented by the addition of the ferry Robert Bridges, which is to be renamed Mount Vernon.

Canal Statistics.

The Dominion Bureau of Statistics, Transportation Branch, has issued the following summary for May:—

Sault Ste. Marie.—Canadian and U.S. locks opened for traffic on May 1, a fortnight later than in 1922. Ship tonnage increased over 100% compared with corresponding month last year. Total freight tonnage for May was 10,646,241 tons, an increase of 7,330,786 over 1922. The two chief factors in the increase were the large shipments of coal and iron ore. Shipments of Canadian grain from Fort William and Port Arthur for May were as follows, in bushels: Wheat, 27,049,987; oats, 4,209,591; barley, 954,469; flax, 50,530; rye, 257,904; a total of 32,522,481, of which 22,804,802 were shipped in Canadian bottoms and 9,717,679 in U.S. bottoms. Of the total Canadian grain from Fort William and Port Arthur, 9,429,323 bush. were destined to U.S. ports.

Welland.—Both ships and freight tonnage decreased from May, 1922, the former, 54,043 tons, and the latter, 38,449. The greatest decline was in corn, 119,954 tons, and the largest increase in wheat, 75,416 tons. Soft coal increased 56,576 tons.

St. Lawrence.—Ship tonnage decreased 3,082 tons, and freight fell off 38,154 tons. The decrease and the increases were similar to those on the Welland Canal.

The Ontario Car Ferry Co's annual meeting was held at Montreal, May 29. Following are the directors for the current year,—Sir Henry Thornton, President, Canadian National Rys., President; W. T. Noonan, President, Buffalo, Rochester & Pittsburgh Ry., Vice President; S. J. Hungerford and J. E. Dalrymple, Vice Presidents, Canadian National Rys., E. A. Neil and O'Donnell Iselin. R. P. Ormsby is Secretary; J. A. Yates, Treasurer, and C. H. Nicholson, Manager.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during May.

Articles	Canadian Canal	U.S. Canal	Total
Lumber	2,327	6,255	8,582
Flour	656,720	385,520	1,042,240
Wheat	3,816,736	33,238,085	37,054,821
Grain, other than wheat.....	2,304,519	7,486,022	9,790,541
Copper	1,890	6,360	8,250
Iron Ore	6,081,285	6,081,285
Pig Iron
Stone	250	200	450
General Merchandise.....	818	2,090	2,908
Passengers	419	3	422
Coal, Soft	19,045	2,603,312	2,622,357
Coal, Hard	2,100	239,360	241,460
Iron Ore	12,779	12,779
Manufactured Iron and Steel..	3,348	8,564	11,912

Freight—Eastbound	231,136	7,312,461	7,543,597
Westbound	62,959	3,038,719	3,101,678
Total Freight	294,095	10,351,180	10,645,275
All canals opened May 1.			

Ship for Arctic Development Work.

In order that the Interior Department may continue its Arctic development work, through its Northwest Territories and Yukon Branch, the s.s. *St. Finbarr* has been bought from the British Admiralty, and will be renamed *Franklin*, in honor of Sir John Franklin, the Arctic explorer. The *St. Finbarr* is one of a class of ship, known as rescue tugs, and was built at Paisley, Scotland, in 1919. She has a steel hull, her dimensions being: length 135.7 ft., breadth 29 ft., depth 13.6 ft.; tonnage, 468 gross, 20 net. She is equipped with triple expansion engines, 1,200 h.p., furnished with steam by 2 Scotch boilers, for a speed of from 12 to 13 knots. Some alterations will be necessary to fit her for Arctic work, including a rubbing plate on her sides as a protection against ice, and she will be given greater internal strength, by the use of transverse beams and special bracing. Protection will be given to her rudder, while backing, by a special apron, and, to conserve coal when running with a fair wind, she will be equipped with spars and light sails. Later, her accommodation will be increased so that she may carry, in addition to her officers and crew, police, Justice Department officials and Government technical officers, who may require to visit the northern islands. It is anticipated that it will be possible to establish, this year, additional Royal Canadian Mounted Police posts, at Cumberland Gulf on Baffin Island, at Cape Sabine, or near there, on Ellesmere Island, and on Lancaster Sound. Other posts established last year will be visited, and a judicial party will be taken to Ponds Inlet to try Eskimos charged with the murder of a trader in 1921.

The ship has been lying at Portland, England, for about a year, and will be in charge of Capt. J. E. Bernier, with A. Theriault as chief engineer, who held similar positions in the s.s. *Arctic*, and who have gone to England to bring the ship across.

A London, Eng. dispatch of June 18, stated that Capt. Bernier, who was there to take over the s.s. *St. Finbar*, and sailing direct for the Arctic regions, had had to leave for Canada before she was ready.

Subsidized Shipbuilding in Great Britain.—A Canadian press cable from London, June 7, states that substantial assistance to the shipbuilding industry is likely to be given in Great Britain as an outcome of a recommendation of the advisory committee, under the Trades Facilities Act, that the British Government guarantee the Royal Mail Steam Packet Co., £2,300,000 on material for three ships to be built at Belfast, Ireland, and that the Northern Ireland Government guarantee a further amount for expenditure on these ships in Ireland. Only British material is to be used in their construction.

Trevisa Steamship Co. Ltd. has been incorporated under the Dominion Companies Act, with a capital stock of 2,000 shares of no nominal or par value, provided that it shall carry on business with a capital of \$10,000, and office at Montreal, to own and operate ships, and conduct a general business as carriers of passengers, merchandise and mails by land and water. The incorporators are: S. R. Holden, K.C., R. C. Holden, P. P. Hutchison, A. B. Wright and B. Forbes, Montreal.

Ocean, Coast, Lake and River Steamship Officers for 1923.

The following appointments of captains and chief engineers, by Canadian navigation companies, have been reported to Canadian Railway and Marine World since those mentioned in our last issue. The first column contains the names of the steamships, the second, those of the captains, and the third, those of the chief engineers.

Glen Steamships Ltd., Midland, Ont.		
Glendochart	D. Charland	W. Goodwin
Glengarnoch	M. Bouvair	T. Bogie
Great Lakes Transportation Co., Midland, Ont.		
Glenelg	C. B. Kirk	J. Gilbert
Glensannox	J. A. Brown	J. A. McChristie
J. A. McKee	D. C. McLachlan	F. Black
Matoa	R. Burke	L. Butler
T. J. Drummond	C. Scott	W. McWilliams
Muskoka Lakes Navigation & Hotel Co., Gravenhurst, Ont.		
Ahmie	A. T. Corbett	C. McArthur
Cherokee	W. Bradshaw	W. Lambert
Islander	A. P. Larsen	J. Russell
Medora	E. McAlpine	J. McKenzie
Oriole	G. Stevens	F. Battelle
Sagamo	R. W. Lee	T. J. Dryburgh

Main Transit Co. Ltd. has been incorporated under the Dominion Companies Act, with \$50,000 authorized capital, and office at Collingwood, Ont., to own and operate ships, wharves, docks, warehouses, etc., and to carry on a general navigation and transportation business. The nominal incorporators are: S. E. Wedd, R. B. Whitehead, B. V. McCrimmon, C. F. H. Carson, and J. G. Middleton, solicitors, Toronto. The company has acquired the s.s. *Dalrymple*, recently built by Collingwood Shipbuilding Co., Collingwood, Ont., which it is now operating in the grain trade between Port Colborne and Montreal. On the first trip made at the end of May from Fort William for Montreal, she carried 89,053 bush. of no. 1 northern wheat, on a draft of 13 ft. 10 in. We are informed that this cargo is greater by several thousand bushels than any previous one ever carried from Fort William to Montreal without transshipment, and it is felt that she will be able to carry 91,000 bush. on the full canal draft of 14 ft. She has a speed of 10½ miles an hour, and is in charge of Capt. F. A. Garratt.

The International Mercantile Marine Co's report for 1922 shows a deficit of \$1,269,783, after payment of interest on bonds, and depreciation, against a net profit of \$5,797,347 for 1921. The net earnings, including insurance fund surplus, after paying interest on subsidiary companies' debenture bonds, was \$6,971,130 for 1922, and \$14,069,053 for 1921. There was a marked decrease in the movement of third class passengers both east and westbound, due to the U.S. immigration laws, and the unsettled condition of Europe. The freight business was exceedingly bad, particularly between the U.S., Great Britain and the European continent, as well as increased active competition, including government owned steamships, with a consequent reduction in freight rates to a point, where, in many cases, the actual cost of loading and discharging cargo was scarcely covered. The passing of dividends on preferred stock is recommended.

Capt. J. A. Cates Tug and Wharfage Co. Ltd. has been incorporated under the British Columbia Companies Act as a specially limited company, with \$100,000 authorized capital, and office at Vancouver, to build and operate at Vancouver or elsewhere, in the province, docks, slips, wharves and ships, etc., and to carry on business as warehouseman, carrier, etc.

Cattle Shipments to Great Britain.

From the commencement of the year, up to, and including June 9, 26,359 cattle were shipped from St. Lawrence and Atlantic seaboard ports, in 57 shipments. Of this total, 21,084 were eastern, and 5,275 western, cattle. The ports from which shipments were made, with the number of shipments and cattle shipped, were as follows,—

Port	Shipments	Cattle
Montreal	16	8,287
Portland, Me.	16	7,350
St. John, N.B.	15	5,667
Boston, Mass.	7	3,684
Quebec, Que.	2	1,211
Halifax, N.S.	1	160

The first shipments of the year were made from Portland, Me. and St. John, N.B., and the main shipments were continued from those ports until the opening of the St. Lawrence navigation, the first shipment out of Montreal, being made May 12. The volume of business to be moved during the balance of the year will depend on the demand in England, and as Canadian stockers have met with a good market, the prospects are encouraging for a good development of the trade. As this trade has been nonexistent for so many years, on account of the English embargo against Canadian cattle, it is, at present, in a more or less experimental stage, and, while it is stated that the British market is supplied more particularly by local and Irish cattle, it is expected, that by Sept. 1, the demand for Canadian cattle will be revived.

Following negotiations by the Quebec Harbor Commissioners for a share of the shipping, they assigned a portion of shed 27 for the receipt and shipment of cattle, and shed pens have been built there, one pen for each carload. The cars are unloaded alongside the shed, on one side, and the ships dock along the other side of the shed, so that the cattle are driven from the shed pens direct to the ship, and terminal reloading and switching are avoided, which must tend to the arrival of the cattle overseas in first class condition. The Canadian National Rys. have carried several shipments from Winnipeg to Quebec, over the National Transcontinental Ry. and arrangements have been made with Manchester Liners Ltd. for some of its ships to load cattle at Quebec. The railway schedule, Winnipeg to Quebec, is about the same as to Montreal, but more leeway is available, as ships pick up the cattle at Quebec about 12 hours after sailing from Montreal, the cattle therefore being a shorter time on board ship.

It is estimated that before the closing of St. Lawrence navigation, some 50,000 cattle will be shipped.

Toronto, Hamilton & Buffalo Navigation Co.—The Toronto, Hamilton & Buffalo Ry. Co. directors' report, for the calendar year 1922, states that the T. H. & B. Navigation Co's steel car ferry boat *Maitland No. 1* was in service throughout the entire year, with the exception of a lay-up of 8 weeks. The net loss from operation was \$17,746.88, due principally to the absence of coal tonnage, caused by the coal strike during the summer.

River St. Lawrence Ship Channel.—The further supplementary estimates for the year ended March 31, 1923, submitted in the House of Commons recently, provide \$80,000 for maintenance and operation of dredging fleet, to cover Governor-General's warrant of Oct. 16, 1922.

Transportation from Edmonton to the Arctic.

The reopening of the Athabasca-Mackenzie River route to the Arctic Ocean, will mark further development of the Arctic trip, on which, in 1922, for the first time, passengers could leave Edmonton, Alta., and depend on making through connections, without delays, to the Arctic Ocean, and return during the navigation season. The actual distance between Edmonton and Aklavik, on the Arctic Ocean, is 1,986 miles, 300 of which is by rail to Waterways. From Waterways, navigation northward is divided into two sections, by the Fitzgerald-Smith portage. Waterways is on the Clearwater River, an eastern tributary of the Athabasca River, and about 10 miles up stream from the junction at McMurray. From McMurray, the Athabasca River flows almost due north to Lake Athabasca, near its western end. Chipewyan is on the north side of Lake Athabasca, where the river joins the lake. Navigation on the lake is somewhat delayed, as the ice remains longer in the lake than in the rivers. The distance from Waterways to Chipewyan is 200 miles, and from Chipewyan to Fitzgerald, 90 miles. The Peace River enters the Athabasca River, from the west, about 30 miles north of Chipewyan, and is navigable up stream from its junction with the Athabasca to the Chutes below Vermilion, about 200 miles. From the outlet of Lake Athabasca, to the junction of the Peace River, what is properly the Athabasca River, is locally known as Rocky River, and from the mouth of the Peace River northward, the united stream is sometimes called the Peace River, and sometimes the Slave River, to Fitzgerald. The Fitzgerald-Smith portage is rendered necessary by a succession of rapids on the Slave River. It is 16 miles across, and there is a graded road, on which teams, tractors and motors are used. Fitzgerald is in Alberta, and Smith, at the north end of the portage is in the Northwest Territories. From Fitzgerald to the Great Slave Lake, the river is known as the Slave, or Great Slave. Resolution, on Great Slave Lake, is 200 miles from Smith. Great Slave Lake is 490 miles long, from west to east, and its outlet, Mackenzie River, is at its westerly end. Hay Harbor is on the southern shore, and is 70 miles west of Resolution, and the lake outlet is 40 miles west of Hay Harbor. Late ice in the Great Slave Lake shortens the season of navigation on the Mackenzie River, as the ice does not clear until the middle of June, and it is the ice from the easterly and northerly arms of the lake, which is drawn to the western part of the lake by the current, which causes this lateness, and not the actual conditions of the climate, as both the Slave and Mackenzie Rivers are open to navigation in May. From Hay Harbor to Providence, on the Mackenzie River, it is about 65 miles, and from Providence to Simpson, 155 miles. The Liard River enters the Mackenzie River from the west at Simpson. With its tributary, the Nelson River, it is navigable by light draft steamboats to Fort Nelson, 300 miles from Simpson. From Simpson to Norman, at the mouth of Bear River, the outlet of Great Bear Lake, is 300 miles, and the Imperial Oil well is 50 miles beyond Norman. Good Hope, 8 miles south of the Arctic Circle, is 130 miles beyond the oil well. Arctic Red River is 140 miles beyond Good Hope. McPherson, on the Peel River, is 65

miles from Red River, and Aklavik is 100 miles from McPherson. Aklavik is in the Mackenzie River delta, and about 25 miles from the Arctic coast, and is a convenient point for trade with the Eskimos. The several arms of the delta are too shallow to allow of ocean ships of any size going in to Aklavik, but Eskimo rowboats and schooners navigate from the coast to Aklavik without difficulty.

The trip from Edmonton and return was accomplished last year in 33 days. Three transportation companies are operating on the routes, viz., Hudson's Bay Co., Northern Trading Co., and Alberta and Arctic Transportation Co. The Hudson's Bay Co. operates the s.s. Athabasca to Fitzgerald, and the motorboat Nichemus, to Fond du Lac. On the Fitzgerald-Smith portage, the company's business is handled by a motor bus, carrying 12 passengers, and freight is carried by horse teams. The s.s. Mackenzie River runs between Smith and McPherson; a new motor boat to replace the motor boat Liard River, wrecked during last summer, is under construction and will operate from Simpson on the Great Slave Lake and Mackenzie River, and up the Liard River to Fort Nelson; the motorboat Hubaco runs in conjunction with the Mackenzie River Steamboat, and an auxiliary powered schooner operates between Resolution and Rae on Slave Lake. Another motor boat is under construction for operation between McMurray and Fitzgerald, and on Lake Athabasca. The Northern Trading Co. carries the mails between McMurray and Aklavik, both winter and summer, and operates the s.s. Northland Echo to Fitzgerald, and the motorboat Notraco on the same route. At the portage, passengers are transferred by motor bus, mails and express by motor truck, and freight by horse teams. The s.s. Northland Trader runs from Smith to Aklavik, the s.s. Northland Pioneer from Smith to Rae, and the auxiliary powered schooner Speed on the Great Slave Lake. The Alberta and Arctic Transportation Co.'s s.s. Slave River operates on the Athabasca section, to Fitzgerald, and the motorboat Canadusa acts as an auxiliary, replacing the Slave River when the water gets too low in the Athabasca and Clearwater Rivers to allow her to operate safely. The Canadusa also runs to Chipewyan and Fond du Lac. At the portage, passengers are transferred by motor car, and there are two 75 h.p. caterpillar tractors, each hauling two wagons, for the transfer of freight. The s.s. Distributor operates on the Mackenzie section, to Aklavik, with the motorboat Lady Mackworth as an auxiliary, which also runs to Rae and occasionally, up the Liard River to Fort Nelson. In addition to the foregoing, a small steamboat is operated out of Chipewyan, by C. Fraser, a trader, and there is an auxiliary powered schooner operating on Great Bear Lake. (Adapted from Edmonton Bulletin.)

Mainly About Marine People.

W. F. Coaker, until recently Minister of Marine and Fisheries for Newfoundland, has been created a Knight Commander of the Order of the British Empire. He is President of the Newfoundland Fishermen's Union, and General Manager, Union Shipbuilding Co., Port Union, Nfld.

Albert Davidson, who has been appointed Assistant General Freight Agent, Canadian Government Merchant Marine, Vancouver, B.C., was born at St. Henri, Montreal, Jan. 29, 1885, and entered transportation service Aug. 22, 1899, since when he has been, to Aug. 1904, in Foreign Freight Department, C.P.R., Montreal; Aug. 1904 to March 1905, secretary to Assistant Freight Traffic Manager, C.P.R., Winnipeg; March 1905 to Sept. 1909, in General Freight Department, C.P.R., Vancouver, B.C.; June 1, 1910 to July 14, 1913, City Freight Agent, Grand Trunk Pacific Ry., and Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C.; July 15, 1913 to Dec. 31, 1916, General Agent, same companies, Prince Rupert, B.C.; Jan. 1, 1917 to Sept. 1920, in charge of Freight Department, same companies, Vancouver; Sept. 1920 to Jan. 1923, consequent on the amalgamation of the companies' interests with Canadian National Rys., Division Freight Agent, steamship lines, G.T.P.R. and G.T.P.S.Co., Canadian National Rys., Vancouver.

Capt. S. T. Easton, an early navigator on the Rideau canal, and for several years in steamboat service on the Ottawa and St. Lawrence Rivers, died at Merrickville, Ont., May 27, aged 73.

Capt. J. A. Simard, for several years master of Canada Steamship Lines' s.s. Saguenay, died at Sorel, Que., June 4, after a long illness. He was well known on the Great Lakes and St. Lawrence River and Gulf, had spent about 43 years in navigation service, and had acted as master of ships sailing to and from the West Indies, and also in the Labrador coasting trade.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

B. F. Sturtevant Co., Hyde Park, Boston, Mass., has bought the plant of the Wisconsin Engine Co., makers of Corliss pumping engines, at Corliss, Wis.

Transportation Meetings, Etc., in 1923.

The names of persons given below are those of the secretaries, unless stated otherwise:—

September.—Travelling Engineers' Association, Chicago, Ill. W. O. Thompson, 1177 East 98th Street, Cleveland, Ohio.

Sept. 4 to 7.—International Railway General Foreman's Association, Chicago, Ill. W. Hall, 1061 West Wabash Ave., Winona, Minn.

Sept. 17.—American Association of Passenger Traffic Officers, Montreal. W. C. Hope, Central Rd. of New Jersey, 143 Liberty Street, New York, N.Y.

Sept. 18 to 20.—Roadmasters' and Maintenance of Way Association, Chicago, Ill. P. J. McAndrews, Chicago & Northwestern Ry., Sterling, Ill.

Oct. 8 to 12.—American Electric Railway Association, Atlantic City, N.J. J. W. Welsh, 8 West 40th Street, New York, N.Y.

Oct. 16 to 18.—American Railway Bridge and Building Association, Seattle, Wash. C. A. Lichty, Chicago & Northwestern Ry., 319 North Waller Avenue, Chicago, Ill.

Dec. 10 to 12.—American Association of Port Authorities, New Orleans, La. T. S. McChesney, New Orleans.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries, unless otherwise stated:—

American Association of Port Authorities—T. S. McChesney, New Orleans Port Commission, New Orleans, La.

Bureau of Explosives—A. H. McMullen, Inspector, lines east of Port Arthur, 354 New Union Station, Toronto.—D. W. McNabb, Inspector, lines west of Port Arthur, C.P.R. station, Winnipeg.

Canadian Car Demurrage Bureau, Eastern Lines—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal. Western Lines—F. W. Thompson, Chairman, 805 Boyd Bldg., Winnipeg.

Canadian Electric Railway Association—D. N. Gill, 248 Albert St., Ottawa, Ont.

Canadian Freight Association—Eastern Lines, G. C. Ransom, Chairman, 909 Shaughnessy Building, Montreal.—Western Lines, F. W. Thompson, Chairman, 805 Boyd Bldg., Winnipeg.

Canadian Industrial Traffic League—H. W. Blahout, 950 Woodbine Ave., Toronto.

Canadian Passenger Association—Eastern Lines, G. H. Webster, 54 Beaver Hall Hill, Montreal.—Western Lines, E. J. Stone, 306 Union Station, Winnipeg.

Canadian Railway Board of Adjustment No. 1—R. Chapple, 263 St. James Street, Montreal.

Canadian Railway Club—W. A. Booth, 53 Rushbrooke St., Montreal. Meetings at Montreal 2nd Tuesday, each month, except June, July and August, at 8.30 p.m.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Dominion Marine Association—F. King, K.C., Counsel, Kingston, Ont.

Engineers' Club of Montreal—C. M. Strange, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 84 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 176 Mansfield Street, Montreal.

Express Traffic Association of Canada—C. N. Ham, 137 McGill Street, Montreal.

Great Lakes and St. Lawrence River Rate Committee—A. E. Storey, 310 Canadian National Rys. General Office, Montreal.

Hydro Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

Niagara Frontier Summer Rate Committee—James Morrison, Canadian National Rys., Montreal.

Quebec Transportation Club—A. F. Dion, 131 Dalhousie Street, Quebec, Que.

Railway Association of Canada—C. P. Riddell, Union Station, Winnipeg.

Shipping Federation of Canada—Thomas Robb, General Secretary, 263 St. James Street, Montreal.

Western Operating Committee, E. J. Stone, 306 Manager, 42 St. Sacramento Street, Montreal.

Transportation Club of Toronto—W. J. Hotrum, 595 Runnymede Road, Toronto.

Transportation Club of Vancouver—C. A. Dorfner, 450 Hastings Street West, Vancouver, B.C.

Winnipeg Traffic Club—A. J. Barber, 114 Cadomin Bldg., Winnipeg, Man.

Canadian Government Merchant Marine, Limited FOR SALE BY TENDER

Sealed tenders will be received by the undersigned at 230 St. James Street, Montreal, Canada, until noon, August 1st, 1923, for the purchase of the following steamers; tenders to be based on acceptance of the respective vessels in their present condition and where now located. Any stores or bunker coal that may be on board excluded:

S.S. Canadian Miner	Ascertained deadweight cap. 2778 tons, built 1920
S.S. Canadian Sealer	Ascertained deadweight cap. 2777 tons, built 1920
S.S. Canadian Trader	Ascertained deadweight cap. 3341 tons, built 1919
S.S. Canadian Adventurer	Ascertained deadweight cap. 3408 tons, built 1919
S.S. Canadian Sailor	Ascertained deadweight cap. 3357 tons, built 1919
S.S. Canadian Sower	Ascertained deadweight cap. 3406 tons, built 1919
S.S. Canadian Pathfinder	Ascertained deadweight cap. 3640 tons, built 1921
S.S. Canadian Engineer	Ascertained deadweight cap. 3679 tons, built 1921
S.S. Canadian Signaller	Ascertained deadweight cap. 3975 tons, built 1919
S.S. Canadian Gunner	Ascertained deadweight cap. 3978 tons, built 1919
S.S. Canadian Warrior	Ascertained deadweight cap. 3995 tons, built 1919
S.S. Canadian Beaver	Ascertained deadweight cap. 3973 tons, built 1920
S.S. Canadian Farmer	Ascertained deadweight cap. 3964 tons, built 1920
S.S. Canadian Observer	Ascertained deadweight cap. 3982 tons, built 1920
S.S. Canadian Rover	Ascertained deadweight cap. 3920 tons, built 1920
S.S. Canadian Coaster	Ascertained deadweight cap. 3939 tons, built 1921
S.S. Canadian Harvester	Ascertained deadweight cap. 4000 tons, built 1921
S.S. Canadian Logger	Ascertained deadweight cap. 3839 tons, built 1921
S.S. Canadian Aviator	Ascertained deadweight cap. 5166 tons, built 1919
S.S. Canadian Raider	Ascertained deadweight cap. 5181 tons, built 1920
S.S. Canadian Settler	Ascertained deadweight cap. 4918 tons, built 1919
S.S. Canadian Rancher	Ascertained deadweight cap. 4892 tons, built 1920
S.S. Canadian Trapper	Ascertained deadweight cap. 5054 tons, built 1920

Eliminate Delays

You must be vitally interested in securing advantages of great importance in getting your trains over the road.

To cause a freight train to stop for one of the train crew to throw a switch results in a delay of from 10 to 30 minutes. It causes delays to other trains, upsets schedules, wastes fuel and causes overtime for train crews.

Such trainstops can be eliminated by the use of electrically operated remotely controlled switch machines.

\$2500 to \$8700 per switch per year are the savings reported by eleven railroads now using remotely operated switches at 71 locations.

In addition to the tangible saving which can be closely estimated a number of economies somewhat intangible are also secured, for example:—the train dispatcher can arrange meeting points with a much greater degree of accuracy thereby increasing miles per hour without increasing speed in motion. This increased use of equipment means that less capital is required for new equipment.

The G-R-S Model 5 Switch Machine controlled from a Desk Circuit Controller in the nearest block station or telegraph office, affords an economical and dependable means of remotely operating a switch.

The G-R-S Model 5 Switch Machine can be furnished to operate on 110 or 20 volts Direct Current or 110 volts Alternating Current.

The G-R-S Desk Circuit Controller is a small compact unit which may be used alone to control a single switch and automatic signals which

govern over it or several units may be interlocked to control a number of switches and signals.

Each controller unit comprises a circuit controller with 10 contacts, a forced drop electric lock and four indicators.

Let us estimate the cost of equipping your important switches for remote operation.

FLANNERY

Time Is Proving F.B.C. Welded Flexible Staybolts

They have been on the market long enough to convince their first users of their worth.

No road has reverted to the threaded type sleeve because of dissatisfaction with the welded sleeve, once having installed it.

This is your assurance, as well as ours, that this assemblage is living up to our claims of being stronger, more efficient and more economical than any other type on the market.

May we advise with you regarding a trial installation of the F. B. C. Welded Flexible Staybolt assemblage?

FLEXIBLE STAYBOLTS

THERMIC SYPHONS GIVE CAPACITY

TO any locomotive the Thermic Syphon adds 10 to 20% steam-making capacity. It does this:

1. By providing more heat absorbing firebox surface at the most effective point.
2. By increasing water circulation and thereby the capacity for absorbing heat.

Thermic Syphons offer the quickest and easiest means of securing more capacity from every locomotive on the road.

Apply them at the regular back shop period without delaying the return of power to the road. Start a Syphon program now.

Three Penalties of Dull Files

The use of a file after it has begun to get dull means waste time, waste energy and unsatisfactory results.

It actually costs less to buy a new file than to keep a slightly dull file in use, because labor is more expensive than files.

Keep your files always keen; these brands will give long service before getting dull.

GAUGE COCKS

18 Countries in One Cruise

*To sail around the world!
To ports of a thousand romances!*

EIGHTEEN countries—fifty nationalities—a Lifetime's travel in Four Months. Madeira first, then the Mediterranean—Gibraltar, Algiers, Monaco, Italy, Egypt; the Suez Canal. Kipling's India—Bombay, Colombo, Calcutta, Rangoon. The gorgeous East—Java, China, Manchuria, Korea, Japan. The Philippines, Hawaii, Vancouver, the Canadian Pacific Rockies.

For the first time—you can make this grand Tour by the magnificent Empress of Canada (26,650 tons displacement) under Canadian Pacific management.

Sailing from New York, January 30, 1924

Fares, \$1,600.00 and up. Limit 500 guests. Excursions at ports of call included in fare. Privilege of side trip across India. Fifteen days overland, Shanghai to Yokohama. Eight days across Flowery Kingdom. Privilege of stop-over in China or Japan, using any later Empress to Vancouver.

Ask for booklet and full particulars

Branches Throughout the Dominion of Canada.

14 Contract Car Shops

in Chicago and its immediate vicinity use exclusively for Car Repairing purposes the

No. 29 Simplex Car Jack

As Contract Car Shops exist and prosper because they can build or repair cars cheaper than a railroad can, it is evident that their management, methods and tools are the secrets of their success.

It can be truthfully and broadly stated that:

Every railroad, contract shop and industry needs the modern Simplex Jacks to insure decreased man hours and costs.

Don't wait until the snow flies before thinking of Electric Heaters

Now is the time to place your orders either for new equipment or for renewals or repairs.

The CUTLER-HAMMER steel jacketed heating element is used exclusively in our heaters, which makes them simpler, lighter and more durable than open coil types.

Let us send you full information on these reliable heaters.

Railway and Power Engineering Corporation Ltd.

133 Eastern Avenue Toronto

Branches: Montreal Winnipeg New Glasgow

Roundhouse Economies

Warm air fed into the pits by a Sturtevant heating system eliminates roundhouse fog, saves delays, decreases accidents and increases your labor efficiency.

Let our engineers figure your problems.

Dake Snub Line Winch for Canal Steamers

To handle the heavy wire snub line. Takes up very little deck space and drum holds 120 ft. 1 1/4 in. wire. For a safety and labor-saving device it has no equal. A money-saver for the vessel owner and a godsend for the master in canalling his vessel through the St. Lawrence and Welland Canals. Send for special booklet and price. We also make a full line of Marine Machinery. Complete Catalogue of Dake Machinery on request.

PEDLAR'S "PERFECT" TONCAN METAL CULVERTS

PURE iron Culverts are rapidly coming into their own. The Province of Nova Scotia has officially adopted them (including Pedlar Culverts) for all Provincial highways. And engineers everywhere are more and more "sold" on them. Pedlar's Culverts are made from the well-known anti-corrosive ~~toncan~~ — a pure iron, deeply corrugated and heavily galvanized. We also manufacture Steel-crete, Metal Lath, Rib Fabric, Floor Tyle, Metal Roofing and Siding, etc.

Write for Culvert Booklet "R.M."

The PEDLAR PEOPLE Limited

(Established 1861)

Executive Offices: Oshawa, Ont.

Factories: Oshawa, Ont., and Montreal, Que.

Branches: Montreal, Quebec, Ottawa, Toronto, Hamilton, London, Winnipeg, Calgary, Vancouver.

The SMALL LOCOMOTIVE

Would haul this train if the car journals were equipped with Stafford Roller Bearings.

This statement is based upon the fact that the Dominion Bridge Company of Montreal has found it possible to cut the size of the motors from two 30 horse-power to two 15 horse-power, on twin-span turntables equipped each with 16 Stafford Roller Bearings.

It is easy to visualize the immense economies which this surprising reduction in journal resistance will accomplish in train operation.

Stafford Roller Bearings—guaranteed three years.

Service shows the most successful car roof to be the

All Steel Dry Lading Roof

which made possible the following specifications:

No. 1. That should be weather-proof under all conditions, also rust-proof, fire-proof and burglar-proof.

No. 2. That should not require maintenance for at least ten years.

No. 3. That should be of low deadweight and give the car a low center of gravity.

No. 4. That should lessen strain on the superstructure of the car when the car is in motion.

No. 5. That should strengthen, rather than detract, from the strength of the car frame.

No. 6. That should give the greatest interior capacity and the lowest clearance limits.

No. 7. That should be flexible enough to conform to every service condition of the car.

No. 8. That should be possible to use again on the same or another car, even in case of partial or total destruction of the rest of the car by fire or wreck.

No. 9. That should not require roofing boards.

No. 10. That should be of low first cost.

No. 11. That should permit of inspection on the part of any shipper by merely closing the doors of the car and if no rays of light are seen through the roof, the shipper to consider it a weather-tight roof.

No. 12. That should be so constructed that the carlines, purlines and ridge, tie the sides and ends of the car together firmly, so that the weather-proof roof has only the one duty of protecting the contents of the car from the elements.

4-6-2 TYPE LOCOMOTIVE

Built for the Canadian National Railways

We are specialists in building locomotives.

We build all types and sizes, also all kinds of spare and repair parts for locomotives and tenders.

Our experience puts us in a position to give you expert advice as to what particular type and size of locomotive is best suited to your needs.

Montreal Locomotive Works, Limited

DOMINION EXPRESS BUILDING, MONTREAL, CANADA

The terminal on the AW-7 base of rail bond makes an angle greater than 90 degrees with the rail base. It is accessible for efficient welding.

A similar beveled terminal is used on the AW-8. The weld is beveled from the rail when completed.

O-B Arc Weld Bonds for Electric Railways

are easily welded into place. Its a case of welding steel to steel with steel. The process is simple and lends itself to quick work.

The wide angle welding scarf on either the base-of-rail or ball-of-rail type allows plenty of room for the weld to start in the angle where it will do the most good. The welding operator is just naturally guided into a good job.

A stock of O-B Arc Weld Bonds is the first step towards a 100% job of bonding and now we have

500 Volt Welders for putting them on—

The new 500-volt series resistance type LW welder for bonding and general repair is just what you have been looking for.

"The Mark of Quality"

24" x 44" x 12' Quick Change Gear Gap Lathe

A valuable utility tool for the average Railway Roundhouse or Shipyard Machine Shop, this Lathe will efficiently perform a wide range of work which is not possible with the regular Engine Lathe. The fact that it will swing a large face plate and thin work in the gap without removing the gap piece is a convenient advantage.

Note the massive, semi-steel bed with extra weight underneath the bridge, the wide cones on the headstock giving ample power and safety belt shifter to prevent accidents when shifting the belt.

Keeping the Wheels Turning

IDLE engines, idle ships and broken machines cause waste and loss. Dominion Service contributes largely to the repair work which keeps the wheels of mighty locomotives, marine engines and industrial machinery turning. Dominion Service places an unlimited supply of pure oxygen and dissolved acetylene in safe, easily-handled cylinders, when and where it is needed for welding and cutting work. No matter where your plant or construction job is located, we can ship by the shortest route from any one of our ten plants and warehouses all the oxygen and dissolved acetylene you require, on telegraph notice. This is our idea of service—let us tell you more about it. Our proposition will mean profit for you. A representative will call at your request.

Interlocking Interests of Canadian Rail and Water Transportation

There is an intimate inter-relation of Canadian Railway, Marine and Industrial activities.

This is especially true of the interlocking interests of Canadian Railways and Canadian Navigation Companies. For Canadian Railways own and operate great fleets of steamships on the high seas and on the Great Lakes and the Rivers.

As the only Railway paper in Canada, Canadian Railway and Marine World has, for 25 years, made, and held, a commanding place for itself in the esteem of the far-seeing railway men who were the creators and are the directors of the Canadian Merchant Marine. This fact makes the WORLD a stronger Marine paper than could possibly be created by any group of men, however able, who undertook to issue a purely "marine" publication.

And, conversely, the WORLD is a stronger Railway paper by reason of its understanding of maritime affairs.

This anomalous condition of affairs is peculiarly Canadian. It is a reflex of the Dominion's industrial development, in which the Railways blazed the way, conquering the wilderness, fostering agriculture and mining, building industry and finally creating merchant fleets to carry the railway-built commerce to every corner of the globe.

Thus, though in one sense ours is a Railway and a Marine audience; in a larger sense our readers are the leaders who have built and are building Canada; and their well paid lieutenants upon whose capable shoulders they lean in carrying out great plans.

Above All—Efficiency!

Experienced railroad executives know that the first and most important point in the selection of lubricants is efficiency—the ability to render satisfactory service under the ever-changing conditions of operating service.

The attraction of “lower price per gallon” has sometimes induced the use of lubricants that are physically incapable of bearing the strains of railway work.

The results secured are always the same—trouble, hot boxes and driving journals, carbonization in cylinders, constant renewal of cylinder packing, delays, repairs and heavy depreciation in equipment.

Compared with the small saving in the first cost of the oils, the additional expenses arising from the use of inferior lubricants makes the item insignificant—shows it in its true light in relation to actual or final cost of lubrication.

Recently a large railroad made a complete service check on refinery lubricants, claimed to be “good as Galena.” A full year’s test on locomotives and cars permitted the fairest and most thorough observance of the oil’s service qualities. At its conclusion Galena lubrication was adopted as being not only much more efficient, but for its ultimate economy.

Wherever similar tests have been made the results have been the same. Service provides the one reliable means of determining lubricating values. It registers the actual efficiency of lubricants and marks the distinction between “cost of oils” and “cost of lubrication.”

*“When Galena Oils go in—
Lubrication troubles go out!”*

Saving \$10,000 in Sixty Days—

with their Brownhoist locomotive crane. That is what the Shartle Machine Co. did with a big Brownhoist No. 6 crane while wrecking a power plant at Nitro.

This crane had had several years service when purchased by the above company. With a few minor repairs they consider this crane as good as new and say of it, "the crane is of such construction that if we had to buy a half dozen more cranes this type would be given the preference."

'The Shartle Company are ready at any time to show their crane to prospective Brownhoist customers and to give them information on the kind of work it is doing. Or, if you will write us we will gladly tell you where Brownhoist cranes are being used on work similar to your own and the size and type best suited to your needs.

Brownhoist builds both big and small cranes. Write us your handling conditions and let us help you select the crane best suited to your needs.

Newark, N.J., U.S.A.

Arc suppressor plates are considered a necessary part of new controllers. Put them in your old equipment

These plates add life to the controller

C-G-E Arc Suppressor Plates are an auxiliary to the controller arc deflector. They are installed opposite the fingers where there is the most arcing, to shorten the time for disrupting the arc. This is accomplished by narrowing the arc passages, which increases the resistance of the arc and the cooling effect of the plates. The result is less burning of the controller fingers, segments, and arcing plates.

Modern controllers are now equipped with arc suppressor plates. They give better, longer service and require fewer repairs and less frequent inspection.

These plates are inexpensive and can be used to advantage on any C-G-E controller having individual-finger blowouts, such as the K-34, K-35, K-36 and K-64. It takes only a few minutes to install them.

Try them and see the difference.

AN ECONOMICAL AND EFFICIENT LOCOMOTIVE STOKER

Everything which increases the ton-mile capacity of the modern locomotive calls for more fuel power.

Nothing done to increase this power counts as much for more tonnage as does the mechanical stoker.

The stoker must feed the

fire with economy as well as efficiency.

These are fundamental features of the DUPONT SIMPLEX STOKER

Are you fully acquainted with the manner in which the DUPONT SIMPLEX STOKER accomplishes these results?

Scientific Treatment of Boiler Feed Water

Dearborn

Questions and Answers

**KILL
LAST AD.**

Q. What is Dearborn Treatment different from other forms of treatment?

A. Dearborn Treatment is based upon laboratory analysis of water supplies. The treatment is especially prescribed to overcome conditions of foaming, scaling, pitting and corrosion. Dearborn Treatment is the only treatment formulated in this manner.

Q. When would you use Dearborn Treatment and when water softeners?

A. Water softeners are needed only under conditions of exceptionally bad waters of certain types. Wherever a softener is required Dearborn Engineers recommend it. However, expensive installations of softening plants have often been made when Dearborn could actually do the work at a small fraction of the cost and with no initial investment.

Q. What is meant by "Laboratory Control"?

A. Laboratory Control is the service of our staff of chemists working in conjunction with our service men, meeting variations in water supplies and in operating conditions with suitable variations in Dearborn Treatment.

Q. What is the standing of the Dearborn Chemical Company?

A. For over thirty-five years this Company has been an acknowledged world leader in feed water treatment. We originated and successfully developed the idea of scientific analysis, prescription and treatment.

Q. How fully is Dearborn Treatment recognized in the railway field?

A. To the extent of our supplying treatment to more than 100 Railways in North America and having a wide distribution to privately owned and Government Railways in many foreign countries.

Q. Does the Dearborn Chemical Company guarantee results?

A. Yes.

Q. What preliminary steps are necessary to installation of Dearborn Treatment?

A. Complete survey of water and operating conditions. Gallon sample of each supply to be submitted to Dearborn Laboratory for analysis. Information as to present condition of boilers. Dearborn Service men will assist if desired, and will aid local officials in getting use of Treatment properly inaugurated. Dearborn Treatment is most economical and easy to use.

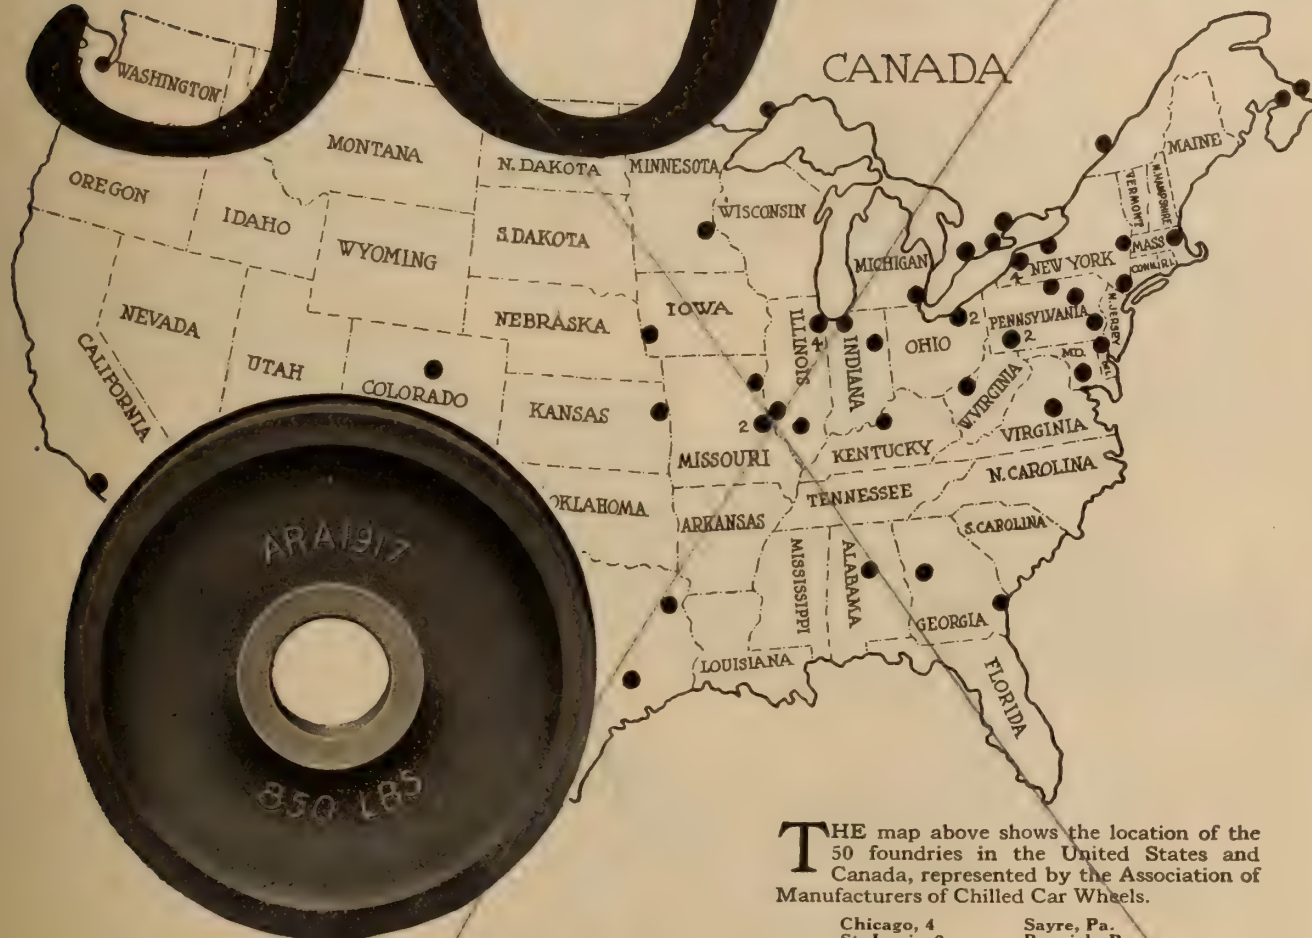

If you have a question not answered here,
ask a Dearborn representative or write us.

Let the "Meteor" Safety Train Signal Protect Your Trains

“ Surest and best rear end train protection ever offered ”

(Endorsement of Railway Official)

OFFICIAL TEST

As reported to the Board of Railway Commission for Canada, by Chief Inspector of the Explosive Division, Department of Mines, Dominion of Canada:—

The Detonation was found to be reliable under trials, the conditions of which were more severe than those likely to be encountered in actual service.

The volume of sound is well above the average, sharp and arresting, accompanied by a brighter flash than given by any other torpedo tested, and plainly seen from the cab of the locomotive.

The detonation was not affected after the signals had been subjected to special treatment, for exposure to rain, snow, steam, saturated atmosphere and rough usage. No “dangerous” debris was projected at the trials, and the results were superior to those obtained with any other torpedo tested.

The brass wire swivel spring is of a form which renders the operation of attaching the signal to the rail simple and quick and cannot be knocked off by the wheel of the locomotive.

After tests under service conditions on the Canadian Pacific Railway, from the Atlantic to the Pacific, practical railroaders affirm that no engineman can possibly run over one of these signals and fail to recognize that a signal is intended. This opinion from men who are familiar with the use of track signals fully endorses all that has been said in favor of the “METEOR.”

The “METEOR” differs from all other torpedoes. It appeals to three senses—Hearing, Seeing and Smelling—and thereby makes assurance trebly sure. The “METEOR” has been adopted as “Standard” on the Canadian Pacific Railway over the entire 18,000-mile system, also by the Grand Trunk Railway and other Canadian Railways.

"You Know Where to Find the Man"

"We want a man who
has specialized for that
position."

"Get the right man for the place from among those whom we already employ," were the President's instructions. "Pick out those who have not only been doing their work well, but have been studying in spare time getting ready for advancement. Among these you will find the right man."

Are you in the enviable position of that Executive Head when you wish to find the right man for the vacant place in your organization? Have you encouraged your employees to study? Have you let your employees know that trained competent men do not need to look elsewhere for promotion? Have you developed real, upstanding men who can fill positions of increased responsibility?

You cannot afford to overlook this vital factor in the success of your enterprise and of those associated with you.

The trained-man problem has been solved. All over this Continent business concerns, large and small, and in every line of trade and industry, have found in the International Correspondence Schools a medium of training and a source of trained men that has simplified one of the greatest problems in the building of an efficient organization.

For thirty-one years the I. C. S. has been training men for advancement, covering every technical trade and every phase of business—accountancy, salesmanship, advertising, traffic management, foreign trade, production, marketing, financing, drafting, electricity, engineering, shop practice and many others.

For a long time the I. C. S. worked only for the individual student. Then employers looking for men with certain qualities—ambition, industry, perseverance, special knowledge—suddenly made a discovery—these were the very characteristics of the I. C. S. trained man. Recognizing this, they began to seek out the men in their employ who were taking I. C. S. courses and to encourage others to enroll. Thus, there has developed a great co-operative plan through which the I. C. S. is serving over one thousand industrial concerns and three hundred railroads, solving the training problems for both employer and employee.

Some employers buy Courses for selected men. Some assist their men to pay for Courses. Others reimburse their men for the price that is paid for their Courses when they have completed them. Still others simply recommend I. C. S. Courses and then encourage those who take them. The I. C. S. offers a simple arrangement whereby employers are kept informed of the progress of employees who receive training from the Institution. **THE DEFINITE EDUCATIONAL ACHIEVEMENT OF THE I. C. S. STUDENT MAKES SUCH SERVICE DIRECTLY VALUABLE TO THE EMPLOYER WHO IS LOOKING FOR MEN FOR LARGER RESPONSIBILITIES.** An I. C. S. Course is a systematic, scientific, comprehensive and connected arrangement of specially prepared texts, easily studied, easily remembered and easily applied. From the day of his enrolment to the completion of his final examination, the I. C. S. Student is directed step by step, through every difficulty and helped over every obstacle. Judgment, initiative, logical thinking, patience and application, so invaluable in every calling, are carefully cultivated in I. C. S. training. Not only is the I. C. S. Student put in possession of valuable knowledge of his chosen branch of commerce or industry, but the personal, practical, problem-solving method of instruction is the making of a trained mind and the building of sound character.

To build an efficient organization you must have trained men, and you cannot depend on finding them in other organizations. No matter how small or how great your needs, the I. C. S. can help you. You may have a single promising employee whom you want specially trained, or you may have ten or a hundred or a thousand employees in your plant or office who are good workers but lacking that special skill you like them to have.

Help them to equip themselves for better jobs and bigger responsibilities. Make them more valuable to you. The I. C. S. is ready with a practical way to do it.

BUSINESS NEWSPAPERS ASSOCIATION

OF CANADA

MANY Canadian business papers have been among the finest and most respected of their kind in the world; but this association has been formed to establish and maintain for Canadian business papers generally, standards which to readers and advertisers must be a guarantee of the high quality and merits of its publication members.

As its "Standards of Practice," the Business Newspapers Association has adopted a set of working principles unsurpassed in any field of advertising or publishing. Only such papers that can live up to these standards are accepted to membership.

Not only does the Business Newspapers Association of Canada stand for honest, proven circulation methods and claims, demanding that all its members' circulations be audited by the Audit Bureau of Circulations; but also for (what is not less important) high editorial principles, fair competition, reputable advertising, and a general publishing policy which seeks to give the greatest possible service to the industries they represent.

CARBON

Plates, Rods, and Paste for Oxy-Acetylene Welding

Wherever the flow of metal must be restricted to a definite area, there is no substitute for carbon.

The full advantage of the oxy-acetylene process cannot be utilized without carbon dams, retainers and plugs.

Use Columbia Welding Carbon Products. They simplify vertical welding and are indispensable in making heavy welds on castings without dismantling; in re-inforcing welds to any desired strength.

For Railroad, Hotel and Steamship Upholstery CHOOSE "CHASE" MATERIALS

The trade mark "Chase" stands for seventy-five years' leadership in manufacturing.

CHASE GOAT BRAND CAR PLUSH: This product, made from the fleece of the Angora Goat, has been the choice of railroads and steamship lines for over thirty years. It is **DURABLE—FAST IN COLOR—RICH APPEARING—MOST SANITARY.**

Recently there was exhibited a car seat upholstered with our Mohair Plush, and the seat had already been in service twenty-five years.

CHASE LEATHERWOVE: The modern, leather-like upholstery material for use where flexible toughness is the one thought.

For cleaning Plush and other upholstery fabrics choose **CHASE PLUSH RENOVATOR**—That remarkable liquid cleanser which does not start the dyes or injure the fabric. **GUARANTEED effective, but NOT HARMFUL.** Write for samples.

Westinghouse

No. 6 ET Test Rack

Keep Air-Brake Equipment at
The Peak of Efficiency

To enable our Air Brake customers to determine promptly and accurately whether the valves of the Westinghouse No. 6 ET Engine and Tender Equipment are up to the proper standard of efficiency, we recommend the No. 6 ET Test Rack.

By using this rack you know immediately whether any part of the equipment needs repairs, where and how to make them, without guess-work or lost time.

No repair shop is complete without the No. 6 ET Test Rack. We furnish full instructions as to its use and maintenance.

Canadian Railway and Marine World

August, 1923

The Peace River Country and Railway Connection to the Pacific Coast.

Considerable speculation has been aroused recently with respect to the probabilities of early and extensive railway construction in the Peace River district, in northern Alberta, and the effect it would have on the future of the Edmonton, Dunvegan & British Columbia Ry., with its subsidiary, the Central Canada Ry., now in the Alberta Government's hands and operated under a five year agreement by the C.P.R., and also in regard to the Pacific Great Eastern Ry., owned and operated by the British Columbia Government. These two railways as projected originally, were intended to connect at the Alberta-British Columbia boundary, passing through the central portion of the districts in question. Reports credit the C.P.R. with the intention of taking over the two lines, either in whole or in part, and building a connecting section to Prince George, B.C., also, the completing of the P. G. E. Ry., between Prince George and the present end of track, a few miles north of Quesnel. On their recent trip over the C.P.R. Western Lines, Grant Hall, Vice President, Montreal, and D. C. Coleman, Vice President, Western Lines, Winnipeg, were interviewed as to the C.P.R. doings in the region mentioned, and as to the company's intentions, but they both refrained from giving any information. It may be taken for granted, however, that the C.P.R. is making investigations in the region, and that upon the reports furnished by the engineers, a policy may be developed, which will result in some movement being made for the development of this large and promising area, which is sometimes referred to as the last northwest.

The investigations which gave rise to the speculations referred to above, were those, which were begun towards the end of June, and which were completed in July, by W. A. James, Assistant Chief Engineer, C.P.R., Western Lines. A press report states that he started from Ashcroft, B.C., on the C.P.R., and proceeded northerly to the Pacific Great Eastern Ry., followed that line into Quesnel, and thence to Prince George along the practically completed right of way, and travelled from Prince George to Peace River by canoe. He was interviewed there as to the purpose of his journey, but declined to give any information beyond the fact that he had made the trip from Prince George in eight days, including a day's delay crossing the portage at Hudson's Hope. He is also reported to have stated that a party under Major C. C. Crysdale, of Vancouver, had gone into the country to check up on previous surveys; that Mr. Macauley, a mining engineer with another party, was investigating the mineral resources in the Hudson's Hope region, and that a third party was looking over the timber resources. Upon receipt of the reports from these parties he would make a report which might lead to developments, but the object of all parties in the field was simply to secure information. Mr. James subsequently continued his trip from Peace River

Crossing, along the Peace River, Fort Vermillion being his objective.

T. C. McBride, M.P. for Cariboo, B.C., who returned to Vancouver, July 10, from Ottawa, is reported to have stated, in an interview, that the Peace River district has an area of 74,000,000 acres, the greater portion of which is good for agriculture, 43,000,000 acres being in Alberta and 31,000,000 in British Columbia, of which latter acreage the Dominion Government owns 3,500,000 acres. Sandford Fleming, then the Dominion Government's Chief Engineer for the Canadian Pacific Ry., in his report for 1880, on the surveys, describes this territory as practically extending from Lesser Slave Lake westerly to the Rocky Mountain foothills, and from latitude 54 to latitude 59, but not all equally fertile. The fertile areas form a plateau, generally about 2,000 ft. above the sea; drained by rivers running in deeply eroded channels, ranging in many places 600 to 700 ft. below the ground level. The less fertile areas are to be found bordering the Athabasca River valley, south of Lesser Slave Lake; there are considerable swamp areas east of Smoky River, near Sturgeon Lake, and some smaller areas elsewhere; and there is a fair amount of original forest, and of second growth timber. Alexander Mackenzie discovered the Peace River and explored it to its source in 1793, and the territory was further explored by Sir George Simpson in 1829. Sandford Fleming went through the country to the coast in 1872 in connection with the reconnaissance survey for the C.P.R., and in the same year the Peace River pass, and the territory on both sides of the divide, were investigated by C. Horetzki and Professor Macoun, and the Pine River pass was investigated by Joseph Hunter in 1877, and surveyed by H. J. Cambie in 1879. These surveys were made prior to the Government's decision to adopt the Yellowhead Pass route to Port Moody, for the C.P.R., in 1879. This work was abandoned subsequently for the present route via Hector, at a summit level of 5,332 ft. in the Rocky Mountains, and a second summit in the Selkirk range of 3,787 ft. at the Rogers Pass tunnel. The Peace River area was again looked over by Canadian Northern Ry. engineers and by Grand Trunk Pacific Ry. engineers, with the result that both these railways were built through the Yellowhead Pass, with its elevation of 3,646 ft. The Canadian Northern Ry., however, kept in mind the necessity of a railway to the Peace River district, and began the construction of a branch line from Peace River Jct., mile 35 from Edmonton, which now terminates at Whitecourt, 72 miles, and is headed for either the Pine River or the Peace River Pass. The Canadian National Rys. have therefore an interest in the Peace River area, and the Dominion Parliament recently voted \$50,000 to provide for surveys and investigation of a railway from a point on the C.N.R. toward Peace River. This connection, it is stated, is to be surveyed from Brule, 199 miles west of Edmonton, northerly

to Grande Prairie, approximately 380 miles, which would give a route of about 950 miles from Grande Prairie to Vancouver, as against 1,175 miles by the present railway connections. The construction of a branch line from Prince George, by the Canadian National Rys. via the Peace River Pass, which has an elevation of 2,630 ft., was advocated by Mr. McBride in the interview referred to. Such a line would give the Peace River district an outlet to the Pacific coast at Prince Rupert, of approximately 790 miles.

The Edmonton, Dunvegan & British Columbia Ry. extends from Edmonton to Spirit River, 361 miles. Grading has been done across the Spirit River for 52 miles further to the Alberta-British Columbia boundary at Pouce Coupe; and there is a branch line from Spirit River to Grande Prairie, 45 miles. The Central Canada Ry. extends from McLennan, mile 266 from Edmonton, to Berwyn, mile 71, crossing the Peace River at mile 48. The Alberta Legislature has provided \$410,000 for the construction of a 15-mile extension of the Grande Prairie branch, westerly from Grande Prairie to near Lake Saskatoon, and \$331,000 for the construction of a 13-mile extension of the Central Canada Ry. from Berwyn westerly. Arrangement for the construction of these extensions are being made between the Alberta Government and the C.P.R., which operates the lines under a lease. This lease, which was entered into in July, 1920, is for five years, and contains an option of purchase which may be exercised at any time during the currency of the agreement. It was entered into with the Alberta Government, when the latter took over the lines from the McArthur interests, the Union Bank being a party to the contract.

The Pacific Great Eastern Ry. was surveyed originally from North Vancouver to Squamish and thence to Prince George, and is completed and in operation from North Vancouver to Whytecliffe, 13.7 miles, and from Squamish to Quesnel, 348 miles. Grading is practically completed to Prince George, approximately 80 miles, and track has been laid from Quesnel to Cottonwood River, 17.5 miles and from Prince George to Red Rock Creek, 18 miles, but no work has been done thereon since 1922. Subsequently provision was made for the extension of the line from Prince George to the British Columbia-Alberta boundary, and for its connection with the Edmonton, Dunvegan & British Columbia Ry., and preliminary surveys were made, but no construction was started. Later on there was an investigation into the promotion of the company, owing to the heavy cost of construction, with the result that the undertaking was taken over by the British Columbia Government, which has since found the funds for the work, as well as for the deficits in operation, the liability of the province, at the end of 1922, in respect of the line, being about \$40,000,000. In 1919 further surveys for the extension to the inter-provincial boundary were made, and in

1920 C. Williams reported on alternative routes, via the Pine River Pass, one being a direct one 316 miles in length, and the second via Vanderhoof and Hudson's Hope, 426 miles in length, the estimated cost of construction in either case being approximately \$18,000,000. In 1919, a survey was also made from Clinton, mile 167.2 from Squamish, for a branch line to Ashcroft, to effect a junction with the C.P.R., and a location showing a route of 41.5 miles on a 1% gradient, except for 6.9 miles at the Ashcroft line, was laid down. In 1922, the B.C. government employed J. G. Sullivan, consulting engineer, Winnipeg, and formerly Chief Engineer, C.P.R., and Col. J. S. Dennis, Chief Commissioner of Colonization and Development, C.P.R., and W. P. Hinton, formerly Vice President and General Manager, Grand Trunk Pacific Ry., to report on the line, its traffic possibilities, and the resources of the country through which it runs. Messrs Sullivan and Hinton concurred in recommending the abandonment of the line from Squamish to Clinton; Mr. Sullivan expressed disapproval of the completion of the line from Quesnel to Prince George; and favored the construction at some time of a line from Clinton to Ashcroft, using the salvaged material from abandoned portions of the line; while Mr. Hinton favored completing the line to Prince George, and the construction of the Clinton-Ashcroft line, thus giving a line through a country where there are traffic possibilities, and making the property more attractive to other companies to lease and operate under suitable conditions. Mr. Sullivan stated that the traffic moving into the Peace River country did not warrant the construction of a line from Prince George either via the Parsnip River and Pine River Pass, or to Grande Prairie.

British Columbia and Alberta Rate Appeal.—An Ottawa press dispatch of July 9, stated that British Columbia and Alberta's rate appeal to the Dominion Cabinet will be heard on Aug. 9. The appeal is from the Board of Railway Commissioner's decision in the rates equalization case, full details of which were given in preceding issues of Canadian Railway and Marine World, and has to do chiefly with British Columbia's demand for the removal of the mountain differential scale. The Winnipeg Board of Trade has given notice that it will oppose the appeal, in so far as class and distribution rates are concerned, but not as concerns the equalization of grain and other commodity rates, and has retained Isaac Pitblado, K.C., to represent before the Cabinet. Details of the B.C. and Alberta argument for the equalization of grain rates were given in Canadian Railway and Marine World for June, pg. 274.

U.S. Coal Cars Distribution.—The Interstate Commerce Commission has ordered that after Sept. 1, U.S. railways, and owners of private coal cars, may no longer assign them to particular bituminous coal mines with which they have contracts for their own fuel supply, in excess of the pro rata share of such mines of the total car supply. Commissioner Potter, in a vigorous dissenting opinion, stated that the majority decision would have the effect of making even worse the present coal situation in the U.S., wherein there are twice as many mines as needed, paying miners double the wages they should be receiving, and enabling them to earn a reasonable weekly wage in three days work.

Toronto, Hamilton & Buffalo Railway Co's Annual Report.

The T. H. & B. Ry. Co's directors' report for the calendar year 1922 has been issued over the signature of J. N. Beckley, President. Following are extracts:—

The report covers the operation of mileage as follows: Main line, 79.88; branches, 20.07; lines operated under trackage rights, 4.36; total, 104.31.

crease, \$47,269.03; maintenance of equipment, decrease, \$71,297.16; traffic expenses, decrease, \$1,765.79; transportation expenses, decrease, \$140,812.69; miscellaneous operations, increase, \$2,508.70; general expenses, decrease, \$9,369.19. The decrease in operating expenses was accomplished mainly through reductions in force and wages, in effect July, 1922.

Railway Operating Income.		
	1922	1921
Rail operations		
Revenues	\$2,444,381.42	\$2,677,984.51

Deduct: Sundry adjustments		540.75
Balance to credit of profit and loss, Dec. 31, 1922		\$3,513,773.41

The total operating revenues were \$2,444,381.42, a decrease from the previous year, of \$233,603.09. The greater part of this decrease is in freight revenue, the total for the year being \$1,666,212.12. This is \$168,475.37 below 1921, the drop in revenue being due principally to falling off in coal traffic because of the protracted coal strike. Passenger revenue, due to a reduction of approximately 20,000 passengers carried, decreased in even greater proportion than freight, the total of \$562,017.99, being a decrease of \$87,739.35 from 1921. The express revenue earned, \$66,917.63, was an increase of \$36,065.04, due to increased compensation and adjustments made under the provisions of the Uniform Express Contract. The reduction in freight earnings was also reflected in switching revenue, the total of \$92,755.68 being \$4,832.56 lower than in 1921. A similar condition prevailed with demurrage revenue, which totalled \$10,439.31, a decrease of \$5,706.91. Dining and buffet revenue was \$28,649.12, a decrease of \$775.21. This was a natural consequence with the reduction in the number of passengers carried. The ratio of expenses to earnings was 78.45% which is 3.16% lower than in 1921.

Operating expenses were \$1,917,637.01, a reduction of \$268,005.06. With but only one exception operating expenses, taken by groups, showed decreases, as follows: Maintenance of way and structures, de-

The directors authorized the establishment of a pension system, effective July 1, 1922, providing for the retirement of employees upon attaining the age of 65. The monthly allowance will be on the basis of 1%, for each year of service, of the average monthly pay received for the 10 years preceding retirement, with a minimum pension to each individual of \$10 a month.

The steel car ferry boat Maitland no. 1, owned and operated by the Toronto, Hamilton & Buffalo Navigation Co., was in service throughout the entire year, with the exception of a lay-up of 8 weeks. The net loss from operation of the T. H. & B. Navigation Co. for the year was \$17,746.88, principally due to the absence of coal tonnage because of the coal strike during the summer.

In spite of the falling off of business and handicaps consequent thereto, the T. H. & B. R. Co. has operated with results which are very encouraging. A dividend was paid, all outstanding notes, amounting to \$277,000, were taken up, and a substantial surplus obtained. The property was maintained and is in excellent condition.

The following are directors for the year ending June 5, 1924: J. N. Beckley, President; E. W. Beatty, Vice President; E. D. Bronner, Grant Hall, A. H. Harris, D. W. Saunders, W. L. Scott, Lord Shaugnessy, A. H. Smith, W. P. Torrance and W. K. Vanderbilt.

Machine for Making Tie-plugs at Moncton.

An efficient and economical machine for the manufacture of tie-plugs from waste material has been built and is in operation at the Canadian National Rys. shops at Moncton, N.B., its arrangement being shown in the accompanying illustration. The machine is operated by a 10 h.p. motor, connected by belt drive to the main driving shaft pulley, and the planer knife shaft is driven by two belts, one on each side of the table. The sprocket wheel and cam shaft, in line below the planer knife shaft, is driven by means of sprockets and chain, and the cam on the right side of the shaft is connected to a feed arrangement directly above the main driving shaft. Two 8 in. crosscut saws are located ahead of the planer knives, to point the plugs and cut them to length. These saws are driven by belt from the main driving shaft to a counter-shaft, from the latter to the saw arm holder shaft by a half turned belt, and from the saw arm holder shaft to the

the crosscut saws, where the first plug is sawn off by the first saw and pointed at one end only. The plugs are then moved forward 9½ in., the second saw cutting the first and second plugs to length, while the first saw, equipped with a special cutter on each side, cuts and points plugs 2 and 3. This is repeated as the machine continues running, the plugs being pushed forward to the end of the table, where they fall into the bag placed to receive them. The machine's capacity is from 60 to 75 plugs a minute.

We are indebted to G. E. McCoy, Superintendent of Car Equipment, Atlantic Region, Canadian National Rys., Moncton, N.B., for the information on which the foregoing is based.

Duty on Creosoted Ties, Etc.

J. A. Clark, Burrard, B.C., asked in the House of Commons recently what duties, if any, are payable on creosoted piling, railway ties, constructional timbers, lumber, planks and cross-arms; also on creosote. The Minister of Customs

for use on telephone or telegraph poles, are subject to duty at the rate of 17½% ad valorem, British preferential tariff, and 25% ad valorem, general tariff. Coal tar creosote oil of specific gravity heavier than water, is free of customs duty, but, when of specific gravity not heavier than water, it is subject to duty at 15% ad valorem, British preferential tariff, and 17½% ad valorem, general tariff."

British Locomotives in 1922.

The year 1922 was not marked by any widespread advancement in locomotive design in Great Britain, although there were one or two departures from what is commonly accepted as standard practice, but on the other hand the number of existing types, with the most modern characteristics, was increased on many of the railways, and types and wheel arrangements which were uncommon a short time ago are now more ordinary, on account of the 1922 developments.

In commenting on locomotive design and construction progress in Great Britain in 1922, the Railway Gazette, London, states that "The 4-6-2 and 4-6-4 wheel groupings belong to the most advanced categories of locomotives in this country, and both have been adopted on a wider scale during the past year. The Pacific type 3-cylinder locomotives of the Great Northern and North Eastern Railways mark another step forward in the evolution of the locomotive in Great Britain, and classify, as a standard, a type which hitherto was always regarded, except in tank engine practice, as a very uncommon one. The wheel arrangement makes possible a very large and efficient boiler, which, in its turn, brings into the range of possibility the use of a much increased cylinder volume. This, together with a 20-ton load on each of 3 coupled axles provides a very powerful and efficient engine."

The 3-cylinder Pacific locomotives for the North Eastern Railway were described, and drawings were given, in Canadian Railway and Marine World for Nov., 1922, pg. 562. Favorable comment regarding the possibilities of 3-cylinder locomotives has been evident in engineering and technical circles throughout the past year, higher torque in starting, decreased dynamic augment and correspondingly reduced track stresses and a higher percentage of power derived being among the advantages claimed.

1922 also saw in Great Britain the adoption of Pacific type locomotives, with 2 cylinders 21 x 28 in., on the London & Southwestern Ry., and also the adoption of 4-6-4 tank locomotives on the Glasgow & Southwestern Ry., where their performance and stability under all conditions have gone a long way in disproving the theory held by many to the effect that this so called "symmetrical" wheel arrangement would be unsuitable for locomotives operating at high speeds over frogs and switches, and in a territory where there are many track irregularities. Additional 2-8-0 type locomotives, marked by 5 ft. 8 in. drivers, were added on the Great Western Ry., and near the end of the year a 4-cylinder 0-6-0 type locomotive, with a special arrangement of cranks, was introduced on the North Staffordshire Ry.

Departures from standard practice included the electric locomotives designed by Sir Vincent Raven for express passenger service, and the Ramsay condensing turbine electric locomotives, mentioned in a preceding number of Canadian Railway and Marine World.

Tie Plug Machine, Canadian National Rys.

saw shaft. The saws are raised and lowered by a cam arrangement on the right side of the machine. This cam shaft is placed centrally below the crosscut saw, and is driven by a sprocket chain connected to the sprocket wheel shaft.

The material of which the plugs are made consists of waste edgings from the manufacture of sheathing, culls from the lumber yard, planing mill, etc., and other waste, sawn into strips of 1 x ¾ in. section, and in operation these strips are fed into the machine, which is equipped with a feed roller, and are moved forward 9½ in. at a time, which distance is equivalent to the length of two plugs. The planer knives mounted on the planer knife shaft have a downward extension on the left side, to plane the plugs to their proper width, while the upper surface planes the plugs to the required thickness, and bevels them, in the one operation. The bevel on the plugs is made by means of the cams on the sprocket wheel shaft raising and lowering the planer knife shaft. After the first two plugs are shaped, they move forward to

and Excise replied: "Wooden piling, not further manufactured than sawn or split and creosoted, is free of customs duty. Creosoted railway ties of wood are free of customs duty. Creosoted constructional timbers, not further manufactured than sawn or split and creosoted, are free of customs duty, but, when further manufactured than sawn or split and creosoted, are subject to duty at the rate of 17½% ad valorem, British preferential tariff, and 25% ad valorem, general tariff. Lumber, not further manufactured than sawn or split and creosoted, is free of customs duty, but, when further manufactured than sawn or split and creosoted, is subject to duty at the rate of 17½% ad valorem, British preferential tariff, and 25% ad valorem, general tariff. Planks, not further manufactured than sawn or split and creosoted, are free of customs duty, but when further manufactured than sawn or split and creosoted, are subject to duty at the rate of 17½% ad valorem, British preferential tariff, and 25% ad valorem, general tariff. Creosoted wooden cross arms

Government Investments in Canadian National Railways.

The following statement of the aggregate investment in railways under Dominion Government operation and control, up to Dec. 31, 1921, has been compiled in the Railways and Canals Department from the consolidated balance sheets of the Canadian Northern, Grand Trunk Pacific, Grand Trunk, and Central Vermont Rys., and from the Departmental Accountant's statement. It includes capital investment in road and equipment, acquired securities, sinking fund, improvements on leased properties, investments in affiliated and subsidiary companies, lands unsold, etc.:

Canadian Northern System.....		\$681,822,115 00
Total long-term or funded debt.....		\$1,842,582,740 45
Canadian Government Railways—		
Intercolonial	\$135,508,770 66	
Prince Edward Island Railway.....	12,836,775 49	
Transcontinental Railway	168,487,927 03	
Hudson Bay Railway.....	20,536,106 28	
Quebec bridge	14,831,742 99	
Branch lines	23,372,683 43	
Rolling stock	39,864,147 80	415,438,153 65
Grand Trunk Pacific.....		256,768,407 18
Grand Trunk Railway Company of Canada.....		512,687,282 20
Central Vermont		25,861,823 76
Total book value of investments.....		\$1,892,577,781 82

Funded Debt and Interest Obligations

As against this, are the following liabilities carrying fixed charges:—		
Canadian Northern—		
Long-term funded debt.....	\$302,339,007 36	
Debenture stock	24,999,388 00	
Equipment trust obligations.....	36,656,000 00	
Dominion of Canada.....	286,279,459 69	\$650,273,855 05
Grand Trunk Pacific—		
Receiver's certificates	34,400,305 12	
Long-term funded debt.....	157,699,714 86	
Dominion of Canada.....	62,809,237 34	
Grand Trunk Railway System (loans)	36,872,142 07	291,781,399 80
Grand Trunk Railway Company of Canada—		
Debenture stocks	155,373,808 34	
Guaranteed stock	60,833,333 33	
Funded debt unmaturing.....	81,132,898 66	
Dominion Government loans and interest.....	76,965,322 10	
Non-negotiable debt to affiliated companies.....	1,789,682 58	
Debt to public.....	14,794,376 00	390,880,421 01
Central Vermont—		
Long-term debt to public.....		9,647,065 00

The above compilation of the book value of the investments in the various government railway properties is as set out in the asset column of the respective balance sheets, and similarly, the figures as to funded debt and interest obligations are taken from the statement of liabilities in each case. The statement does not purport to represent a complete consolidated balance sheet, but merely the two features expressly referred to, viz., the investment in property and the funded debt or stocks which, by reason of a guarantee of interest, are in the same position as securities entering into the funded debt.

The Canadian Northern debenture stock included above does not call for interest until there is a net surplus available for dividends. The loans and advances by the Dominion Government are shown with accrued interest, as that is the way they appear in the respective balance sheets. Stripped of accrued interest, the Canadian Northern advances are \$251,088,248.88, Grand Trunk Pacific, \$50,591,237.10, plus \$31,889,066.56 by receiver's certificates. The Grand Trunk holds \$12,664,205.52 of Central Vermont securities, not including capital stock to be referred to. The public holds the amount shown above.

It has not been customary to reckon interest charges on capital or other expenditure on the Intercolonial, Transcontinental or other lines comprising the original Government Railways group. On this account there had been a capital expenditure to Dec. 31, 1921, of \$415,438,153.

Notice of Railway Accidents to Board of Railway Commissioners.

The Railway Act, 1919, provides as follows: Sec. 285 (1) "Every company shall, as soon as possible, and immediately after the head officers of the company have received information of the occurrence upon the railway belonging to such company, of any accident attended with personal injury to any person using the railway, or to any employee of the company, or whereby any bridge, culvert, viaduct, or tunnel on or of the railway has been broken or so damaged as to be impassable or unfit for immediate use, give notice thereof, with full particulars,

to the Board. The conductor or other employee in charge of the train, place or structure in connection with which such accident occurred, shall as soon as possible after such accident notify the Board of the same by telegraph. (2) The Board may be regulation declare the manner and form in which such information and notice shall be given and the class of accidents to which this section shall apply, and may declare any such information so given to be privileged."

The Board has requested that railway companies submit their respective views as to what amendments should, in their opinion, be made to its general order 361 for the purpose of dispensing with the necessity of reporting accidents attended with minor or trivial injuries.

The C.P.R.'s Bungalow Tourist Camp at Nipigon, Ont., was opened recently, when the company entertained a party of guests from Fort William and Port Arthur from June 30 to July 3. W. M. Neal, General Superintendent, Algoma District, represented the company. Miss Greene is manager of the resort.

C.P.R. Notes Redeemed. — According to notice given April 25, the C.P.R. on July 10, called for repayment the entire issue of \$52,000,000 of 6% note certificates dated March 2, 1914, and repayable March 2, 1924, subject to right of recall on 60 days notice.

The U.S. Government's railway in Alaska has been completed, and President Harding has authorized the Secretary of the Interior to operate it.

Relative Value of Coal and Fuel Oils for Locomotives.

The International Railway Fuel Association is investigating the relative value of various coals and fuel oil available for locomotive use. The relative value of solid and liquid fuels is not represented by their comparative B.t.u. content, principally, because the standby losses with fuel oil are very much lower than where coal is burned. Coal burning locomotives ordinarily arrive at terminals with a considerable quantity of partly consumed fuel in the firebox, and coal is also consumed while locomotives are standing at stations and on side tracks, whereas only a small quantity of fuel oil is required under similar conditions. The results of this investigation, which are to be presented in the form of a paper at the next annual meeting, will be of particular value to the railways in determining the relative prices they can afford to pay for coal and oil fuels. They will also establish the true relative fuel efficiency of railways burning fuel oil in comparison with the coal burning roads. The Interstate Commerce Commission requires railways burning fuel oil to report the equivalent consumption of coal per freight ton and passenger car mile, on the assumption that 3½ barrels of fuel oil is equivalent to one ton of coal.

The International Railway Fuel Association is also going to make the extensive study of locomotive fuels being mined in various localities, and will present at its next annual meeting a symposium on methods best adapted to utilize such fuels as are available. This will relate particularly to the availability of lignite, peat and other low grade fuels for locomotives. The Association also contemplates an investigation of the interrelation of the numerous fuel economy devices available. The result of this investigation, which will be presented at the next annual meeting, will show the savings that can be anticipated from a combination of several locomotive fuel economy devices, such as the brick arch, superheater, feed water heater, syphons, etc. The facts to be developed in this report are of importance to the railways, since the use of several of these devices in combination is becoming quite general.

The American Railway Association has expressed a desire to co-operate actively with the International Railway Fuel Association to put into general practice methods developed and recommended by the latter. Consequently, it will be the latter Association's purpose to devote considerable time to the solution of such detail problems relating to fuel use as are referred to it by the A.R.A. joint committee of fuel conservation, comprising 7 operating officials, 7 purchasing agents and 7 mechanical officials. The most immediate problem now under consideration is that of co-operative research, whereby the testing laboratory facilities of several universities may be utilized by the railways to determine the relative value of new locomotive devices, and comparative efficiency of various grades of coal in locomotive use.

Railway Men's Advance Polls. — The statement of the returning officer at the recent provincial election in Hamilton, Ont., shows that the cost of the advance polls for railway men, who would be absent from home on duty, on the election day, was \$458.47. At one of the two stations, only seven votes were polled.

The Grouping of Railways in Great Britain.

The Railway Act, passed by the Imperial Parliament in Aug., 1921, provided for the amalgamation of the railways in England, Wales and Scotland into four groups, and the constituent companies of each group were given until Dec. 31, 1922, to arrange for the consolidation of 102 subsidiary companies, with the constituent companies with which they were allied, and for the drawing up of plans of amalgamation for the four groups. These plans had to receive the approval of the amalgamation tribunal before they could come into operation.

The companies to constitute the different groups had to deal with three separate matters: 1, The absorption of subsidiary lines allied to or operating in their several territories. 2, The amalgamation of the constituent companies. 3, The position of joint lines. The subsidiary lines consisted of lines owned and operated independently; lines operated independently, but supplied with rolling stock by other companies, and lines owned independently, but leased for operation. Difficulties in arranging terms for absorption arose in connection with the first two of these sections, which caused some delay in the negotiations, but with one or two exceptions, which are to be dealt with by the arbitration tribunal, all these have been got over.

The first amalgamation between constituent companies took place Jan. 1, 1922, when the London & North Western Ry. and the Lancashire & Yorkshire Ry. companies put into effect an agreement which had been negotiated some time previously. Other amalgamations followed, as the plans matured and the only two constituent companies of any of the groups outside the plans are the Caledonian Ry. Co. (the shareholders of which have tentatively approved of the plan) and the North Staffordshire Ry. Co., the negotiations in which case have not been completed. These are both constituent companies of the North Western-Midland-Western Scottish group.

The third consideration in the consolidation had to do with the jointly owned lines, of which there were a considerable number, having a total length of approximately 1,400 miles. Of these about 400 miles will cease to be joint, as the joint ownership was between constituent companies of one or other of the four groups; while the remaining mileage of joint lines is owned as between group and group. The London, Midland & Scottish group and the London & North Eastern group are jointly interested in 585 miles; the L. M. & S. group and the Great Western Ry. Co. in 220 miles; the L. M. & S. group and the Southern group in 105 miles; the L. & N. E. group and the G. W. Ry. Co. in 41 miles; the G. W. R. & S. groups in 9 miles; and the L. M. & S., G. W. R. & S. groups in 5¼ miles; while each one of the groups is separately interested with one or other of the Metropolitan and Metropolitan District Ry. Cos. in altogether 15 miles of joint lines. The L. M. & S. group, in addition to owning 291¼ miles of line in Ireland, is jointly interested in 91 miles along with the Midland Great Western Ry. and the Great Northern Ry. of Ireland; while the Great Western Ry. is jointly interested in 107 miles of line in Ireland with the Great Southern & Western Ry.

The first railway in England, the Stockton & Darlington, for which George Stephenson's locomotive Rocket was built, is included in the mileage of the London

& North Eastern Ry.; the London, Midland & Scottish Ry. includes the Liverpool & Manchester Ry., the second line built, at the opening of which Chancellor of the Exchequer Huskisson was killed. The Great Western Ry. was the champion of the old broad gauge, which was finally abandoned about 1890.

The plans for the amalgamation of the Southern group as the Southern Ry. Co. and of the North Eastern group as the London & North Eastern Ry. Co., were fully completed and approved by Dec. 31, 1922, and these new companies came into existence Jan. 1, 1923. The Great Western Ry. Co. continues its corporate existence, and the plans for the absorption of the subsidiary companies, and the amalgamation of the constituent companies are practically completed, but there are some matters regarding two or three of the subsidiary companies with which the amalgamation tribunal will have to deal. The title of the North Western group has been fixed as the London, Midland & Scottish Ry. Co., but while the absorption of subsidiary companies has been completed, the amalgamation of the constituent companies has not. The shareholders of the Caledonian Ry. Co. have accepted the plan, but it has not been finally approved, and the terms for the amalgamation of the North Staffordshire Ry. Co. have not been settled. So far as operation, however, is concerned, in connection with these two groups, the matter is settled, and when the plans are approved by the amalgamation tribunal, they will be dated as in effect from Jan. 1.

The general plan of amalgamation and absorption consists of the valuation of all outstanding stocks of the various undertakings, and the issue thereof of stock in the enlarged company. About 300 issues of stocks are reported to have been dealt with, and as a result of the amalgamations, the number of railway stocks now on the market is stated to be 34. The total capital of the amalgamated groups, upon the final completion of the work, will approximate £1,500,000,000.

In the following table the mileages given for the several constituent companies include those of subsidiary lines amalgamated, and the proportion of the mileage of joint railways owned:—

London, Midland & Scottish Ry.	Miles
London & North Western Ry. and Lancashire Ry.	2,667.50
Midland Ry.	2,107.75
North Staffordshire Ry.	220.75
Furness Ry.	158.00
Caledonian Ry.	1,114.50
Glasgow & South Western Ry.	493.50
Highland Ry.	506.00
London & North Eastern Ry.	
North Eastern Ry.	1,757.75
Great Eastern Ry.	1,191.25
Great Northern Ry.	1,051.25
Great Central Ry.	729.00
Hull & Barnsley Ry.	106.50
North British Ry.	1,378.00
Great North of Scotland.....	334.50
Great Western Ry.	
Great Western Ry.	3,005.00
Barry Ry. & Dock Co.	68.00
Cambrian Ry.	295.25
Rhymney Ry.	51.00
Cardiff Ry.	11.75
Taff Vale Ry.	124.50
Alexandra Docks & Ry. Co.	10.25
Southern Ry.	
London & South Western Ry.	1,020.50
London, Brighton & South Coast.....	457.25
London, Chatham & Dover, South Eastern Ry. and South Eastern & Chatham Managing Committee.....	637.75

The following have been appointed General Managers of the new groups, the head offices of which are all in London: London, Midland & Scottish Ry., Arthur Watson, formerly General Manager, Lon-

don & North Western Ry. London & North Eastern Ry., R. L. Wedgewood, formerly General Manager, North Eastern Ry. Great Western Ry., F. J. C. Pole, formerly General Manager, Great Western Ry. Southern Ry., Sir H. A. Walker, K.C.B., formerly General Manager, London & South Western Ry.

The route miles of the running lines of the four companies as at Dec. 31, 1922, covering all the amalgamations, whether completed or pending before the Amalgamations Tribunal, are stated in the companies' reports to be as follows:—London, Midland & Scottish Ry., 7,370 miles; London & North Eastern Ry., 6,676 miles; Great Western Ry., 3,703 miles; Southern Ry., 2,114 miles.

Efficiency and Economy of United States Railway Management.

The Interstate Commerce Commission passed the following order, recently: Sections 12 and 15 (a) of the Interstate Commerce Act being under consideration, and the Commission desiring to know whether expenditures of carriers by railroad subject to the act, for the maintenance of equipment, have been reasonable, and to keep informed as to the manner and method in which the business of such carriers is conducted, with especial reference to the furnishing of car service, and to have full and complete information necessary to perform its duties; and having under consideration the question as to the efficiency and economy of management of such carriers; with a view to making such order or orders as may be appropriate under the act: It is ordered, that the Commission, on its own motion and without formal pleading, enter into a proceeding of inquiry and investigation into and concerning: whether expenditures by such carriers for the maintenance of equipment have been reasonable; the manner and method in which the business of such carriers is conducted, with especial reference to the furnishing of car service; and, whether the courses adopted by such carriers in the maintenance of equipment and in providing car service have been efficient and economical, and whether the service provided has been reasonably adequate.

The New York Central Rd. is making good progress with building the Castleton cutoff, consisting of about 27 miles of double track, a high-level double track bridge across the Hudson River, a mile south of Castleton, and a large classification yard at Feura Bush, where the cutoff will connect with the West Shore Rd. main line to Buffalo. The bridge will connect at the east end with the Boston & Albany and N.Y.C. main line, and at the west end with the West Shore Rd. It is designed to relieve congestion at Albany, N.Y.

Rutland & Noyan Ry.—The Dominion Parliament has authorized the company to lease its railway and undertaking to the Rutland Ry. Co., incorporated in the State of Vermont. The R. & N. R. is 3.39 miles long, and connects the Canadian National Rys., G.T.R. line, at Rouses Point, with the Rutland Ry. at the International Boundary. (March, pg. 119.)

Steel Rail Order.—A press report states that the C.P.R. has ordered 35,000 tons of steel rails from Algoma Steel Corporation.

Canadian National Railways' Branch Lines Construction Programme Rejected.

When Canadian Railway and Marine World for July went to press, the bill introduced by the Minister of Railways, Hon. G. P. Graham, to authorize the Governor in council to provide for the construction by the Canadian National Ry. Co. of over 1,000 miles of railways, at a cost of \$28,307,000, full details of which we gave in our July issue on pg. 340, had been passed by the House of Commons, and sent on to the Senate, where it was read the first time in due course. On June 29, Senator Dandurand, Government leader in the Senate, moved its second reading, and the Opposition leader, Sir James Lougheed, moved the six months hoist. In the course of a lengthy debate, it was shown that being a money bill, it could not be amended by the Senate, but must either be accepted in full, or rejected. The late date in the session at which it was brought down was criticized, as well as the departure from the usual practice of including the amounts required in the regular estimates, and suggestions were made that separate bills should be introduced for each line, so that some might be authorized and others rejected by 47 to 10, several Liberal senators voting with the Conservatives in the majority. The Government did not make any further attempt to secure the appropriations desired, or to prolong the session so that bills which might have been more acceptable could have been introduced in the House of Commons, and sent on to the Senate, and Parliament was prorogued on the following day, June 30.

The C.N.R. President, Sir Henry Thornton was on a trip to the Pacific coast at the time, and is reported to have said, in speaking at Jasper, Alta., on July 10, "The Senate's action does not necessarily mean that all branch lines construction must be forever abandoned. I don't know, of course, what action the Government will take now, but my guess is that the whole programme as originally outlined will be offered to the House and the Senate next session, when, after full discussion has been given to the various projects, some measure of relief would be offered. The position of the Canadian National Rys. in reference to the whole branch line construction proposition seems to have created the impression in certain circles, I gather, that the branch line programme originated exclusively in the minds of the directors and myself, and was planned with a view to securing control of the expenditures of large sums of money. This impression is incorrect. Here is what happened: Soon after I came out it was explained to me that we would have to build some branch lines in the west to consolidate the position of the system, partly to open up the country and relieve distress among the farmers, many of whom have 30 to 40 miles of a road haul from existing railway points, and last, but not least, to bring into use capital already invested in partly constructed lines. We made a careful review of the whole position and after taking the advice of officers experienced in the west, the directors and myself decided it was advisable to do something along the line suggested by the officers. So we prepared a programme of branch construction extending over a 3-year period. It was simply the recommendation of the directors that went to the government and what happened afterwards is none of my business. As a

matter of fact, the estimates were prepared by intelligent and competent officers, and would have been considered as sufficient for our requirements. The directors asked for the 3-year programme, because they felt that they could not work economically on a hand to mouth plan from year to year, and that a three year programme was necessary in order to co-ordinate the work and get it going economically."

The Minister of Railways is reported to have said in an interview at Ottawa on July 19.—"The Government is helpless to do anything apart from the Longlac-Nakina cut-off, which is, really, a co-ordination of two lines and already under contract. Not a foot of branch lines for the C.N.R. can be built this year. The Government cannot spend money that Parliament does not appropriate. The Senate took the position that the country cannot afford the money for the projected lines. My position is that we cannot afford to do without them. They are essential to the growth of the C.N.R. and the development of the country it serves. The public-owned system needs branches the same as the C.P.R. The idea being propagated that the lines would run into \$100,000,000 is sheer nonsense. The estimates were liberal, having regard to the fact that of the 1,000 miles provided for, 400 are already graded, and in some cases ready for the rails. It is also said that if the Government had provided for the expenditures in supplementary estimates the situation might have been different. Why? The Senate could have rejected the estimates the same as it rejected the bill."

During the third and fourth weeks of July, dispatches from points in the prairie provinces credited Sir Henry Thornton with stating that the question of the C.N.R. Co. issuing bonds, and going on with branch line construction, was being discussed, and that some of the C.N.R.'s vice presidents, including Gerard Ruel, who is also General Counsel, and also Major Graham A. Bell, Deputy Minister of Railways, were going to Winnipeg for a conference with him. A Winnipeg press dispatch of July 24, credited him with having issued the following statement:—"After a very searching conference with the vice presidents of the C.N.R., I have reluctantly come to the conclusion that the company cannot effectively issue bonds in respect of the branch line programme which has been rejected by the Senate. The difficulty is not so much with the power to issue bonds as with respect to the power to expend the proceeds. I wish to make it clear to the public that bonds can only be issued for the construction of such railway facilities as are authorized by Parliament, and as the parliamentary authority which may be given to the company is clearly restricted under the Canadian National Railway Co's Act, sec. 23, which is as follows:—"The company may from time to time construct and operate railway lines or railway facilities or properties of any description in respect to the construction whereof respectively Parliament may authorize the necessary expenditure or the guarantee of the company's securities."

"It will be at once apparent from the reading of this part of the act that the railway company is limited to the construction an operation of lines, facilities or properties in respect to which

Parliament has authorized the expenditure or authorized the guarantee of the company's securities. Consequently, the branch lines which it was proposed to build, or complete, lie, under present circumstances, beyond the scope of the act. Once Parliament authorizes the expenditure or the guarantee of the company's securities for construction purposes, the company may then make an issue, of securities guaranteed by the Crown and proceed with the work. The branch lines bill was for the purpose of authorizing the issue and guarantee of the company's securities, and, this bill, having been rejected by the Senate, the company is entirely without power to carry on the contemplated programme either in whole or in part."

Use of Deckless Locomotives in Road Service.

The Board of Railway Commissioners' Secretary has issued circular 202, as follows:—"The resolution quoted below was submitted to the Board by the legislative representatives of the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen: 'The use of deckless engines in road service to be restricted (deckless engines are those with boiler extending back to end of engine frame and wing casting, leaving no foot plate for enginemen except that provided for on front of tender).' After investigation, the Board rules that no more of this type of locomotive shall be put into service on railways under the Board's jurisdiction, except upon application and approval; and that such locomotives as are now in road service on the different railways be worked into switching service as opportunity offers."

Another circular was issued on the same day, as follows:—"Under instructions from the Board, I enclose copy of circular no. 202, and beg to state that this rule has been accepted by the Railway Association of Canada in the following language:—"The so-called deckless engine is a type that is no longer being ordered by the railways, and the engines of this class that are now in road service are, as opportunity offers, being worked into switching service. In those circumstances it appears unnecessary for the Board to issue a general order requiring the railways to do what they are now doing voluntarily.' I am directed further to state that the Board expects the railway companies to concur in and carry into operation the ruling referred to, and to so advise the Board."

The Austrian National Assembly has, according to a press cablegram, authorized the government to relinquish active management of the railways, and turn them over to a body to be created to operate them on purely commercial lines, in the hope of eventually eliminating the present annual deficit of two trillion crowns.

Caterpillars Stop Train.—The Canadian National Rys. Ocean Limited was delayed for 4 hours, recently, between Bathurst and Newcastle, N.B., by caterpillars on the tracks. The swarms of caterpillars in certain sections of New Brunswick are reported to be the worst experienced in recent years.

The Educated Traffic Man.

By A. H. Thorpe, Traffic Manager, Wm. Davies Co., Toronto

While more firms each year are realizing the importance of having an educated traffic man to look after their interests, there are a host of industrial concerns which seem to be satisfied to rely on rates quoted by railway rate clerks, and rate memorandums in the possession of a receiving or shipping clerk, or even the bookkeeper. It is a well-known fact that railway rates are changing from time to time, and the educated traffic man at times finds it difficult to keep posted on these changes, therefore an inexperienced man has a big task before him. From time to time one hears of these men using lists of rates, in passing freight bills, which are years out of date. As long as the railway does not charge them a rate higher than that shown on the list, they are satisfied and pass the account as correct, believing they have the best of the railway, and overlooking the fact, if an undercharge has been made, that it will have to be paid subsequently. The fact that there is a discrepancy between his rate and the one charged by the railway should have been sufficient to tell him it is time to check up his rates list. The experienced man will pay the correct charge, whether this means increasing or decreasing the freight account, knowing this is the most satisfactory, and it enables the purchasing or selling department to arrive at the correct cost.

As stated previously, the trained traffic man finds he has to be on his toes all the time, to keep up to the minute. It is comparatively easy for him to familiarize himself with the correct rates and classification applying to the limited number of commodities handled by his firm, and there is no excuse for him to allow discrepancies to stand for any length of time. If he should pass them when the account is paid, and we all make mistakes, he should find them when he goes over his bills at a later date to audit them.

We must not be too hard on our railway friends in connection with errors, as very frequently the shipper is responsible for the error, by insufficiently describing his goods. Then again the railway rate clerk has to endeavor to keep posted on the correct basis applicable to all classes of traffic, and until our good friends in charge of making and issuing tariffs find a way to further simplify them, he is likely to continue to make errors. Great headway has been made in recent years, in tariff construction, and yet there is room for improvement. To the inexperienced, they are a maze, and, strange to say, we sometimes find the railway official who is not sure what the correct basis is after he has issued the tariff.

As regards the trained traffic man, it seems to me it is important that he keep before him a number of questions for frequent reference, such as: Am I familiar with the freight and express classifications, as they affect our shipments, to see if they are being put up so as to obtain the lowest possible classification? Are my freight tariffs, or lists, of rates up to date? When did I last check of rates up to date? When did I last check them with the railway records? Am I auditing my bills regularly, subsequent to payment? Am I acquainted with the local freight agent, the division freight agent, superintendent and other railway and express officials with whom I do

business? Am I familiar with the manner in which shipments are handled at the local terminals? Am I co-operating with the other departments of our organization so that we may obtain the best results? Have I made a survey of my department, to see if I have any dead wood, and that I am obtaining efficiency from every member of my staff?

In conclusion, let me ask: Do you endeavor to keep your shipping and traffic knowledge to yourself for your personal use, and remain self-centered and small, or do you pass on your knowledge to your assistants and those about you, and thus develop into a real broadminded traffic man?

Protection for Locomotive Crews From Gases in Tunnels.

The U.S. Mines Bureau has developed a pocket canister, illustrated herewith, to protect locomotive men and firemen from the effects of poisonous gases in railway tunnel is well known, while carbon dioxide by breathing sulphurous locomotive smoke while a train is passing through a tunnel is well known, while carbon dioxide, sulphur dioxide and carbon monoxide are constituents of flue gas that are dangerous to life. Carbon monoxide is formed by incomplete combustion, and is

the poisonous constituent that is probably responsible for such deaths as have occurred from breathing air, heavily contaminated with smoke from stalled locomotives, in poorly ventilated tunnels. This gas is insidious in its action on man, because it has no odor, taste or color, and does not irritate the eyes or throat, the irritation from smoke being due to other constituents that are not very poisonous. Carbon monoxide is poisonous, because it combines with the red coloring matter of the blood more readily than oxygen does, and blood that is saturated with carbon monoxide cannot take up oxygen as it should. A few breaths of air containing 2% carbon monoxide will produce unconsciousness and death, almost as quickly as drowning.

A few specific instances of railway men being overcome in tunnels are as follows: 1. In the Giovi tunnel in Italy, many cases of sickness from gas are reported. On one occasion 13 deaths resulted there from a train, of which the crew had been gassed, backing into another train outside the tunnel. 2. On Aug. 11, 1898, a heavy freight train, with three locomotives, stalled in a tunnel near Genoa, Italy. The locomotive crews were overcome by gas, the train got away from them and ran back down the grade, colliding with a passenger train and killing 12 people and injuring 40. 3. On Oct. 9, 1904, a heavy freight train broke in two

in the Grand Trunk Ry. tunnel under the St. Clair River. Six men died from carbon monoxide poisoning, and others were in a serious condition when removed. Several years before, a train stalled in the same tunnel, the locomotive man, conductor and a brakeman dying from gas poisoning. Electrification has removed the danger in this tunnel, however.

The canister developed by the U.S. Mines Bureau is patterned after the small canisters used by U.S. troops during the great war. The canister bottom is perforated with small holes, above which is a screen to retain the granular charcoal and soda lime absorbent, about 200 cubic centimeters (less than ½ pint) of absorbent being used in each. On top of the absorbent is a piece of towelling, to serve as a filter, then a stiff wire screen held rigidly upon the absorbent by springs. A flat metal collar is soldered to the walls inside, half way up and extending ¼ in. toward the center, to prevent gases channeling along the sides. When a canister is placed in the mouth, the thin rubber leaves fit between the lips and teeth, the lugs are gripped by the teeth, and the breath passes in and out through the canisters.

Tests were made in 23 tunnels on the Baltimore & Ohio Rd., between Grafton and Parkersburg, W. Va.; in the Gallitzin tunnels on the Pennsylvania Rd. at the crest of the 1.75% grade extending from Altoona, Pa., and in the Schenley tunnel on the Baltimore & Ohio, in Pittsburgh, Pa., and in all cases it was found that though black, heavy and hot smoke was allowed to pour into the locomotive cab, the canisters furnished the wearers comparatively cool air, free of gas. The effective life of the canisters is about three months.

Prior to developing this pocket canister, the Bureau experimented with the regulation army gas mask, but it was found that, while it afforded protection against the gases met with in warfare, it did not protect against carbon monoxide.

Introduction of Articulated Locomotives in Great Britain.—A development has recently taken place which is of interest to all concerned with the construction and operation of locomotives, viz., the ordering of an articulated locomotive by Vivian & Sons, Hafod Copper Works, Swansea, to handle heavy traffic at the works. The Railway Gazette (London) says: "This will be the first articulated locomotive to run in this country. There have been many good reports of the performances of this type of locomotives from the colonies, and foreign countries, in recent years, not only in the hauling of goods trains at slow speeds, but in passenger service at comparatively high speeds. The articulated locomotive hitherto has never been regarded seriously, where speed is concerned, and it is perhaps chiefly for this reason that its trial in this country in even goods service has not yet come about." The Gazette goes on to say that, now that the orthodox type locomotive is being thrust against the immovable barrier of limiting factors, the factor of speed in articulated locomotives is important, as, if such a locomotive proves economical, vast new fields are opened to the locomotive designer.

S. M. Vauclain, President, Baldwin Locomotive Works, is reported to have stated that the U.S. railways will have to spend \$1,500,000,000 annually to keep pace with the demand for transportation service.

Canadian Pacific Railway Construction, Betterments, Etc.

Musquash River Bridge.—The Board of Railway Commissioners has approved plans for the reconstruction of bridge 65.22, over Musquash River, Shore Line Subdivision, New Brunswick District, by replacing a 120 ft. through Howe truss span with a 100 ft. through pony truss span.

Fredericton Station.—We are officially advised that a contract has been given Rhodes, Curry & Co., Amherst, N.S., to build a new station building at Fredericton, N.B., at an estimated cost of \$45,000, and not at a cost of \$500,000, as stated in daily papers. The building is expected to be completed by Sept. 1. It will be 108 x 28 ft. over all, with a second story in the center to provide offices for the Fredericton & Grand Lake Coal & Ry. Co's Manager. The building will be on concrete foundations, with Wallace sandstone for the plinth course, and tapestry brick external finish above the plinth, with abestos shingle roof. The interior will have pressed brick wainscoting, and oak trim and millwork. The central portion of the building will have a frontage of 25 ft. and a depth of 54 ft. over all. At the front of this area will be the operator's table, separated from the office by a partition, and at the rear of this office will be a hall connecting the men's and women's sections of the waiting room, and giving access to the men's and women's lavatories. Each of the two waiting rooms will be 24 x 28 ft. and will be provided with a separate entrance from the platform. The baggage and express rooms will be alongside the women's waiting room. At each end of the building there will be a shelter 24 x 18 ft.

Douglas Stream Bridge.—The Board of Railway Commissioners has approved plans for alterations to bridge 25.25, over Douglas Stream, St. Johns Subdivision, Quebec District.

The C.P.R. Chateau Frontenac, Quebec, opened a further section of the new addition recently. The main entrance is from St. Louis St., directly opposite Place d'Armes Square, through a large courtyard, and gives access to the offices, reception rooms, etc.

Lachute Subdivision Bridges.—The Board of Railway Commissioners has approved plans for the reconstruction of the following bridges on the Lachute Subdivision, Quebec District: 79.17 and 80.1, over Papineau Creek; and 97.6, over Trepanier Creek.

Ottawa Northern & Western Ry.—The Dominion Parliament has granted extensions of time of two years for the commencement of construction, and of five years for the completion of the projected extension from the present terminus at Waltham, Que., across the Ottawa River, to a junction with the C.P.R. at Chalk River, Ont.

Interprovincial & James Bay Ry.—The bridge under construction at mile 62.5 on this line, which is being built from near Kipawa to the Quinze River, Que., consists of a 23 ft. span on concrete abutments. The concrete work is included in the general contract, and the span is being transferred from another part of the C.P.R. lines, from a bridge which has been reconstructed.

In connection with press reports as to a projected extension of this branch line under construction to the Quinze River

into the Rouyn gold field, we are officially advised that Mr. Hillman, one of the company's engineers made a trip into the country recently, with the Quebec Minister of Lands, to obtain information. Nothing is being done by the company, either in making surveys or in preparing to start construction beyond the Quinze River.

Carberry Subdivision Third Track.—The Board of Railway Commissioners has authorized the building of a third track across road allowance at mile 63.6, Carberry Subdivision, Manitoba District.

Manitoba & North Western Ry.—The Dominion Parliament has granted extensions of time for two years, for the commencement, and of five years for the completion of the following projected lines: From Tuffnell, in Tp. 30, Range 10 or 11 west of 2nd Meridian, northwesterly, northerly and westerly, to a crossing of the North Saskatchewan River in Tp. 49, 50 or 51, Range 14 or 15, west of the 2nd Meridian, and thence westerly to Prince Albert, Sask. From Theodore, Tp. 28, Range 6 or 7, west 2nd Meridian, westerly to a junction with the C.P.R. Pheasant Hills Branch, between Govan and Lanigan, Sask.

The location surveys show the Tuffnell-Prince Albert line have a total length of 210 miles. A contract for grading the first 50 miles from Tuffnell is reported to have been let to Grant Smith & Co. and McDonnell Ltd., Vancouver. The Board of Railway Commissioners has approved of location plans for the line from Tuffnell, mile 0 to 94.26.

Saskatchewan District Locomotive Houses.—Tenders were recently received for the alteration and renewal of heating systems at the locomotive houses at Regina, Moose Jaw, Swift Current and Sutherland, Sask., and for a new system for three stalls at the locomotive house at Hardisty, Sask.

Leader Southeasterly Branch.—The Board of Railway Commissioners has approved of revised route map of the projected branch from Leader, Sask., southeasterly, between miles 44.65 and 49.5.

Pashley Northeasterly Branch.—The Board of Railways Commissioners has approved general location of the branch from Pashley, Alta., 15 miles east of Medicine Hat, northeasterly, between miles 28.77 and 32.49. This line will apparently connect with the branch from Leader southeasterly referred to above.

Bears Paw and Glenboro Washouts.—A press dispatch of July 3 stated that owing to excessive rains, seven miles of the main line, about 15 miles west of Calgary, Alta., had been washed out on July 1 and 2. Calgary papers of July 4 gave illustrations of the damage, which, however, did not bear out the original story. About one mile west of Bears-paw, a small creek rose 27 ft. and carried away part of the bank and the trestle supporting the track, and there were a number of small washouts at Glenbow and eastwards. These caused the holding up of 10 trains, 4 in Calgary and 6 in Banff. Repairs were effected, enabling the delayed trains to get through by the night of July 4, and on the following day traffic was reported to be running smoothly.

Electrification in Western Mountains.—Canadian Railway and Marine World

for July mentioned a Winnipeg press report which credited D. C. Coleman, Vice President, Western Lines, with having stated that surveys were being made of the water power available on the Columbia River, in British Columbia, in the vicinity of the main transcontinental line, and that if the traffic demands and financial conditions warrant it, a start might be made next year in electrifying sections of the main line through the mountains. We are advised that the latter portion of the report was incorrect, and electrification is not likely to be entered upon until traffic necessities demand it, and financial conditions will permit.

Newfoundland Railway Taken Over by the Government.

An act amending the Newfoundland Railway Acts, and another act confirming the agreements for the Humber River development project, were assented to by the Governor in the Newfoundland Legislature, July 11. The passing of these two measures is the culmination of negotiations which have been going on for several years past, between the Newfoundland Government and the Reid Newfoundland Co. The first of the acts settles all outstanding differences between the two in respect to the operation of the Newfoundland Ry. by the abandonment by both parties of all claims, and the payment to the Reid Newfoundland Co. by the Government of \$2,000,000 in 5½% bonds. As a result of this the Government enters into full possession of the railway property and will control and manage it, possibly by a commission. This includes the transinsular railway and its branches, the telegraph, the express company, the steamships and the St. John's drydock. The Reid Co. retains its lands, except 200,000 acres granted in 1904.

The second act confirms an agreement for the development of a water power on the Humber River, the establishment of a paper mill and other industries in connection therewith, which was made with the Newfoundland Power & Paper Co. Ltd., behind which is Sir W. G. Armstrong, Whitworth & Co. Ltd., of England. The company is to issue \$4,000,000 of bonds, half of which is being guaranteed by the Imperial Government at 5¼%, and will be secured by mortgage. A sinking fund is to be provided to clear off the bonds in 25 years. Half of the money will be expended in Newfoundland on the erection of buildings, etc., and the rest in England for machinery and other plant.

In presenting the matter to the Legislative Assembly on June 14, the then Premier, Sir Richard Squires, who has since resigned, stated that the Armstrong, Whitworth Co. would not touch the Humber development project without having the railway situation cleared up, hence the necessity for the agreement with the railway. The bills were subsequently introduced and were put through their various steps, with some minor amendments, by July 5.

The Northern Construction Co., of Vancouver, B.C., has, we are officially advised, a contract for the excavation of a canal, as a part of the Humber River development.

Export Rates from Southern Ontario to Montreal and New York.

The Canadian Pacific and Canadian National Railways complained recently to the Board of Railway Commissioners against the Michigan Central Rd., Toronto, Hamilton & Buffalo Ry., Pere Marquette Ry. and Wabash Rd., tariffs naming export rates from Southern Ontario territory to New York and other Atlantic ports. For many years prior to 1905 the export rates from Chicago, Detroit, Port Huron and intermediate points to Montreal were 2c. per 100 lb. lower than to New York, but from Southern Ontario points the export rates were the same to Montreal as to New York. After a hearing in 1905, the Board of Railway Commissioners issued order 586 prescribing that from Southern Ontario points the export rates to Montreal were to be as much below the export rates to New York as the export rates from Chicago, Detroit, Port Huron and intermediate points to Montreal were below the export rates from such points to New York. The order also prescribed that the ordinary summer class and commodity rates to Montreal were not to be exceeded on export traffic. Shortly after the order was issued, the railways against which the recent complaint was launched issued special tariffs naming export rates to New York, Philadelphia, Baltimore and Boston to meet the reduced rates to Montreal, such lower rates to be in effect only during the portion of the year when export business is possible through Montreal harbor—i.e., the New York export rate was reduced to the Montreal export rate during the summer months, on traffic from Southern Ontario points. This was done until 1917, in which year, due to the exigencies of war, the roads complained against did not see fit to reduce their export rates in the summer to meet the Montreal rate. Reductions were not made again until 1921, and it was because of these reductions that the complaint was launched by the C.P.R. and C.N.R.

Answering the complaint, the T.H. & B. Ry. submitted that the Board's order naming a lower export rate to Montreal than to New York fixed maximum rates only, and not minimum rates, and claimed that it should not be debarred from making rates to meet any competition existing. It pointed out that to take away its right to meet competition would seriously affect its traffic. The other respondent roads argued along similar lines. The C.P.R. and C.N.R. claimed that the other roads had violated the Board's order, for the reason that they put in, during the summer, the same export rate to New York as to Montreal. They argued that if the C.P.R. and the C.N.R. obeyed the order, while the Board allowed the other roads to keep the same rates in effect to New York as to Montreal, the C.P.R. and C.N.R. would have to put in a still lower rate to Montreal, which would, presumably, be again met by the other lines, and so on until the rates got to practically nothing. High insurance rates on the St. Lawrence route, and the smaller number of sailings from Montreal than from New York, were also cited in the complaint. The Canadian Manufacturers' Association, as an interested party, while expressing the opinion that Canadian ports should be favored, as much as possible, for export trade, was in favor of the respondents being allowed to continue to meet the Montreal rate during the summer months.

In a report prepared by W. E. Campbell, the Board's Chief Traffic Officer, and adopted by the Board as its judgment in the matter, he called attention to a report made to the Board by the late Jas. Hardwell, formerly Chief Traffic Officer, in which it was pointed out that before order 586 was passed, the situation had been considered as a purely competitive one. Mr. Campbell considered that the order did not prescribe minimum rates; it was applicable only to normal rates, and not to special rates, which could be put in to meet competitive conditions. He stated that at the time the Board drafted the order cognizance was not given to the possibility of a competitive condition arising, but, it having arisen, he was satisfied that the export rates from Southern Ontario points may be properly be considered as competitive, and that, therefore, the roads complained against could continue to meet the Montreal export rates with those contained in the tariffs on which the complaint was based.

Rules for Pilots on Locomotives.

The Board of Railway Commissioners passed general order 379, April 4, as follows:—Re general order 289, March 24, 1920, prescribing rules relative to the inspection of locomotives and tenders attached thereto: Upon reading the Chief Operating Officer's report and recommendation, the Board orders that the rules be amended by striking out the last paragraph and inserting in lieu thereof the following: "Pilots.—All locomotives in road service, excepting engines operating in strictly international service, on the lines of the Boston & Maine, Maine Central, Rutland, New York Central, and Great Northern Railway companies, shall be equipped with pilots projecting not less than 24½ in. from the back of the upright which the pilot is built on, to the nose of the pilots; the minimum height from the rail to be 3 in.; and the maximum 6 in. Pilots shall be securely attached, adequately braced, and maintained in a safe and suitable condition for service. All such locomotives shall be fully equipped by Dec. 31, 1925."

The locomotive booster, which was described in Canadian Railway and Marine World at the time of its introduction on U.S. railways, and also in connection with tests of booster-equipped locomotives on the Timiskaming & Northern Ontario Ry., is to be tried in England. The first application will be on an Atlantic type locomotive built by the London & North Eastern Ry. some years ago, in connection with which the Railway Gazette (London) says: "These Atlantic type locomotives are still relied upon for working the bulk of the express passenger traffic on the Great Northern section, and they give extraordinarily good results, the boiler and grate being very amply proportioned, whilst the cylinder dimensions are moderate. At the same time the adhesion weight on the 4-coupled wheels is necessarily restricted, and in hauling the very heavy passenger trains up the bank from King's Cross to Finsbury Park, these locomotives are at times somewhat at a disadvantage in dealing with the loads. When weather conditions are adverse, this difficulty naturally increases, but it is to be anticipated that the addition of the booster will overcome the difficulty."

Transcontinental Air Mail Service.

Last year the United States aeroplane mail service flew over 2,000,000 miles without a fatal accident to the aviators. The U.S. Postmaster General has announced that in a few weeks an aerial mail service will make the direct flight between New York and San Francisco in 28 hours. The air mail will start at one end of this flight at noon of one day and by sundown of the next day will deliver the mail at the other side of the continent. The distance is roughly given as 3,000 miles.

The night flying on this trip will be done by an aviator who will leave Chicago in the evening and descend at Cheyenne, Wyoming, at dawn. The entire line of the journey will be marked by lights; at Chicago, Iowa City, Omaha, North Platte and Cheyenne will be great beacons with 600,000,000 candle power. At intervening points, 25 miles apart, will be landing places and search lights, and every three miles between these points lesser lights. From high in air, on clear nights, a path of light will mark the entire line of the night flight. The machine itself will have two powerful searchlights and a wireless service. It is believed that every precaution has been taken for safe and rapid night flying.

Not so long ago—many remember it—it took, not hours, but weeks, to carry mail across the continent. Then the railway came and made the trip within the week. Soon the aeroplane will be doing it in a day.

Canadian National Railways' Insurance.

Senator Dandurand gave the following information in the Senate recently, in answer to questions by Senator Casgrain:—The Canadian National Ry., excepting former government lines, and the Canadian Government Merchant Marine, were insured last year for \$327,046,561, the premiums paid being \$2,637,800. The fire insurance was placed with Western Assurance Co., Union Assurance Co., Lloyd's, London, Cornhill Insurance Co., London, Globe & Rutgers, Alliance Assurance Co., Motor Union Insurance Co., London Guarantee & Accident Co., London & Lancashire Fire, Union Society of Canton, United British Insurance Co. The marine insurance was placed with various English insurance companies, and a small percentage with United States companies. The business was placed through regular brokers, Willis, Faber & Co., of Canada; Hare & MacKenzie, Ltd.; Dale & Co., and Toronto Insurance & Vessel Agency. The Government has no information as to who are the directors of those companies. It is the intention of the Canadian National Ry. and the Canadian Government Merchant Marine to create their own cash insurance reserves, for the adequate protection of all insurable railway and marine property.

U.S. President Harding, speaking at Kansas City, Mo., recently, advocated consolidation of U.S. railways into a smaller number of systems, and declared that government ownership of them would be a "colossal blunder."

Terminal Grain Co. is reported to have been organized at Vancouver, B. C., with \$100,000 authorized capital and A. H. Gale as President, to build an elevator there. It is stated that construction of the first unit will be commenced shortly.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alma & Jonquiere Ry.—The Board of Railway Commissioners has authorized the connection of the C. N. Rys. with the Alma & Jonquiere Ry. near Hebertville, Que. (July, pg. 320.)

The Atlantic, Quebec & Western Ry. and the Quebec Oriental Ry. operated by one management, extend from Matapedia, on the Intercolonial Ry., to Gaspé, Que., 202 miles. New ties are being put in at various points, a press report stating that it is intended to put in 100,000 this year. Additional ballasting is being done between Matapedia and Escuminac, 27 miles.

Burrard Inlet Tunnel and Bridge Co.—The Board of Railway Commissioners was asked, at its sitting in Vancouver, B.C., June 29, to approve amended plans for the proposed bridge across the second narrows of Burrard Inlet, Vancouver, and for leave, in connection with the southern approach to erect an overhead crossing for a roadway, and to install a single track connection with the C.P.R. at station 658,300 on the railway between mile post 124 and 125.

In connection with the resubmission to the ratepayers of North Vancouver City, and North Vancouver District of bylaws to raise funds to buy \$100,000 of stock in the company, and to guarantee the payment of \$257,000 of the company's debentures, the Mayor of North Vancouver City stated that the changes made in the plans provided for the substitution of steel for a large section of the wooden piling originally proposed, and the substitution of a bascule span for the originally proposed old type of swing span. These changes would add approximately \$200,000 to the cost, which would be provided for by the grants of \$100,000 each from the Dominion and the British Columbia Governments. The necessary alterations had been made in the agreements with the contractors—the Northern Construction Co., and Major General J. W. Stewart. The reason for this second vote was to meet some technical demands of bond dealers, and did not involve the ratepayers in any way financially beyond the bylaws passed in Dec. 1922. It was stated that construction was expected to be started within 30 days after ratification of the bylaws, which were approved by the ratepayers on July 4.

A special meeting of shareholders, who in the main represent the municipalities to be served by the bridge, was called to be held July 16, to authorize the directors to issue \$630,000 of series A bonds for construction. (July, pg. 320.)

Calgary & Fernie Ry.—The Dominion Parliament has extended for two years the time within which the projected line from Calgary, Alta., to Fernie, B.C., may be commenced. When the matter was before the House of Commons it was stated that the construction of the railway is a necessary part of an agreement with an English syndicate which is taking over the coal mines, owned by those interested in the charter. (Jan. pg. 8.)

Canadian Niagara Bridge Co.—The Dominion Parliament has authorized the starting of work on the projected bridge across the Niagara River within two years after its building has been approved by the Executive of the United States, the bridge to be completed within five years. The C.P.R. is interested in this bridge through the Toronto, Hamilton

and Buffalo Ry. It is said that the construction will be done by the Michigan Central Rd. (March, pg. 118.)

Edmonton, Dunvegan and British Columbia Ry.—A press report states that it is expected that an early decision will be reached with regard to the starting of construction on the projected extension of the Grand Prairie branch for 15 miles westerly. (March, pg. 320.)

Esquimalt and Nanaimo Ry.—We are officially advised that it has been decided to build a temporary boiler house at Wellington, Vancouver Island, B.C., to replace the buildings burned some months ago, pending a definite decision as to permanent buildings to be built. (July, pg. 320.)

Essex Terminal Ry.—The Dominion Parliament has granted an extension of two years for the commencement of construction of the projected railway from near Ojibway to Pelton, Ont., the line to be completed within five years from the passing of the act. (March, pg. 119.)

Michigan Central Rd.—A press report states that work has been started by the Dominion Construction Co., Toronto, on the extension of the freight yards at St. Thomas, Ont. A construction track has been laid, and the steam shovel work is in progress. (July, pg. 320.)

Midland Ry. of Manitoba.—A press report states that a permit has been taken out for alterations at the company's buildings on Ross Ave., Winnipeg, at an estimated cost of \$20,000.

Montreal, Joliette and Transcontinental Ry.—The Dominion has granted an extension of five years for the construction of this projected railway from Maisonneuve, Que., northerly to Joliette, thence northerly and northwesterly to St. Michel des Saints, and thence to Parent, on the National Transcontinental Ry., 180 miles. (March, pg. 119. See also Montreal to National Transcontinental Ry., June, pg. 279.)

North Shore Ry.—We are officially advised that this railway, running from Adamsville Jct., N.B., on the Intercolonial Ry., via Beersville, to Coalville, 15 miles, has been taken over by the Beaver Coal & Ry. Co. The line has been repaired by putting in new ties throughout. The company is reopening the collieries at Beersville, and was expecting to begin making shipments during July (Jan., pg. 9.)

Quebec Central Ry.—The Dominion Parliament has authorized the company to continue the construction of its Chaudiere extension by diverting and rebuilding the portion of the present line from Beauce Jct. to Beauceville, and building a line from Beauceville to the Famine River and thence to Langeville, and along the St. John River watershed, to a junction with the Temiscouata Ry. at Cabano, about 140 miles; construction is to be started within two years and completed within five years. An extension of time has also been granted for two years for starting construction and of five years for the completion of a projected line from Leeds to a junction with the Scott's-Quebec Bridge line near St. Lambert, 35 miles. (March, pg. 119.)

Timiskaming & Northern Ontario Ry.—The Board of Railway Commissioners has approved of location plans for the first nine miles of the line, being built by the T. & N. O. Ry. Commission, under

the Nipissing Central Ry. charter, from Swastika to Larder Lake. This is the line for which Sinclair Construction Co. has a contract.

A contract has been let to Jeffrey & Stevens, North Bay, Ont., for the erection of an addition to the Commission's office buildings at North Bay, at an estimated cost of \$20,000. (July, pg. 321.)

Vancouver Harbor Railway.—We are officially advised that a contract has been let to Leith, Murry & Co., for rails, fastenings, switches, frogs, switch stands, etc., for the Ballantyne pier section of the terminal railway under construction by Vancouver Harbor Commission. (July, pg. 321.)

The World's Greatest Highway.

Sir George McLaren Brown, European General Manager, C.P.R., has an article in the Royal Colonial Institute's journal, United Empire, under the title mentioned above, in which he says: "Even more than being an expression, a personification, a materialisation of Canada, the Canadian Pacific Ry. is a typical development of the whole spirit of true Imperialism. . . . It has become the imperial highway, linking the old world with the new by land and sea, bridging two oceans and linking four continents." He goes on to show how valuable was this imperial highway to the empire during the war. It was principally through its ocean services that the C.P.R. came into direct touch with the war. On the outbreak of hostilities the Admiralty requisitioned the company's principal ships on both the Atlantic and the Pacific for service as armed cruisers and transports. C.P.R. ships carried over a million troops and passengers on war business between Aug., 1914, and Oct., 1919. They carried over four million tons of cargo and munitions of war and many thousands of horses and mules. Fifteen ships of a total tonnage exceeding 126,000 tons, were lost by enemy action. He tells some stirring stories of the adventures of some of the ships during war service; and concludes his survey of the company's work by a reference to its Colonization and Development Department.

Locomotive Men's Eye Tests.

The Board of Railway Commissioners passed general order 378, April 13, as follows:—Re general order 94, July 24, 1912, prescribing Uniform Rules Governing the Determination of Visual Acuity, Color Perception, and Hearing of Railway Employees: Upon hearing the matter at Ottawa, Nov. 21, 1922, the Canadian Pacific Ry. and the Brotherhood of Locomotive Engineers being represented, and what was alleged, the Board orders that the said rules be amended by striking out the re-examination statement, under the heading "Standards of Visual Acuity," "Class B," and substituting in lieu thereof the following, viz.:—"20-30 combined, not less than 20-50 in either eye without glasses. When combined vision without glasses is not less than 20-50, and either eye not less than 20-70, or nil, and by the aid of glasses combined vision can be brought to not less than 20-30, enginemen must wear glasses. See Rules 8, 9, 10, 13, 15, 17, and 18."

That all the railway companies subject to the Board's jurisdiction reprint their general instructions, quoting general order 94 as amended herein.

Automatic Cut-Off Control for Locomotives.

The Cleveland, Cincinnati, Chicago & St. Louis Ry. has in service an Atlantic type passenger locomotive, and a mikado type freight locomotive, equipped with a device to automatically adjust cut-off, which has been constructed and placed in operation on the strength of reasoning advanced by the company's mechanical engineer, E. S. Pearce, to the effect that there is a certain constant back pressure for each locomotive at which it will develop its maximum operating efficiency. The device operates, on the principle that as locomotive speed changes, and tends to change back pressure from the predetermined most desirable quantity, cut-off adjustment is automatically made and the predetermined back pressure retained. While the function of automatic cut-off control is the same in general principle as that of a governor applied to a steam engine, it is evident that, on account of the greatly varying speeds at which a locomotive is required to operate, there was no possibility of governing locomotive cut-off so as to maintain constant speed, as on a stationary steam engine, and despite the desirability, recognized for years, of some device which would automatically regulate valve travel on locomotives, so as to cause the greatest efficiency to be maintained at all speeds, no progress was made with such a device for the reason that nobody knew of anything of which to make the cut-off a function in operation; that is, because no suitable principle could be found upon which to base the cut-off control.

The reasoning that resulted in the conclusion that cut-off is properly a function of cylinder back pressure, led to some experiments which promise to have far reaching results. The freight locomotive on which the automatic device is applied was used in these experiments, and demonstrated, in what is claimed to be a conclusive manner, that automatic cut-off control will be the means of saving large sums in locomotive operation. On tests with tonnage trains, when cut-off was manually controlled by the reverse lever, with the best locomotive men available handling the locomotive, the trains could not be taken nearly as far up heavy grades, without stalling, as when cut-off was controlled automatically, so as to keep cylinder back pressure at a quantity which previous trials had determined as that at which the locomotive would give its greatest output. The test reports state that the tendency of the locomotive men in handling the reverse lever was to lengthen the cut-off much too soon; they wanted to get over the hill before they came to it, with consequent large wastes of steam.

On the C.C.C. & St.L. mikado locomotive equipped with the automatic cut-off control device, the controller mechanism is contained in a box suspended on the right side of the locomotive, with its top flush with the running board. The mechanism is connected with the exhaust passage at both ends of each cylinder, the pressure lines passing through a pressure retaining valve and unflow fitting, the latter providing a uniform indication of uniform back pressure, without pulsations. Connection is also made with the main reservoir. In starting a train, the reverse lever (a non-creeping power reverse gear responding to small adjustments is used) is put in extreme forward position and the throttle

opened wide. As soon as steam chest pressure exceeds main reservoir pressure, the automatic equipment begins to operate. With increasing speed, back pressure tends to increase until the predetermined most favorable back pressure is reached at about 10 m.p.h. As speed still further increases, back pressure tends to pass this predetermined mark, upon which the mechanism begins to shorten the cut-off, and as speed increases still more the cut-off is further decreased. If the throttle be closed to such a degree that steam chest pressure becomes less than main reservoir pressure, the automatic equipment becomes inoperative, and the locomotive is under manual control, but if the throttle be opened again, the automatic equipment cuts in again. When a grade is encountered, and speed reduces, back pressure begins to drop, and the automatic mechanism will then lengthen cut-off until the reverse lever is again in the corner if necessary.

It is stated that tests have shown a saving of 30% in steam consumption with this device, as against manual control of reverse lever positions, due to the fact that no locomotive man is a good enough guesser to know what combination of speed, throttle opening and reverse lever position will give him the most efficient operation of his locomotive, while the regulation of cut-off to conform to predetermined back pressure will give most efficient operation automatically. It is reported that the C.C.C. & St.L. will equip some 19 locomotives with the apparatus. The mikado now equipped is in regular service, and performing much more efficiently than when the reverse lever was moved in accordance with locomotive men's judgment. In view of the potentially large saving which may be made, it is more than possible that the experiments and results to date are paving the way for the universal application of the most important refinement in locomotive practice since the advent of the superheater.

The Railway Crafts' Organization.

The 2,000,000 men who are employed on United States railways may be divided roughly into three groups. Train service brotherhoods with a membership of about 500,000 locomotive men, firemen, trainmen, switchmen and conductors, constitute the first group. Four of these unions are outside of the American Federation of Labor. Only a small number of switchmen, numbering about 10,000, still remain in the Federation. These are the men that actually take the trains out. They have to do the moving of steam and electric transport.

The second group is the shopmen, known as the Federated Shop Crafts, but more correctly as the unions composing the Railway Employees' Department of the American Federation of Labor. Six international unions of that Federation compose these unions of mechanics. They construct and repair the locomotives, passenger and freight cars, man the locomotive houses and shops and couple up and inspect trains of cars before they are sent out of the terminals.

This is the group which has been on strike. These six international unions are working as an industrial unit, through

their department with headquarters in Chicago. The strike has been carried on by these unions, the six international presidents acting through B. M. Jewell as spokesman. The unions involved, in the order of their importance, are, the Brotherhood of Railway Carmen, International Association of Machinists, Brotherhood of Boilermakers, Brotherhood of Electrical Workers, Brotherhood of Blacksmiths, and Sheet Metal Workers' International Alliance.

The third group of the railway employees is the largest and the least compact. Its numerical strength is estimated variously from 750,000 to 1,000,000. It is composed of the two largest groups of semi-skilled and unskilled workers, the trackmen, trestle builders and shop laborers in the United Brotherhood of Maintenance of Way Employees, which claims over 300,000 workers, and the still larger union known as the Brotherhood of Railway Clerks, Freight Handlers and Station Employees. These compose the bulk of the miscellaneous groups. In addition, there is the Order of Railroad Telegraphers, the Brotherhood of Railroad Signalmen, two small but skilled crafts, the Brotherhood of Stationary Firemen and oilers, composed of men working in the shops and locomotive houses, and two very small groups, the Brotherhood of Railroad Patrolmen and the Order of Sleeping Car Conductors.

Fourteen of the 18 railway labor unions are in the American Federation of Labor. Six of these have solidified and simplified their organization by pooling their strength through the shop crafts organization. The remaining eight are in the closest of communication with the mechanical crafts through the railway employees' department, in which they are also represented.—Bloomfield's Labor Digest.

While the foregoing article presumes only to apply to the U.S., it also has its application to Canada, inasmuch as all the unions mentioned herein (with one exception, that of the Brotherhood of Railroad Patrolmen) have local branches in Canada. In Canada, however, there is also an organization, known as the Canadian Brotherhood of Railroad Employees, which embraces in its membership such railway employees as clerks of all departments, freight handlers, foremen, checkers and porters, car checkers, baggage masters, parlor, sleeping and dining car service employees, locomotive wipers, ash-pit men, crane men, laborers and express company employees.—Labor Gazette.

Hydro Electric Power Commission of Ontario.—Shortly after the recent Ontario general election, Col. D. Carmichael, who was a member of the Drury Government without portfolio, and was appointed by it as a member of the Commission, resigned voluntarily. J. G. Ramsden, of Toronto, who was appointed a member of the Commission by the Drury Government a few months ago, was asked to resign by Premier Ferguson a few days after the latter assumed office, but refused to do so, and was therefore dismissed. The Ferguson Government has appointed J. R. Cooke, M.L.A., for North Hastings, as a member of the Commission, and has asked the interested municipalities to submit names of persons from which the Government may select a member of the Commission to represent the municipalities. Sir Adam Beck, who is a member of the Ferguson Government without portfolio, remains as Chairman of the Commission.

Canadian National Railways Construction, Betterments, Etc.

Lunenburg Subdivision.—The Board of Railway Commissioners has authorized the rebuilding of the bridge carrying the highway over the railway at mile 6.2, Lunenburg Subdivision, N.S., on the old Halifax and Southwestern Ry. This covers the replacement of a timber trestle built about 20 years ago with a concrete substructure, on which will be placed a 108 ft. lattice girder span, removed from another position. The work is being done by the railways' forces.

Minto Coal Mines Spur.—Tenders will be received to Aug. 10, for the construction of a spur of about 5 miles at Hardwood Ridge, Sunbury County, N.B. Hardwood Ridge is on the portion of the old National Transcontinental Ry., main line, now included in Chipman Subdivision, Edmundston Division, Atlantic Region, and is 54.55 miles west of Pacific Jct.; 8.74 miles west of Chipman; and 1.14 miles east of Cantor. This spur is to give connection with the Minto coal mines, from which the C.N.R. expects to use about 75,000 tons this year, purchases having been made from Minto Coal Co., Welton and Henderson, Rothel Coal Co., Miramichi Lumber Co., and Harvey Welton.

Mimico-Port Credit Third Track.—The C. N. Rys. are building a third track south of the present double track main line and on the same right of way, from the end of stub track just west of Mimico, Ont., 7.98 miles west of Toronto union station, to connect with the siding just east of Port Credit, 11.74 miles west of Toronto union station, a distance of 3.76 miles, on the Oakville Subdivision, London Division, Southwestern Ontario District, Central Region. The work was commenced June 1, and is being done by railway forces, under the direction of the staff of Major F. L. C. Bond, Regional Chief Engineer, Toronto. Released 100 lb. steel is being used. The object is to relieve congestion by taking eastbound freight trains off the main line east of Port Credit. There is a 4-track line from Toronto to Mimico yard, but with only two tracks from Mimico west, the heavy traffic which has been handled throughout this year has caused congestion and delay west of Mimico. The amount of traffic passing over the Oakville Subdivision, which extends from Toronto to Hamilton, 38.71 miles, is indicated by the following figures, which show total train movements between those cities, and which are the daily average of a 2-week period during July; eastbound passenger trains, 29; westbound passenger trains, 37; eastbound freight trains, 32; westbound freight trains, 37; average no. of freight cars handled daily in both directions, 3,008; total daily train movement, 135. These figures include C.P.R. movements, the C.P.R. having running rights over the C.N.R. line from Toronto to Hamilton. We are officially advised that it is expected to have the third track in operation before the end of the present construction season.

Burlington Third Track.—Work was started, May 14, on building a second track between Burlington Jct. and Burlington canal, 2.8 miles, by the railways' forces. The new track is laid with 100 lb. rails and is about ready for operation.

Hamilton Station.—C. G. Bowker, General Manager, Central Region, and F. L. C. Bond, Chief Engineer, Central Region, met Hamilton, Ont., city repre-

sentatives there, July 17, and discussed matters in connection with the building of a new station, its location, etc., which is to be gone into further between C.N.R. and city engineers.

Midland Elevator.—Fegles Construction Co., Fort William, Ont., has been given a contract for building a 2,250,000 bush. reinforced concrete storage annex to Tiffin Elevator no. 2, at Midland, Ont.

Longlac-Nakina Cutoff.—Work is proceeding rapidly on the construction of the cutoff between Longlac, on the Canadian Northern Ry., and Nakina, Ont., on the National Transcontinental Ry., by the contractors, Foley Bros. & Hervey.

Kashabowie Subdivision Second Track.—The Board of Railway Commissioners has authorized the opening for traffic of the second track on the Kashabowie Subdivision, west of Port Arthur, mile 11.1 to 13.2.

A contract has been let to Dutton & Mannix, Winnipeg, for clearing, grading and culvert work for a second track on the main line, from mile 32 to 35.65, between Mokomon and Rowan, Kashabowie Subdivision.

Portage la Prairie Yard.—Portage la Prairie, Man., City Council is reported to have passed a bylaw transferring Trenton Ave. to the C.N.R. for right of way for additional yard tracks. In return a new road is to be opened, and a level crossing at Main St. will be eliminated.

Dauphin Freight Shed.—Tenders were received to July 23 for the erection of a freight shed at Dauphin, Man.

Hudson Bay Ry.—The Dominion Parliament, at its recent session, provided \$350,000 for construction work on this line. It was stated that the money will be expended on bringing part of the line up to standard.

Saskatchewan District Culverts.—Tenders were received recently for building a subway at Fairford St., Moose Jaw; for reinforced concrete culverts at mile 86.1, Avonlea Subdivision; and mile 15.1, Carlyle Subdivision; and a concrete culvert and fill at mile 214.3, Manitoba Subdivision.

Saskatchewan District Ballast Pits.—Tenders were received recently for stripping ballast pits on Wawanesa, Maryfield, Craik, Langham, Conquest and Rosetown Subdivisions.

Regina Water Supply.—Tenders were received recently for building an earth dam and supplementary works on Boggy Creek, near Regina, Sask., and for a pipe line from the dam to North Regina yards. Some details of this work were given in Canadian Railway and Marine World for July, pg. 344.

Kipling and Avonlea Water Supplies.—A contract has been let to Dutton & Wickstrand, Winnipeg, for building a dam, and to C. Glasser & Sons, Winnipeg, for laying of a pipe line therefrom for a water supply at Avonlea, Sask.; to Dutton & Mannix, Winnipeg, for a dam, and to Thomas Jackson & Sons for a pipe line therefrom for a water supply at Kipling, Sask.

Canadian Northern-G. T. P. R. Connections.—The Board of Railway Commissioners has authorized the opening for traffic of the south leg of Y at the junction of the G. T. P. Ry. with the C. N. Ry. on the Battle River, Sask., Subdivision; and of the connection between the two lines at Camrose, Alta.

Edmonton Subway, Etc.—The Board of Railway Commissioners has, according to an Edmonton, Alta., press report of July 12, decided to issue an order directing the C.N.R. to file, within six months, plans showing railway facilities and subways proposed to be built at Edmonton. The plans, it is said, will cover the proposed new station, subways at Namayo Ave., 101st and 124th Streets and other works, and will involve the closing of some streets.

Ansell to Bickerdike Revision.—The Board of Railway Commissioners has authorized the opening for traffic of the revised line from Ansell to Bickerdike, Alta. This work has been done on the 5 miles between the points named, west of Edson.

Peace River Line.—Sir Henry Thornton, President, is reported to have said, on arriving at Vancouver recently, from Prince Rupert, B.C., that the C.N.R. will build a line into the Peace River district. He could not say at what point the line would leave the main line, or what route would be followed, as these matters would have to be decided upon on the reports of the engineers who would be sent out during the summer. The supplementary estimates passed at the Dominion Parliament's recent session provide \$50,000 for surveys and investigations for a railway into the Peace River country.

The construction of a line in Northern Alberta to tap the coal areas there was suggested in the final report of the Senate Committee which has been investigating the fuel supply. C. N. Ry. maps show a projected line northerly from between Errington and Brule, and press reports for some time past have credited railway engineers with being active in this district.

Bulkley Subdivision Improvements.—A contract has been let to S. S. Magoffin & Co., Prince Rupert, B.C., for building a reinforced concrete culvert and a partial fill at mile 1576, Bulkley Subdivision. The work was described in Canadian Railway and Marine World for July, pg. 344.

Vancouver Station Grounds.—We are advised, in connection with the arrangement between the C.N.R. and Vancouver City Council, as to the laying out of the station grounds there, that in January, during Sir Henry Thornton's visit, the filling of an area in front of the station was authorized to enable the city council to lay out a park area. The material for the filling in has been delivered and the laying out of the area is being gone on with, and is expected to be completed this year. While there is some paving and sewer construction to be undertaken in front of the station, on the basis of equality in respect of cost between the C.N.R. and the city, it has not been decided whether this will be accomplished this year, negotiations not having been closed. In regard to the fill in connection with the continuation of Terminal Ave. through the railway's False Creek property, it is still unsettled as to when it will be undertaken. (July, pg. 343.)

The Canadian National Rys. in order to accommodate passenger traffic from Victoria Beach and Grand Beach to Winnipeg, on July 2, had to hurriedly fit up eight box cars with rough seats.

Canadian Railway AND Marine World

Founded in 1896 by Acton Burrows.

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transportation
Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

AUBREY ACTON BURROWS, Business Manager.

Assistant Editors, John Keir, Donald F. Keir and
Edwin Winfield.

United States Business Representative,
A. Fenton Walker, 143 Liberty St., New York.

Member of
Associated Business Papers, Audit Bureau of Cir-
culations, Business Newspapers Association of
Canada, Canadian National Newspapers and
Periodicals Association, Canadian Press Associa-
tion.

Authorized by the Canadian Postmaster General
for transmission as second class matter.

SUBSCRIPTION PRICE, including postage,
Canada, United Kingdom, most other British Pos-
session, (except Australia), and to Mexico, \$2 a
year. Extra postage to United States, 50c a year;
to other foreign countries, except Mexico, \$1.50
a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or
post office money order. If remittance is made
by cheque, 15 cents should be added to cover cost
of collection, unless cheque is payable at par in
Toronto or Montreal.

ADVERTISING RATES furnished on application.

ADVERTISING COPY must reach the publishers
by the 10th of the month preceding the date of
the issue in which it is to appear.

TORONTO, CANADA. AUGUST, 1923.

Locomotives Running Through Be- tween Montreal and Toronto.

It is the Canadian National Rys. man-
agement's intention to operate the six
new 6000 class mountain type passenger
locomotives, assigned to the Central Re-
gion, one of which was described in Cana-
dian Railway and Marine World for July,
in passenger service from Montreal
through to Toronto and from Toronto
through to Montreal, a run of 334.04
miles. Heretofore, in passenger service
between the two cities, locomotives have
been changed at Brockville, 125.64 miles
from Montreal, and Belleville, 208.40
miles from Montreal. When the moun-
tain type locomotives are placed in regu-
lar passenger service between Montreal
and Toronto, crews will probably be
changed at a central point between
Brockville and Belleville, such as King-
ston Jct.

This move by the C.N.R. management
will apply in Canada an operating method
adopted in the U.S. within the past
few years, as several lines in that coun-
try are operating passenger locomotives
over what was formerly two or three
locomotive divisions. This seems but a
natural consequence of the improvements
made in locomotive design, and of the
additional equipment now being applied
to locomotives, which makes for more
efficient performance and which lightens
the firemen's work, notably the automatic
stoker, power grate shakers, brick arches
and feed water heaters. U.S. roads
which are operating their passenger loco-
motive over two and three division runs
report that they are not experiencing
the delay from dirty fires and other
troubles which could have naturally been
anticipated with older type locomotives,
and there seems to be no reason why C.
N.R. should not be successful in operat-
ing the mountain type locomotives over
what has heretofore been a three division
run.

There is no doubt that large economies
are to be secured; in addition to having
an equal transportation service perform-
ed on a much smaller capital investment
for locomotives, the fuel saving involved
through not having to get so many loco-
motives ready for the road, plus numerous
incidental economies, should be consider-
able. Severe weather conditions might
impose obstacles to such operation, but
if three or four months of success with
the long runs can be experienced before
severe weather comes, such a handicap
can be faced with much more assurance
owing to the operating staff generally,
and the locomotive crews in particular,
having become familiar with the new
conditions.

C.P.R. Shopmen's Red Revolu- tionism.

The resolution passed by the Montreal
council of the shopmen's C.P.R. feder-
ation, calling upon the Government to
remove troops from the Sydney, N.S.,
strike area and threatening to strike un-
less the demand was complied with, as
mentioned elsewhere in this issue, was
entirely unwarranted and objectionable
from every viewpoint. Troops were
sent to Sydney, not to intimidate strik-
ers, as has been claimed, but to preserve
law and order, to prevent sabotage, in-
stances of which were not lacking, and
to afford protection to employees who
wished to continue work. The people

have a right to expect law and order to
be maintained, and they look to the Gov-
ernment to see that it is, in cases where
municipal authority is evidently unable
to do so; for that reason, the Govern-
ment would have shown itself incapable
and unworthy of office unless it had
taken steps to ensure that law and order
would be maintained and that destruc-
tion of property would be prevented. Any
man who wants to work at wages agreed
upon with his employer has the right to
do so, and if some of his fellows see fit
to strike it does not affect that right by
one iota, and it is a public duty to see
that it is not interfered with and that
the man who attempts to exercise it is
not subjected to interference of violence.
The miners' strike in the Sydney area
was an outlaw one, led by acknowledged
reds and in defiance of agreements leg-
ally entered into, it was not sanctioned
by the miners union's general officers,
but was opposed by them, and conse-
quently the action of the federation's
Montreal council in passing the resolu-
tion is absolutely indefensible, and tends
to make one believe that the council's
officers do not understand that agree-
ments confer obligations as well as
rights.

The Government's action in sending
militia to Sydney was eminently proper.
While the framers of the resolution re-
ferred to sought to make it appear that
the move was an autocratic attempt to
interfere with personal liberty, and make
men work against their wills, by the use
of military force, the fact of the matter
is that the Government's action was
taken to guarantee personal liberty and
to protect property, in a strike led by
radicals of dangerous tendency, in de-
fiance of agreements solemnly entered
into. If the resolution accurately ex-
presses the feelings of the railway em-
ployes in whose names it was issued, it
would naturally be expected that they
would lose no time in openly denouncing
the institutions of this free country in
affiliating with Moscow; if not, the coun-
cil which framed it should rescind it, pro-
claiming its recognition of the sanctity
of agreements, and the futility of outlaw
strikes in defiance of union officers, and
commend the Government for promptly
taking measures to protect the liberty of
Canadian citizens, and the property of
industrial enterprises which must face
world-wide competition to furnish em-
ployment.

Political Patronage in Newfoundland.

The following extraordinary advertise-
ment has been published in Newfound-
land papers: "Sir W. G. Armstrong,
Whitworth & Co., Ltd. notifies all men
seeking work at the Humber develop-
ment that they can only be engaged
through the representatives of their dis-
tricts, who will be allotted a proportion
of passes by the company's employment
agent, according to the total require-
ments for labor at the works. Men go-
ing forward without the regular employ-
ment passes will not be engaged, and are
certain to suffer unnecessary hardship
and expense." This, of course, means
that political supporters of the members
for the different districts and their pro-
teges will receive preference for employ-
ment. It is to be hoped that with the
passing of the Reid Newfoundland Rail-
way under the Colony's control, a similar
policy in regard to the employment of
men for its operation, etc., will not be
pursued.

Politicians' Shortsightedness.

Grant Hall, Vice President, C.P.R., can look back over the past 25 years with a good deal of satisfaction. The Railway and Shipping World, now Canadian Railway and Marine World, announced in its Aug. 1898 issue, that he had been "removed" from the mechanical foremanship of the Intercolonial Ry. at Moncton, N.B., and had gone to Montreal. The petty politicians who secured his removal little knew what a good turn they were doing him, in compelling him to seek employment on a privately owned road, where merit counts and on which his progress, always upward, has been uninterrupted.

Canadian National Railways Equipment Bonds Sold.

The Finance Minister issued a circular, July 14, respecting Canadian National Ry. Co's 15 year 5% guaranteed bonds, in connection with equipment, series G, 1923, as follows: The equipment is for the Canadian National Rys. owned by the Dominion Government. The bonds will be dated Aug. 1, 1923, and will be payable in equal semi-annual instalments of \$750,000, from Feb. 1, 1924, to Aug. 1, 1938. They will be issued in denominations of \$500 and \$1,000 with coupons attached. Provision will be made for registration of principal. Interest will be payable Feb. 1 and Aug. 1. Principal and interest will be payable at the office of the Finance Minister, in Ottawa, or at the offices of the assistant receivers general, Montreal or Toronto. The rolling stock to be acquired by the railway is to cost \$30,000,000. In accordance with the usual practice respecting equipment bonds, 25% of this cost (\$7,500,000) will be paid in cash out of the appropriations made by Parliament for railway purposes. The issue will be guaranteed as to principal and interest by the Dominion Government. The bonds will be additionally secured by a first charge upon the equipment, title to which will be vested in the railway company. There are no mortgages or charges of any kind which will rank ahead of such charge. The Finance Minister will act as trustee under the trust mortgage. Bonds in denominations of \$500 will be printed in French on request of one or more successful bidders for not less than \$1,000,000 of bonds. A bidder may be required, on notification, to deposit with the Finance Minister, a sum equal to not less than 5% of the principal of the bonds tendered for by him, which amount will be forfeited to the Crown in case of non-fulfilment of his tender. Such sum may be represented by Government bonds or by a certified bank cheque. Tenders may be made for the whole \$22,500,000 of the issue or for any part thereof not less than \$1,000,000. Tenders will be received by the Finance Minister at Ottawa up to noon, on July 25. The right is reserved to accept or reject all or any tenders for all or any part of the above issue. Interim receipts will be given by the Finance Minister on receipt of the amount called for, to be exchanged subsequently for definite bonds.

An Ottawa press dispatch of July 25, stated that the Finance Minister had announced that the tenders of three Toronto bond houses, A. E. Ames & Co., Wood, Gundy & Co., and Dominion Securities Corporation, at 97.887 and accrued interest, had been accepted, and that the following were also interested

in the transaction, Kerr, Fleming & Co., Aemilius Jarvis & Co., R. A. Daly & Co., Matthews & Co., Osler & Hammond, Gairdner, Clarke & Co., McLeod, Young, Weir & Co., and Rene Leclerc, Inc.; also the Canadian Bank of Commerce, Royal Bank of Canada, Imperial Bank and Dominion Bank. Two other tenders were submitted, one at 97.57 and the other at 97.275. The bonds were offered to the public on July 27, at from 99 to 99.50, according to date of maturity, and are reported to have been over subscribed.

Grand Trunk Railway Co's Annual Report.

The G.T.R. Co. of Canada's directors report for the calendar year 1922 has been issued over the signature of Sir Henry Thornton, President. Following are extracts:—

	Income Account.	
	Year 1922	Year 1921
Operating revenues.....	\$77,700,019.23	\$76,858,032.27
Operating expenses.....	70,317,813.45	71,179,292.80
Net operating revenue	7,382,205.78	5,678,739.47
Railway taxes.....	1,200,287.20	1,325,577.28
	6,181,918.58	4,353,162.19
Equipment and joint facility rents, etc. (net)	3,083,932.71	2,475,151.74
Net operating income	9,265,851.29	6,828,313.93

Operating Revenues were \$77,700,019, an increase over 1921 of 1.10%. Revenue from freight traffic was \$56,561,067, an increase of 4.28%. Number of revenue tons carried, 23,675,475, an increase of 9.16%. Revenue tons carried one mile 4,561,145,848, an increase of 12.55%. Average haul per revenue ton was 192.65 miles, an increase of 3.10%. Freight revenue per train mile was \$5.59, a decrease of 0.53%. Average revenue per ton was \$2.38902, a decrease of 4.47%. Average revenue per ton mile was \$0.01240, a decrease of 7.32%. Revenue from passenger traffic was \$14,342,003, a decrease of 7.53%. Number of passengers carried was 10,998,246, a decrease of 5.27%. Average revenue per passenger was \$1.30403, a decrease of 2.39%. Average revenue per passenger mile was \$0.02864, a decrease of 5.94%. Average distance per passenger was 45.53 miles, an increase of 3.78%. Revenue from mails was \$1,212,433, an increase of 6.94%. Revenue from express was \$2,883,700, a decrease of 12.22%. Revenue from milk was \$228,541, a decrease of 5.85%. Revenue switching was \$679,860, an increase of 21%. Revenue from dining and buffet was \$325,003, a decrease of 0.93%. Revenue from demurrage was \$264,162, a decrease of 16.35%.

Operating Expenses were \$70,317,813, a decrease of 1.21%, compared with an increase of 1.10% in operating revenues. Maintenance of way and structures decreased \$2,122,092, or 16.50%. Maintenance of equipment increased \$2,982,817, or 16.75%. Traffic expenses increased \$232,023, or 14.65%. Transportation expenses decreased \$1,554,149, or 4.37%. Average loaded cars per freight train mile were 22.49, an increase of 14.51%. Average empty cars per freight train mile were 10.38, a decrease of 8.22%. Average total cars per freight train mile were 32.87, an increase of 6.20%. Average load per loaded freight car mile

was 20.88 tons, a decrease of 6.20%. Average load per freight train mile was 450.83 tons, an increase of 7.46%. Miscellaneous operations decreased \$48,186, or 10.42%. General expenses decreased \$343,433, or 11.83%.

	Pay Rolls.	
	Employees	Pay Roll
1918.....	25,342	\$30,152,476.86
1919.....	30,617	42,617,415.93
1920.....	31,686	53,375,736.60
1921.....	29,128	45,865,171.10
1922.....	28,869	42,915,246.42

Taxes were \$1,200,287, a decrease of 9.45%. Taxes per mile of road operated were \$332.32, compared with \$367.00 in 1921.

The capital expenditure account at Dec. 31, 1922, amounted to \$394,737,012, an increase of \$3,167,549.46, excluding credit of \$73,893,491.74 covering adjustment of prior years.

League of Nations' Reports on the World's Transportation Situation.

A detailed analysis of the world transportation situation, as conducted by the League of Nations Communications and Transit Commission, has been received by Canadian Railway and Marine World, dealing with the railway, highway, inland water and ocean, and air transportation situation in many countries and in great detail. The analysis is based on reports from a great many countries, in reply to a questionnaire sent out by the League shortly after the General Conference on Communications and Transit met at Barcelona in March and April, 1921. The following countries supplied reports: Austria, Belgium, Bolivia, Brazil, Bulgaria, Canada, Chile, China, Czechoslovakia, Denmark, Estonia, Finland, France, Germany, Great Britain, Greece, Guatemala, Haiti, Hungary, India, Italy, Japan, Latvia, Lithuania, Luxemburg, Netherlands and Dutch Indies, Norway, Panama, Paraguay, Persia, Poland, Portugal and colonies, Roumania, Serb-Croat-Slovene State, Spain, Sweden, Switzerland.

In the reports, the transportation situation in each country is covered under the following heads: state of railway communication before the war; general effects of the war on transportation facilities and conduct; the work of rehabilitation after the war; rolling stock, railway traffic, transportation rates, and railway finances; inland and ocean navigation developments and position; sea-ports and ocean shipping; motor and air transport. In practically all cases, the analysis into the transportation situation, past and present, and into future plans and prospects, is most thorough, and for that reason a wealth of information is presented. The reports are published in two volumes, with introduction by Prof. Tajani, Engineer, Professor of the Royal Polytechnic College, Milan. Canadian Railway and Marine World is indebted to Lt. Col. T. A. Hiam, Railway Expert to the Permanent Commission on Communications and Transport, League of Nations, Geneva, Switzerland, and formerly private secretary to Sir Donald Mann, then Vice President, Canadian of the reports.

Canadian National Telegraphs have opened offices at Cap aux Os, Que., and MacDiarmid, Ont., and closed offices at Becquets station, Que., Kemptville, Lowbush, Willett and Woodford, Ont.

Freight and Passenger Traffic Notes.

The Canadian National Rys. is stated, in a press report, to have run a freight train out of Brockville, Ont., for Montreal, July 12, consisting of 100 cars.

The C.P.R. ticket and telegraph offices in Moncton, N.B., have been moved from the corner of Main and Alma Streets, to Victoria Block, a more central location.

For the third consecutive week, and for the fourth time in 1923, the number of cars loaded with revenue freight on U.S. railways exceeded the million mark in the week ended June 23, the total loading for that week being 1,002,740 cars.

The Minister of Colonization, Mines and Fisheries of Quebec, returned to Quebec, July 12, from a trip through the Gaspé peninsula, and is reported to have said, in an interview, that it costs more to carry fish to Boston, Mass., from Gaspé, than it does from Prince Rupert, B.C., and that an attempt will be made to secure a reduction of rates.

The Board of Railway Commissioners passed an order, July 4, directing Canadian National Rys. to stop trains 87 and 88 at Wendover, Ont., on Saturdays, during June, July, August and September, when necessary, to enable passengers from Montreal and Ottawa to detrain, and on Mondays to enable passengers for Montreal and Ottawa to entrain.

The Canadian National Rys. have been operating a gasoline motor car service between Victoria and Milnes Landing, Vancouver Island, 27 miles, carrying passengers and hand baggage only, and making two trips a day each way. A press report states that it is proposed to extend the service to mile 69, and that the car will make one trip a day in each direction.

Canadian National and Canadian Pacific Railways traffic officials and Dominion Government immigration officials met at Winnipeg, July 20, to discuss arrangements for the supply of harvest labor. It was estimated that approximately 60,000 men would have to be taken from British Columbia, Ontario, Quebec and the Maritime provinces, an increase of about 20% over the 1922 requirement.

The C.P.R. ran a special train from Winnipeg to Quebec, recently, 1,579 miles, in 36 hours, 12 min., the regular running time being 53 hours. This was to enable passengers and mails from China and Japan, for Europe, to make connection with the s.s. Empress of Scotland at Quebec, the regular train having been held up by a landslide west of Lake Louise, Alta. The special, consisting of one baggage, one tourist, one standard sleeping car, one dining and three compartment cars, left Winnipeg on July 7, at 8.15 a.m., and reached Quebec on July 8, at 9.27 p.m.

The Canadian National Rys. standard passenger tariff C.R.C., no. E542W-457, approved by the Board of Railway Commissioners, became effective July 1. It provides the following rates per mile: Caraquet and Gulf Shore section, Bathurst to Tracadie and Shippegan, N.B., 4c; International Ry. of New Brunswick section, Campbellton to St. Leonards, N. B., 4c; York and Carleton section, Cross Creek to Stanley, N.B., 5c; Hudson Bay Jct. to Pas, Man., 3½c; Tannis to Brazeau, Alta., 4c; Wolfe Creek, Alta., to Vancouver and Prince Rupert, B.C., in-

cluding branch lines, 4c; standard fares on all other sections, 3.45c.

A press report states that the C.P.R. has decided, with the White Star and Cunard steamship lines' approval, to provide reduced fares from British ports for farm laborers desiring to go to western Canada. The fare, from British ports to Winnipeg, had, it is said, been fixed at £12, with a rail rate of ½c a mile to points beyond, and the laborer, upon securing a certificate from the farmer with whom he engaged, that he had worked 30 days, will be entitled to a return rate of \$20 to the seaport and a 25% reduction in ocean fare. The plan is to be effective only for sailings from British ports to Quebec between Aug 1 and 15.

The C.P.R. has introduced a new three to six weeks conducted holiday tour from Great Britain to Canada, at an inclusive cost, the itineraries being arranged according to the time to be occupied. The three week itinerary covers a trip from Quebec to Niagara Falls and return to Montreal; the four weeks one cover a trip to Winnipeg, going by the lake route to Fort William, and returning to Montreal by rail; and the six weeks one covers a trip across the continent and back. The first of these tourist parties arrived in Quebec from Southampton, June 29, in charge of E. C. F. R. Mackenzie of the C.P.R. London offices, and travelled to the Pacific coast, the return trip to England being scheduled for July 27 from Montreal.

The Board of Railway Commissioners, sitting at Winnipeg, July 16, heard the Transcona Ratepayers' Association's complaint against the passenger accommodation, train service, and fare charged between Transcona and Winnipeg. After hearing the association's representatives, Assistant Chief Commissioner McLean is reported to have pointed out that the Board had no power to order commutation rates unless it is proved there is discrimination, and this was not alleged. The railway was within its rights in giving its employes and their families cheaper rates. The application re fares would be dismissed, but an order would be issued as requested in regard to adequate baggage service, and general accommodation.

Ottawa Cross Town Railway Tracks.

We are officially advised that Sir Henry Thornton, President, Canadian National Rys., has written the Mayor of Ottawa that the railways' proposals with respect to the projected removal of the cross-town tracks will be submitted to the city shortly. This matter has been under consideration for some time, and conferences have been held with A. C. Mackenzie, Engineer in charge of Maintenance of Way, C.P.R., was appointed to investigate it. Full data are now collected.

A letter from E. W. Beatty, President, C.P.R., received by the Mayor, July 13, referred to having received a report on the matter on his return to Montreal from Europe, and said that the removal of the cross town tracks would be premature until the question of the establishment of a Federal District has been settled. The Mayor is reported to have

stated that the removal of the cross town tracks would aid the Federal District proposal, and also to have said at a meeting of the council's committee on the matter, on July 18, that the C.P.R. is only slightly interested, as all it has is a right of way from the Canadian National Rys. The committee authorized Ald. Lowe, its chairman, and the Mayor, to draft a letter to be sent to both railway presidents, urging the quickest action possible.

Block Signal Installation, Between Toronto and Hamilton.

The Canadian National Rys. on account of increased traffic, are equipping the Oakville Subdivision, London Division, Southwestern Ontario District, Central Region, which extends from Toronto to Hamilton, 38.71 miles, with automatic block signals. They will govern main line movements from Bathurst St. Jct., 1.3 miles of Toronto union station, to Stuart St. station, Hamilton. From Bathurst St. Jct. to Canpa, 7 miles, they will govern movements over all 4 tracks; from Canpa to Port Credit, 4.57 miles, they will govern movements on 3 tracks, as a third track is being built to Port Credit from Mimico. From Port Credit to Hamilton, 25.84 miles, where the line is double track, the signals will govern movements on both tracks.

The signal system will be of the color light type. No semaphore arms or discs will be used, colored lights being relied upon for both day and night indications. The signals will be mounted on steel cantilever brackets, each bracket serving 2 tracks. On the 4-track portion of the line, the brackets will be staggered. On the 3-track portion, they will support the signals governing movements on two tracks, and the signal for the third track will be supported by a pole at the side in the ordinary manner. Each signal will have 3 lamps, arranged vertically one above the other, equipped with red, yellow and green lenses, respectively, to give the usual indications, viz., red, the stop indication; yellow, the caution; and green, the proceed, and the whole system will be operated in accordance with the standard rules applying to the usual type of block signal system. A special feature of the signal lights will be that each will be equipped with 2 filaments, furnishing resistance to currents of differing voltage. In case of one filament failing, the diminished intensity of illumination will warn the signal maintainer that a new filament is necessary. The signal light lenses will be about 8 in. diam. A similar installation, although on a much smaller scale, was made by the G.T.R. about a year ago, between Lachine and St. Henri, Que. Only 12 signals were used, but these were sufficient to demonstrate the desirability and reliability of the color light system.

The Board of Railway Commissioners' approval for the Toronto-Hamilton installation was given by order 33,817, June 27, and construction is proceeding from the Toronto end. The signal and line material is being supplied by Union Switch & Signal Co., Swissvale, Pa., and the cantilever supporting brackets by Bates Expanded Steel Truss Co., Chicago. The installation is being done by V.N.R. forces, under the direction of C. H. Tillet, Signal Engineer, Central Region, Toronto, and it is expected that it will be completed in the autumn.

President E. W. Beatty's Speech in England.

E. W. Beatty, K.C., President, C.P.R., was entertained at dinner, by the Canada Club, at the Savoy Hotel, London, Eng., on June 21, E. R. Peacock, a director of the Bank of England, presiding over a very large company of distinguished statesmen, financiers, professional and business men, including, among others, Lord Shaw of Dunfermline, Right Hon. L. S. Amery, First Lord of the Admiralty, Right Hon. Austen Chamberlain, and Brig. Gen. Sir Gordon Guggisberg, Governor of the Gold Coast Colony, all of whom spoke, in addition to Mr. Peacock, who proposed Mr. Beatty's health.

Mr. Beatty, in responding to the toast, said: "I feel that I can, without impropriety, discuss the question of Canadian development, having been associated for many years in an enterprise largely Canadian and English in ownership, 65% of its stock being held in Great Britain and Canada, and 87% of its ranking securities owned by citizens of the Empire. It was constructed as a term of Confederation, and without it Confederation would not have been possible. It has been in existence for about 42 years, and under operation for about 37 years. There is invested in its railway lines, exclusive of all subsidiary enterprises, cash to the extent of \$900,000,000 or nearly £200,000,000. Its credit has been taken as the yard stick of Canadian credit by foreign investors, and its prosperity has contributed to the encouragement and support of Canadian industries by foreign and British capital.

"Canada has two problems which are of great importance to it, viz., the necessity for greater population and the equally vital necessity of the introduction of new capital to support its development. I will not pretend to bore you with an elaboration of the now accepted basic fact that, with its wealth of natural resources, Canada needs to a marked degree these two stimulating influences. In recent years, we have proceeded in framing our policies with a tortoise-like slowness which has been irritating, particularly when contrasted with the forward and progressive policies of other parts of the Empire. To me the question has long since ceased to be a debatable one. We either believe in that great Dominion and its future or we do not. If we do believe in it we must know that it can support more than 9,000,000 people, and that it will require more than 9,000,000 to support it. We suffered, as every other country suffered, from certain economic changes which followed the conclusion of the war. We felt, as others did, the dislocation of market conditions and the high costs of production. The combination of the two represented a temporary handicap in the marketing of some of our greatest products. Faith in ourselves is, however, returning, and some of us now fear that the greatest mistake of all was that of delay, and the loss of opportunity to secure the highest type of immigrant which has been the penalty for that delay. Fortunately, however, some agencies were able to counteract the propaganda of despondency to a limited extent, and immigrants are now coming forward, and many more will come forward in consequence of the optimism and confidence which prevail, and also the removing of certain government restrictions which have denied up to now the entry of some of the finest type of immigrants Canada could secure.

"This fact, coupled with the gradual return of improved industrial conditions, convinces me that the present year will not be an unprosperous one for Canada and for Canadian institutions. Our industrial expansion is equally as important as our agricultural expansion, because Canada, through its vast natural resources of raw material and great water powers in process of being developed, is in sight of becoming an industrial as well as an agricultural country, and it is economically unsound to count on recruiting that labor from an agricultural population or agricultural immigrants. That fatal mistake was made by the United States when it diverted the peasant immigrants from Poland, Hungary and Ukrania into the stock yards, the packing plants, the steel works, and the coal mines, and thus diverted hundreds of thousands of prospective farmers from their natural calling. In a lesser degree the same mistake has been made in Canada, and many immigrants who have come to that country, with the genuine intention of working the land, are now to be found in the mines and industries to which they were induced by employers eager to get labor at any price.

"What we seem to need is what I might call a 'balanced immigration,' which would supply our industries as well as our farmers with the best available help. In that way we could anticipate a normal and rational development, increasing the home market, while at the same time increasing the production both in the industries and on the land. For the farmer buys the product of the manufacturer just as the city worker feed on eggs, butter, milk, bread, and meat. As a rule it is not easy to induce the skilled mechanics and craftsmen of any country to migrate to another. It is the unskilled labor that is shiftless. The skilled laborer is able to buy a home and has his savings in the bank. But there are times when mankind seems to be let loose in a flood of unrest. It was such a flood that drove the Huguenots to England and thus gave England some of her now basic industries. A similar flood seems to be raging through Europe and Great Britain today, and if only the doors of immigration are kept open we may find in Canada a home for workers who for generations have been identified with highly skilled trades and crafts. Progress in industry so often depends on the inventive genius of the actual workers. The more of such inventive skill we can obtain for Canadian industries, the better. We would be wise to keep our gates open for brains as well as brawn.

"You have perhaps heard that during the last year there has been a considerable exodus of Canadians to the United States; you have also been informed that agriculturists did not prosper to the extent they expected. Both statements involve nothing but a natural consequence of the economic dislocation which was the inevitable result of a world wide war, and why it should give any grounds of apprehension to the people of a country of such infinite resources is beyond my comprehension. It is incidental to Canada's geographical location that a nation of 120,000,000 to the south of it there should, particularly in the disturbed conditions which followed the war and the inevitable restlessness which was part of the after war psychology, be a greater movement of Canadians to the

United States, a country which then and now is in a period of great commercial activity. The movement does not mean that there is a lack of opportunity in Canada, but that an inflated commercial condition in the States has lured those whose position enables them to take advantage of an immediate and temporary greater opportunity. We have been disappointingly slow in advertising our country's undoubted possibilities. We have not made steps sufficiently forward to warrant those in England believing in our confidence in ourselves, and the result has been until very recently a very slow movement of settlers and a limited inter-Empire trade expansion.

"I have said that the need of men and money is paramount. From Great Britain we have formerly secured a support and a strength in both that have been largely responsible for the development of Canadian enterprise. That support was of necessity withdrawn during the period of the conflict, and in the aftermath, owing to Great Britain's enormous obligations, but that it will and should return in full volume is clear beyond peradventure. In discussing the problem with those in London most familiar with the financial situation, I found only two suggestions made which might be considered as reasons why this support, particularly financial support, should be sparingly given, and these were the failure of some enterprises, due to their being over ambitious in conception, or to over confidence in administration, and the feeling that quite recently a great Canadian enterprise had been taken over by the Government on terms which were considered to be unfair in some respects to British investors. As to the first, I have little to say by way of comment. No country is immune from instances of faulty business judgment, and no country is so wealthy that enterprises instituted without proper consideration, or administered without regard to economic considerations, can succeed. I venture to suggest to you, however, that the number of successes in Canada and the integrity of investments properly made there are as great as in England itself.

"As to the Grand Trunk and the unfortunate feeling of resentment which has in some cases developed in consequence of its acquisition by the Government, I can only speak very generally and very guardedly. It would be unseemly for me, connected with a road for many years its principal competitor, to make any reflections or observations upon the former administration of the Grand Trunk. I can say to you, however, that if its executive administration had been in former years more Canadian in character, and more in touch with Canadian methods and Canadian sentiment, some of the difficulties which confronted them in the later stages of their history might conceivably have been avoided. The Grand Trunk was in a very peculiar position. It was a corporation financed and controlled in London, operating a company with head offices in Canada, deriving a large part of its business from the United States. To a marked degree it was similar to a bridge with one pier in the western states, the span in Ontario and Quebec, and the other pier in New England. Therefore, essentially, it was an international road and peculiarly subject to fluctuations in the railway situation both in Canada and the United

States. It required a very keen and accurate appreciation on the part of its executive of those conditions which were local to that part of North America.

"Neither would it be proper for me to say more than I have said in respect to the attitude of the Government. I was always opposed to the acquisition of the Grand Trunk, and my reasons were very simple. I did not believe then, and I do not believe now, that the property has the same possibility of development as part of the government system as it would have under capable efficient private administration. I do not think it was a wise thing for the Dominion of Canada to embark upon such an extensive public ownership programme. It may well be that my views will prove to be wrong, and that the development of the country, and the tremendous increase in traffic which will result if the expansion which we anticipate takes place and is not too long delayed, will make a success of what our judgment at the time considered to be an extremely hazardous adventure into public ownership.

"But if I do not discuss or criticize the former administration of the Grand Trunk, or the policies of the Government which led to its acquisition, I am naturally deeply concerned if the combination of the two results in any lack of support to Canadian enterprises generally by the financial interests of England. Canada has secured, and will continue to secure, much capital from the United States, but Canada has secured in the past a support from Great Britain which has been a strength to it, as well as constituting a bond of Empire, the importance of which cannot be over estimated. It would be a great pity if a difference of opinion as to the policy of any government in respect to one enterprise should affect detrimentally the policy of England towards Canadian enterprises generally, and there should be little justification for such result, if, as I conceive to be the case, the importance of Canada to the Empire is equal to the importance of Great Britain to Canada.

"Much attention has been given by the public men of both Great Britain and Canada to the subject of inter Empire trade. If it is true that the world is looking to the Anglo-Saxon races to take a large share in implementing and assisting the economic rehabilitation of Europe, it must follow that such steps as may be properly taken to strengthen from within the Empire itself should be taken by Great Britain and the overseas Dominions. The Dominions are a source of great wealth because they are large in area and rich in natural resources. What they possess in the way of native wealth must be taken from the earth by the combined efforts of men and money. With every added strength of the dominions overseas comes an added assurance that the peace of the world will not be disturbed, because the strength of the British Empire and the good will of the United States will prevent it. I presume it will not be suggested that the catastrophe of 1914 would have arisen or, if it arose, would have been continued over five years of waste of human life, human energy, and national resources, had, for example, the population and wealth of Canada and Australia combined been at that time equal to that of the United States. The advantages of the extension of inter Empire trade and the development of Canadian industries are almost too clear to require elucidation. You have your surplus population

which can be absorbed with profit to Canada and yourselves. We have our tremendous agricultural territory, our new and growing industrial development, which can profit by settlers and new capital. We have the production of those commodities which we think we can produce in quality and in price equal to those of other countries, and the market for them rests in part in the older portions of the Empire. It should not be an academic question, but one in which the governments and business men of Great Britain and Canada should take a keen, immediate and aggressive interest. If the unity of the Empire in war was of paramount importance, its development in peace is just as vital if the older parts are to receive additional strength from the development of the new, and the great future of the new is to be realized through the support of the old."

Alberta Coal Rates to Ontario.

The transportation aspects of the fuel situation in Canada were dealt with fully in preceding issues of Canadian Railway and Marine World up to the point where the railways offered a \$9 rate for transporting Alberta domestic coal to Ontario. The parliamentary committee on mines and minerals said in its report, "The Canadian National Rys. quoted a rate of \$9 a ton in trains of 50 car loads, for May, June and July. The C.P.R. state that the actual cost of carrying coal from Lethbridge to Ontario points in 46 ton car loads is \$9.90 a ton. Western Canada coal operators maintain that the rates quoted make any large movement of coal from western Canada to Ontario impracticable. Your committee is forced to the conclusion that the rates quoted will in no way assist in solving Canada's fuel problem. . . . We believe that our National railway should carry fuel at cost in this crisis, and the committee suggests that the rates quoted are not cost rates, but much higher."

A meeting was held at Edmonton on July 16, presided over by C. A. Magrath, Chairman of Dominion Advisory Fuel Commission, and attended by Sir Henry Thornton, President, Canadian National Rys.; D. C. Coleman, Vice President, Western Lines, C.P.R.; J. E. Dalrymple, Vice President, Traffic, Canadian National Rys.; W. G. Manders, Freight Traffic Manager, Western Region, Canadian National Rys.; Geo. Stephen, Assistant Freight Traffic Manager, Western Lines, C.P.R.; and other railway officials; Premier Greenfield of Alberta, and numerous mine operators. The operators said they could put good domestic coal on cars in Alberta at \$4.50 a ton, and that they wanted a \$6.50 rate so that, after adding the dealers' charge of \$2.50 a ton for handling and profits, the coal could be sold in Ontario for \$13.50 a ton in competition with U.S. anthracite at \$15.50. Press reports state that the railway representatives stated they could not give the rate asked, but that they agreed to transport 4,000 tons at a reduced rate, which was not specified, as a trial shipment.

An Edmonton press dispatch of July 23, stated that a rate of \$7 a ton had been agreed on between the Canadian National Rys. management and Premier Greenfield, for experimental coal shipments to Ontario, that it was expected that from 4,000 to 6,000 tons would be shipped from the Drumheller, Brazeau and other collieries, and that the operators would charge \$4.50 a ton f.o.b. mine,

which would enable the coal to be sold in Ontario at about \$12. A dispatch on July 25 stated that 50 cars were being shipped that day from Drumheller.

If the \$12 price mentioned in the dispatch is meant to indicate the retail price to consumers, it seems too low. With the coal costing \$4.50 f.o.b. mine, \$7 for freight, and at least \$2.50 for handling and distribution costs at destination, it would appear that the best price at which the coal could be offered the Ontario consumer would be about \$14 a ton.

Use of French Language on Quebec Railways.

Mr. Justice Surveyer gave judgment in the Quebec Superior Court, at Montreal, recently, in the action heard some time ago, brought by M. Demers, advocate, Montreal, against the C.P.R., with J. Fegg, mis-en-cause, to recover \$500 damages for suffering, nervousness and affront, which he alleged to have suffered through Fegg threatening to put him off a C.P.R. train on Oct. 12, 1919. The plaintiff boarded the train at Choisy and failing to find his ticket when asked for it, he told the conductor in English he would find it and give it to him afterwards. A little later the conductor asked him again for the ticket, when he demanded that the conductor speak in French. Following this an altercation resulted, and some scuffling took place which lasted about a minute, according to other passengers, during which the conductor told Demers that if he did not give up his ticket he would be put off the train.

Mr. Justice Surveyer held that, in refusing to give up his ticket under the circumstances, the plaintiff was hampering the conductor in the discharge of his duties. The Railway Act, in providing for the printing of tickets, notices, etc., in French in the province, intended to prevent travellers and shippers from being led into error because of their ignorance of English. A provincial statute had been passed with the same object, and there were sanctions for the enforcement of both these laws. But penal provisions should be interpreted restrictively, and therefore it was sufficient for a railway conductor in the province to be able to understand the French language, but he is not obliged to ask for a ticket in French from a passenger who has shown that he understands English. The conductor apparently lost his temper, and in threatening to put the plaintiff off the train before it had stopped, had overstepped his legal rights. The action was therefore dismissed, but without costs.

Canadian National Rys. Terminal Elevators.—Tenders were received to July 21, for the leasing for three years from Sept. 1, of the Canadian National Rys. terminal elevators at Port Arthur, Ont., capacity 8,750,000 bush., and at Transcona, Man., capacity 1,000,000 bush. We are officially advised that the Port Arthur elevators are at present leased to F. H. Peavey & Co., Minneapolis, Minn., and the Transcona elevator to Rosenbaum Bros. of Canada, their terms expiring Sept. 1.

The C.P.R. Recreation Club, Toronto, held its annual picnic to Galt, Ont., on July 14, for the second year in succession. It was attended by over 2,000 members and friends, who travelled in three special trains, and had a most enjoyable time, despite some rain.

Railway Wages and Working Conditions in Canada and the United States.

Train Service Men's Wages.—A Winnipeg press dispatch of July 16 credits H. E. Barker, General Chairman of the Order of Railway Conductors on the Canadian National Rys. Western Lines, who returned recently from a meeting of conductors' and trainmen's officers in Chicago, with the statement that the conductors and trainmen would within the next few weeks, demand from Canadian railways, restoration of the wage schedule in effect prior to Aug. 1921.

Shopmen.—A Montreal press report of July 25 stated that railway shopmen's representatives were to meet the Railway Association of Canada's operating committee, wage sub-committee, on July 30, to discuss wages and working conditions. Details of the application made by the shopmen for a re-opening of negotiations were given in a preceding issue of Canadian Railway and Marine World. It is stated that they are not asking for restoration of the 1920 rates of pay, but that they want an increase of 10c an hour, and the time and one half rate for Sundays and holidays to be restored. Another request is for the abolition of paint spraying machines now used in the shops, it being claimed that they ruin clothes and are detrimental to health because of the impossibility of avoiding inhalation of vapor and paint particles. The shopmen's committee will consist of R. P. Tallon and Chas. Dickie, President and Secretary, respectively, of the American Federation of Labor's Railway Employees' Department, Division 4, and representatives of the individual shop crafts.

Canadian National Rys. Shopmen.—Representatives of about 9,000 C.N.R. shopmen, including machinists, boiler-makers, blacksmiths, sheet metal workers, electricians, and carmen, employed on the Central Region, met in Montreal on July 18 and subsequent dates to wind up the business of the Grand Trunk System Federation and to form a new regional body to replace it, this being necessary on account of the C.N.R. amalgamation. Shopmen's officers attending the meeting included R. J. Tallon, President; Frank McKenna, Vice President; and Chas. Dickie, Secretary, of the American Federation of Labor's Railway Employees' Department, Division 4; J. A. McClelland, Canadian Vice President of the International Association of Machinists; W. G. Powlesland, Vice President of the blacksmiths' organization; J. Merri-gan, International Vice President, boiler-makers' union; L. Beuloin, Vice President, Brotherhood of Railway Carmen; Z. Tardiff, business agent for the carmen, and J. A. Spence, business agent for the machinists. In addition to representatives from the original Canadian Northern and G.T.R. lines now included in the Central Region, there were present delegates from the Central Vermont Ry., who asked for co-operation from shopmen on other Central Region lines in their effort to have the agreement entered into at the conclusion of the strike last year lived up to. Practically all of the 125 delegates present brought resolutions from their locals declaring against the "farming out" of repair work by the railways, and the general officers were instructed to take up the matter with the C.N.R. management. Strong resentment was expressed against the management letting this work to private companies, it being claimed that the rail-

way employees needed it and that the railways had shops in which to do it, and the general opinion was that the railways should work three 8-hour shifts, if necessary, to ensure that all repair work be done on railway premises. The meeting went on record against the piece work and bonus systems in railway shops, and officers were instructed to take every possible measure to get them eliminated. The officers were directed to take steps to have pass and pension privileges restored to men who went on strike in 1900 and 1905 in Montreal and Stratford. It was pointed out that conductors and trainmen had had their seniority and pension rights restored, and it was argued that shopmen should receive equal treatment. The officers of the shopmen's Grand Trunk Federations are:—Chairman, F. Harrison, Montreal; Vice Chairman, W. A. McGuire; Secretary, J. Corbett.

Canadian National Railways Telegraph Department Employees.—The Department has concluded an agreement with its employees by which operators, telegraph supervisors, telephone operators and supervisors, clerks, cashiers, delivery supervisors, billing machine operators, collectors and maintainers, will be given increases averaging from \$10 to \$20 monthly and totalling about \$125,000 monthly.

Canadian National Rys. Sleeping and Dining Car Employees.—Details were given in a preceding number of Canadian Railway and Marine World of the dispute between the C.N.R. and some of the dining room and sleeping car employees on western lines, members of the Canadian Brotherhood of Railway Employees, and it was stated that a conciliation board had been granted, consisting of Chas. Dafoe, Winnipeg, representing the railways, David Campbell, Regina, representing the employees, and W. J. Donovan, Winnipeg, chairman, the latter appointed by the Labor Department. At the hearings, the railways were represented by J. M. Grieve, General Superintendent, S.D. & P. Cars and Railway Restaurants; Jas. Gorman, Superintendent of S.D. & P. Cars and Railway Restaurants, Western Region, and A. C. Egan, Comptroller, Western Region, and the employees by R. Dykes, C. H. Minchin and J. A. Robertson, all C.B.R.E. officers. The first matter heard concerned the claim of porters on G.T.P. sleeping cars for unpaid wages from May 1 to Oct. 1, 1920, as per schedule agreement. The railways had made certain deductions for meals. The board upheld the employees' contention, and recommended that the sums deducted be paid back. The second matter was the claims advanced by C.N.R. tourist car porters for additional wages from Aug. 1, 1918 to May 26, 1919. Messrs. Campbell and Donovan found in favor of the employees, but Mr. Dafoe in a minority report stated that he did not consider that the claim was justified. The third matter, that of a difference in wages due to seniority standing, was decided against the employees by Messrs. Donovan and Dafoe, and Mr. Campbell presented a minority report in favor of the employees. The fourth claim concerned the wages of a porter on a buffet parlor car; the employee claimed he was entitled to a \$115 monthly rate, while the railways claimed he belonged to a classification calling for a \$97.50 rate. Messrs. Donovan and

Dafoe, in a majority report, recommended that he be paid at the rate of \$106.25, and Mr. Campbell recommended that he be paid the \$115 rate. The fifth matter had to do with the alleged wrongful dismissal of a sleeping car porter, but the board refused to deal with it.

Maintenance Employees.—A Montreal press dispatch of July 16 stated that members of the committee selected to represent the maintenance of way employees in negotiations with the Railway Association of Canada operating committee's sub-committee on wages and working conditions, would meet there on July 17 to prepare their case. Canadian Railway and Marine World for June and July gave details of the application for a conference on wages and working conditions made by the employees' organization. The agreement heretofore in effect required 60 days notice of a desire to have it amended.

Ex-service Men Want More Seniority.—A Vancouver press dispatch of July 5 stated that the Great War Veterans, in session there, had passed the following resolution:—"Whereas under the working agreement between the Canadian National Rys. and the employees' representatives in the event of a reduction of staff, seniority of service governs, and as this would affect the majority of the ex-service men now employed, all members of His Majesty's forces should take their seniority before that of any unnaturalized alien; their seniority should be dated from the date on which they joined the forces, such seniority rights to be applied in all instances, except for reduction in the service, and ex-members of His Majesty's forces should be given preference for employment and promotion." The dispatch stated that many delegates contended that in numerous instances ex-service men employed in railway service had been laid off, while enemy aliens and unnaturalized foreigners were kept at work.

C.P.R. Shopmen Demand Removal of Troops from Sydney.—The Montreal council of the C.P.R. shopmen's federation, representing a large number of shop and locomotive terminal employees, passed the following resolution on July 16: "That this meeting of representatives of the men employed in the various crafts in the C.P.R. shops and round-houses in Montreal and vicinity strongly protests against the employment of the Canadian militia in the present labor dispute in Sydney, N.S., and calls upon the Government to issue the necessary instructions for their immediate withdrawal; further, that we go on record as favoring a strike of the 7,000 men directly affiliated with this council, whose representatives we are, as a means of forcing the withdrawal of the militia from the strike area in Sydney, in the event that no immediate action is taken in this direction by the Government." Copies of the resolution were forwarded to the Minister of Labor; the President of the Canadian Trades and Labor Congress; the Premier of Nova Scotia, and the Secretary, American Federation of Labor's Railway Employees' Department, Division 4.

United States Situation.—The dispute between maintenance of way employees on various U.S. roads and the managements, which came before the U.S. Railroad Labor Board on an application for a gen-

eral increase in maintenance employees' wages on 29 roads, as stated in Canadian Railway and Marine World for July, was remanded by the Board to the parties concerned.

Many disputes between U. S. railways and their clerical employees, the majority of whom are members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, were scheduled for hearing before the Labor Board on July 23.

In addition to the wage increases to shop, maintenance men and clerical employees on individual U.S. roads, as detailed in Canadian Railway and Marine World for July, other roads have recently granted small increases to different classes of employees.

The Brotherhood of Railroad Trainmen and the Order of Railroad Conductors' western general chairmen met in Chicago on July 9 and 10 to discuss plans for a campaign for increased wages in the autumn, when agreements with the majority of the U.S. roads expire. The delegates voted to urge the members of their organizations to request the restoration of the peak wages of 1920. The general chairmen of these organizations in the eastern and southern U.S. territory will probably meet in August to consider wage questions. The fact of the enginemen's and firemen's brotherhoods declining to take part in these proceedings, is significant, and the statement of W. S. Stone, President of the Brotherhood of Locomotive Engineers, that it would not require much preparation to get ready for a wage movement "when the financial conditions of the country warrant it," lend strength to the belief that the differences of opinion as between Mr. Stone and W. G. Lee, President of the Brotherhood of Railroad Trainmen, as to the train service organizations' wages policies, are large.

The Joint New England Railroad Committee, appointed by the governors of the six New England states to report on the general railway situation there, has submitted its report to an assembly of the governors. The committee recommended rehabilitation of the Boston & Maine and the New York, New Haven & Hartford Rd. as a preliminary step to the formation of a consolidated system, and reported that if financial considerations permit, New England interests can be better served if the railways in the territory consolidate, leaving out the Boston & Albany, Central Vermont, the Canadian National Rys. line to Portland, and the C.P.R. mileage in Maine and Northern Vermont. H. G. Kelley, former President, G.T.R., is chief of the technical staff.

Montreal Level Crossings Protection.—A contract has been signed between the Montreal City Council executive committee and the Highway Lighthouse Co. for placing signal lights at railway crossings for the protection of pedestrians, etc. The lights will be of an automatic flashing type, using acetylene gas, the model of which has been approved by the committee and the chief of police. The contract is for five years, the company providing and maintaining the signals in return for permission to sell advertising on the panels which enclose the mechanism. Signal lights at 19 crossings of the Canadian National Rys. G.T.R. lines, at 28 crossings of the Canadian National Rys. Canadian Northern Ry.; at 23 crossings of the C.P.R.; and at 5 crossings of the Montreal Harbor Commissioners' lines.

Transportations Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Board of Railway Commissioners.—W. RUSSELL FOLLIS, heretofore passenger locomotive man, C.P.R., running between Toronto and Hamilton, has been appointed acting Inspector of Locomotives and Boilers, with headquarters at Toronto, vice L. D. Gillett, deceased.

Canadian National Rys.—G. E. BELLEROSE, heretofore General Assistant, Express Department, Montreal, has been appointed General Superintendent of Transportation, Express Department, Office, Montreal.

J. C. BOOTH has been appointed Grain Door Inspector and Supervisor, Lakehead Division, Manitoba District, Western Region. Office, Fort William, Ont.

J. CLOTWORTHY has been appointed Assistant to Superintendent, Pensions and Relief. Office, Montreal.

D. M. JOHNSON, heretofore in charge of Live Stock Department, Dominion Agriculture Department, has been appointed Agricultural Agent, C.N.R., reporting to E. A. Field, Land Commissioner. Office, Winnipeg.

GEO. C. JONES, heretofore Assistant General Manager, Central Region, C. N. Rys., Montreal, has been appointed General Manager, C. N. Rys. Telegraph and Telephone Service, Geo. D. Perry, heretofore Vice President and General Manager, Canadian National Telegraphs, Toronto, having resigned. Office, Toronto.

J. D. LIFE has been confirmed in his position as Assistant Staff Recorder, Winnipeg.

C. J. MILLIGAN, heretofore Master of Titles and Inspector of Legal Offices, Regina, Sask., has been appointed Regional Counsel, Atlantic Region, C.N.R., vice H. F. Alward, granted leave of absence on account of ill health, and who will, later on, should his health permit, be transferred to the Railways and Canals Department at Ottawa, as Counsel, a position he filled formerly. Office, Moncton, N.B.

E. W. OLIVER, B.A.Sc., C.E., heretofore General Superintendent, Electric Lines, C.N.R., Toronto, who has had charge of the Niagara, St. Catharines & Toronto Ry., and the Niagara, St. Catharines & Toronto Navigation Co., and also has devoted considerable time recently to Toronto Eastern Ry. matters, has been appointed Manager, Niagara, St. Catharines & Toronto Ry., Niagara, St. Catharines & Toronto Navigation Co., Toronto Suburban Ry., and Toronto Eastern Ry., with office at Toronto, reporting to S. J. Hungerford, Vice President, Operation and Construction Departments, C.N.R., Montreal.

W. L. PINKNEY, heretofore Staff Recorder, Toronto, has been appointed Staff Recorder, Montreal.

C. B. TRITES, heretofore Staff Recorder and Secretary, Relief Department, Moncton, N.B., has been appointed Assistant Superintendent, Pensions and Relief. Office, Moncton.

Canadian Pacific Ry.—P. J. BELL, heretofore fitter, North Bay, Ont., has been appointed assistant foreman, there, vice F. Brooks, appointed Locomotive Foreman, Schreiber, Ont.

E. G. BOWIE, heretofore Division Master Mechanic, Schreiber Division, Algoma District, Schreiber, Ont., has been appointed Division Master Mechanic,

London Division, Ontario District, vice C. Gribbins, appointed Locomotive Foreman, Chalk River, Ont. Office, London, Ont.

F. BROOKS, heretofore Assistant Foreman, North Bay, Ont., has been appointed Locomotive Foreman, Schreiber, Ont., vice F. G. Perkins, appointed Locomotive Foreman, London, Ont.

W. CHANDLER, heretofore Locomotive Foreman, Chalk River, Ont., has been appointed Locomotive Foreman, Brownville, Me., vice F. H. Jenkins, appointed Division Master Mechanic, Schreiber Division, Algoma District, Schreiber, Ont.

R. S. DICKSON, heretofore Locomotive Foreman, Havelock, Ont., has been appointed Night Locomotive Foreman, London, Ont., vice J. S. Hall, appointed Locomotive Foreman, Havelock, Ont.

E. E. FREEMAN, heretofore Locomotive Foreman, North Bay, Ont., has been appointed Locomotive Foreman, Sault Ste. Marie, Ont., vice A. Parker, superannuated.

J. S. HALL, formerly Night Locomotive Foreman, London, Ont., was appointed Locomotive Foreman, Havelock, Ont., June 1, vice R. S. Dickson, appointed Night Locomotive Foreman, London, Ont., and on July 1, he was appointed Locomotive Foreman, North Bay, Ont., vice E. E. Freeman, appointed Locomotive Foreman, Sault Ste. Marie, Ont.

C. GRIBBINS, heretofore Division Master Mechanic, London Division, Ontario District, London, Ont., has been appointed Locomotive Foreman, Chalk River, Ont., vice W. Chandler, appointed Locomotive Foreman, Brownville, Me.

F. H. JENKINS, heretofore Locomotive Foreman, Brownville, Me., has been appointed Division Master Mechanic, Schreiber Division, Algoma District, vice E. G. Bowie, appointed Division Master Mechanic, London, Ont. Office, Schreiber, Ont.

M. J. KELLY, heretofore chief clerk, Division Freight Office, North Bay, Ont., has been appointed Travelling Freight Agent, there, vice J. J. McGarry, appointed Travelling Freight Agent, Windsor, Ont.

J. J. MCGARRY, heretofore Travelling Freight Agent, Algoma District, North Bay, Ont., has been appointed Travelling Freight Agent to cover border cities, at Windsor, Ont.

H. H. MOYNES, heretofore Travelling Tariff Inspector, Toronto, has been appointed Travelling Freight Agent, London, Ont., vice W. J. Anderson, appointed District Freight Agent there, as announced in our last issue.

F. G. PERKINS, heretofore Locomotive Foreman, Schreiber, Ont., has been appointed Locomotive Foreman, London, Ont., vice A. A. Sheppard, appointed Locomotive Foreman, Cartier, Ont.

P. PINCOMBE, heretofore Locomotive Foreman, Cartier, Ont., has been appointed Locomotive Foreman, Havelock, Ont., vice J. S. Halls, appointed Locomotive Foreman, North Bay, Ont.

T. E. ROBERTS, heretofore chief assistant, Colonization and Development Department, London, Eng., has been appointed Assistant Manager of that department. Office, London.

A. A. SHEPPARD, heretofore Locomotive Foreman, London, Ont., has been appointed Locomotive Foreman, Cartier, Ont., vice P. Pincombe, appointed Locomotive Foreman, Havelock, Ont.

Mainly About Railway People Throughout Canada.

E. W. Beatty, K.C., President, C.P.R., returned to Canada, July 9, on the company's s.s. *Montlaurier*, after a trip through Europe, visiting the company's various offices. On leaving Paris, he was entertained at luncheon by the Cercle Interallie, and later, in London, was the chief guest of the Canada Club at dinner.

Frederick Austin Bourne, whose appointment as Superintendent of Pensions and Relief, Canadian National Rys., Montreal, was announced in a recent issue, was born at Dublin, Ireland, June 20, 1869, and entered railway service, April 1, 1883, since when he has been, to March 1, 1887, apprentice, Mechanical Accounts; March 1, 1887, to Oct. 1, 1890, clerk, same department; Oct. 1, 1890, to May 1, 1899, clerk, Treasurer's Department; May 1, 1899, to March 1, 1913, Assistant Secretary-Treasurer, Insurance and Provident Society, G.T.R.; June 15, 1913, to April 1, 1914, Honorary Secretary, St. John's Ambulance Association; April 1, 1914, to March 1, 1916, Secretary-Treasurer, Insurance and Provident Society, Secretary, Pension Department, G.T.R., and Secretary, Pension Department, Canadian Express Co.; March 1, 1916, to April 1, 1923, Secretary, Pension Department and Staff Records, G.T.R., all at Montreal.

Stuart B. Brown, who has been ap- July 15, 1912, in private business; July ment, Canadian Manufacturers' Association, Toronto, was born at Ottawa, Ont., Jan. 14, 1891, and entered transportation service July 1, 1906, since when he has been, to Sept. 1, 1907, clerk, local freight department, Ottawa & New York Ry., Ottawa; Sept. 1, 1907, to May 1, 1908, clerk, General Freight Department, same road, Ottawa; May 1, 1908, to Nov. 10, 1911, clerk, Tariff Bureau, New York Central & Hudson River Rd. and West Shore Rd., New York; Nov. 10, 1911, to July 15, 1912, in private business; July 15, 1912, to Jan. 17, 1919, Assistant to Manager, Transportation Department, Canadian Manufacturers' Association, Toronto; Jan. 17, 1919, to June 28, 1923, Assistant Manager, same department, C.M.A., Toronto.

Allan Cameron, Oriental Manager, C. P.R. and Canadian Pacific Steamships Ltd., Hong Kong, China, arrived at Victoria, B.C., July 2, by the company's s.s. *Empress of Russia*, en route to Montreal, to consult with the President, who has just returned from Europe, on matters concerning the company's Oriental business.

Miss Edith Cochrane, daughter of the late Hon. Frank Cochrane, at one time Minister of Railways and Canals, was married in Toronto, June 26, to R. L. Blackburn, of Ottawa.

Britton B. Cooke, who died at Parfit Sanitarium, Muskoka, Ont., July 11, was appointed Publicity Manager, Canadian Railway War Board, at its inception, Nov. 1, 1917, and continued in that capacity when its name was changed to Railway Association of Canada, Dec. 1, 1919.

Hugh Doheny, President, Hugh Doheny & Co., railway and general contractors, Montreal, died there, June 28. He was born at Montreal in 1864. His first railway contract was for the construction of a section of the C.P.R. on the north shore of Lake Superior in 1884, after which he carried out several contracts for railway construction, including portions of the Minnieapolis, St. Paul & Sault Ste. Marie Ry. in Michigan, C.P.R. Crowsnest

Pass line from Alberta into British Columbia, a section in Cape Breton for Mackenzie, Mann & Co., about 200 miles of the Timiskaming & Northern Ontario Ry., and, in association with Macdonnell & O'Brien, a 300 miles section of the National Transcontinental Ry. west of Quebec. He also built the Canada & Gulf Terminal Ry., between Mont Joli and Matane, Que., and was Vice President of that company at the time of his death. He was a partner in O'Brien & Doheny and Quinlan & Robertson, who were awarded a contract for the construction of sec. 3 of the Welland Ship Canal, which was eventually continued by Doheny, Quinlan & Robertson, but which has now been merged with sec. 4, and is being completed by the P. Lyall Construction Co. He was also engaged, between 1889 and 1890 on the construction of the Sault Ste. Marie Canal.

Lieut. Col. Sir John Strathearn Hendrie, K.C.M.G., C.V.O., who died at Johns Hopkins Hospital, Baltimore, Md., July 17, after an operation for an intestinal growth, was born at Hamilton, Ont., Aug. 15, 1857, and educated there and at Upper Canada College. He was a son of the late Wm. Hendrie, founder of the Hendrie Cartage Co., and for several years was in business as a contractor and built several railway lines in Canada and the U.S. He entered the Ontario Legislature, as member for Hamilton, in 1902, and was a minister, without portfolio, from the formation of the Whitney administration until 1914, when he was appointed Lieutenant Governor of Ontario. During his term in the Legislature, he was chairman of the railway committee, and introduced the railway bill which was passed in 1906. He promoted the Hamilton Bridge Works Co., and was General Manager, for several years, and subsequently President, and was associated with a number of financial, industrial and transportation companies, including the Hendrie Cartage Co., Niagara Navigation Co., Hydro Electric Power Commission (1906), Bank of Hamilton, Hamilton Jockey Club, Ontario Jockey Club, National Battlefields Committee, etc. He joined the 4th Field Battery of Canadian Artillery in 1883 and became major in 1894, commanded the battery in 1899, lieutenant colonel in 1902, retired in 1909, and held the long service decoration. He commanded the artillery which visited England in connection with the Queen Victoria diamond jubilee celebrations in 1897, and was created a Companion of the Royal Victorian Order in 1907, and a Knight Commander of the Order of St. Michael and St. George on his appointment as Lieutenant Governor of Ontario in 1914. He was devoted to horses, and in conjunction with his brother, Col. Wm. Hendrie, maintained a racing stable at Hamilton.

Capt. C. S. L. Hertzberg, M.C., formerly in C.P.R. service, and a son of the late A. L. Hertzberg, Engineer, Ontario Diseriet, C.P.R., Toronto, has been awarded the Czecho-Slovakia Croix de Guerre, for war service.

Lady Hickson, of Montreal, widow of Sir Joseph Hickson, at one time General Manager, G.T.R., and the Misses Hickson, have been spending some time at York Harbor, Me.

C. R. Hosmer, director, C.P.R., and Mrs. Hosmer are spending the summer at their country house at St. Andrews, N.B.

Herbert George Lash who has been

appointed Publicity Representative, Canadian National Rys., Toronto, was born at St. John's, Nfld., Jan. 16, 1894, and from June 1912 to Sept. 1915, was a reporter on the Toronto Mail and Empire; from Sept. 1915 to June 1919, he served with the Canadian Expeditionary Force overseas, originally as a private in the 4th Universities Company, P.P.C.L.I., and later as Lieutenant in the 47th Battalion, Canadian Infantry. He was awarded the Military Cross for work on the Droucourt-Queant line, Sept. 2, 1918, and a bar to the Military Cross at Valenciennes Nov. 1, 1918, and was wounded at Courcellette, Sept. 16, 1916. On his return from military service, he resumed his position as reporter on the Mail and Empire, and was, from Dec. 1919 to Apr. 1921, assistant sporting editor, and from Apr. 1921 to June 1923, editor, Toronto Sunday World.

Joseph Gaston Legrand, Bridge Engineer, Western Region, Canadian National Rys., Winnipeg, died there, July 2, after a long illness. He was born at Sompuis, Marne, France, Dec. 24, 1861, and from 1881 to 1882, underwent officers' training in the French Army. From 1882 to 1887, he was chairman and instrument man, French Government Railways, Ardennes; 1887 to 1889, engineer in charge for the contractors for fortification works at Verdun; 1889 to 1891, engineer, Hafna Mining & Smelting Co., Llanrwst, Wales; 1891 to 1893, in private practice as civil engineer in Montreal; 1893 to 1903, structural draftsman, Dominion Bridge Co., Montreal; 1903 to 1906, Assistant Chief Engineer, Structural Department, Locomotive & Machine Co., now Montreal Locomotive Works, Montreal; 1906 to 1908, Bridge Engineer, Grand Trunk Pacific Ry., Montreal; 1908 to Sept. 1, 1920, Bridge Engineer, G.T.P. R., Winnipeg; Sept. 1, 1920 to April 1923, Bridge Engineer, Western Lines, Canadian National Rys., Winnipeg; and since April 1923, Bridge Engineer, Western Region, Canadian National Rys., Winnipeg. In 1907 he was a member of the board which decided on the design for the Quebec Bridge, and from 1912 to 1914 was Consulting Bridge Engineer for the Edmonton, Dunvegan & British Columbia Ry. and the Pacific Great Eastern Ry., and acted as designing engineer for the Provencher bridge over the Red River between Winnipeg and St. Boniface. He was a member of the Engineering Institute of Canada, and the American Railway Engineering Association.

Joseph James McGarry, who has been appointed Travelling Freight Agent, C. P.R., Windsor, Ont., was born at Dublin, Ireland, Sept. 16, 1888, and entered railway service in 1905, since when he has been to 1912, clerk in railway clearing house, Dublin; 1912, clerk to Auditor of Freight and Telegraph Receipts, G.T.R., Montreal; 1913 to 1914, assistant agent, C.P.R., Nipigon, Ont.; 1914 to 1916, chief clerk Division Freight office, C.P.R., North Bay, Ont.; 1916 to 1921, Travelling Freight Agent, C.P.R., North Bay, Ont.; Feb. 1, 1921 to Nov. 1, 1922, Travelling Freight and Passenger Agent, C.P.R., North Bay, Ont.; Nov. 1, 1922 to June 15, 1923, Travelling Freight Agent, C.P.R., North Bay, Ont.

Sir William Mackenzie, President, Toronto Ry., and formerly President Canadian Northern Ry., returned to Canada from Great Britain, July 9, by the C.P.R. s.s. *Montlaurier*.

Sir Donald Mann, ex Vice President, Canadian Northern Ry., who left Toronto in the middle of May, has been spending some time on the European Continent, including Russia and is expected to return within a few weeks.

Lady Mount Stephen, widow of the first President of the C.P.R., arrived in Canada, July 17, on the C.P.R. s.s. Empress of Canada, for a visit.

Charles James Mulligan, who has been appointed Regional Counsel, Atlantic Region, Canadian National Ry., Moncton, N.B., was born at St. John, N.B., Jan. 15, 1870, and is a B.A. and M.A. of the University of New Brunswick. He became a barrister in Sept. 1892, and practised at St. John, N.B., until April 1908, when he was appointed Master of Titles and Inspector of Legal Offices, for Saskatchewan, at Regina, with the rank of a deputy minister, which position he held to July 1, when given his present appointment.

T. E. Roberts, who has been appointed Assistant Manager, Colonization and Development Department, C.P.R., London, Eng., entered the company's service in June 1949, as accountant in the Land Department, and acted as conductor for several land seeking parties arranged by the C.P.R. During a portion of the war he acted as Manager of the Department, and later was on active service for three and a half years, toward the end acting as Assistant Transport Officer, Canadian Forestry Corps, with the rank of lieutenant.

Alfred Rumsby, formerly chief traffic officer of the Associated Boards of Trade of British Columbia, Vancouver, aged 30, was found dying at his wife's grave at Victoria, B.C., June 29, from a self inflicted wound, and died later in a hospital. His wife died suddenly about a month previous, and he had resigned his position as he felt unfitted for his work.

John Gunion Rutherford, C.M.G., member of the Board of Railway Commissioners for Canada, died at Ottawa, Ont., July 24. He was taken seriously ill, with a heart affection at Penticton, B.C., July 9, during the board's western tour, and was removed to Ottawa a few days later, accompanied by Dr. Boyce, of Kelowna, B.C. He was born in Peeblesshire, Scotland, Dec. 25, 1857, was educated in Glasgow, later came to Canada and graduated from the Ontario Agricultural College, Guelph, and the Ontario Veterinary College, where he won the gold medal in 1879, after which he practised as a veterinary surgeon in Canada, the U.S. and Mexico. He went to Portage la Prairie, Man., in 1884 and engaged in veterinary work and horse breeding. From 1884 to 1892 he was Veterinary Inspector for the Manitoba Government, from 1892 to 1896 was member of the Legislature for Lakeside, and in 1897 was elected to represent Macdonald, Man., in the House of Commons. He was appointed Dominion Veterinary Director General in 1902, and held that position to 1912, being also, from 1906, Dominion Live Stock Commissioner. From 1912 to 1918 he was Superintendent of Agriculture and Animal Husbandry, Department of Natural Resources, C.P.R., and in Sept. 1918, was appointed a member of the Board of Railway Commissioners. He was an Honorary Associate of the Royal College of Veterinary Surgeons, and in 1908 was Canadian delegate to the International Institute of Agriculture at Rome; and the International Congress on Tuberculosis at Washington, D.C., from 1909 to 1911 was President, American Vet-

erinary Medical Association, and was also at various times Chairman of the International Commission on Control of Bovine Tuberculosis; President, Western Canada Live Stock Union; President, Horse Breeders Association of Manitoba and Northwest Territories, etc. He was Veterinary Officer of the Northwest Field Force during the Riel rebellion in 1885.

Lord and Lady Shaughnessy, and the Hon. Marguerite Shaughnessy, are spending the summer at their country home at St. Andrews, N.B.

Guy Tombs, of Guy Tombs, Ltd., transportation service, etc., Montreal, Mrs. Tombs, and son, are visiting Great Britain and the European continent, expecting to return early in September.

The United States Railways' Financial Results.

The articles appearing each month in Canadian Railway and Marine World dealing with the financial results secured

John Gunion Rutherford, C.M.G., V.S., H.A.R.C.V.S., Member, Board of Railway Commissioners for Canada, who died at Ottawa, July 24.

by U.S. railways have shown that so far this year they have been better than at any time since 1917. The July article pointed out that in April the U.S. roads earned at the equivalent annual rate of 6.5% on their tentative valuation. In May this rate was 6.33%, net operating income for that month being \$89,999,600. Gross earnings in May were \$547,282,500, an increase of 21.8% over May 1922. Operating expenses, \$420,656,000 were an increase of 18.4%.

For the first 5 months of 1923, the net operating income was \$356,966,900, equivalent to an annual rate of return on tentative valuation of 5.69% compared with net operating income of \$273,215,000 for the first 5 months of 1922, which was representative of an annual rate of 4.45%. Gross earnings for the first 5 months of 1923 were \$2,553,856,600, an increase of 19.4%, and operating expenses, \$2,026,163,600, were 18.2% greater, than in the first 5 months of 1922.

Railway Earnings.

Canadian National Railways.

Canadian Railway and Marine World is unable to publish its usual comparative monthly table of C.N.R. earnings, owing to changes which have been made in the form in which they are furnished. The following figures have been supplied for the "Amalgamated System" for May, and for the 5 months ended May 31, it being stated that they include the total revenue and expenses of some of the subsidiary companies which were not included theretofore.

	Earnings	Expenses	Net	Increase
May	\$20,992,772	\$19,092,414	\$1,900,358	\$ 925,126
For 5 months ended May 31,				
1923	\$96,303,524	\$95,911,764	\$ 391,760	\$3,193,946
Inc'e	\$12,041,605	\$ 8,847,659	\$3,193,946	*****
Operating ratios—	1923	1922		
January	102.57	110.46		
February	116.55	107.71		
March	102.10	98.92		
April	89.93	107.09		
May	90.95	94.72		
For 5 months ended May 31..	99.59	103.32		

The gross operating revenues for the whole Canadian National Railways system, including Central Vermont Ry., for May, were \$21,830,532.64, and operating expenses \$19,746,308.82, making net revenue \$2,084,223.82, against \$1,078,496.23 for May 1922.

Approximate gross earnings for June, \$22,989,634, and for two weeks ended July 14, \$9,419,068, against \$21,670,275 and \$8,885,927 for the same periods in 1922.

Canadian Railway and Marine World has, heretofore published separate figures for Grand Trunk Ry. earnings. We are officially advised that it is not the management's intention to make such figures public in future.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1923, compared with those for 1922. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimalt & Nanaimo Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World:—

	Gross.	Expenses.	Net.	Increase or Decrease
Jan.	\$13,148,914	\$12,428,888	\$ 720,026	* 236,549
Feb.	11,159,865	10,664,371	495,494	*158,994
Mar.	13,585,763	11,606,049	1,979,714	*440,793
Apr.	13,651,494	11,700,615	1,950,879	402,107
May	14,355,539	12,357,292	1,998,247	*346,266
	\$65,901,575	\$58,757,215	\$7,144,360	*\$307,398
Incr.	\$ 3,416,664	\$ 3,724,062		*****
Decr.	*****	*****	\$ 307,398	*****

*Decrease.

Approximate gross earnings for June, \$14,217,000, and for two weeks ended July 14, \$6,860,000, against \$23,198,000 and \$6,353,000 for same periods in 1922.

Freight Car Location on Canadian Railways.—The Railway Association of Canada has issued a report on location of freight cars on Canadian railways on July 1, based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Kettle Valley; Napierville Jct.; Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo, as follows: Number of cars owned, 209,924; home cars on Canadian foreign lines, 10,449; home cars on U.S. lines, 39,473; home cars on home lines, 160,102; Canadian owned foreign cars on home lines, 7,865; U.S. owned foreign cars on home lines, 33,774; total cars on lines, 201,741; percent on lines to total owned, 96.1; deficiency on lines to total owned, 8,183; home cars in bad order, 14,933; foreign cars in bad order, 518; total cars in bad order, 15,451; percent in bad order, 7.6; privately owned U.S. cars on lines, 2,559; privately owned Canadian cars on lines, 1,469.

Railway Operating Revenues, Expenses and Other Statistics for April.

The following comparative table for April, 1923 and 1922, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There has been no change in the roads operating, but the 1922 figures, given in the reports this year, include certain revisions, and are not in all cases the same as reported in 1922.

The column headed "Canadian National" gives the figures for the combined steam railways in Canada, under the

Canadian National Ry. Co's directors' management, including the former Canadian Northern System, the Intercolonial, Prince Edward Island, National Transcontinental and other Canadian Government Rys., the Hudson Bay Ry. and the Grand Trunk Ry. of Canada and the Grand Trunk Pacific Ry. It includes all G.T.R. lines in Canada and 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Province Line Ry., 9.77 miles, and Black Rock terminal. It does not include other lines in New England, nor lines west of the Detroit and St. Clair Rivers.

The column headed "Canadian Pacific"

includes also the Montreal & Atlantic and Esquimalt & Nanaimo Rys.

The items under side headings 1 to 6, inclusive, include rail lines only and not water lines. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. Total train miles include freight; passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, baggage, parlor cars, etc.

In the table for March, in Canadian Railway and Marine World for July, pg. 315, "Daily averages per mile of road operated," were incorrectly stated as "Averages per mile of road operated."

Railway Operating Revenues, Expenses and Other Statistics.

A table on page 388 gives the gross earnings, operating expenses, net earnings or deficits, and other operating statistics for Canadian railways as a whole for April, and separately for the Canadian National and Canadian Pacific Railways. Tables on another page give the results secured by the Canadian National and Canadian Pacific Railways in May. As pointed out in our July issue, the railways had a much better month in April than in March, and the later figures show that April 1923 was also a much better month than April 1922. Freight revenue for the roads as a whole was \$6,139,676 more than in April 1922, and passenger revenue was slightly more, resulting in total operating revenues being \$6,256,744, or 21% more. The April 1923 revenue was also \$1,618,175 more than that for March.

In view of the fact that the lower rates prevailing required the transportation of more freight and passengers than in April 1922, to secure increased gross earnings, it is not surprising that operating expenses increased substantially. Total operating expenses were \$3,537,935, or 12.6%, more than in April 1922, but were \$479,492 less than in March. Compared with April 1922, the expense for maintenance of way, maintenance of equipment, traffic and transportation was more, but in view of the greatly increased traffic handled, the increase in operating expenses, particularly as regards transportation expense, was not unduly large, but, on the contrary, was such as to reflect a high degree of operating efficiency.

The gratifying increase in gross revenue over March and April 1922, with a reduction in operating expenses, compared with March, and an increase in operating expenses not nearly so large as the increase in gross earnings compared with April 1922, is reflected in a substantial improvement in the operating income statement. The net earnings of \$4,034,686 in April, compared with \$1,315,876 in April 1922, resulted in an operating income for the month representing a proportionate improvement over April 1922. A comparison of the month's operating ratio, 88.66, with 95.51 for April 1922, and 94.30 for March 1923, shows the improvement effected.

The large increase in freight traffic in April this year, compared with April 1922, is shown by the freight tonnage and ton mileage. Grain movement during April 1922 was light, on account of embargoes against both Vancouver and Port William and Port Arthur, which explains in part the large increase in April 1923, although the April traffic this year was 4.3% more than that of March, or 7% greater on a per diem basis, and was well above the traffic of any month last year prior to September. The larger traffic of April 1923 was handled more efficiently than that of April 1922; a little calculation shows that the freight train miles did not increase proportionately to the ton miles. The train mileage figure shows the increase in the average carload of from 22.6 to 24.7 tons, and in the average revenue trainload of from 453.6 tons to 498.7. The average trainload increase did not result entirely from the increase in average carloading, but was due in part to there being an additional loaded car in each average train. The increase in freight traffic is shown strikingly under the heading "Daily average per mile of road operated." There

were 2,137 ton miles of freight handled per mile of road per day in April 1923, compared with but 1,485 in April 1922.

The number of revenue passenger miles in April also showed a good increase over April 1922, while the number of passenger train miles operated, although larger than in April 1922, did not increase disproportionately. Although the average passenger rate declined slightly, it was not enough to prevent the gross earnings from passenger traffic showing an increase. The improvement in passenger traffic density is shown in the table, under the "Daily average per mile of road operated" heading. The number of revenue passenger miles per mile of road operated per day was 172 in April 1923, compared with 167 in April 1922.

An analysis of the table giving the April results for the railways as a whole shows that the railway industry was in a much better position in April 1923 than in April 1922, not only as concerns the railways themselves, but also as concerns the public which they serve. For example, while the public paid the railways only 1.064c per revenue ton mile of freight handled, compared with 1.177c in April 1922, and while the railways earned only \$5.31 per freight train mile, compared with \$5.34 in April 1922, while the average revenue trainload was heavier in April 1923 than in April 1922, yet the total freight earnings, due to the heavier traffic provided, were very much better than in April 1922, and the operating expenses incurred did not increase nearly proportionately to the increased earnings. In the same way, although the public paid smaller passenger fares in April 1923 than in April 1922, and while the railways earned slightly less per passenger train mile, yet the total passenger earnings were larger, and although the expenses as between freight and passenger services cannot be segregated with any degree of accuracy, it is a reasonable proposition that the railways gained from the heavier passenger traffic, despite the decreased average rate. This is but an object lesson of the principle that has been continually emphasized in these columns, viz., that increased traffic is what the railways need, and that increased traffic will benefit, not only the railways, but also the public, through making possible lower transportation charges.

Regarding the April results for the individual large roads, the great improvement accomplished by the Canadian National amalgamated system is at once evident. The 64% increase in freight traffic was doubtless due in large part to the embargo mentioned above, and the advantages which came to the National system because of the increased traffic in April are evident throughout the figures covering the month's operations. The increase in freight earnings particularly, but the increase in passenger earnings also, accompanied by an increase in operating expenses which was not nearly so large, proportionately, as that in total gross earnings, shows that additional traffic can be handled by the National lines at decreased unit costs. The increases in average freight car loading, from 22.3 tons in April 1922, to 26.1 tons in April 1923; and in average revenue freight train loading, from 410.4 tons in April 1922 to 505.9 tons in April 1923, reflects the improved position and shows in a striking way the effect which an

increase in volume of traffic has.

The C.P.R. had an increase of \$1,036,104, or 8.3%, in gross earnings, but operating expenses increased \$934,609, or 8.6%, slightly increasing the operating ratio from 87.38 in April 1922 to 87.59. Freight traffic increased 20.7% and freight revenues increased \$1,148,957, or 13.9%, but passenger traffic fell off slightly. The average receipts per ton mile decreased from 1.182c to 1.115c and with a reduction of 43.5 net tons of revenue freight per train the average revenue per train mile decreased from \$6.14 to \$5.30.

The table of May earnings for the C.P.R. and the C.N.R., and of the earnings from Jan. 1 to May 31, shows that while the C.P.R. enjoyed a larger gross than in May 1922 by \$691,293, the operating expenses were \$1,037,559 more than in May 1922, resulting in a decrease in net earnings of \$346,266. For the first five months of 1923, the C.P.R. gross earnings, \$65,901,575, were \$3,416,664 more than in the first five months of 1922, but as operating expenses, \$58,757,215, were \$3,724,062 more, this resulted in the net for the period being \$307,398 smaller. As pointed out in our July issue, the favorable results secured by the C.P.R. in April 1923 were responsible for placing the net earnings in the first four months of 1923 ahead of those for the same period of 1922, but the May results have caused the net earnings to fall behind the 1922 record again.

The Canadian National Railways, exclusive of the Central Vermont Ry., had gross earnings in May of \$20,992,772, an increase of \$2,499,462 over May 1922; operating expenses, \$19,092,414, were \$1,574,337 more than in May 1922, resulting in net earnings, \$1,900,358, being \$925,126 more than in May 1922. For the first five months of 1923, C.N.R. gross earnings, \$96,303,524, were \$12,041,605 more than in the first five months of 1922; and operating expenses, \$95,911,764, were \$8,847,660 more, resulting in net earnings, \$391,761, being \$3,193,946 more, the first five months of 1922 having been marked by an operating deficit of \$2,802,185.

From the May figures of both large systems, it is evident that the railways are having all they can do to make ends meet properly on the present rates and traffic. In our review of the April results, it was shown that, although a great improvement over April 1922 was secured, the operating ratio for the roads as a whole was 88.66; it is likewise evident that the roads are still far from securing the relationship between income and outgo that they should have, viz., one expressed by an operating ratio of between 70 and 75. The only reason that they are able to get the results they have been getting is because traffic has been good; the present rates applied to traffic approximating the 1921 condition would find Canadian railways in bad shape. It is not likely that higher rates can be looked for in the near future; agriculture and industry would certainly not be disposed to see them granted. The railways' only salvation, therefore, seems to be in keeping down expenses and in obtaining increased traffic. The applications for increased pay, and more favorable working conditions, which amount to practically the same thing as increased pay, made by the maintenance men and shopmen, would, if granted even in part,

be a move in the wrong direction so far as expenses are concerned; but, on the other hand, the movement of the immense western crop which is predicted, even though it will be moved at comparatively low rates, promises the railways a large volume of traffic which will be reasonably profitable, mainly on account of its large volume.

Traffic Orders by Board of Railway Commissioners.

Canadian National Railways Standard Passenger Tariff.

33,841. June 29. Re application of Canadian National Ry. Co., under sec. 334 of the Railway Act, of 1919, for approval of its standard passenger tariff C.R.C. no. E.542-W-457, issued June 26, 1923 and effective July 1, 1923. Upon the report and recommendation of its Assistant Chief Traffic Officer, the board orders that the said tariff, cancelling Canadian Northern Ry. C.R.C. no. E.2699, Grand Trunk Pacific Railway C.R.C. no. 660 and Halifax and Southwestern C.R.C. no. P-77, be approved.

Prince Edward Island Railway Transshipping Charges Suspended.

33,915. July 19. Re complaint of J. J. Hughes, M.P., with regard to freight rates between points on Prince Edward Island and mainland stations on Canadian National Rys.; the board orders that, with respect to Canadian National Rys. tariff schedules as follows, viz., supplement 2 to C.R.C. no. E-603; supplement 1 to C.R.C. no. E-609; and supplement no. 1 to C.R.C. no. E-607, the provisions therein reading as shown below, be suspended until further order, viz.—“Shipments to or from stations on Prince Edward Island east of Charlottetown and Royalty Jct., or west of Summerside, will be subject to an additional charge of 2c per 100 lb., to cover cost of transshipping from standard to narrow gauge cars, or vice versa.”

The board further orders that the following provision in Canadian National Rys. tariff C.R.C. no. E-618, be suspended as from May 14, 1923, until further order, viz.—“Shipments destined to stations on Prince Edward Island east of Charlottetown and Royalty Jct., or west of Summerside, will be subject to an additional charge of 20c per net ton to cover cost of transshipment from standard to narrow gauge cars.”

Automatic Train Control in the U.S.—

Details of the hearing on automatic train control in the U.S., and the Interstate Commerce Commission's order requiring class 1 roads to equip specified divisions on their lines with automatic train control, were given in a preceding issue of Canadian Railway and Marine World. The order required that the installations be completed by Jan. 1, 1925, and the Commission has since authorized a few of the roads to equip divisions other than those originally specified. Up to July 1, practically all the roads included in the order had made some progress in installing a train control system, although some of them have not definitely decided which system will be put in. The majority have chosen one of the following systems: Union Switch and Signal Co's continuous induction; General Railway Signal Co's tapered control; American Train Control Co's device; National Safety Appliance Co's system; Miller Train control; Federal Signal Co. induction system; Regan Safety Devices Co's system.

The Pacific Route for Western Grain.

The progress made in developing an export route for western Canadian grain by way of Vancouver and the Panama Canal to British and other European markets, and by way of Vancouver and the Pacific to South American and Oriental markets, has been discussed in preceding issues of Canadian Railway and Marine World, particularly in February, on pg. 61, and in June, on pg. 274, in both of which articles different peoples' opinions were quoted as to the feasibility and permanency of the Pacific route, and numerous influencing considerations were detailed.

The commission appointed by the Dominion Government to enquire into the grain trade, composed of Mr. Justice Turgeon, of the Saskatchewan Supreme Court; Dean Rutherford, of Saskatchewan University's faculty of agriculture; Dr. McGibbon, Professor of Economics at Alberta University; and J. F. Scott, of Quebec, which has been holding hearings in the west throughout June and July, has developed further information as to the western route's possibilities. Press reports from various western cities state that testimony was presented to the commission as follows:

William Pearce, Statistician, Colonization and Development Department, C.P.R., stated that in 1881 he had gone to the Pacific coast to look over the possibilities there for an outlet for Alberta grain, and had concluded that Vancouver was the logical export port for all rain raised west of Swift Current, Sask. Speaking for himself, and not for the C.P.R., he still believed that all wheat raised as far east as Moose Jaw, and possibly Regina, should go via the Pacific. He claimed that the Panama Canal zone's heat would have no harmful effect. To the objection that there was but little return freight for Vancouver, he pointed to the fact that 85% of the ocean freight tonnage is carried by tramp steamers. He said that if the proper facilities were available at Vancouver, that port would get 50% of the wheat from the prairie provinces, and that if it could get the volume of traffic the rates would be adjusted.

A. J. McMillan, Manager, Robin Hood Milling Co., stated that the shipments his company had made through Vancouver had been handled satisfactorily, but that the service had not been established to the extent that it could compete with the Atlantic route. While at times the rates might be lower via Vancouver, the fact that the ship supply on the Pacific coast was uncertain, and that a ship could be secured on the Atlantic seaboard at almost any time, influenced many buyers to specify that shipments should be routed east. If more ships were available at Vancouver the Pacific route would be very satisfactory.

J. H. Hanna, Secretary, Calgary Board of Trade, read a statement in which it went on record as favoring the Pacific route and urging greater facilities at Vancouver.

J. M. Cameron, General Superintendent, Alberta District, C.P.R., stated that in his opinion grain handling facilities at Vancouver should be increased and the port made more than a mere exporting station for ocean tonnage. If the volume of grain to Vancouver increases, as it probably will, increased storage facilities should be provided at Vancouver and

interior points in Alberta supplemented. It is for the grain trade to decide finally and the railway company is ready to follow their suggestions.

S. C. Brown, Superintendent, Canadian Government elevator at Calgary, stated that in the grain year 1922-23 the elevator handled about 7,000,000 bush. of grain all of which went west except about 10 cars.

Geo. Lane, a veteran Alberta farmer and rancher, stated that ever since the U.S. started to build the Panama Canal he had hoped that it would provide a better source of transportation for western Canadian wheat, and that he is now more convinced than ever that the Pacific route is the best for Alberta. It was his wheat that went through the Panama Canal in one of the first trial shipments, and he was very emphatic in his statement that the grain was in no way harmed by the heat. He thought that screening should be done at interior elevators if possible, and if not, at Vancouver.

J. I. McFarland, President Alberta Pacific Grain Co., said that shippers were getting lower prices at Vancouver at the end of June than at Port Arthur, and had been for two months, because of high freight rates and lack of ships at Vancouver. Under present conditions Vancouver could offer more favorable prices to prairie shippers during winter only.

From Mr. McFarland's statement it would seem that with rail rates and the shipping situation on the Pacific as at present, wheat from all of Saskatchewan and part of Alberta would go east during lake navigation, but the Vancouver World, in dealing with his testimony, states that steps are being taken to provide better steamship service out of Vancouver and that high hopes are entertained of having the rail rates equalized, in which case the supremacy of the Vancouver route for all Alberta's grain and a large part of Saskatchewan's would be firmly established. Other opinion is to the effect that any change in the shipping and rate situation on the Pacific will be unfavorable to further development of the Vancouver-Panama route to Europe.

As has been pointed out by British Columbia interests in connection with the rate appeal now pending, grain hauled east from Edmonton for 1,225 miles is only to the head of Lake Superior, while if hauled west for 770 miles it is to Vancouver, at tidewater, but it is hauled the 1,225 miles eastward for 15½c a bush., while the charge for hauling it 770 miles westward is 15c a bush., only ½c less. The railways point to higher operating costs and lower traffic density as justification for this. From these facts, and from the evidence quoted above it is evident that the development of the Pacific grain route is going to experience in the near future will depend largely on what the Dominion Government does with British Columbia's and Alberta's appeal from the Board of Railway Commissioners' decision on rate equalization, to be heard in the near future.

The average mileage per freight car per day on U.S. railways has been much better in the first part of 1923 than in preceding years. For the first 4 months of 1923 it was 26.4, compared with 22.3 in the first 4 months of 1922, 21.2 in the first 4 months of 1921, and 22.1 in the first 4 months of 1920.

Birthdays of Transportation Men in August.

Many happy returns of the day to:—

A. C. Barker, Superintendent of Transportation, Atlantic Region, Canadian National Rys., Moncton, N.B., born at Lacadie, Que., Aug. 5, 1878.

V. T. Bartram, ex-Purchasing Agent, Timiskaming & Northern Ontario Ry., now general contractor, etc., Toronto, born at Ottawa, Aug. 2, 1880.

H. H. Beasley, Purchasing Agent, Toronto Transportation Commission, Toronto, born at St. Thomas, Ont., Aug. 1, 1867.

Major Graham A. Bell, C.M.G., Deputy Minister of Railways and Canals, Ottawa, Ont., born at Perth, Ont., Aug. 13, 1874.

C. B. Brown, Chief Engineer, Operation Department, Canadian National Rys., Montreal, born at Ithaca, N.Y., Aug. 27, 1879.

A. B. Calder, Assistant to Chief Commissioner of Colonization and Development, C.P.R., Montreal, born at London, Ont., Aug. 24, 1867.

D. B. Carswell, Superintendent Engineer, Canadian Government Merchant Marine Ltd., Montreal, born at Paisley, Scotland, Aug. 3, 1884.

J. S. Carter, District Passenger Agent, C.P.R., Nelson, B.C., born at Aurora, Ill., Aug. 14, 1864.

Hon. F. B. Carvell, K.C., Chief Commissioner, Board of Railway Commissioners, Ottawa, Ont., born at Bloomfield, N.B., Aug. 14, 1862.

A. E. H. Chesley, General Accountant, Dominion Atlantic Ry., Kentville, N.S., born near Annapolis Royal, N.S., Aug. 27, 1877.

A. B. Chown, General Passenger and Baggage Agent, G.T.R. lines west of Detroit and St. Clair Rivers, Canadian National Rys., Chicago, Ill., born at Belleville, Ont., Aug. 4, 1887.

Col. F. F. Clarke, D.S.O., Chief Land Surveyor, Operation Department, Canadian National Rys., Montreal, born at Hamilton, Ont., Aug. 22, 1878.

C. H. N. Connell, District Engineer, Ontario District, Canadian National Rys., Toronto, born at Woodstock, N.B., Aug. 26, 1876.

S. W. Crabbe, Superintendent, Smiths Falls Division, Quebec District, C.P.R., Smiths Falls, Ont., born at Teeswater, Ont., Aug. 9, 1885.

H. W. Crawford, ex-General Agent, Canada Steamship Lines, now of Toronto, born at Bowmanville, Ont., Aug. 24, 1887.

Capt. L. A. Demers, F.R.A.S., J.P., N.P., Dominion Wreck Commissioner, Ottawa, Ont., born at Montreal, Aug. 18, 1862.

E. L. Desjardins, Superintendent, Levis Division, Quebec District, Canadian National Rys., Levis, Que., born at St. Jean Port Joli, Que., Aug. 1, 1859.

J. V. Foy, General Passenger Agent, Canada Steamship Lines, Ltd., Toronto, born there, Aug. 27, 1882.

G. H. Griffin, General Agent, Passenger Department, Rail and Steamship Lines, C.P.R., Cleveland, Ohio, born at Boston, Mass., Aug. 2, 1877.

Geo. H. Ham, Head Office Department, C.P.R., Montreal, born at Trenton, Ont., Aug. 23, 1847.

W. B. Harper, Resident Engineer, Laurentian Division, Quebec District, C.P.R., Montreal, born at Baie Verte, N.B., Aug. 15, 1882.

C. A. deLotbiniere Harwood, K.C., Solicitor, Quebec Province, Central Reg-

ion, Canadian National Rys., Montreal, born at Vaudreuil, Que., Aug. 2, 1869.

F. S. Isard, Manager, Canada Steamship Lines, Ltd., Montreal, born at Hamilton, Ont., Aug. 14, 1888.

H. L. Johnston, District Engineer, Vancouver Island Lines, Canadian National Rys., Victoria, B.C., born at Fredericton, N.B., Aug. 29, 1862.

W. A. Kirkpatrick, Superintendent of Transportation, Saskatchewan District, Canadian National Rys., Saskatoon, Sask., born at West Lorne, Ont., Aug. 28, 1883.

F. L. Lamplough, Superintendent, Ottawa Division, Northern Ontario District, Central Region, Canadian National Rys., Ottawa, Ont., born at Cambridge, Vt., Aug. 15, 1867.

J. D. McDonald, ex-General Passenger Agent, Western Lines, G.T.R., and General Western Passenger Agent, Canadian National Rys., Chicago, Ill., born at Toronto, Aug. 27, 1855.

M. K. McQuarrie, Engineer, Dominion Atlantic Ry., Kentville, N.S., born at Sault Ste. Marie, Ont., Aug. 17, 1884.

A. H. Mahon, Master Mechanic, Canadian National Rys., Edson, Alta., born near Ottawa, Ont., Aug. 27, 1874.

H. J. Main, Superintendent, Trenton Division, Ontario District, C.P.R., Toronto, born at Kemptville, Ont., Aug. 16, 1885.

C. Montgomery, Master Mechanic, Pere Marquette Rd., St. Thomas, Ont., born near London, Ont., Aug. 29, 1860.

C. S. Morse, District Freight Agent, C.P.R., Ottawa, Ont., born there, Aug. 31, 1889.

W. G. Murrin, Vice President, British Columbia Electric Ry., Vancouver, B.C., born at Greenwich, Eng., Aug. 27, 1875.

L. Palk, Assistant to Vice President and General Manager and Assistant Secretary, Winnipeg Electric Ry., and Secretary, Winnipeg, Selkirk & Lake Winnipeg Ry., Winnipeg, born there, Aug. 14, 1885.

Capt. K. G. Polyblank, District Engineer in charge of construction, Longlac-Nakina cutoff, Canadian National Rys., Longlac, Ont., born at Bristol, Eng., Aug. 17, 1884.

Lieut.-Col. Blair Ripley, C.B.E., D.S.O., District Engineer, Ontario District, C.P.R., Toronto, born at Oxford, N.S., Aug. 29, 1880.

J. M. Rosevear, General Comptroller, Canadian National Rys., Montreal, born at St. Lambert, Que., Aug. 9, 1869.

W. LeB. Ross, Treasurer, Western Region, Canadian National Rys., Winnipeg, born at Ottawa, Ont., Aug. 9, 1868.

F. C. Salter, Manager, Foreign Department, Express Department, Canadian National Rys., Montreal, born at Sarnia, Ont., Aug. 31, 1863.

A. O. Seymour, General Tourist Agent, C.P.R., Montreal, born at Ogdensburg, N.Y., Aug. 14, 1887.

S. A. Simpson, Superintendent, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Winnipeg, born at Toronto, Aug. 22, 1880.

J. F. Sweeting, Industrial Agent, Natural Resources Department, C.P.R., Winnipeg, born at Worthing, Eng., Aug. 20, 1872.

W. J. Sturges, Fuel Agent, Western Region, Canadian National Rys., Winnipeg, born at Fairfield, Vt., Aug. 20, 1877.

L. Tait, Secretary-Treasurer, London St. Ry., London, Ont., born at Hamilton, Ont., Aug. 9, 1882.

W. D. Waddell, General Accountant, Canadian National Rys., Montreal, born at Waterford, Ireland, Aug. 7, 1877.

F. E. Warren, General Car Foreman, C.P.R., Winnipeg, born at Chelsea, Que., Aug. 29, 1872.

W. B. Way, Superintendent, Cochrane Division, Quebec District, Canadian National Rys., Cochrane, Ont., born at Bowmanville, Ont., Aug. 22, 1867.

H. E. Weyman, Manager, Levis County Ry., Levis, Que., born at Guildford, Eng., Aug. 27, 1883.

F. E. Whelpley, acting Treasurer, Atlantic Region, Canadian National Rys., Moncton, N.B., born at St. John, N.B., Aug. 20, 1861.

Transportation Events of Twenty-five Years Ago.

From Railway and Shipping World, now Canadian Railway and Marine World, for July, 1898.

C.P.R.'s Montreal-Ottawa line completed.

C.P.R. opened Place Viger station and hotel at Montreal.

G.T.R. completes superstructure of Victoria Jubilee Bridge, Montreal.

Ottawa & New York Ry. completed between Cornwall, Ont., and Ottawa.

G.T.R. accepts R. A. Waite's plans for head office building on McGill St., Montreal.

Erie & Huron Ry., from Rondeau, Ont., to Sarnia, 76 miles, sold to Lake Erie & Detroit River Ry. Co.

Ottawa & New York Ry., and New York & Ottawa Ry., head offices removed to Ottawa, Ont., from Moira, N.Y.

Grant Hall, who had been removed from the mechanical foremanship of the Intercolonial Ry., at Moncton, N.B., took up his residence in Montreal.

Port Arthur, Duluth & Western Ry., which was built from Port Arthur, Ont., to the Minnesota boundary, at Gunflint Lake, 85½ miles, with a 6 miles extension beyond the boundary to Gunflint mines, was sold to Mackenzie, Mann & Co., for about \$250,000. They let a contract for clearing and grading the first 20 miles from Stanley, 19 miles from Port Arthur, to E. Fauquier. T. H. White was Chief Engineer.

The Interstate Commerce Commission sat in Chicago, to investigate the passenger rate war, between the C.P.R., on the one hand, and certain United States western lines, and their connections, including the Grand Trunk Ry., which charged that the C.P.R., in violation of the Act to Regulate Commerce, was making unreasonably low rates between various points in the U.S., not as a measure of legitimate competition, but as a means of retaliation for the purpose of exacting unreasonable demands upon its part, all of which was either denied or justified by the C.P.R.

Railway Lands Patented.— Letters patent were issued during June, for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres
Calgary & Edmonton Ry.....	321.00
Canadian Northern Ry.....	2.11
Canadian Northern Western Ry.....	6.06
Canadian Pacific Ry.....	9.89
Qu'Appelle, Long Lake & Saskatchewan, Rd. & Steamboat Co.....	70.00
Total.....	409.06

Partial Suspension of Crowsnest Pass Freight Rates Agreement Continued.

The Dominion Government has suspended for another year the Crowsnest Pass agreement, with the exception of the portion of it relating to freight rates on grain and flour. The order in council, no. 1,279, passed on June 30, is as follows: "Whereas chapter 41 of the Statutes of Canada, entitled An Act to amend The Railway Act, 1919, provides as follows: '1. Subsection 5, of section 325, of The Railway Act, 1919, shall, notwithstanding the proviso thereof, remain in effect until the sixth day of July, 1923, and may be continued in force for a further period of one year by order of the Governor in Council published in The Canada Gazette; provided, that notwithstanding anything herein or in said subsection 5 contained, rates on grain and flour shall, on and from the 6th day of July, 1922, be governed by the provisions of the agreement made pursuant to chapter 5 of the Statutes of Canada, 1897.'

"Now therefore, His Excellency the Governor General in council, on the recommendation of the Minister of Railways and Canals, and in virtue of the authority vested in him by the said chapter 41 of the Statutes of Canada, 1922, is hereby pleased to order that the said subsection 5, of section 325, of The Railway Act, 1919, shall be and the same is hereby continued in force for a further period of one year, that is, until the 6th day of July, 1924, subject to the proviso contained in the said Act with respect to rates on grain and flour."

Section 325, subsection 5, of the Railway Act referred to in the order, is as follows: "Notwithstanding the provisions of section 3, the powers given to the Board under this act to fix, determine and enforce just and reasonable rates, and to change and alter rates as changing conditions or cost of transportation may from time to time require, shall not be limited or in any manner affected by the provisions of any act of the Parliament of Canada, whether general in application or special and relating only to any specific railway or railways, and the Board shall not excuse any charge of unjust discrimination, whether practised against shippers, consignees, or localities, or of undue or unreasonable preference, on the ground that such discrimination or preference is justified or required by any agreement made or entered into by the company; provided that this subsection shall remain in force only during the period of 3 years from and after the date of the passing of this act."

Section 325, subsection 3, referred to in section 5, is as follows: "Except as otherwise provided, any tariff in force, except standard tariffs hereinafter mentioned, may, subject to disallowance or change by the Board, be amended or supplemented by the company by new tariffs, in accordance with the provisions of this Act."

The Crowsnest Pass agreement, which was entered into in 1897, between the Dominion Government and the C.P.R. Co., under authority of an act passed by Parliament in that year, provided that, in consideration of a government subsidy of \$11,000 a mile for the construction of the C.P.R. line through the Crowsnest Pass, the railway would place in effect lower rates on certain specified commodities westbound, and on grain and flour eastbound. The exact rate reductions provided for were given in

Canadian Railway and Marine World for Feb. 1922, pg. 63. The Crowsnest Pass rates on grain and flour remained in effect in entirety from Sept. 1, 1899, until Oct. 7, 1903, when they were modified by lower rates resulting from an agreement made between the Province of Manitoba and the Canadian Northern Ry. Lower rates continued until March 15, 1918, when the 15% rate increase was allowed by the Board of Railway Commissioners. This was granted subject to the Crowsnest Pass agreement, and brought western grain rates up to the Crowsnest Pass maximum from most points in Saskatchewan and Alberta, though not in Manitoba. On July 16, 1918, further rate increases, occasioned by rising railway operating costs, were granted, and as the western grain and flour rates could not be further increased without violating the Crowsnest Pass agreement, order in council 1,863, of July 27, 1918, was passed, authorizing the Board of Railway Commissioners to disregard the agreement as a rate controlling instrument, and subsequently sub-sec. 5 was added to sec. 325 of the Railway Act, enabling the Board to disregard all rate controlling agreements, including the Crowsnest Pass agreement, for three years from July 6, 1919. The Crowsnest Pass agreement would therefore have become effective again on July 6, 1922, in the absence of further legislation. Prior to that date, however, after numerous hearings before a House of Commons special committee on transportation costs, dealt with fully in Canadian Railway and Marine World for June and July, 1922, and after the committee's report, given in full in our July 1922 number, had been presented, Parliament enacted that the Crowsnest Pass agreement should, except in respect of grain and flour, be suspended for one year from July 6, 1922, and gave the government power to suspend it further for one year, if, in its judgment, the then existing circumstances should justify such further suspension.

The order in council passed recently continues the suspension of the agreement, except in respect of grain and flour, until July 6, 1924, and the Crowsnest Pass rates on grain and flour will remain in effect until that date, unless, as is most unlikely in view of the railway operating ratios now prevailing, they are reduced further, and, unless further legislation is passed, the Crowsnest Pass schedule of rates in its entirety will again become operative on July 6, 1924.

Figures submitted to the special parliamentary committee in 1922, showed that the substitution of the Crowsnest Pass rates on grain and flour for those in effect immediately prior to the substitution, caused a loss to the C.P.R. of \$7,159,543 and to the C.N.R. of \$8,606,453 during the first year of operation under the re-applied Crowsnest Pass rates.

Canadian Railway Board of Adjustment No. 1.—A. E. Crilly, Chief of Wage Bureau, Canadian National Rys., and H. T. Malcolmson, Superintendent, Toronto, Hamilton & Buffalo Ry., have been appointed members of the Board, succeeding A. J. Hills, Assistant to Vice President, Operation and Construction, Canadian National Rys., and the late F. P. Brady, Assistant to Executive, Canadian National Rys.

Freight Rate Reductions, Quebec, Montreal & Southern Railway.

A recent Montreal press report said "For the first time on record, at any rate within recent years, a Canadian railway has voluntarily made a reduction in its freight rates. This unusual course has been taken by the Quebec, Montreal and Southern Ry., which has issued circulars announcing a straight reduction of 25% on all freight."

We are officially advised that the above report is incorrect, and that the Q.M. & S. Ry. has not issued circulars announcing a reduction of 25% on all freight. The management did, however, announce reductions in rates on flour, grain, lumber and building material, including brick, cement and sand. The Q.M. & S. rates on these commodities previously in effect were about 20% higher, on the average, than Canadian Pacific and Canadian National rates, and the effect of the reduction has been to bring the Q.M. & S. rates into line with those on the other lines.

The press report quoted erred badly in referring to the reductions as the first voluntary ones on record, or at any rate within recent years, as since the Board of Railway Commissioners last authorized an increase in freight rates Canadian railways have made individual rate concessions, and concessions of a more general nature, such as to live stock and milling industries. It is a good thing that Canadian railways are operated with more care and accuracy than are employed by daily newspaper writers who undertake to record railway activities.

The C.P.R. St. John River Bridge Case.

Mr. Justice Grimmer delivered judgment recently, in the New Brunswick Chancery Court, dismissing the Province of New Brunswick's action against the C.P.R. Co. and its subsidiary, the St. John Bridge & Ry. Extension Co., in respect of the construction of the bridge across the St. John River at the reversing falls at St. John. The main point at issue was the Government's contention that the control of the river was given to New Brunswick under the Ashburton Treaty. The bridge was built with the approval of the Dominion Department of Public Works, which has control of navigable waters, and of the Board of Railway Commissioners, and the matter was first brought up by some persons interested in shipping, who contended that the bridge was built at such a height above high water mark as to impede the passage in and out of the river of certain ocean going schooners. It is expected that the decision will be appealed, and that the case will be taken to the Imperial Privy Council.

St. James Hotel Property, Montreal.—A recent press report stated that the St. James Hotel, corner of St. James St. and Chaboillez Square, Montreal, would be taken over by the Canadian National Rys. and converted into an office building. We are officially advised that the building is owned by the C.N.R., having been taken over from the G.T.R., and is rented, but that possession can be obtained by giving three months notice. The management is considering whether the use that could be made of the space would be sufficient to offset the rent which is now being received.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a complete record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

General order 383. June 12.—Amending general order 124, April 30, 1914, prescribing regulations governing operation of draw, swing or bascule bridges over navigable waters, by striking out par. 3 and substituting, 3. The signal to be given by a steamer to have a swing bridge opened shall be three long whistles.

33,738. June 7.—Authorizing Canadian National Rys. to rebuild overhead highway bridge at mile 6.2 Lunenburg, Subdivision, N.S.

33,739. June 6.—Approving supplements 1 to 5, to connecting agreement between Bell Telephone Co. and Adelaide Telephone Co.

33,740. June 11.—Authorizing Canadian National Rys. to rebuild bridge at Main St., Harrisburg, Ont.

33,741. June 6.—Authorizing Esquimalt & Nanaimo Ry. to use portion of Johnson St. bridge, Victoria, B.C.

33,742. June 11.—Authorizing Canadian National Rys. to rebuild public highway bridge known as Given Road, Beverley Tp., Ont.

33,743. June 11.—Extending to July 1, 1924, time within which C.P.R. may erect freight shed at Kingston, Ont., under order 28,542, July 14, 1919.

33,744. June 11.—Rescinding order of Railway Committee of Privy Council, March 4, 1903, authorizing C.P.R. to build siding for Ontario Portland Cement Co., South Dumfries Tp., Ont.

33,745. June 6.—Authorizing Town of Ford City, Ont., to extend Huron St. across Pere Marquette Rd. in Ford City and Walkerville, Ont.

33,746. June 11.—Authorizing Canadian National Rys. to rebuild public highway bridge at Cons. 5 and 6, Innisfail Tp., Ont.

33,747. June 11.—Approving crossing of C.P.R. Calgary & Edmonton Branch, in s.w. ¼ Sec. 30, Tp. 48, Range 24, West 4th Meridian, Alta.

33,748. June 12.—Authorizing Canadian National Rys. to build siding for Sargeant Co., Orillia, Ont.

33,749. June 12.—Approving agreement between Bell Telephone Co. and Glengarry Telephone Co., Glengarry and Prescott Counties, Ont.

33,750. June 12.—Ordering Canadian National Rys. to put in new piping on south derail at crossing of Moose Jaw Electric Ry. by Canadian National Rys., at 10th Ave., Moose Jaw, Sask.

33,751. June 11.—Authorizing Hamilton Cataract Power, Light & Traction Co. to place 110-volt lines under Canadian National Rys., between Lots 1 and 2, Con. 1, Saltfleet Tp., Ont.

33,752. June 12.—Ordering Pere Marquette Rd. to repair fencing on its line on 8 lots, between Leamington and Wheatley, Mersea Tp., Ont.

33,753. June 14.—Authorizing Canadian Pacific Ry. to build second switching lead at grade across Port Arthur, Nelson and Clavet Sts., Port Arthur, Ont.

33,754. June 12.—Relieving Canadian National Rys. from fencing portion of its line from mile 0 to 31, both sides, Mountain District, Edson Division, B.C.

33,755. June 12.—Authorizing Canadian National Rys. to rebuild bridge carrying highway across its tracks, between Lots 24 and 25, Wilmet Tp., Ont.

33,756. June 13.—Authorizing Canadian National Rys. to build third track between Mimico and Port Credit, across town line between Toronto and Etobicoke Tps., Ont.

33,757. June 13.—Approving supplement to connecting agreement between Bell Telephone Co. and Gold Springs Rural Telephone Co., Northumberland County, Ont.

33,758. June 13.—Authorizing Canadian National Rys. to build spur for Ford Motor Co. of Canada, Danforth, Ont.

33,759. June 13.—Authorizing Canadian National Rys. to build third track across roads between Lots 10 and 11, Con. 2, south of Dundas St., Toronto Tp., Ont.

33,760. June 13.—Ordering Niagara, St. Catharines & Toronto Ry. to rebuild bridge on Victoria St., Stamford, Ont.

33,761. June 12.—Amending order 33,503, April 7, 1923, authorizing Canadian National Rys. to build spur for Quaker Oats Co., Peterborough, Ont.

33,762. June 12.—Authorizing North Cypress rural municipality, Man., to make highway across C.P.R., east of Wellwood station, Man.

33,763. June 12.—Authorizing Canadian National Rys. to rebuild bridge at Queen St., Newmarket, Ont.

33,764. June 14.—Authorizing C.P.R. to build spur across Coldstream Road, Vernon, B.C.

33,765. June 13.—Dismissing application of City of Windsor, Ont., for authority to extend Moy Ave. across Essex Terminal Ry.

33,766, 33,767. June 14, 15.—Authorizing C.P.R. to build spurs for Oliver Rogers Stone Co., Owen Sound, Ont.; and Union Oil Co. of Canada, Ver-

non, B.C.

33,768. June 15.—Approving Bell Telephone Co. agreement with Hawley Telephone Co., Lennox and Addington County, Ont.

33,769. June 14.—Authorizing Canadian National Rys. to build spur for Imperial Oil, Ltd., Morris, Man.

33,770. June 15.—Authorizing Canadian National Rys. to build third track, Mimico to Port Credit, across Dixie Road, or Golf Links crossing, Toronto Tp., Ont.

33,771. June 15.—Authorizing Waterloo Tp., Ont., to build highway across Grand River, opposite 2nd Ave., two miles south of Kitchener, Ont.

33,772. June 18.—Ordering Brantford & Hamilton Ry. to pay J. S. Coker, Gainsville, Ont., compensation for removal of hedge at crossing of Stone Road.

33,773. June 15.—Authorizing Canadian National Rys. to make highway crossing at mile 57.75, near St. Adelphie, Que.

33,774. June 18.—Authorizing Essex Terminal Ry. to build second track across Drouillard Road, Ford City, Ont.

33,775. June 11.—Authorizing Canadian National Rys. to divert road allowance between Secs. 16 and 17, Tp. 14, Range 8, West 2nd Meridian, through west half of Sec. 16 and across railway tracks, by a subway.

33,776. June 19.—Authorizing Canadian National Rys. to use bridge over Trent River, at Glen Ross, Ont.

33,777. June 18.—Relieving C.P.R. from further protection at crossing one mile west of Hungerford, Ont.

33,778. June 19.—Authorizing Canadian National Rys. to connect with Alma & Jonquiere Ry., near Hebertville, Que.

33,779. June 19.—Approving location of Canadian National Rys. 4th class station at Runnymede, Sask.

33,780, 33,781. June 19.—Authorizing British Columbia Public Works Department to make highway crossings over Canadian National Rys. near Barriere; and over C.P.R. at mile 45.66, west of Field, B.C.

33,782. June 19.—Authorizing Interprovincial & James Bay Ry. (C.P.R.) to build bridge 49.8 over Little River.

33,783. June 18.—Authorizing Canadian National Rys. to open for traffic its revised line from Ansell to Bickerdike, Alta.

33,784. June 18.—Authorizing Canadian National Rys. to rebuild bridge carrying highway over tracks in Con. 1, north of Governors Road, Beverley Tp., Ont.

33,785. June 20.—Authorizing C.P.R. to build spur for A. E. Woodward Elevator Co., Vancouver, B.C.

33,786 to 33,788. June 20.—Approving supplements to Bell Telephone Co. agreements with St. Jude Telephone Co., St. Hyacinthe County, Que.; Burnt River Telephone Co., Victoria and Peterborough Counties, Ont.; and Little Nation Telephone Co., Papineau County, Que.

33,789. June 20.—Ordering C.P.R. to afford cattle pass facilities for J. J. Crozier, Adamston Tp., Ont.

33,790. June 20.—Authorizing C.P.R. to build spur for Beatty Bros., Fergus, Ont.

33,791. June 18.—Approving location of Nipissing Central Ry. from Swastika, Ont., mile 0, easterly to mile 9.

33,792. June 20.—Approving supplements to Bell Telephone Co. agreement with Gore G Telephone Co., Prince Edward County, Ont.

33,793. June 21.—Authorizing Esquimalt & Nanaimo Ry. to build spur for Genoa Lumber Co., in Lot 104, Chemainus District, Vancouver Island, B.C.

33,794. June 15.—Approving location of Interprovincial & James Bay Ry. (C.P.R.) standard no. 5 station at Latulippe, Que.

33,795. June 20.—Authorizing British Columbia Public Works Department to make highway crossing over C.P.R. at mile 44.39 west of Field, B.C.

33,796 to 33,799. June 15.—Approving location of Interprovincial & James Bay Ry. (C.P.R.) stations at Fabre, Lorrainville, Ville Marie and Laverlochere, Que.

33,800. June 25.—Approving location of C.P.R. Tuffnel to Prince Albert Branch, mile 0 to 68.15 and authorizing crossing of a number of highways.

33,801 to 33,805. June 16.—Approving Bell Telephone Co. agreements with Fingal Telephone Co., Elgin County; Bethesda & Stouffville Telephone Co., York & Ontario Counties; Springbank Telephone Co., and Howick Municipal Telephone System, Huron & Wellington Counties; and Fordwich Rural Telephone Co., Huron & Perth Counties, Ont.

33,806. June 18.—Ordering Canadian National Rys. to build station facilities at Clair, Sask., by Sept. 30.

33,807. June 24.—Authorizing Town of Melville, Sask., to carry Atlantic Ave. across Canadian National Rys.

33,808. June 26.—Authorizing Canadian National Rys. to build third track across a highway south of Dundas St., Toronto Tp., Ont.

33,809. June 23.—Authorizing Ontario Public

Highways Department to straighten highway crossing over C.P.R. west of Stittsville, Ont.

33,810. June 22.—Authorizing Canadian National Rys. to cross Neehing Ave., and connect with C.P.R. industrial track at Fort William, Ont.

33,811. June 21.—Dismissing application of Commercial Travellers' Association for order directing Canadian National Rys. to make connections by its G.T.R. train 41 with C.P.R. Sudbury train at North Bay, Ont.

33,812. June 24.—Authorizing Canadian National Rys. to build third track across highway in Lot 7, Con. 2, south of Dundas St., Toronto Tp., Ont.

33,813. June 24.—Recommending to Governor in council for sanction, an agreement between Michigan Central Rd. and Toronto, Hamilton & Buffalo Ry.

33,814. June 26.—Authorizing Canadian National Rys. to build third track across highway in Lot 8, Con. 2, south of Dundas St., Toronto Tp., Ont.

33,815. June 23.—Rescinding order 15,792, Jan. 13, 1912, authorizing construction of highway over Columbia & Western Ry. (C.P.R.), at 7th St., Eholt, B.C.

33,816. June 23.—Approving clearances at C. P.R. coaling plants at Outremont and Megantic, Que.

33,817. June 27.—Approving Canadian National Rys. revised plan of automatic signals between Toronto and Hamilton, Ont.

33,818. June 29.—Approving location of C.P.R. Tuffnel to Prince Albert Branch, mile 68.15 to 94.26.

33,819. June 28.—Authorizing Canadian National Rys. to open for traffic the diversion of its Welland Division from south of Thorold station, to a connection with old main line, in Lot 71, Thorold Tp., Ont., 2.2 miles.

33,820. June 29.—Authorizing Canadian National Rys. to divert highway across its tracks at mile 443.63, Battleford Subdivision, Sask.

33,821. June 29.—Authorizing Canadian National Rys. to open for traffic, portion of second track of main line, mile 11.1 to 13.2, Kashabowie Subdivision, Ont.

33,822 to 33,824. June 29.—Approving C.P.R. plans of replacement of 120 ft. through Howe truss span by 100 ft. through pony truss span at bridge 65.22, Shore Line Subdivision, over Musquash River, Ont.; alteration in bridge 97.6, Lachute Subdivision, over Trepannier Creek, Que.; and replacement of deck plate girder span by 33 ft. deck girder beam span in bridge 80.1, over Papineauville Creek, Lachute Subdivision, Que.

33,825. June 29.—Authorizing Canadian National Rys. to cross northerly end of Avondale Ave., Hamilton, Ont.

33,826. June 29.—Authorizing Canadian National Rys. to enter upon lands of Mrs. M. Burns, A. E. Hancock and F. E. Walker, Woodstock, Ont., to remove obstructions to view at crossing of Ingersoll Road.

33,827. June 29.—Dismissing application of Toronto Tp., Ont., for authority to carry highway across Canadian National Rys. on Lot 12, Con. 2, south of Dundas St.

33,828. June 29.—Relieving Canadian National Rys. from maintaining watchmen at crossings of Charlotte and Simcoe Sts., Peterborough, Ont., between 10.30 p.m. and 6.30 a.m. during January, February, March and April, movements over crossings to be flagged.

33,829, 33,830. June 20.—Approving C.P.R. plan showing alteration to bridge 79.17, over Papineauville Creek, Lachute Subdivision, Que.; and in bridge 25.25, over Douglas Stream, St. John's Subdivision, Que.

33,831. June 29.—Ordering Canadian National Rys. to install automatic bell and wigwag signal at crossing immediately east of Charlesbourg West station, Que.

33,832. July 3.—Declaring that for the present, the Canadian National Rys. crossing near Collins Bay station, Ont., is protected to Board's satisfaction.

33,833 to 33,840. July 3.—Approving Bell Telephone Co.'s agreements with St. Paul de Chester Telephone Co.; Brown Corporation; Cecile Swale Telephone System; Stoke Rural Telephone Syndicate; Muskoka and Parry Sound Telephone System; East Middlesex Telephone Co.; Richelieu Telephone Co., and Kirkton Telephone Co.

33,841. June 29.—Approving Canadian National Rys. standard passenger tariff C.R.C. no. E.542-W457, effective July 1.

33,842. July 3.—Declaring that for the present, the Canadian National Rys. crossing at Featherstone, near Thamesville, Ont., is protected to Board's satisfaction.

33,843. July 3.—Approving agreement between Bell Telephone Co. and Roman Catholic Episcopal Corporation, Kingston Diocese, Ont., for service station.

33,844. July 5.—Authorizing Lamerton Municipality 398, Alta., to make highway across Canadian National Rys. in Sec. 3, Tp. 39, Range 23, West 4th Meridian, Alta.

33,845. July 4.—Authorizing Laval Electric Co. to erect 25,000 volt power transmission line

over Canadian National Rys. tracks and telegraph line, near L'Assomption station, Que.

33,846. July 5.—Authorizing Lower St. Lawrence Power Co., Rimouski, Que., to erect 33,000 volt transmission line from Rimouski to Riviere Metis, paralleling Canadian National Rys. track and telegraph lines for about 22 miles.

33,847. July 5.—Authorizing opening for traffic of connection, at Camrose, Alta., between Canadian Northern Battle River Subdivision, mile 53.29, and Grand Trunk Pacific Ry. Bashaw Subdivision at mile 33.40, also south leg of Y.

33,848, 33,849. July 3, 4.—Approving Bell Telephone Co.'s agreements with Fort Coulogne Rural Telephone Co.; and Molesworth Independent Telephone Co.

33,850. July 5.—Authorizing C.P.R. to build third track across road allowance between Secs. 35 and 36, Tp. 11, Range 8, West 1st Meridian, Man., mile 63.6, Carberry Subdivision.

33,851. July 4.—Authorizing Canadian National Rys. to cross Brant Ave., Burlington, Ont., with second track.

33,852. July 4.—Authorizing Quebec, Montreal & Southern Ry. to remove shelter station at Lake St. Paul, to Ste. Gertrude siding, Que.

33,853. July 4.—Ordering Canadian National Rys. to stop trains 87 and 88 at Wendover, Ont., on Saturdays, during June, July, August and September, when necessary, to enable passengers from Montreal and Ottawa to detain, and on Mondays, to enable passengers for Montreal and Ottawa to entrain.

33,854. July 3.—Ordering that obstructions to view at crossing of Canadian National Rys. at William St., Cobourg, Ont., be cut down; and that C.N.R. install electric bells and wigwag signals at each side of crossing.

33,855. July 3.—Declaring that for the present, the third highway crossing east of Delhi, Ont., over G.T.R., is protected to Board's satisfaction.

33,856. July 3.—Declaring that for the present, C.P.R. crossing near Lonsdale station, Ont., is protected to Board's satisfaction.

33,857. July 5.—Authorizing Canadian National Rys. to build diversion of east and west road allowance between Secs. 12 and 13, Roe, Sask.

33,858. July 5.—Authorizing Hydro Electric Power Commission of Ontario to build permanent structure to carry Niagara, St. Catharines & Toronto Ry. over its tracks in Lots 77 and 90, Stamford Tp., Ont.

33,859. July 5.—Authorizing Canadian National Rys. to build tracks across Dargenson St., Montreal.

33,860. July 5.—Approving general location of C.P.R. Pashley Northeasterly Branch, mile 28.77 to 32.49.

33,861. July 5.—Authorizing Canadian National Rys. to build spur through Blocks H and A2, Vancouver, B.C.

33,862. July 5.—Approving revised route map of C.P.R. Leader Southeasterly Branch, mile 44.65 to 49.5.

33,863, 33,864. July 9.—Approving location of C.P.R. Archive to Wymark Branch, mile 31.67 to 53.16, and mile 77.11 to 77.36, Sask., and authorizing crossing of a number of highways.

33,865. July 9.—Approving C.P.R. plan of proposed changes in interlocking plant at crossing of Pere Marquette Ry., Chatham, Ont.

33,866. July 9.—Ordering that cost of drainage works built for the subway where Canadian National Rys. cross highway between Lots 15 R I N and 15 R I S, Ekfrid Tp., Ont., viz.: \$871.33, be paid two-thirds by C.N.R. and balance by Ontario Highways Department.

33,867. July 10.—Authorizing C.P.R. to replace 100-ft. through truss span by 100-ft. deck plate girder span in bridge 72.8, Lachute Subdivision, Que.

33,868. July 9.—Approving connecting agreement between Bell Telephone Co. and Wroxeter Telephone Co.

33,869. July 9.—Authorizing Canadian National Rys. to build third track across Kingsbury Ave., Etobicoke Tp., Ont.

33,870. July 9.—Authorizing C.P.R. to rebuild bridge 26.7, Timiskaming Subdivision, Devil's Garden, Ont.

33,871. July 9.—Approving supplements to connecting agreement between Bell Telephone Co. and Beckwith & Montague Rural Telephone Co.

33,872. July 6.—Authorizing C.P.R. to build spur for Hull & Ottawa Power & Manufacturing Co., Campbells Bay, Que.

33,873. July 9.—Ordering Pere Marquette Ry. to place in operation by Sept. 1, standard 30 ft. mail cars, between London and Walkerville, and Blenheim and Sarnia, Ont.

33,874. July 6.—Approving supplement to connecting agreement between Bell Telephone Co. and Brompton Pulp & Paper Co.

33,875. July 6.—Authorizing Canadian National Rys. to rebuild bridge across its tracks, near Georgetown, Ont.

33,876. July 9.—Approving agreement between Bell Telephone Co. and West Garafraxa Telephone Co-operative Association.

33,877. July 9.—Relieving C.P.R. from fencing certain portions of right of way within Toronto terminals, and in Oshawa and Galt, also in North Toronto and Queen's Wharf Branches.

33,878, 33,879. July 9.—Approving supplements to Bell Telephone Co.'s agreements with Russell Rural Telephone Co., and South Bruce Rural Tele-

phone Co.

33,880. July 9.—Authorizing York Tp., Ont., to build bridge across Canadian National Rys. between Astley Ave. and Douglas Drive, Toronto.

33,881. July 9.—Authorizing Canadian National Rys. to build second track across Ontario St., Burlington, Ont.

33,882. July 7.—Extending to Aug. 1 and Sept. 1, the time within which Canadian National Rys. may rebuild bridge on Victoria St. Stamford, Ont.

33,883. July 10.—Authorizing C.P.R. to replace 100-ft. through span by 100-ft. deck plate girder span in bridge 92.7, Lachute Subdivision, Que.

33,884. July 10.—Authorizing C.P.R. to build spur for Satin Finish Hardwood Flooring, Ltd., Weston, Ont.

33,885. July 11.—Authorizing Canadian National Rys. to rebuild bridge 59.2, Brazeau Subdivision, Alta.

33,886. July 12.—Declaring that for the present, Canadian National Rys. crossing at mile 121, Minaki Subdivision, east of Transcona, Man., is protected to Board's satisfaction.

33,887. July 9.—Approving agreement between Bell Telephone Co., and Wallingford Bros. Ltd.

33,888. July 13.—Amending order 32,134, Feb. 18, 1922, authorizing C.P.R. to build crossing between Lots 10 and 11, Con. 6, Aubrey Tp., Kenora District Ont., by providing that cost be paid by Ontario Lands and Forests Department.

33,889 to 33,891. July 12.—Declaring that for the present Canadian National Rys. crossings 7 miles east of Eckville, Alta.; at mile 60, Alderdale Division, Martin's crossing, Old Government Road, Ont., and at Palmerston, Ont., are protected to Board's satisfaction.

33,892. July 12.—Declaring that C.P.R. crossing near St. Vincent de Paul, Que., is protected to Board's satisfaction, provided company keep cars back one car length on each side of highway.

33,893. July 12.—Declaring that for the present, Canadian National Rys. crossing east of St. Casimir station, Que., is protected to Board's satisfaction.

33,894. July 12.—Declaring that for the present, C.P.R. crossing about 2 miles east of Port Hope, Ont., is protected to Board's satisfaction.

33,895. July 13.—Ordering that on portions of Canadian National Rys. Western Lines in prairie provinces, operated through non-forested territory, the provisions of general order 362, clause 8, be suspended after Aug. 1, in case of locomotives equipped with barrel type spark arrester.

33,896. July 12.—Declaring that for the present, Michigan Central Rd. crossing, 1½ miles east of Leamington, Ont., is protected to Board's satisfaction.

33,897. July 12.—Approving agreement between Bell Telephone Co. and Metcalfe Rural Telephone Co.

Freight Car Conditions and Supply.

The Railway Association of Canada reports that on July 1 there were 201,741 freight cars on Canadian lines, of which 15,451 were in bad order. The A.R.A. allowance, on a 7% basis, works out to 14,122 allowable bad order cars, so that the excess number over the A.R.A. figure was 1,329. The actual bad order percentage was 7.6, compared with 7.7% at June 1. A shortage of 750 cars was reported, compared with a shortage of 350 at June 1 and 1,360 at May 1. The American Railway Association Car Service Division reports that in the U.S., on June 15, there were 200,784 freight cars of all kinds in need of repair, this being 8.9% of the total number of cars on U.S. roads, and 10,982 less than on June 1, when 9.4% were in bad order. Despite the fact that U.S. railways are experiencing the heaviest car loading in their history, the car surplus on June 22 more than balanced car shortage, the total surplus on that date being 58,671 cars, and the total shortage 11,896. In the week ended June 23, there were 1,002,740 cars loaded with revenue freight on U.S. lines, 136,419 more than in the corresponding week of 1922, and 227,293 more than in the corresponding week of 1921.

Telephone Train Dispatching on Canadian National Rys.—With the completion of the telephone circuit between Campbellton, N.B., and Mont Joli, Que., trains are now being dispatched by telephone on the main line from Halifax and St. John in the east, to Vancouver and Prince Rupert in the west.

Railway Rolling Stock Orders and Deliveries.

The C.P.R. has ordered 30 vans, to be built in its Angus shops, Montreal.

Canadian National Rys. received, during June, 100 automobile cars and 20 baggage cars, from Canadian Car & Foundry Co.

The C.P.R. has received 12 Pacific type (4-6-2) locomotives, with cylinders 25 x 30 in., from Montreal Locomotive Works.

Timiskaming & Northern Ontario Ry. has ordered 2 all-steel snow ploughs from Canadian Car & Foundry Co., for delivery by Nov. 1.

Quebec Development Co. has received 4 four-wheel (0-4-0T) locomotives, with cylinders 14 x 22 in., from Montreal Locomotive Works.

The C.P.R. has received 7 baggage cars, out of an order for 15, from National Steel Car Corporation. The balance was expected to be delivered by the end of July.

The Canadian National Rys. order for 15 milk cars, to be built at its Port Huron, Mich., shops, for the Central Vermont Ry., as mentioned in our last issue, has been increased to 20.

Canadian National Rys. have ordered 750 single sheathed steel frame 60-ton box cars, from Canadian Car & Foundry Co., and 250 from National Steel Car Corporation.

Canadian National Rys. have received 6 additional Mountain type locomotives, which were fully described and illustrated in Canadian Railway and Marine World for July, from Canadian Locomotive Co.

The C.P.R., between June 13 and July 14, received 14 Pacific type G-3 locomotives from Montreal Locomotive Works; 4 steel baggage and express cars, from National Steel Car Corporation; and bought 1 Jordan all-steel ballast spreader.

Canadian National Rys. have received 10 express refrigerator cars, 898 repaired steel underframe 49-ton box cars, and 200 repaired refrigerator cars, from National Steel Car Corporation. It was expected that 40 additional express refrigerator cars, the balance of an order for 50, would be delivered by the end of July.

United States locomotive builders continue to operate their plants to capacity, as shown by the following figures, supplied by the U.S. Department of Commerce: Locomotives shipped during June, 232, compared with 238 in May 1923, and 114 in June 1922; total shipments for first 6 months of 1923, 1,405, compared with 362 in first 6 months of 1922; unfilled orders at end of June 1923, 1,958, compared with 2,150 at end of May 1923, and 596 at end of June 1922.

Railway Accidents Throughout Canada.

—The number of railway accidents during June, reported to the Board of Railway Commissioners, was 249, in which, 3 employees and 13 others were killed, and 36 passengers, 199 employees and 35 others were injured. Included in "others" were 6 persons killed and 19 injured in 19 highway crossing accidents, the crossings being unprotected in 17 cases, and protected in 2 cases by gates and bell respectively. Automobiles and motorcycles were concerned in 8 of these accidents, other vehicles in 8, a bicycle in 1 and pedestrians in 2.

Reduction in Rates on Western Live Stock.

The Western Stock Growers' Association, with headquarters in Calgary, Alta., asked D. C. Coleman, Vice President, Western Lines, C.P.R., for a conference with that company's freight traffic officers for the purpose of discussing freight rates on certain live stock movements, and, as a result, Geo. Stephen, Assistant Freight Traffic Manager, Western Lines, C.P.R., suggested to Canadian National Rys. freight traffic officers that they should join the C.P.R. freight traffic officers and the live stock men in a conference. It was held at Calgary on May 29, C.P.R. and C.N.R. traffic men and Western Stock Growers' Association representatives being present, and after examination of representations made by the Association representatives, the railways, to extend some needed assistance to the live stock industry in Western Canada, agreed on the following rate revisions:

Effective June 15, 1923, the carload rate on horses from points in the three prairie provinces to eastern Canada was reduced to the basis of 10c per 100 lb. over the carload rate on cattle. This was a restoration of the spread formerly in effect as between the carload rates on horses and cattle from the three prairie provinces to eastern Canada.

The arrangement covering the return transportation of men who go east with carload shipments of cattle was extended to apply to attendants in charge of carload shipments of horses, effective June 15, 1923. Prior to that date no reduced return transportation was issued to attendants in charge of horse shipments.

Effective June 15, carload shipments of cattle, pigs and sheep shipped from central marketing points, such as Winnipeg, Calgary, Edmonton and Moose Jaw, to farmers, for breeding, feeding and finishing purposes, are carried on the basis of 50% of the regular tariff rate, instead of 75% as prior to that date. This reduction was made in view of the long rail hauls involved from the central marketing points mentioned above, back to the points to which the stock will be returned for breeding, feeding and finishing.

In addition, the C.P.R. published a temporary tariff, effective June 15, and expiring Sept. 15, on stocker cattle from points in Manitoba to points in southern Alberta, on the basis of 50% of the regular tariff applicable on cattle in carload lots. This is a temporary action by the C.P.R., to assist the southern Alberta ranchers in replenishing their herds.

Ex-Soldiers in Railway Service.—The Great War Veterans' Association, at its convention in Vancouver, B.C., recently, passed a resolution stating that under the working agreement between the Canadian National Rys. and the men's representative, in the event of a reduction of staff, seniority of service governs, and this would affect a majority of ex-service men now employed. All members of His Majesty's forces should take their seniority before that of any unnaturalized alien; their seniority should be dated as from the date on which they joined the forces, such seniority rights to be applied in all instances, except for promotion in the service, and ex-members of His Majesty's forces should be given preference for employment and promotion.

Among the Express Companies.

H. H. Carr, heretofore agent, Dominion Ex. Co., Truro, N.S., has been appointed agent, North Bay, Ont.

W. E. Norton, heretofore agent, Dominion Ex. Co., Sydney, N.S., has been appointed agent, Cobourg, Ont.

R. P. Dunphy, heretofore agent, Dominion Ex. Co., New Glasgow, N.S., has been appointed agent, Chappleau, Ont.

T. R. Mackenzie, heretofore route agent, Dominion Ex. Co., Truro, N.S., has been appointed route agent, Sherbrooke, Que.

N. R. Weir, heretofore route agent, Dominion Ex. Co., Campbellton, N.B., has been appointed route agent, North Bay, Ont.

The Canadian National Rys. Express Department has opened offices at Elmira, P.E.I.; Norway Bay, Que.; Lake Joseph and Bala Park, Ont., and Alberta Beach, Alta.

J. E. Coulter, heretofore chief clerk, Vice President and General Manager's office, Dominion Ex. Co., Toronto, has been appointed Assistant to Vice President and General Manager there.

M. Calder, heretofore agent, Dominion Ex. Co., Charlottetown, P.E.I., has been appointed General Agent, in charge of Prince Edward Island business, Express Department, Canadian National Rys. Office, Charlottetown.

Express companies reduced rates on business eastbound from Canada to Europe, effective July 9, on similar lines to those put into effect on westbound business from Europe to Canada, April 20. These reductions, ranging between 15 and 20%, are in the ocean proportion of the through rates, and affect all classes of traffic. The effect of the reduction on westbound traffic is reported to have been good, and it is hoped that by extending the reduction to eastbound traffic, there will be a further stimulation of business between Canada and Europe.

R. E. M. Cowie, Vice President, American Railway Ex. Co., in a recent address before the Providence, R.I., Chamber of Commerce, said: "It is an impressive fact that the American Railway Ex. Co. issues more waybills every day of the year than all the railways of the U.S. combined. If this does not convey an idea of the enormous quantity of shipments that are handled by express, the business at New York City is even more illuminating. A record of the declared value of all shipments kept recently showed that the average value of express cargo handled in New York City alone every day amounted to at least \$50,000,000. If to these figures were added the value of all shipments moving by express to and from all points in the country every 24 hours, a better idea could be gained of the enormous liability assumed by the express company in the transportation of its current business. Twenty-four exclusively express trains, consisting of between 300 and 400 cars, are required to take care of the New York City business every night."

Gilbert E. Bellerose, heretofore General Assistant, Express Department, Canadian National Rys., Montreal, has been appointed General Superintendent of Transportation, Express Department, C.N.R., Montreal. He was born at Penetanguishene, Ont., July 15, 1884, and entered transportation service in March 1902, since when he has been, to May 1903, car service clerk, G.T.R., Toronto; June 1903 to May 1904, clerk and messenger, train service, Dominion Ex. Co.,

Eastern Lines; May 1904 to Sept. 1909, messenger, train service, and agent, same company, Western Lines; Oct. 1909 to Nov. 1911, chief clerk, acting agent, and messenger, train service, Great Northern Ex. Co., lines in British Columbia and Pacific northwestern states; Nov. 1911 to June 1915, messenger, train service, and station agent, Dominion Ex. Co., Victoria, B.C., Nelson, B.C., and Calgary, Alta.; July 1915 to June 1917, messenger, train service, Canadian Northern Ex. Co., Winnipeg; Feb. 1917 to Nov. 1920, Traffic Supervisor, same company, Winnipeg; Nov. 1920 to Aug. 1921, Assistant to General Manager, Canadian National Ex. Co., Winnipeg; Aug. 1921 to March 1923, Assistant to General Manager, same company, Montreal; March to June 1, 1923, General Assistant, Express Department, Canadian National Rys., Montreal.

Telegraph and Cable Matters.

Tests made by the Marine Department with a view to establishing a wireless direction finding station at Pachena Point, on the west coast of Vancouver Island, were completed recently. It is anticipated that the station will be ready for operation this summer.

Telegraph, and other companies operating overhead lines, suffered considerable loss during the heavy storms in southern Ontario during the last few days of June. Canadian National Telegraphs report the greatest loss between Guelph and Stratford, Toronto and Hamilton and London, where several stretches of line were carried down by falling trees, buildings, etc.

Canadian National Telegraphs have installed teletypes on the Stobie-Forlong leased wires at London and Oshawa, Ont., the two circuits comprising 10 teletypes, one at Peterborough and Oshawa, two at Toronto and Hamilton, and one at St. Catharines, Brantford, Kitchener and London. Communication is carried on in either direction and between any of the offices on the circuit. This is said to be the largest installation in Canada.

Canadian National Telegraphs electricians are installing new cordless pin jack switchboards in Toronto, Montreal and Quebec, and will shortly commence installing power plants and repeaters at Sioux Lookout, Ont., and Riviere du Loup, Que., for the rerouting of circuits. The repeaters at Sioux Lookout will provide an alternate route for circuits between east and west via Port Arthur, and repeaters at Riviere du Loup will eliminate the necessity for extending overland circuits through the submarine cable between Quebec and Levis, which has been a source of considerable trouble, due to passing ships dragging anchor and interrupting the cable.

The Minister of Marine has issued a regulation requiring as a condition of the granting of a radiotelegraph license, that the licensee shall deposit \$50 as security for the payment of coast station and land line delivery charges for radiotelegraphic messages originating on board any ship, in respect of which the license is issued, and transmitted via any coast station, domestic or foreign, the deposit may be appropriated for the payment of any such charges, not paid in due course, and will be returned at the expiry of nine months from the termination of the license, subject to any deductions for unpaid charges, as mentioned.

Electric Railway Department

Canadian Electric Railway Associations Annual Meeting in Toronto.

When Canadian Railway and Marine World for July went to press, the Canadian Electric Railway Association's annual meeting, scheduled for June 27 to 30, was in progress in Toronto, but we were able to publish the general programme, and to give a list of the exhibitors of electric railway supplies and equipment, and particulars of their principal exhibits. Owing to the unavoidable absence of the President, Major F. D. Burpee, Manager, Ottawa Electric Ry., necessitated by the conferences going on in reference to the company's employees' wages and working conditions, the Vice President, H. H. Couzens, General Manager, Toronto Transportation Commission, presided at the business meetings, the luncheons and the annual dinner, and performed those duties, which devolved on him most unexpectedly, to the great satisfaction of all in attendance. As stated in our previous issue, the exhibits were displayed in the Music Building, on the Canadian National Exhibition grounds, the business meetings being held in the adjoining amphitheatre, a most ideal arrangement, made by a committee, of which C. L. Wilson, Superintendent, Hydro Electric Rys., Toronto & York District, was chairman. The general programme, as given in Canadian Railway and Marine World for July, was adhered to very closely, except for the changes necessitated by the absence of Major Burpee, as referred to above, and of Lt.-Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., who was to have spoken at the dinner.

Business Meetings.

June 27.—Mr. Couzens, in taking the chair at the opening meeting, expressed regret at Major Burpee's absence. The Association's Treasurer, W. S. Hart, Treasurer, Quebec Ry., Light, Heat & Power Co., and Vice President Three Rivers Traction Co., presented the financial statement, showing \$2,859.81 on hand. The Secretary, D. N. Gill, Comptroller, Ottawa Electric Ry., presented his report, from which the following is summarized: The Association's membership consists of 35 electric railways, the same number as in the previous year, Brantford Municipal Ry. having joined, and Windsor, Essex & Lake Shore Rapid Ry. having withdrawn. The associated membership consists of 33 electric railway supplies manufacturers and dealers. A large number of enquiries were received during the year from member companies. Some of these were answered from information on the Association's files, and in the other cases, questionnaires were sent out. Three charts, with full information as to wages paid employees, and working conditions, were compiled and distributed. The report also dealt with the work done by the Association in connection with Dominion and provincial legislation, claims for damages for street railway accidents, Dominion Government tax on bond interest, the work of the committees on public relations, standards, safety, and accounting of maintenance and depreciation of street railway assets, and proceedings before the Board of Railway Commissioners respecting air brake cars, and compensation for carrying mails.

June 28.—G. Gordon Gale, Vice President and General Manager, Hull Electric Co., and chairman of the standards committee, presented its report, explaining the Canadian Engineering Standards Association's work, which is giving the C.E.R.A. representation on its sectional committees for drafting standard specifications on wire strand, signals on highways, and overhead crossings.

Alex. Jackson, Superintendent of Time Tables, Public Service Ry. Co., Newark, N.J., read a paper on a scientific traffic survey of traffic movements on urban railways, which was discussed by D. N. Wilson, Engineer on Traffic Surveys; J. McCulloch, Traffic Superintendent; J. W. Howden, in charge of traffic surveys, and A. K. Bunnell, of the executive staff,

Wilson, Superintendent, Hydro Electric Rys., Toronto and York Districts; G. Gordon Gale, Vice President & General Manager, Hull Electric Co.; and C. B. King, Manager, London St. Ry.

W. G. Gordon, Traction Engineer, Canadian General Electric Co., read a paper on the proper motor for a given cycle of duty, which he supplemented by considerable additional information on points suggested by D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., who took part in the discussion as also did M. Buck, Electric Railway Journal; and W. R. Robertson, General Superintendent, Ontario Hydro Electric Rys.

June 30. The report of the committee on public relations, of which A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry., was chairman, was read and adopted.

Don M. Campbell, chairman of the associate members committee, suggested that the Association's next annual meeting be held in Ottawa. G. Gordon Gale, suggested that an attempt be made to hold the Association's next annual meeting, and that of the Canadian Electric Association, and possibly other electric associations, at the same place and during the same week, the manufacturers to make one combined exhibit throughout the week, and the various associations to meet separately on different days. It was decided that the incoming executive committee endeavor to arrange this.

The nominating committee, consisting of the Association's past presidents, which was appointed at the first day's meeting, presented a report, recommending persons for election as Honorary President, Honorary Vice President, honorary councillors, Treasurer, executive committee, and Auditor. Their names, etc., are given in the center of page 398. Subsequently, the President elect, H. H. Couzens, in accordance with the usual custom, appointed Eustace Smith, Jr., Executive Assistant, Toronto Transportation Commission, as the Association's Secretary.

The rest of the morning session was devoted to a number of timely topics, which had been listed for discussion.

Exhibits.—In addition to the manufacturers and supply houses exhibits, which were dealt with fully in Canadian Railway and Marine World for July, the Toronto Transportation Commission had, on a track near the eastern entrance to the exhibition grounds, an exhibit of rolling stock, made up as follows: A large motor car built by Canadian Car & Foundry Co. and equipped with English Electric Co. electrical and control apparatus, to which was attached a 3-door trailer. This type of car was described and illustrated in Canadian Railway and Marine World for June, 1921, pg. 319, and the trailer in the Sept. 1922 issue, pg. 473; a motor car similar to the above, and also built by Canadian Car & Foundry Co., but equipped with Westinghouse electrical and control apparatus, to which was attached a 2-door trailer, of the type described in Canadian Railway and Marine World for June 1921, pg. 318; a motor car similar to the above, built by Canadian Brill Co., and equipped with Canadian General Electric

H. H. Couzens,
General Manager, Toronto Transportation Commission, and President, Canadian Electric Railway Association, 1923-1924.

Toronto Transportation Commission; W. R. Robertson, General Superintendent, Ontario Hydro Electric Rys.; C. B. King, Manager, London St. Ry.; H. E. Weyman, Manager, Levis County Ry.; R. M. Reade, Superintendent, Quebec Ry., Light, Heat & Power Co.; W. J. Radford, Assistant Manager, Toronto Suburban Ry.; and C. P. Nachod, Nachod Signal Co., Louisville, Ky.

June 29. H. E. Weyman, Manager, Levis County Ry., and chairman of committee on valuation, maintenance, and depreciation, of street railway assets, presented its report, which was discussed by him, and by H. H. Couzens, General Manager, Toronto Transportation Commission; W. R. Robertson, General Superintendent, Ontario Hydro Electric Rys.; A. B. Ingram, Vice Chairman, Ontario Railway & Municipal Board; H. P. L. Hillman, acting comptroller, Toronto Transportation Commission; C. L.

Co. electrical and control apparatus; a 47 ft. motor car of the type described in Canadian Railway and Marine World for Sept. 1922, pg. 473, built by Canadian Car & Foundry Co.; a motor car of the same type, built by Ottawa Car Manufacturing Co.; a double truck motor car, 2,104, taken over from the Toronto Railway Co., operated formerly on the p.a.y.e. system, and converted into a car on which the passenger pays as he leaves, if he is in the front section, or as he passes the conductor, if he wishes to pass into the rear section, as in the Commission's new equipment; a 2-car train, made up of 2 of the double truck cars taken over from the Toronto Ry. Co.; a Birney safety car; a single truck car taken over from the Toronto Ry., the Commission still having 66 of these on hand; a train consisting of a single truck motor car and single truck trailer which was in operation by the Toronto Ry. in Sept. 1921, when the Commission assumed control of the lines; and a differential dump car.

The associate members re-elected their officers, as follows,—Don M. Campbell, Preston, Ont., chairman; H. T. Gibbs, Sales Engineer, Canadian Westinghouse Co., secretary; O. C. Rehfus, Mechanical Engineer, Canadian Steel Foundries, treasurer. The associate members, who were very much pleased with the way in which the arrangements for the exhibits, etc., were handled made the following presentations viz., C. L. Wilson, chairman of exhibit committee, a cane; W. R. McRae, chairman entertainment committee, a pipe; C. H. Clancey, of the Toronto Transportation Commission, who assisted with the exhibits, a fountain pen; and Miss A. Leitch, stenographer, an ever-sharp pencil.

Luncheons, Dinners, etc.

Luncheons for the members, associate members, and guests, were held at the Sunnyside Pavilion, on the lake front, on June 27, 28 and 29, Mr. Couzens, presiding. On June 27, in Major Burpee's unavoidable absence, he read the latter's presidential address, which is given in full farther on in this issue. On June 28, City Controller Hiltz, in the absence of the Mayor from the city, conveyed a message of welcome. On June 29, Sir John M. Gibson, director Dominion Power & Transmission Co., gave a most interesting address, in which he dealt with that company's pioneer work, in the development of electric energy at Decew Falls.

The annual dinner at the King Edward Hotel, which was attended by over 200, was a most successful and enjoyable function. Mr. Couzens, who presided, proposed the toast of the King, the other toasts being as follows:—Canada, proposed by Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry., responded to by Geo. Wright, one of the members of the Toronto Transportation Commission; Our Industry, proposed by G. Gordon Gale, Vice President and General Manager, Hull Electric Co., responded to by C. B. King, Manager, London St. Ry.; Our Guests, proposed by F. A. Gaby, Chief Engineer, Hydro Electric Power Commission of Ontario, responded to by M. Buck, Associate Editor, Electric Railway Journal; The Ladies, proposed by Hugh Millar, President, Lyman Tube and Supply Co., responded to by Don M. Campbell; and the Technical Press, proposed by E. P. Coleman, General Manager, Dominion Power and Transmission Co., responded to by Acton Burrows, Proprietor, Canadian Railway

and Marine World.

The ladies accompanying the members and associate members, in addition to attending the luncheon and dinner, were, on June 28, given a boat trip to the Royal Canadian Yacht Club, where they had tea; and on June 30, an automobile drive round the city, with afternoon tea at the Old Mill, on the Humber River.

President Burpee's Address.

In the unavoidable absence of the President, Major Burpee, the address which he had prepared was read by the Vice President, H. H. Couzens, as follows: It is a great disappointment to me that labor troubles on our system in Ottawa will prevent me from attending our Association's nineteenth annual meeting. I regarded my election to the office of President last year, at Quebec, as a very great honor, and have endeavored during the year to follow in the able footsteps of my predecessors. The Quebec convention was a great success, which was largely due to the splendid exhibit of equipment and supplies made by our

D. E. Blair, B.Sc.
Superintendent of Rolling Stock, Montreal Tramways Co., and Vice President, Canadian Electric Railways Association.

associate members. I understand that they have again prepared an exhibition that, if possible, is even better than their last year's one. I am sure you will all be well repaid for the time you spend in the exhibition. Those of us who are not directly connected with one of the plant departments of our business get accustomed to regarding a street railway as a complete system designed to carry people from one place to another. It is well to have the opportunities afforded by these exhibitions to appreciate that there are a thousand and one minute details and intricate adjustments in our business, as marvelous as those of the human body, on which the health of the whole system depends. We talk of putting heart into our business. Don't let us forget that it has bones and sinews too.

Association's History.—It may be interesting to some of you whose connec-

tion with the industry has been more recent than that of us old boys, to learn when and how the Canadian Electric Railway Association started. It was established in 1904, nineteen years ago, at a meeting of street railway men held in Montreal. W. G. Ross, then Managing Director of the Montreal St. Ry., presided. Others present at that meeting were Duncan McDonald, then Manager, and Patrick Dubee, Secretary, of the same company; W. H. Moore, of the Toronto Railway Co.; Lt. Col. H. H. McLean, director, St. John Ry., New Brunswick; E. A. Evans, then General Manager, Quebec Railway, Light & Power Co.; Allan Royce, of the Toronto Suburban Ry.; and C. E. A. Carr, then Manager, London St. Ry. There were also present D. E. Blair, R. M. Hannaford, and H. E. Smith, who, with Mr. Dubee, are still with the Montreal company. And last, but not by any means least, Acton Burrows, whose very name is redolent of efficiency and research. Mr. Burrows has never missed one of our meetings, and has done more than any other single man to make our Association the important body that it is today. His widely read and valuable journal, the Canadian Railway and Marine World, has been our official organ from the start. Mr. Ross was the first President and Mr. Royce Honorary Secretary-Treasurer. Mr. Royce occupied the latter office till 1907, when Mr. Burrows succeeded him, and remained in office till 1920, when we most reluctantly were obliged by him to accept his resignation. Fortunately we have since had the benefit of his wide experience and mature advice as a member of our honorary council.

The Canadian electric railway industry, according to the last published Government report, operates between 5,000 and 6,000 cars, on nearly 2,500 miles of track, and the total investment reaches to about \$200,000,000. Even if the Association's work had not justified its existence in the past, and I feel sure it has, it is hard to conceive of such a huge industry functioning properly without some central organization such as this. Our activities are many and cover a wide field. We collect data, prepare reports, and undertake anything that will be generally beneficial to any, or all, of the street railways and supply houses that form our membership. Perhaps not the least valuable of our work is to watch for, and, as far as possible influence, or should I say, improve, legislation passing through the Dominion and provincial houses. At each capital we have a legislative representative. Every year sees some enlargement in the scope of the Association's work, and an added value to membership in it. It seems to me most important that the Association should include every electric railway in Canada. We have never yet attained 100% membership, but I earnestly hope that my successor will have that achievement to his credit. Occasionally some road changes hands, and the new management, not being familiar with our work, and being imbued with a spirit of economy, will not approve of the modest yearly fee. This seems unfair to the rest of us. We build the dams; they come in for a share of the power. In any case, most of the work done by the Association is of general benefit to every Canadian electric railway, whether it is a member or not. Indeed, many individual pieces of work accomplished by the Association in the

past have been worth many times the annual charge for membership. In these days, when those we deal with, and those who work for us, are so highly organized it would be suicidal for the electric railways themselves not to be prepared to present a united front against ill-considered legislation, popular misunderstanding of our difficulties, and various other ills that co-operation alone can help to cure. Let us all do what we can to make the C. E. R. A. represent every street railway, publicly or privately owned, in the Dominion. This is probably more important today than ever before. We are passing through a critical period in the industry's history. New problems are constantly presenting themselves. New and untried methods of transportation are attempting to compete with us. They fail, as a rule, but the experiment is usually at our expense. This Association can be of immense value to Canadian electric railways, but it needs the hearty co-operation of each and every member. Questionnaires from the Association's office should be answered promptly and the fullest information given. Don't forget that some member has sent in an enquiry and is anxiously waiting for just the data you may think it unnecessary to supply. You may be the next seeker after light. You all know the old doggerel: "The man who has plenty of peanuts, and giveth his neighbor none, Shan't have any of my peanuts When his peanuts are done."

Public and Private Ownership.—During the past decade in Canada there has been a pronounced movement towards public ownership of electric railways. For a time the operators of the privately owned and publicly owned systems were inclined to hold aloof from each other. I am glad that our Association is big enough and broad enough to include all the electric railways of Canada, and that quite a number of the publicly owned railways have become members. The Toronto Transportation Commission, which, under the management of the Vice President of this Association, H. H. Couzens, controls one of the largest Canadian systems, is giving a splendid example of what can be done under public ownership, and is rapidly producing here one of the model traction systems on the North American continent. Whatever our personal views may be on public ownership, and I suppose we are entitled to them, we are all electric railway operators having to deal with the same problems, whether under the control or under the regulation of municipal governments, and I am satisfied this Association has become a much stronger and better balanced organization since the publicly owned electric railways have joined it. There are still a number of municipally owned systems in western Canada that are not members. This seems to be due to the fact that the councils in the cities where they are located do not yet appreciate the value of the Association's work, as representing a vital industry and not any special method of administration, and refuse to sanction the payment of the annual fee, in ignorance of the many advantages that their management would derive from meeting and co-operating with other operators in the same industry. There should be some way of overcoming this obstacle, and it is to be hoped that the new executive will find it. We are all laborers in the same field, trying to give our patrons the best service we can. The only difference between the two is that one has to pay

dividends and the other interest. We use the same kind of current and need the same kind of currency.

Labor and Working Conditions.—During the war period, the street railway industry generally was harder hit than most others, because of the reluctance of the public to agree to an adjustment of fares to meet the rapidly rising cost of operation. I have heard people say that the electric railway industry fell down badly under the conditions imposed by the war. Nothing, to my mind, is farther from the truth. No other industry came through with such a small increase in the selling price of its product. And yet we had to meet relatively the same increases in the cost of labor and materials as others did. During that period the wages paid our employes jumped by leaps and bounds, reaching a peak in 1920, when the increase for most Cana-

certain factors that must be kept in mind, by both employer and employe, in dealing with wages and working conditions, and these apply to every electric railway, whether publicly or privately owned. The public that we serve is entitled to good service. And by good service I do not mean luxurious service, but service that is safe, reasonably comfortable, and rapid. The street railway is becoming more and more the vehicle of the average man—the man who cannot afford to own a motor car. In order to keep the fare low enough to induce the greatest amount of patronage from that class in the community, and still meet our obligations, we must resist demands for frills and non-essentials, and keep eternally on the trail of waste and extravagance in every department. The capital invested is entitled to, and should receive, a fair return; high enough to attract fresh capital when required for expansion and improvements. Good service cannot be supplied by a starving, or bankrupt, system. It is only by persistent publicity that the public can be brought to a realization of this truth so elementary to us. The employes should receive fair wages, and be provided with good working conditions. But the employe must remember he is working in an industry, the success of which depends on the marketing of transportation at a low price, and that there must be definite limits to what he can receive for his labor, and the degree of comfort his working conditions can afford. I believe it is firmly fixed in the minds of most officials of street railway labor unions that all that is necessary to do to meet any demands they make is to raise the fare. Does it ever occur to them that an unduly increased fare will result in such a decrease in car riding that the final result must be disaster to both employes and employer? This is especially the case in smaller cities, where the average haul is short, and there are few transients. Can we not look forward to a time when all three parties will accept as fundamental the right of the public to good service; the right of capital to a fair return; the right of the employes to a fair wage; and recognize all of them as dependent on the controlling factor that the rate of fare which is to provide the revenue to pay for these things must be low, or people will find a more attractive means of getting about. While no one believes more firmly than I do that the good will of our employes, and their hearty co-operation in our efforts to produce good service, rank only second to the good will of the public, and that a discontented staff will nullify anything we may try to do in that direction, there is a limit to what we can do for them. That limit is set by the rate of fare, which must be equated to the right of the public to good service, and the right of the capital invested in the plant to a fair return. After all, isn't the value to the community of the work performed by each class of employes the gauge that should determine their remuneration? A man who hires as a motorman, or conductor, should be made to realize that the job can never give him more than a modest income. If he wants something more than that, he should prepare himself for some other line of work that demands some special knowledge or skill, which takes more than a few days of training to acquire. One would think I was addressing a board of conciliation. Well, Shakespeare said something about the dyer's hand becoming subdued to

Canadian Electric Railway Association.

Honorary President: Major General Sir John M. Gibson, K.C.M.G., M.A., LL.B., LL.D., K.C., director, Dominion Power & Transmission Co.

Honorary Vice President: Acton Burrows, Proprietor, Canadian Railway and Marine World.

Honorary Advisory Council: Thos. Ahearn, President, Ottawa Electric Ry.; F. A. Gaby, Chief Engineer, Hydro Electric Power Commission of Ontario; Lt. Col. J. E. Hutcheson, General Manager, Montreal Tramways Co.; Geo. Kidd, President, British Columbia Electric Ry.

President: H. H. Couzens, General Manager, Toronto Transportation Commission.

Vice President: D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.

Treasurer: E. P. Coleman, General Manager, Dominion Power & Transmission Co.

Executive Committee: The President, the Vice President, the immediate Past President (Major F. D. Burpee, Manager and director, Ottawa Electric Ry.), the Treasurer, and G. Gordon Gale, Vice President and General Manager, Hull Electric Co.; W. S. Hart, Treasurer, Quebec Railway, Light, Heat & Power Co., and Vice President, Three Rivers Traction Co.; D. W. Houston, Superintendent, Regina Municipal Ry.; C. B. King, Manager, London Street Ry.; M. W. Kirkwood, General Manager, Grand River Ry. and Lake Erie & Northern Ry.; H. K. McLean, Superintendent of Transportation, New Brunswick Power Co.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry.; W. R. Robertson, General Superintendent of Railways, Hydro Electric Power Commission of Ontario; H. E. Weyman, Manager, Levis County Ry.; C. L. Wilson, Superintendent, Hydro Electric Rys., Toronto & York District.

Secretary: Eustace Smith, Jr., Executive Assistant, Toronto Transportation Commission, 35 Yonge St., Toronto.

Official Organ: Canadian Railway and Marine World, Toronto!

dian roads was 100% higher than in 1913. Since then there have been some reductions, but not at all in proportion to the drop in the cost of living. Reduction in wages has been consistently opposed by organized labor, who constantly strive, as is natural, for more money, and less and easier work. While probably most of us feel that a return to pre-war wages and conditions is not desirable, there must be an end to the steadily increasing operating costs, if we are to be successful as public utilities, and continue to sell our product—transportation—at a price that will appeal to the greatest number of people. When car riding becomes a luxury that cannot be freely indulged in by people of small incomes, our death knell will have sounded, and we will pass on, to be replaced by some other and more popular means of transportation for the masses. There are

what he works in. Do you know that we have had six boards in Ottawa since 1918, and many before that year. The Ottawa Electric Ry. would be a good training school for delegates to the League of Nations. I would like to start a discussion on the Industrial Disputes Act, but this is hardly the place for it.

Everything indicates a most successful meeting. The exhibits are excellent, the morning meetings should be most interesting, the entertainment features will be enjoyed by all of us, and we will have the great advantage of meeting and talking shop with our fellow workers in the traction field. A particular advantage this meeting affords us is the opportunity of looking over the tremendous work done in less than two years by the Toronto Transportation Commission. As President of the Association I can regard myself as merely a conductor, whose duty it is to call out "All aboard." The success of the meeting depends on your willingness to move up to the front, and enter wholeheartedly into the many interesting functions provided for us. I feel sure, years hence, the Toronto meeting will stand out in our memories as one of the best in the Association's history.

Executive Committee Meeting.

The newly elected executive committee met in the Toronto Transportation Commission's board room on July 20, those present being H. H. Couzens, President, in the chair, D. E. Blair, Vice President; E. P. Coleman, Treasurer; Major F. D. Burpee, G. Gordon Gale, W. R. Robertson, and C. L. Wilson. Following up the suggestions made at the Association's annual meeting, it was decided to ascertain whether the Canadian Electric Association would be willing to hold its next annual meeting at the same place, and during the same week, as the C.E.R.A. the two associations to meet on different days, but one exhibit to be made by the manufacturers for both meetings. The following committee were appointed.

Legislation:—Dominion, Major F. D. Burpee, Manager, Ottawa Electric Ry.; Nova Scotia, W. L. Weston, Manager, Nova Scotia Tramways & Power Co.; New Brunswick, J. A. Olive, New Brunswick Power Co.; Quebec, W. J. Lynch, General Manager Quebec Railway, Light, Heat and Power Co.; Ontario, C. L. Wilson, Superintendent, Hydro Electric Railways Toronto & York District; Manitoba, E. Anderson, K.C., Solicitor, Winnipeg, Electric Ry.; Saskatchewan, D. W. Houston, Superintendent, Regina Municipal Ry.; Alberta, M. Freeman, Commissioner, Lethbridge Municipal Railway; British Columbia, V. Laursen, Solicitor, British Columbia Electric Ry.

Motor Buses and Trucks:—Major F. D. Burpee, Manager, Ottawa Electric Ry., Chairman.

Safety:—W. R. Robertson, General Superintendent of Railways, Hydro Electric Power Commission of Ontario, chairman; W. H. Darracott, chief clerk to Manager, Winnipeg Electric Ry.; W. R. McRae, Superintendent of Rolling Stock, and shops, Toronto Transportation Commission; R. M. Reade, Superintendent, City Division, Quebec Ry., Light & Power Co.; J. F. H. Wyse, General Manager, Ontario Safety League.

Standards:—D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., chairman; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; G. Gordon Gale, Vice President & General Manager, Hull Electric

Co.; H. T. Gibbs, Sales Engineer, Canadian Westinghouse Co.; W. G. Gordon, Traction Engineer, Canadian General Electric Co.; Hugh Millar, President, Lyman Tube & Supply Co.; W. G. Murrin, Vice President, British Columbia Electric Ry.

Valuation, Maintenance, and Depreciation of Street Railway Assets:—H. E. Weyman, Manager, Levis County Ry., chairman; W. G. Hewson, Railway Engineer, Hydro Electric Power Commission of Ontario; F. S. Livingstone, Traffic Manager, Hydro Electric Railways, Toronto & York District; L. Tait, Secretary-Treasurer, London St. Ry.; G. E. Waller, General Superintendent of Railways, Dominion Power & Transmission Co.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies.—

*Deficits.

Edmonton Radial Ry.—A press report states that the operating deficit for 1922 was \$5,476, the lowest on record. There was an increase in gross revenue, over 1921, of \$7,053, and a decrease of \$35,907 in operating expenses. The expenses per car mile were 25c, against 26.9c in 1921.

The Montreal Tramways and Power Co. is a holding company for the Montreal Tramways Co., and other allied companies controlled by the E. A. Robert interests. The annual report for the year ended Nov. 30, 1922, the first issued to the public, showed assets of \$28,799,071; and the profit and loss account showed an income of \$672,514 of which \$526,529 was paid out in interest. After the meeting of expenses and other disbursements \$98,274 was carried forward. The publication of the report attracted considerable attention and there was a good deal of hunting for proxies for an extraordinary general meeting of shareholders held July 3, called on the requisition of certain shareholders. E. A. Robert, President was in the chair, and the administration of the company's affairs was criticized by L. M. Fortier and A. E. Beauvais, and after discussion, the President moved and W. A. Finlay seconded a motion for the appointment of a special committee of five to enquire into the company's affairs. The names of the committee suggested were not acceptable to the critics of the management, and A. W. Fournier and E. Girard moved for a committee of three to make a general enquiry and to present a report within two months. Scrutineers were appointed to take the vote, and the meeting was adjourned to July 5 when it was reported that the amendment had been defeated by 75,851 to 56,572. The original motion to appoint C. H. Branchaud, A. Hudson, L. Fortier, C. J. Hodgson and A. W. Stevenson to make an enquiry was then carried. One of the members of the committee, C. H. Branchaud subsequently resigned. On July 12, a requisition, was drawn up, for presentation to the directors calling attention to this fact, and to several matters arising in connection with the meeting of July 3, and asking for the holding of an extraordinary general meeting for certain specific purposes, which were set out.

Port Arthur Municipal Ry.—A report presented to the Port Arthur Public Utilities Commission, shows a surplus in the operation of the municipal utilities for the calendar year 1922, of \$7,993.65, of which, the municipal railway was responsible for \$1,315.61.

Quebec Power Co.—The various proceedings in connection with the taking over of the Quebec Ry., Light, Heat & Power Co. by Shawinigan Water & Power Co. interests, which secured control recently, are being pushed forward. A number of meetings have been held, at which resolutions dealing with various phases of the matter were passed. As the result of these, among other things, the Public Service Corporation of Quebec has ceased to exist under that name, the new title being the Quebec Power Co., for which the Quebec Government has issued supplementary letters patent. The shareholders of this company met on June 27, when Julian C. Smith, President, explained that the company's capital is fixed at \$10,000,000, of which \$6,000,000 is to be common stock, and \$4,000,000 preferred stock, with a \$200,000 bond issue, to be issued in series as required. There is now issued \$1,600,000 of common stock, and \$1,400,000 of preferred stock. It is expected that the final arrangements for taking over the Quebec Ry., Light, Heat & Power Co. and bringing it into the Quebec Power Co.'s organization will be completed about the end of August, when the conditions on which the transfer took place will be made public.

Waterloo-Wellington Ry.—Following the defeat by Kitchener ratepayers, on May 30, of a bylaw to take over and rehabilitate this railway, from Kitchener to Bridgeport, Ont., there was some fear that the operation of the line would cease on June 30, but the line is being operated as usual by the company. It has been suggested that a new agreement may be negotiated, but in the meantime the Kitchener City Council has been asked to resubmit the bylaw to purchase the line and to provide funds for its reconstruction.

Windsor, Essex and Lake Shore Rapid Ry.—A press report states that negotiations are in progress for the purchase of this company's line by the Hydro Electric Power Commission of Ontario. The line extends from Windsor to Leamington, Ont., 36.17 miles, 1.13 of which is double track. Its gross earnings for 1921 were \$322,240, and operating expenses, \$253,952. After paying taxes, funded debt, etc., of \$57,969, the net income was \$10,317.

Winnipeg Electric Railway.—

	May 1923	May 1922	5 mos. to May 31, 1923	5 mos. to May 31, 1922
Gross	\$429,916	\$427,880	\$2,341,674	\$2,229,274
Expenses	301,587	293,680	1,613,734	1,238,388
Net	128,329	134,200	727,940	1,060,886
Fixed Surplus	50,128	56,717	374,042	740,715
Surplus	50,128	56,717	303,769	320,171

The decrease in surplus for May is due to a decrease in gross receipts from the railway and gas utilities, owing to a reduction in daily receipts from the railway and in an apparent trend of economy in the use of gas, on account of existing general conditions.

Electric Railway Wages and Working Conditions.

Guelph Radial Ry.—The Hydro Electric Power Commission of Ontario's Railway Department, which is operating this line for the City of Guelph, has agreed to extend for a year from July 1, the conductors' and motormen's wages and working conditions agreement heretofore in effect, under which the pay per hour is; 1st year, 41c; 2nd year, 43c; 3rd year and thereafter, 45c; overtime, over 9 hours, 20c an hour extra.

Hydro Electric Railways, Essex District.—The management has agreed to extend for another year the conductors' and motormen's wages and working conditions heretofore in effect. The pay per hour is; 1st 6 months, 45c; 2nd 6 months, 50c; thereafter, 55c. Overtime is paid for at 20c an hour additional, overtime commencing after the performance of 10 hours continuous duty.

Montreal Tramways Co.—As stated in Canadian Railway and Marine World for July, the company's conductors and motormen had decided to ask for increased wages, but no demand had then been addressed to the management. Subsequently the men requested an 8-hour day, with the same gross wages as at present, which it was stated would work out at a maximum rate of 65c an hour. The maximum rate of pay to July 31, 1921, was 55c, which the company gave notice to reduce by 20%. After negotiations the reduction was fixed by the company at 12½%, and a board of conciliation was appointed, the majority report of which held that the reduction was not unreasonable. Some further negotiations took place, but were finally dropped by the men, the rate of pay per hour from Aug., 1921, to the present time being 1st year, 39½c; 2nd year, 44c; 3rd year, 48c. A poll of the men was taken in July as to whether there should be a strike in the event of negotiations failing, when 2500 voted in the affirmative and 300 the negative. Lt. Col. Hutcheson, General Manager, and the men's representatives have held several meetings to discuss wages and other matters, and we were officially advised July 18, that negotiations were being continued. The company not having receded from its position to adhere to the present rates, while the men are said not to favor an application for the appointment of a board of conciliation.

It is stated that the wages have been increased 100% since 1913, and are now 65% higher than they were in 1918; while the living for a family of five according to the Labor Department's figures is only 6.52% higher than in April, 1918; consequently there is no justification for demands for increased wages. It is also stated that many of the motormen and conductors are earning as high as \$200 a month, this being in cases where considerable overtime is worked, but \$130 a month is quite common while with a little overtime, requiring little or no exertion, \$150 can be made.

A press report of July 19 stated that immediately after receiving their pay, the company's laborers and trackmen laid down their tools and left work, demanding an increase of wages from the present rate of 30c to 45c an hour. This action is reported to have been as great a surprise to the union's officers as it was to the management. The union officers advised the men to go back to work and let them negotiate with the management.

Ottawa Electric Ry.—When Canadian Railway and Marine World for July went to press, negotiations were going on between the company and its employees regarding wages and working conditions. A board of conciliation by a majority report, favored the adoption of an 8-hour day, on a platform time basis, with the following rates of pay per hour:—1st year, 50c; 2nd year, 52c; 3rd year and thereafter, 54c; these rates to be retroactive to May 1. The company's representative on the board, G. D. Kelley, presented a minority report which recommended the continuance of the 1922 rates, with some adjustment of the spread of hours. The men accepted the majority report, but the company absolutely declined to do so. The men received the authorization of the International Union to strike, and action was postponed to June 25. In the meantime a bulletin letter from Major F. D. Burpee, Manager, sent to the men, was published advising them that the spread of hours had been considered and that new run guides had been prepared, effective July 1, giving an average platform time of 8¾ hours, with an average spread of 11¾ hours on week days; and an average platform time of 7¾ hours with an average spread of 10½ hours on Sundays. This was not acceptable to the men, and the Minister of Labor, who intervened to prevent a strike, could not get the parties together, although he had interviews with Major Burpee and the men's representatives. Magnus Sinclair, one of the International Union officers, arrived in the city, and endeavored to secure acceptance of the majority award, as a whole, or as to the establishment of an 8-hour day, or as to an increase in wages, but failed, and as a result a final conference was held on July 3, when it was arranged that the union officials would recommend the acceptance of the following:—"It is agreed by the parties hereto that the agreement signed by them on Sept. 17, 1922, be continued in effect and be binding upon them to May 1, 1924, and thereafter from year to year. If either party to this agreement desires a change in any of its provisions, such party shall notify the other in writing not less than 30 days prior to May 1 in each year. On such notification being received the change desired shall be open to discussion." The men met on July 4 to consider this, when Magnus Sinclair recommended its acceptance. The men voted in favor of it by 279 to 91, and an agreement was signed accordingly. The 1922 agreement, which has been renewed provided for the following pay per hour for conductors and motormen:— First year, 43c; second year, 45c; third year, 46c; fourth year and thereafter, 48c.

Major Burpee then issued the following letter to the employees:—"On July 6 an agreement was signed between Division 279 and the company, which renews last year's agreement until May 1st 1924, and thereafter from year to year. If either party desires a change it must notify the other in writing not less than 30 days prior to the 1st of May in each year, when the changes desired shall be open for discussion. In an interview prior to a definite settlement of the dispute, on account of which Division 279 applied for a board of conciliation this year, the committee representing that organization was informed that the new run guides which went into effect

July 15 and 16 would be a standard form of run guide governing the future operation of our car service department. This does not mean that the service will not be changed from time to time, to meet the varying amount of traffic we are called upon to handle, but that the general plan of relief adopted in these guides will be continued hereafter. The other items discussed during the negotiations, heaters in the vestibules of the cars, conductors' winter coats, etc., will have the management's thoughtful consideration, and every effort will be made to have them satisfactorily arranged. In fact it has always been the company's policy to do whatever it can at any time to adjust reasonable complaints and to make things as comfortable as may be for its employees and its customers. So much so is this that I have often wondered why it seems to have been necessary in the past to apply each year for a board of conciliation to deal with matters, most of which can be better handled by friendly meetings between the employees and the company. Ever since the Industrial Disputes Act became a Dominion law in 1907, we have had a constant series of boards appointed under it to deal with disputes between the company and its employees, in spite of the fact that on the whole there has been the best of feeling on both sides. The Industrial Disputes Act was intended to be used as a last resort, when disputes between business concerns and their employees became impossible of settlement in any other way, in order to try and prevent strikes and lockouts, and the consequent inconvenience to the public and serious loss to employers and employees. In our case it seems as though conciliation boards were resorted to before the full advantages of friendly negotiations were exhausted. When one considers the composition of the boards of conciliation, usually three legal gentlemen with no practical knowledge or financial interest in the matter they have to deal with, this constant appeal to such a tribunal seems foolish and unnecessary. Disputes such as have arisen in the past should be much easier settled by private negotiations, with avoidance of a great deal of friction and hard feelings. This is only possible though if each party is able to put himself in the other fellow's place, and consider his side of the question in conjunction with his own. While it does not always appear so when these questions are being argued, there is a third party to all disputes between a public utility and its employees—the public. It is quite as much concerned in these disputes as the company and its employees, and its interest deserves quite as much consideration.

"What are the rights of these three interested parties? The public expect, and are entitled to, safe, rapid and comfortable service. The employees are entitled to fair wages, and as good working conditions as can be provided. The employer is entitled to a reasonable return on the capital invested in the plant. The company's revenue must be sufficient also to keep the plant in a good state of repair, provide for the replacement of wasting equipment, and meet its obligation to the public and the employees. A street railway cannot be a success unless the fares charged the public are low enough to attract business from everyone in the community.

The wealthy man, or the man who enjoys a fairly good income, generally manages sooner or later to own an automobile. As soon as he does so, he ceases to be a regular patron of the street railway, and will only ride on our cars when his automobile is out of business. This means that street railways must cater to the man who cannot afford to own an automobile. The lower the fare, the more successful and popular the street railway. Of late years the competition from automobiles and motor buses is being severely felt. The bus seems to appeal to the modern human being's desire to ride in an automobile of some kind, and even where the fare charged is higher than that of the street railway, it has won a certain measure of success. This success in many cases is only temporary because it has been proved that transportation by electric street car is the cheapest that can be provided, and will continue to be so until some more economical form of motive power than gasoline and some less expensive material for tires than rubber can be discovered. In the meantime the opposition from motor buses, which pay practically nothing for the right to use the streets and which do more damage to the pavement than street cars, while taking up more space for each passenger carried, is cutting seriously into the business of electric railways. The increase in the use of private automobiles offers greater competition than the motor buses that are openly in the business of public carriers. Most owners of automobiles pick up every day, and carry from place to place, a few friends who would otherwise take the street cars and pay fares. There is nothing we can do to offset this particular form of competition. It is a condition that we have to face and make the best of.

"Of the three interested parties, our customers, the public, must be considered first. Unless our service is good enough, and cheap enough, to attract their patronage we will cease to exist, and both the employer and the employees will have to turn their attention to some other line of work. In order to keep the fare at a popular rate, the good service the public expects and is entitled to must be plain and inexpensive. It also must be convenient, safe and comfortable, and enable them to get from one place to another without undue loss of time. Let us look for a moment at the employees' side. A man who engages as a conductor or motorman cannot expect to earn more than a plain living from it. If he is ambitious and desires a better living than can be obtained from such an occupation he must prepare himself by study and hard work for something that will make his services command a higher rate of pay. The wages he receives for his work as a conductor or motorman should be sufficient however to provide him and his family with a decent living. The conditions which govern his work should be such as not to be injurious to his health, and to provide him with a reasonable degree of comfort. If he demands and receives more than this, the other two interested parties, his employer and the public, must go short. If we go short in giving the public what they expect, our business will fall away, and street railways will eventually be replaced by some more satisfactory means of getting about. This brings us to the right of the employer to a fair return on the invested capital. It is a well known fact in this industry that unless the street

railway, whether it is publicly or privately owned, is financially sound it cannot provide the service the public expects, and which is necessary to the successful continuation of the business. If the employer fails to receive a fair return on the invested capital it cannot obtain the funds necessary for extensions, or for new equipment as the plant wears out. It must gradually go down hill and, as it does, the service to the public ceases to be good and its patronage declines. It is evident then that these three factors, the rights of the public, the employees and the employer—must be kept in mind in the settlement of any dispute arising in the street railway industry. In the presentation of the case for the employees before boards of conciliation it sometimes appears as though all that is necessary to grant the demands is to increase the fare. This plan has been adopted in some places, with the result that the business has fallen off so much that the total revenue after the increased fares were put into effect has been very little more than what was received before. It is possible, with the consent of the public, through city governments, to increase rates, but nothing can compel people to ride if they think the fare is beyond their means. The cities where street railways are most successful, and the rights of the three interested parties are nearest being satisfied, are those where the riding habit of the customers of the street railway is highest. This means that the service must be good, and sold to the public at a price that induces them to ride frequently, and not just when they are compelled to.

"Years ago, when the street railway was a baby industry the 5c piece, perhaps because it was the lowest unit of our coinage other than the copper cent, was adopted as a standard fare. It was certainly the most convenient amount to charge for the service provided. In those days the cost of living was low, and those who risked their money in the industry, which was then regarded more as a speculation than an investment, did very well. Those days are past, and it is not likely that they will ever return. The public is still inclined to regard the 5c piece as the proper fare for a street car trip, although the costs of operation have doubled and trebled. In the course of years the ownership in street railways has been constantly changing hands. It is not possible now to dig into the past, and expect those who originally risked their funds in the industry to give up the profits that they earned in the early years, nor would it be right to expect them to do so. They were the pioneers who took the chance and won, and they are entitled to what they got. If on the other hand they had lost, they would not have expected, or found, anyone to step forward and reimburse them.

"To satisfy today the rights of the three parties referred to requires the most careful management and full consideration from each party of the rights of the other two. The public cannot expect to find a car always on hand, the moment it is required by each intending passenger. It cannot expect parlor car fittings. It cannot demand a taxi service for a street railway fare. The employee cannot hope for more than a plain living from his employment. The employer can no longer regard the street railway business as an opportunity to make a fortune. The success of this business depends on selling transportation at as

cheap a rate as possible. The three interested parties all have rights, but each must consider the other two in the settlement of a dispute affecting the operations of a street railway. I earnestly hope that in the future, when disputes arise, those who are delegated to settle them will be broad enough to keep these things in mind and be prepared to try to reach an adjustment that will be fair to all three."

Toronto Eastern Railway Construction and Associated Developments.

Canadian Railway and Marine World for July stated that the Canadian National Rys. management was preparing to start work on the completion of the Toronto Eastern Ry. and to extend it, at the west end, to a junction with the C.N.R. Orono Subdivision line to take it into Toronto, so as to provide a radial electric railway service east from that city. We are officially advised that the finishing of the T.E.R. construction is to be gone ahead with immediately, and that S. B. Wass, Terminal Engineer, who was in charge of the Neebing yard construction near Fort William, Ont., has been transferred to Oshawa, Ont., and will be in charge of the T.E.R. work. H. L. Vercoe, formerly in the Canadian Northern Ry's engineering department has been engaged as special engineer for Canadian National electric lines. J. B. Heron, formerly in Canadian Northern Ry. service on location and construction between Ottawa and Capreol, Ont., has been appointed resident engineer for the Toronto Eastern work, at Oshawa, and will report to Mr. Wass.

A portion of the T.E.R. was built by Mackenzie, Mann & Co., several years ago, from Bowmanville to Whitby, about 15 miles, except the overhead electrical work, none of which was erected on any part of the line, i.e., grading, culverts, trestles, track laying and ballasting were done. From Whitby to the west line of Pickering Township, grading, culverts, and trestles were done, but no track laying and ballasting. No part of the road has been operated. The line was projected as an electric one and was intended to be a feeder from Bowmanville, Oshawa, Whitby, Pickering and the intervening country, for the Canadian Northern Ottawa-Toronto line. It was to connect with the Canadian Northern at Cherrywood, 22.5 miles east of Toronto union station. This plan was, however, changed with the intention of building from Bowmanville to connect with the Toronto & York Radial Ry., Scarborough Division, at West Hill, its present eastern terminus, which would have necessitated changing the gauge of the latter road, which is 4 ft. 10 1/4 in. These plans advanced to the stage where the Board of Railway Commissioners' approval was secured, but were then displaced by another plan by which the Toronto Eastern line would extend from Bowmanville to connect with the Canadian Northern Ottawa-Toronto line north and east of Scarborough, a few miles east of Toronto. The Board of Railway Commissioners' approval was not secured for this plan, and when war broke out, work on the line stopped, with construction completed only so far as stated above. The project's history from that time, including the Hydro Electric Power Commission of Ontario's attempt to get control of it, and the municipalities' successful attempt to get the C.N.R. management interested in its

completion, was given in Canadian Railway and Marine World for July, pg. 355.

The intention is to complete the T.E.R. between Bowmanville and Pickering, to build a connection between Bowmanville and the Canadian National Rys., Orono Subdivision, and electrify the latter from the connecting point east to Cobourg, 78.3 miles from Toronto union station; to build a connection between Pickering and the Orono Subdivision line east of Toronto and to operate an electric service from Cobourg to a Toronto terminal where the C. N. R. Orono Subdivision line crosses Queen St., near the Don River. Details are not yet available as to where the connecting links from Bowmanville and Pickering will join the Orono Subdivision. The first work will be to put the previously completed portion of the T.E.R. between Bowmanville and Whitby in standard condition, and to complete the portion between Pickering and Whitby, after which the connecting lines will be gone on with. Preparations for completing the T.E.R. part of the work are being gone ahead with, under Mr. Wass' direction. We are officially advised that the Senate's recent action in giving a six months hoist to the bill to provide the C.N.R. management with some \$28,000,000 for branch lines construction will not interfere with this work, as funds were provided by a previous appropriation.

Associated with this development will be other work designed to provide a complete electrified system for radial service east and west of Toronto. While the plans for this are not yet completed, they are well advanced, and provide for the construction of a connecting link just north and west of Toronto, to connect the Toronto Suburban Ry., which runs from Toronto to Guelph, to the old G.T.R. Belt Line Railway, which will be electrified to provide a connection with the eastern electrified line at a point north of the Don River terminal. A new terminal will be necessary at the Don River and Queen St. Connections with the Toronto Transportation Commission's lines will be furnished at Bloor St. viaduct, where elevators to take passengers from the track level to the street level will be necessary; at Yonge St., where the belt line crosses it, and at Weston Road.

The Calgary, Alta., Municipal Ry. officials complained to the police recently that men patronizing the Ogden line were in the habit of rushing the back end of the one man cars, forcing the door and so securing free rides. The police arrested one man caught in the act, who was fined \$13.50, including costs, by the police magistrate.

One of the Nova Scotia Tramways and Power Co's one man cars caught fire from a defective fuse, at the corner of Buckingham and Granville Streets, Halifax, N.S., July 3. The passengers got out without mishap; and the fire was extinguished with but little damage to the car; but traffic was held up for 30 minutes.

Montreal Tramways Co. is preparing a map showing the area served by its lines, and all the routes, together with a series of numbers which will enable visitors and others to find the car they want readily. The system is expected to be put in operation on all lines by the end of the summer.

London St. Ry. put into operation on July 1, the first of the one man, p.a.y.e. single end, double door, safety cars, described in Canadian Railway and Marine World for January, pg. 35.

The Toronto Transportation Commission's Activities.

Loop Construction Protested.—The Commission had planned the construction of a loop at Lansdowne Ave., Bloor St. and Wade Ave., in the western part of the city, upon which to turn the cars on the Bloor St. run, one of the most important east and west runs. They are now turned on a Y at Lansdowne Ave. and Bloor St. Upon the plans for a loop becoming known, residents in the area affected took steps to have the construction prevented, on the ground that it would mean two extra crossings of sidewalks by the car tracks, and also would be liable to postpone the removal of several steam railway level crossings in the vicinity. Ward 6 Ratepayers' Association, the Bloor and Lansdowne Business Men's Association and Ward 6 Transportation Committee met on July 8 and sent a deputation to the city council to request that the construction of the loop be prevented, which the council acceded to. It is possible that the Commission may try to get the council to change its decision, as it is stated that the citizens' idea that the loop construction would postpone grade separation is entirely erroneous.

Car Deliveries.—At July 18 the Ottawa Car Manufacturing Co. had delivered 24 motor cars out of an order for 50, and Canadian Car & Foundry Co. had delivered 20 out of an order for 60. All trailers ordered have been delivered, and delivery of the remaining motor cars is expected in the near future.

One-Man Cars.—Canadian Railway and Marine World for July gave particulars of the hearing before the Ontario Railway and Municipal Board of the Commission's application for permission to operate double truck cars with a one-man crew, when the Board directed that a complete trial be made. This is now being done, 13 double truck cars being in one-man operation on the Church St. route. These are not the new motor cars which are convertible for one-man operation, as described in a preceding issue of Canadian Railway and Marine World, but are some taken over with the Toronto Civic Ry., which have been equipped with safety control and on which some changes were made to fit them for one-man operation, chiefly in regard to the doors and door operating mechanism.

The general repair shops being built by the Commission at Bathurst St. and Davenport Road, described in Canadian Railway and Marine World for March, are nearing completion. It is expected that the installation of machinery will be begun in September, and that the shop will be ready for operation in the fall.

Conversion of Old Double Truck Cars.—About two months ago the Commission converted a double truck p.a.y.e. car, 350 of which were taken over from the Toronto Ry. Co., into one for front entrance operation, with passengers paying their fare on exit if they elect to ride in the front section of the car, and on passing the conductor's farebox, near the middle of the car, if they wish to go through to the rear section. Experiments with the converted car proved it to be superior to the p.a.y.e. type, and it has been decided to convert all the 350 cars, with the exception of a number, not yet determined, which will be used for permanently connected two-car trains. Conversion of 30 of the p.a.y.e. cars is now under way.

Suit for Royalties.—A writ was issued at Osgoode Hall on June 22 by Peter Witt, Cleveland, Ohio, and C. S. Wright, Toronto, against the Commission, to recover \$2,500 and \$150 costs, on royalties of \$50 each on 50 motor cars delivered to the Commission by the Ottawa Car Mfg. Co. The Commission is protected by agreement with the Ottawa Car Mfg. Co., the latter having guaranteed to indemnify the Commission for all claims paid in respect of royalties, patents, etc. Messrs. Witt and Wright brought a similar action against the Canadian Brill Co., and recovered the amount then claimed.

Exhibition Park Service.—The Commission on July 1 introduced a special service extending the Dovercourt car route to the Canadian National Exhibition grounds. The extended service is given only between 2 and 10.30 p.m., and will be discontinued after the exhibition. The object is to enable citizens to utilize the park for picnic and other recreation.

Cross-Town Line.—The extension of the Dundas St. line across Yonge St., to afford a new east and west line across the city, was completed at the end of June, and its operation started on July 1.

Track Work.—At the time of writing, the Commission has the following track work under way: on north part of Avenue Road, rehabilitation of west track; on Queen St., between Church St. and the Don bridge, surfacing and repairs to joints; intersection installation at Front and Bay Sts. and at King St. and Wilson Ave.; installation of reverse curves on Roncesvalles Ave. at Harvard St.; completing installation of loop at Vincent St., near Bloor and Dundas Sts., on which King cars will turn; laying of additional track and special work in yard at new repair shops, Bathurst St. and Davenport Road; laying of track and special work at Roncesvalles Ave. car house yard.

Operation with two car train.—As stated in the paragraph about the conversion of 350 double truck p.a.y.e. cars taken over from the Toronto Ry. Co., some of them will be used for making permanently connected 2-car trains, the number to be converted to be determined after experiment. The first of this multiple unit equipment was turned out of the Commission's shops about the middle of July and is being operated on the Bathurst St. route. Both types of cars have been greatly altered. The leading car retains the back entrance, but has had an exit door placed adjacent to the entrance door, and the rear car has been equipped with front entrance and exit doors. The leading car's capacity is unchanged, accommodation for 37 passengers being provided, but the installation of a circular seat around the rear vestibule of the rear car, and the inclusion of 6 transverse seats, has increased the rear car's capacity to 50. The current is collected by the leading car, and the control is from that car, which retains all four motors, while the rear car retains 2 motors, driving through the leading truck. Door operation is so interlocked that power cannot be applied to start the train when doors are open on either car. Special features are an alternative exit at the forward end of the leading car and an emergency exit at the back of the rear car. The latter exit will normally be blocked by a section of the longitudinal seat which can be quickly removed in emergency. The p.a.y.e. fare collection system applies to both units.

Electric Railway Projects, Construction, Betterments, Etc. Toronto-Port Credit-Oakville Electric Railway Situation.

British Columbia Electric Ry.—We were advised recently that the rails for the second track on the Victoria Road line, Vancouver, were expected to be delivered by the end of July, when the work would be immediately gone on with. Its cost is estimated at \$61,000. (July, pg. 353.)

Edmonton Radial Ry.—A press report states that the electric railway tracks on the south approach to the high level bridge, Edmonton, Alta., are being taken up, and are being relaid on the west side of the approach and that the estimated cost is about \$5,000. (March, pg. 134.)

Hamilton St. Ry.—In connection with the reported early closing of the Hamilton and Dundas St. Ry., the question of the future service on Aberdeen Ave. in Hamilton has been raised. A suggestion has been made for the construction of a connection with the line running to Westdale, and the operation of a belt line service. Plans are reported to have been approved by Hamilton City Council for the extension of the Westdale line to near the Halfway house.

It is expected, a press report states, that the laying of a second track on Margaret St., will be started at an early date. (July, pg. 353.)

London St. Ry.—A press report, July 11, states that an Ontario Railway and Municipal Board engineer has been inspecting all the bridges crossed by the railway, and will report thereon shortly.

We are officially advised that it is proposed to rebuild the paved double track on Richmond St., from Dufferin to Oxford St., about 0.6 mile. (June, pg. 295.)

Montreal Tramways Co. applied to the Board of Railway Commissioners, June 28, for permission to cross the Canadian National Rys. and the C.P.R. tracks with its Atwater Ave. line, so as to enable connection to be made between the city and Point St. Charles. The City Engineer stated the benefits which would accrue to the citizens if the proposed line were built, and the Canadian National Rys. counsel submitted facts as to the traffic in and out of Bonaventure station, which had to cross Atwater Ave. The application was supported by a deputation from the Verdun City Council. Judgment was reserved for the Commissioners' traffic officers to investigate the matter, particularly with regard to interlocking systems. The extension of the Atwater Ave. line proposed is from St. James St. to Center Ave., and would involve crossing 4 main line double tracks of the Canadian National Rys. (G.T.R.) south of St. James St.; 2 industrial spur tracks, and some shunting tracks of the C.N.Rys.; the C.P.R. South Bank Branch, and some industrial tracks at the intersection of Atwater and Center Streets. (June, pg. 294.)

New Brunswick Power Co.—A press report states that the putting in of a new roadbed on the track on Dock and Mill streets, St. John, is practically completed, and that it is proposed to improve the curves at the junction of King and Charlotte Streets, and at Wall St., leading to City Road. (June, pg. 295.)

New Brunswick Power Co.—Tracks on Britain St., between Charlotte St., and Prince William St., St. John, and in some other parts of the city are being renewed. (June, pg. 295.)

Niagara, St. Catharines and Toronto

Ry.—The Board of Railway Commissioners has ordered the N.St.C. and T. Ry. to rebuild the bridge on Victoria St., Stamford, Ont. (July, pg. 352.)

Nipissing Central Ry.—The Dominion Parliament has extended for two years the time within which the company may build the several lines authorized by its incorporation act. A list of these lines was given in Canadian Railway and Marine World for Jan., pg. 36.

Nova Scotia Tramways and Power Co. is reported to have invited tenders for its share of the paving on Queenpool Rd. and South Park St., Halifax, N.S., on which its lines run. Paving blocks for this work were reported on July 12, to have been delivered.

Ottawa Electric Ry.—Hull, Que., City Council received a letter from Major Burpee, Manager, Ottawa Electric Ry., July 4, stating that the company could not make improvements in the service between Ottawa and Hull, unless it were given permission to build a loop line, which it was ready to do immediately upon approval. A petition by 1500 residents, approving of the loop was presented to the council the same evening. On July 6, Major Burpee attended a meeting of the council by request, when the matter was discussed, and it was decided to have an agreement drawn up which will permit the building of a loop crossing Bridge St. near the Eddy Co's offices and Eddy Park. Major Burpee explained that the company did not desire to have the loop line for the purpose of entering into competition in any way with the Hull Electric Co., but merely to operate larger cars and give a fast service. He said that the company would erect a waiting room for passengers at the corner of Eddy Park. (July, pg. 353.)

Quebec Ry., Light and Power Co.—We are officially advised that a diamond crossing and interlocking signal system is being installed at the Canadian National Rys. crossing on Beauport Road, Quebec, to connect the Mastai extension with the line on 10th St., Limoilou, Quebec, about 440 yards in all. (July, pg. 353.)

Winnipeg Electric Ry.—The city council special committee considering transportation matters has recommended the city to wipe out all old applications to the company for additional street railway services and to make an entirely new application for the extensions desired. (July, pg. 353.)

Winnipeg Electric Ry. applied to the Board of Railway Commissioners at Winnipeg, July 16, for permission to carry its Academy St. tracks across the Canadian National Rys and the Midland Ry. of Manitoba, west of the present track and on Lindsay St. Some of the commissioners and their officials visited the site of the proposed crossings and judgment was reserved pending filing of detailed plans by the company.

British Columbia Electric Ry.—The Board of Railway Commissioners sitting at Vancouver recently heard the Broadview Ratepayers' Association's application for a reduction of fares on the Burnaby Lake line.

The Brandon, Man., Municipal Ry. had, a press report states, to cease operation, July 7, owing to an explosion at Canada Gas and Electric Corporation plant which supplies the power.

At the request of the municipalities interested, the late Ontario Government headed by Premier Drury passed two orders in council on June 9, in connection with the proposal to extend the Hydro Electric Railway's Toronto and York District, Mimico Division which is in operation from the Humber River to Port Credit, on to Oakville. The first order approved the form of agreement between the Hydro Electric Power Commission of Ontario and the Toronto City; Mimico and New Toronto Towns, Port Credit Village and Etobicoke and Toronto Townships for the construction and equipment of an electric railway from Toronto to Port Credit, and authorized the Commission to enter into the agreements under the Hydro Electric Railway Act, 1914, and amendments thereto, to proceed with construction. The order after reciting that agreements for the construction of an electric railway between Port Credit and St. Catharines were approved by the municipalities between Port Credit and Oakville, in compliance with Municipal Electric Railways Act, 1922, sec. 29, viz: Toronto and Trafalgar Townships, and Oakville Town, and that these corporations were desirous that construction be approved of the agreements, subject to a new apportionment of the cost of the line; and authorized the Hydro Electric Power Commission of Ontario to proceed with the construction and equipment of the railway and to dispose of \$1,065,667 of bonds for for that purpose.

While the municipalities asked for the extension of the existing line from Port Credit to Oakville, the orders in council authorize the construction of a new line from Toronto to Oakville, such line being one section of the projected Toronto-Guelph-London line, viz: Toronto to Port Credit; and one section of the Port Credit-St. Catharines line, first voted upon by the municipalities in 1916, and 1917 respectively, and reaffirmed by the municipalities referred to in the orders in council, except as regards the harbor front entrance by Toronto.

The matter is before the Hydro Electric Power Commission of Ontario, but it is said the change in the Ontario Government and the passing of the orders in council have prevented progress being made.

New Toronto Town Council on July 4, discussed a project for the purchase of the existing line from Sunnyside to Port Credit by the municipalities interested, and its operation as a local enterprise. Mimico Town Council, Port Credit Village Council, and Etobicoke and Toronto Townships' Councils have been asked to appoint representatives to a joint meeting to discuss the matter.

The Hydro Electric Power Commission of Ontario is in the market for from 20 to 28 cars for operation on the Hydro Electric Railways various districts. They will be very similar in design to the double truck one-man-two-man safety cars ordered by the Commission from the St. Louis Car Co., which were described in Canadian Railway and Marine World for May, pg. 235. The chief differences will be that they will be suited for operation in two and three car trains when necessary.

London and Port Stanley Ry. is reported to have carried over 20,000 passengers to Port Stanley, Ont., on July 2.

Re-Routing of Toronto Street Cars.

Toronto Transportation Commission put in effect, on July 1, a general re-routing plan, affecting the street car service throughout the city, and for several days before published full pages of information in the city daily papers, explaining the changes, the reasons therefor, etc., from which the following is reproduced, as it will be of general interest to all street railway officials: Since the Commission commenced to function, very careful and continuous study has been made of traffic conditions in the city, with a view to introducing a more up-to-date and efficient routing of the cars, which is necessary to ensure an improved and more efficient system.

Merging of Lines.—In Sept., 1921, there were transferred to the Commission the system operated by the Toronto Ry. Co., the civic lines (three separate systems), and sundry sections which at one time formed portions of company owned radials. These separate units were connected together to give, as far as possible, a unified service during the period of rehabilitation, reconstruction, etc. It was from the first realized that no co-ordinated re-routing plan, though most desirable, could be effected until rehabilitation was substantially completed, loops installed, clearance and other curves laid, which, together with other improvements, were necessary to ensure flexibility and freedom of movement for the cars. Also, with few exceptions, the routes were interdependent one on another and any plan, to be effective and give the desired result, must be comprehensive in its scope, in spite of the temporary disorganization which is unavoidable with such a radical change until crews and passengers become familiar with altered conditions.

Little Change in 30 Years.—The city has grown greatly, the center of population has moved and though traffic movements have greatly changed in the past 30 years, yet there has been no general re-routing of street car traffic over the whole city during that time. In some cases routes existing today were evolved to accommodate the riding habits of three decades ago. The new routes are planned to meet the requirements of 1923 Toronto in so far as this can be done until such time as the waterfront viaduct is built; northwest grade separation effected; the Gerrard St. bridge completed; the Gerrard subway reconstructed, and the Toronto Suburban Ry's city lines absorbed into the system. The main consideration which has governed the re-routing plan is to give a service which will meet the requirements of the majority of the passengers and at the same time ensure that the service is distributed in the most economical method possible.

Routes Outgrow Usefulness.—There now exist cases where a route has outlived its usefulness, probably due to changed conditions since it was laid out, and a diversion, in whole or part, would be a great convenience to a large number of car users and inconvenience very few. There are also overlapping routes where the traffic does not warrant such a condition. Here again the same effect will be accomplished by change of route. The most efficient and economical service can be given when the traffic is comparatively uniform along the entire route. If at one point on a route traffic is much

greater than at other points the service may be quite inadequate at the heavy point, but still be excessive for the major portion of the route. If one condition is corrected the other is thrown still further out of balance. Putting additional, regularly scheduled cars on to a route is not a thing which can be done without careful consideration. Every car on a regular schedule represents a yearly gross expense of approximately \$20,000. Therefore, one unnecessary car on each route would mean an increased annual expense of \$440,000.

Extra Service Costs Money.—Extending a route beyond its area of fairly heavy traffic density to accommodate the residents of some particular section is also uneconomical, especially when those residents can reach destinations by transferring to another route. A route cannot be extended without putting on more cars, and each additional car mile operated will mean extra expense, with the possibility of little extra revenue being received. One of the principal objects in re-routing the cars is to obtain a better distribution of traffic. With improved distribution, passengers will be carried more comfortably and quickly, and, at the same time, more economically. The Commission, therefore, asks car users, as far as possible, to use the route laid out to serve their districts, thereby assuring themselves of the best service due to the improved distribution which will follow. It may be well to point out that if traffic is concentrated on one or two lines, this causes unnecessary congestion, slows up the service, and, if continued, ultimately necessitates the premature construction of subways, the cost of which is out of proportion to the advantages gained, except in cities where there is a very large population and where the surface lines are inadequate to handle the traffic to and from the business area.

Basic Idea of Re-routing.—Owing to the way in which Toronto is laid out, with the larger portions of its area and population in the east and west, the heaviest flow of traffic is that running eastward and westward, particularly from the west. It is for this reason that the basic idea underlying re-routing is a series of straight or shallow U-shaped cross-town lines, King, Queen, Beach, College, Carlton, Bloor and St. Clair, combined with a series of lesser lines linking them together. To care for the excess of population lying west of Yonge St., three diagonal routes, Dundas, Harbord and Bay, are used. During rush hours traffic is principally to and from the business center. This is taken care of by the tripper services, some of which are already in use and others are being added, four to the north and northwest and three to the east and northeast. These are scheduled routes forming a definite part of the regular service and are not subject to variation from day to day.

Service for Majority.—It is, of course, impossible to provide for everyone a car direct from his home to his business, and the convenience of the majority must govern. The new routing is, however, based on the general direction of travel taken by the majority, and after a week or so, when the schedules are finally adjusted to the traffic and the passengers and crews have become familiar with the altered conditions, the Commission is confident that the new routing

will be approved by the great majority of car users.

More Cars Wanted.—It is a matter of great regret to the Commission that the number of new cars available for re-routing on July 1 is less than anticipated, and, accordingly, the new plan will be severely handicapped in several ways, directly and indirectly. Some cars are much overdue. Others, though practically completed, are delayed owing to the non-delivery of essential equipment not supplied by the car builders. Furthermore, the rehabilitation of the majority of the cars transferred to the Commission, and which are to be retained in service, is not completed, due to reasons beyond the Commission's control. Consequently the available cars have to be distributed in the best way for the scheme as a whole and it is unfortunately necessary even to take the new cars off some routes on which they have been operating for some time, as well as delay their installation on new routes. This is a temporary measure, and when delivery is made of all the cars now on order, which should be in the comparatively near future, there will be sufficient of the up-to-date type of cars to operate the full service at normal hours on all trunk routes. There is one exception, however, the Sherbourne route, where there is not sufficient clearance for the new cars on Sherbourne bridge and not sufficient roadway allowance to permit of widening the devil strip. It may be asked why the Commission did not delay the re-routing until the full complement of cars was available. The answer is that July is the month of lightest traffic, and Sunday, July 1, immediately preceding Dominion Day holiday, when traffic is lighter than on a normal week day, offers the best opportunity for making alterations.

Suspension of Judgment Asked.—Experience of the consideration extended by the public in the past convinces the Commission that the same consideration and co-operation will be repeated and the result of re-routing not finally judged until conditions are normal and the handicap of shortage of suitable cars removed.

The attention of car users is drawn to the change being made in the destination signs which will be used on the cars in future. Destination signs are those appearing on the front of the cars and to the left of the route sign, when facing the car. Route signs also appear on the side of the cars. For some time, due to the increase in the size of the system, it has been more and more difficult to find room on the sign rolls for the number of names necessary to cover the various destinations on all routes. In future, with few exceptions, the destination signs shown while the cars are routed through to the end of the route will be "Terminus," and when cars, due to emergency conditions, are not run through to the end of the route, the destination sign shown will be "Not Thro'."

Night Cars will be operated on all night car routes every 15 minutes up to 1 a.m., and every half hour after.

Such complete arrangements had been made by the Commission's management that the re-routing went into effect without a hitch, and while, of course, some objections to it have been made, the great majority of the citizens are evidently well satisfied with it.

Mainly About Electric Railway People.

David Edward Blair, who has been elected Vice President, Canadian Electric Railway Association, was born at Montmagny, Que., July 25, 1877, and graduated from McGill University with the degree of B.Sc. in 1897. He entered Quebec District Ry's service in Sept. 1897, as Assistant Chief Electrician, and Mechanical Superintendent, remaining with that company, and its successor, Quebec Railway, Light, Heat & Power Co., until March 1903, when he was appointed Assistant General Superintendent, Montreal St. Ry., and afterwards Superintendent of Rolling Stock, which position he has remained in since, with that company, and its successor, Montreal Tramways Co.

E. E. Carpenter, who has been appointed Chief Engineer, British Columbia Electric Ry., Vancouver, graduated from Stanford University in 1898, with the degree of B.S. in civil engineering, after which he was engaged for about seven years in railway engineering work. He was, at one time, chief engineer in charge of the design and construction of a 5,000 h.p. initial power development installation for the B. C. E. R. Co., at Jordan River, Vancouver Island, and later engaged in private practice in partnership at San Francisco.

Henry Herbert Couzens, General Manager, Toronto Transportation Commission, who has been elected President, Canadian Electric Railway Association, was born at Totnes, Devonshire, Eng., Oct. 16, 1877, and was educated at the Independent College (Taunton School), Taunton, Eng. He served subsequently as an articled pupil in both mechanical and electrical engineering, with Allen & Son, Taunton, and the Taunton Corporation Electrical Works, respectively, becoming Assistant Engineer of the latter, and in 1898 was appointed Assistant Engineer, Bristol Corporation Electrical Department, Bristol, Eng., and held that position until 1901, when he was appointed Deputy City Electrical Engineer, Bristol. He resigned in 1909 on his appointment as Manager and Engineer, West Ham, London, Eng., Corporation Electric Supply, and in 1912 was appointed to a similar position with the Hampstead Borough, London, Eng., Council and continued for a year as Consulting Engineer for West Ham. He resigned that position at the end of 1912, on his appointment as General Manager, Toronto Hydro Electric System, and took up the duties of the latter position early in 1913. In 1920 he was given an indefinite leave of absence to become General Manager, Toronto Transportation Commission. He is a member of the Institution of Electrical Engineers, London, Eng., the National, Royal Canadian Yacht and Engineer Clubs, Toronto, and Toronto Board of Trade, and was Vice President of the Canadian Electric Railway Association for 1922-23. Mr. Couzens expects to leave Toronto about the middle of August to spend a short time in England.

A. J. Gadoua, acting Superintendent of Transportation, Montreal Tramways Co., died at Notre Dame Hospital, Montreal, July 5, from syncope, caused by acute indigestion. He was born at Sherrington, Que., in 1871, and entered the company's service in 1891 as a horse car conductor, and after the system was electrified, he was appointed inspector,

and later was in charge of the St. Denis shops. He served in Paris, France, under the late Duncan McDonald, General Manager, Paris tramways, and on returning to Montreal in 1907, was appointed

George Kidd,
President, British Columbia Electric Railway Co.

W. G. Murrin, M.I.E.E.,
Vice President, British Columbia Electric
Railway Co.

Claims Agent, Montreal St. Ry., later Montreal Tramways Co., and in Oct. 1922, was appointed acting Superintendent of Transportation, on A. Gaboury's retirement.

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., Mrs. Gale, and their children, are spending the greater part of the summer at their country house at Aylmer, Que., and will visit Tadousac, Que., for a short time.

George Kidd, heretofore General Manager, British Columbia Electric Ry. Co., Vancouver, has been appointed President; W. G. Murrin, M.I.E.E., heretofore Assistant General Manager, has been appointed Vice President at Vancouver; and A. T. Goward, heretofore Manager at Victoria, has been appointed Vice President there. No change has been made in their duties, Mr. Kidd remaining in charge of the company's entire policies, and holding power of attorney from the directors in London, Eng.; Mr. Murrin continuing in charge of the actual operations on the British Columbia mainland, and Mr. Goward in charge of operations on Vancouver Island. R. M. Horne-Payne continues as Chairman of the Board in London.

George Kidd, who has been appointed President, British Columbia Electric Ry., Vancouver, B.C., was born at Sheffield, Eng., March 9, 1874, and qualified as a chartered accountant in 1896. He entered British Columbia Electric Ry. service in 1907, and has been, to 1911, Secretary, London, Eng.; 1911 to May 6, 1914, Comptroller, London; May 6, 1914, to July 1, 1923, General Manager, Vancouver, B.C.

W. B. Mayo, Chief Engineer, Ford Motor Co., is reported to have been appointed General Manager of the Detroit, Mich., city owned electric railway.

William George Murrin, M.I.E.E., who has been appointed Vice President, British Columbia Electric Ry., Vancouver, B.C., in charge of operations on the mainland, was born in London, Eng., Aug. 27, 1875, and was educated at the Royal Naval School, Greenwich, and the Finsbury Technical College, London. He entered electric railway service in 1903, since when he has been, to 1911, Works Manager, London United Tramways Co.; 1911 to 1913, electrical engineer in London; 1913 to 1914, Mechanical Superintendent, British Columbia Electric Ry., Vancouver; 1914 to 1917, General Superintendent, same company, Vancouver; 1917 to July 1, 1923, Assistant General Manager, same company, Vancouver.

E. W. Oliver, B.A.Sc., C.E., heretofore General Superintendent, Electric Lines, C.N.R., Toronto, who has had charge of the Niagara, St. Catharines and Toronto Ry. and the Niagara, St. Catharines and Toronto Navigation Co., and also has devoted considerable time recently to Toronto Eastern Ry. matters, has been appointed Manager, Niagara St. Catharines and Toronto Ry., Niagara St. Catharines & Toronto Navigation Co., Toronto Suburban Ry. and Toronto Eastern Ry., with office at Toronto, reporting to S. J. Hungerford, Vice President, Operation and Construction Departments, C.N.R., Montreal.

Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry., has resigned.

Alderman Sutherland, Chairman of the St. Thomas, Ont., City Council street railway committee in referring recently to the continued deficit on the operation of the municipal railway is reported to have said that it is largely due to the increased number of automobiles in the city.

Weston-Toronto Railway Service.

Mayor Flynn, Reeve Gardhouse, and Town Solicitor Gray, of Weston, Ont., went to Ottawa early in May, to urge on the Minister of Railways the necessity for improved service between Weston and Toronto, and were referred to the Canadian National Rys. management. They then went on to Montreal, and had an interview with S. J. Hungerford, Vice President, Operation & Construction, and suggested that Toronto Suburban Ry. cars between Weston and the junction of Keele Street and Weston Road, Toronto, should operate every 10 minutes, instead of every 20 minutes, and that an electric storage battery car service be established on the G.T.R., to make two trips from Weston to Toronto in the morning, and two trips from Toronto to Weston in the evening. They also asked that the Toronto Suburban Ry. carry out its agreement with Weston by removing its tracks from the west side of Main St., there, to the center of the street, for approximately three quarters of a mile, so that the town might proceed with its street paving programme. Subsequently, at Mr. Hungerford's request, they had interviews with R. A. C. Henry, Director, Bureau of Economics, and chairman of the C.N.R. officials committee dealing with electrification problems for Toronto district.

Mr. Hungerford wrote the Mayor of Weston, at the end of June, his letter being summarized as follows:—"One of the suggestions made at the interview was, that the Toronto Suburban Ry. tracks should be taken off Weston Road altogether from the northerly limits of Toronto and that its Woodbridge line be joined up with the old G.T.R. line just north of Weston and a half-hourly service be maintained from there down to Parkdale. This was very seriously considered and it would be feasible to take up the tracks on Weston Road and establish a half-hourly service on the old G.T.R. line on the basis of a 10c fare, provided the same traffic could be maintained as far as St. Clair Ave. and 50% of the present traffic to St. Clair Ave. continued on to Parkdale. A 10 or 15 minute service on this route would be entirely impracticable without constructing an entirely independent line for this particular traffic and the cost of such an independent line would be such as to render the fares which it would be necessary to charge, beyond reason. After very careful consideration, Mr. Hungerford felt that a half-hourly service would not be adequate to meet the requirements of the Mount Dennis and Weston people, and he came to the conclusion that it would be in their interests to keep the tracks on the roadway.

The Canadian National Rys. have requested the City of Toronto to consider taking over the portion of the Toronto Suburban Ry. from the city limits at Northlands Ave. to Woodbridge and negotiations are now under way with the city accordingly. In the event of the city failing to take over the line to Woodbridge, he is prepared to recommend that steps be taken to put in an adequate service on the T.S.R. and to extend the line as far as St. Clair Ave. as soon as possible, the frequency of the service to be adequate to meet the reasonable demands of the traffic and subject to change from time to time as conditions warrant. The fare between points in Weston and Mount Dennis to St. Clair

Ave. to continue as at present, until the date of the expiration of the franchise with the Town of Weston on Oct. 27, 1928, and the one with York Township expiring on Sept. 4, 1929, the above to be contingent upon the Town of Weston and York Township entering into new franchises,—Which will provide against bus and jitney competition; which will be of sufficient duration to satisfy the expenditure necessary to rehabilitate the line and provide sufficient equipment for the improvement of the service; which will provide for readjustment of fares from time to time, following the expiration of the present franchise, on the basis of service at cost and which will provide with respect to permanent paving that may be done during the period of the new franchises, that the railway will be called upon to bear only the additional expenses of such pavements as is the result of the railway tracks occupying the street, and be responsible for such maintenance work as is the result of the operation of the railway. It is the intention ultimately to extend this service as far as Bloor St., College St. or possibly beyond as part of the C.N.R. development.

The Canadian National Rys. are prepared to carry out the Toronto Suburban Ry's obligations with respect to paving between Cruikshank Ave. and the northerly limits of Weston in accordance with the agreement of June 25, 1914.

Mr. Hungerford is prepared to recommend that a test be made of a battery car service between Weston and Parkdale, or Toronto union station, in the morning and evening, on the understanding that it does not involve any loss to the C.N.R.

One-man cars on Hydro Electric Railways, Essex District.—A recent Windsor, Ont., press report stated that one-man car operation was to be discontinued on the Hydro Electric Railways, Essex District. We are officially advised that this report is incorrect. In addition to the freight and general equipment, there are on the Essex District, 17 one-man safety cars; 10 single truck, two-man cars, and 20 double truck two-man cars. The 17 safety cars will continue to be operated by one man, and in addition, the four one-man-two-man cars ordered from the St. Louis Car Co., and described in a preceding issue of Canadian Railway and Marine World, delivery of which was expected during July, will be operated as one-man cars except during rush hours when two men will be used. One-man car operation on the Essex District is reported as satisfactory in every way.

Transfers on Calgary Municipal Ry.—R. A. Brown, Superintendent, Calgary Municipal Ry., in recommending a return to the transfer regulations in force in 1921, when transfers were made at the point at which the car a passenger was on took a different direction from the car to which he wished to transfer, pointed out that under that regulation the ratio of transfer passengers was 16.7%. The regulation was suspended in 1922 for nine months during which the ratio of transfers increased to 18%. At the beginning of this year a new regulation providing for passengers transferring at the first connecting or last diverging intersection was put in force, and under it the ratio of transfers increased to 21%.

Montreal & Southern Counties Railway Terminal Station.

The Montreal & Southern Counties Ry. is about to build a one story addition to its station at the corner of McGill and Yorkville Streets, Montreal. The addition, 37 by 45 ft., will make the completed structure approximately two-thirds larger than the present one. The erection of the addition will involve the rearranging of the interior layout. The main door will be in the center of the north front, entrance being obtained through a large vestibule into the general waiting room, which will be 25½ x 55 ft. in place of the former 25 x 18 ft. At the end of the central portion of the waiting room will be the approach to the ticket office will be lavatories, entrances being provided from the waiting room into one section, and from the ticket office corridor into the second. The baggage room will be to the east of the ticket office, and the news stand will be in a niche off the waiting room. The exterior walls of the new structure will be solid brick, with pressed brick facing, 13 in. wide, carried on concrete foundation. A feature will be made of the main entrance by using a wide plaster treatment with stone caps and base and flush panel effects in brick and tile. The elevation of the structure will be of a simple design, with moulded galvanized iron cornice. The roof will be flat, of tar and gravel. The vestibule and lavatory floors will be of terrazzo, and the other floors of maple. The additional general waiting room will be finished similar to the present waiting room, and the vestibule will be built up with a glazed screen having wood panels, pilasters and glazed doors. The building will be heated by hot water. We were officially advised, July 12, that while the contract had not then been let, it was expected to have the work started by July 31, and completed by Sept. 1.

Electric Railway Notes.

Oshawa Ry. has received two cars from Ottawa Car Manufacturing Co.

Quebec Railway, Light & Power Co., is considering the purchase of additional rolling stock for its city street railway lines.

Toronto Transportation Commission has received 26 motor cars, out of an order of 50, from Ottawa Car Manufacturing Co., and has also received 12 motor cars from Canadian Car and Foundry Co.

Toronto Street Railway Employees' Union has re-elected its chief officials for another term, as follows: B. Merson, Chairman; City Controller J. Gibbons, Business Agent; and Alderman W. D. Robbins, Secretary.

London St. Ry. applied to the city council, July 3, for permission to convert three of its old cars into one man cars, and the council referred the matter to the finance committee with the suggestion that 6 cars might be converted.

The first street car line built in Toronto was on Yonge St., and it was opened for traffic on Sept. 11, 1861. Toronto had then a population of 42,000. The Queen St. line was opened on Dec. 2, 1861. The conductors did not wear uniforms and were paid \$8 a week.—Toronto Star.

Marine Department

Canadian Government Radio Direction Finding Stations.

Over five years have elapsed since radio direction finding stations were first erected on Canada's east coast by the Marine Department for navigation purposes. Stations were then erected at Cape Race, Canso, Chebucto Head and Cape Sable. The Cape Sable station was dismantled at the close of the Great War, reverting to its original commercial status, that of handling ordinary commercial messages with ships at sea, under contractual obligations long since entered into with the Marconi Co. for its operation and which the exigencies of war only temporarily suspended. A new station was, however, erected in 1920, at Red Head, near St. John, N.B., in such a position as to afford ships navigating the Bay of Fundy, in thick or foggy weather, a direct line of bearing up or down the bay.

The Department expects to erect two additional d.f. stations, one on St. Paul Island in Cabot Straits, and the other on the west of Vancouver Island in the vicinity of Pachena Point. The location of a site is of considerable importance for technical reasons, and much preliminary work must be done, carrying out tests from various points before the most suitable, and satisfactory location can be found.

Canada was amongst the first countries to foresee the great possibilities of the direction finding stations and to introduce them as an aid to navigation. Their use at so early a date was, however, looked upon by some navigators with feelings of doubt, and even with disfavor, for it was difficult to convince mariners of the old school that radio could establish the position of a vessel at sea any more accurately than practical navigation which the twentieth century had raised to an almost exact science. Notwithstanding this attitude, the Marine Department threw open the service for the use of all ships, without fee or toll, with the assurance that on days when the ocean lanes were obscured in haze and fog and the uncertainties of dead reckoning were held in doubt, the direction finding stations alone would provide the guiding hand. In due time the Department was able to produce evidence in support of its faith. Reports lauding the accurate and efficient work began to come in from masters of ships of all nationalities; ships of high and low degree, crack ocean liners and modest coasting tramps. Some inaccuracies were recorded, but reports of these were expected and solicited, for they were of prime importance in assisting the marine authorities to arrive at conclusions by which they could improve the stations and render them more accurate and reliable, and the Department never ceased its painstaking efforts to bring the apparatus to the highest degree of efficiency.

After over five years of practical experience, numbered amongst the keenest of direction finding station advocates, are those who in the commencing days of the stations were ready to condemn them. The appreciative comments which have been received regarding the service rendered are far too numerous to reproduce here, but setting aside all reference to everyday cases of assistance given,

the efficiency of the stations can perhaps be best expressed in the words of one master who said, "I consider that the direction finding is the greatest thing in fog that has been invented." Thus, taken in its broader sense, direction finding supplies the missing link when astronomical and other observations are unavailable and dead reckoning with its complexities is often a very doubtful factor.

A unique example of the assistance rendered ships at sea by means of d.f. bearings is the following: while off the Newfoundland coast, east bound, on Nov. 24, 1919, a steamship encountered dense fog.

d.f. station:—"Your bearings have proved very accurate. Ship had set 21 miles to northward since yesterday noon. Can now hear Cape Pine fog whistle." (See accompanying chart).

An example of the disasters that might have been averted had the d.f. stations been more fully relied upon is the case of the passenger s.s. Bohemian of 9000 tons gross, bound from Boston to Liverpool via Halifax, with 65 passengers and 115 crew. On March 1, 1920 at 2 a.m., this ship was approaching Halifax, in foggy weather and the captain obtained a bearing from Chebucto Head d.f. station at the entrance to Halifax Harbor.

Course of the steamship—eastbound, Nov. 24, 1919.

Lines 1, 2, 3, 4. Direction finding bearings.

Line 5. Supposed (approximate) course of ship, as calculated by dead reckoning.

Line 6. Actual (approximate) course of ship as shown by direction finding bearings.

In order to check the ship's position the master obtained a bearing from the Cape Race d.f. station, which put the ship 20 miles out of position by dead reckoning and soundings. Knowing full well the dangers of the Newfoundland coast, the master proceeded with great caution and after the lapse of a suitable period, obtained another bearing from Cape Race. This confirmed the previous information and showed the ship still setting to the northward and headed for the eastern shore of St. Mary's Bay, instead of having a clear course well to the south of Cape Pine. The captain thereupon turned his ship southward and an hour and a quarter later he picked up Cape Pine fog whistle. After verifying his new position by a further bearing he forwarded the following message to Cape Race

The bearing thus obtained placed the ship between 5 and 6 miles nearer shore than the position as disclosed by dead reckoning. The master, decided, however, that the d.f. bearing was entirely inaccurate and disregarded it, holding his ship to the same course for a further 40 minutes. At end of that time, still navigating according to dead reckoning, he altered the course of the ship to turn into Halifax Harbor. Ten minutes later, just as Chebucto Head d.f. station was being called for another bearing, the ship struck, and the request for a bearing was turned into a distress call. All the passengers were taken ashore safely, but 6 of the crew were lost subsequently while salvage operations were under way. The ship broke in two and was a total loss.

Another case is that of the s.s. *Marvale* which on May 21, 1923, struck Freels Rock, near Cape Pine, Nfld., subsequently becoming a total loss. The captain did not ask for bearings although he was but 21 miles from Cape Race d.f. station when his ship struck.

To assist navigators in laying off their bearings the Department has published two gnomonic charts, one extending

ship can take his own bearings and not have to depend on a second party for his information, it would undoubtedly prove the most satisfactory to all concerned.

The Marine Department is closely in touch with all developments in connection with direction finding, and is conducting work along these lines. The Canadian d.f. stations enjoy an enviable

Three Rivers Harbor Commissioners.

The Dominion Parliament has passed an act incorporating the Three Rivers Harbor Commissioners, and defining the limits of the harbor, which comprises the portion of the River St. Lawrence between a line drawn parallel to and one mile easterly perpendicularly from the line joining the intersection with high water mark on the north shore of the boundary line of Three Rivers and Pointe du Lac Parishes and in the intersection of high water mark on the south shore of the boundary line of St. Gregoire and Nicolet Parishes, and a line drawn through triangulation monument XII on the north shore on Lottinville Point in Cap Magdeleine Parish, and triangulation monument XII-1, on the south shore, on the extremity of Becancour Point, on Ile Dorval or Montessen in Becancour Parish. Three commissioners will be appointed by the Dominion Government, to be paid out of the harbor revenues, such amount as the Government may determine. They will have all the powers usually conferred on harbor commissioners, and will administer all the property heretofore under the control of the Three Rivers Harbor Commissioners who were appointed under the authority of the Statutes of 1882, chap. 52, and amending acts.

Welland Canal Lock Gate Accident.—Glen Line Ltd. s.s. *Glencassie*, while up-bound and light, July 10, about 2.30 a.m., struck the lower tow path gate in entering lock 11, tearing off and breaking one of the gate suspension bars below water level, and breaking two wales. It was necessary to take a spare gate from Port

Dominion Government Radio Direction Finding Station, Red Head, St. John, N.B., showing Marconi Co's system of aerials as used by Marine and Fisheries Department.

from Belle Isle to New York and the other from Belle Isle to Bermuda. These charts are laid off on the gnomonic projection, and thus avoid the error which occurs when using the regular mercator projection to lay off bearings at distances of more than 30 or 40 miles. The gnomonic charts are provided with a graduated scale of degrees around each station, so that laying off bearings from a station becomes a simple matter, involving no calculations. These charts may be obtained from the Marine Department's Chief Hydrographer, at a nominal cost.

Radio direction finding is developing along several lines. First, the system described above, in which the d.f. apparatus is installed at the station on shore, and the responsibility for the accuracy of the bearings devolves on the operator at the shore station. Second, the system in which the d.f. apparatus installed on board the ship, and the ship's operator takes the bearing, and the responsibility for its accuracy rests on him; and, third, the system in which a radio beam from a station ashore is rotated around the compass at a certain definite rate, a distinctive signal or other means being employed to indicate when the beam is pointing true north. As the situation stands at present, the first system mentioned above is the most consistent and will probably continue to be used for some time to come. Nevertheless, both of the other systems show great possibilities, the development work which is being done on them is giving very encouraging results, and if eventually some arrangement can be arrived at whereby the navigating officer of a

Interior of Dominion Government Radio Direction Finding Station, Red Head, St. John, N.B., showing Marconi Co's system of radio direction finding apparatus, as used by Marine and Fisheries Department.

reputation for the accuracy of their bearings and the promptness with which they are given, and it is pleasing to know that Canada is well to the fore in connection with this comparatively new development of the art of radiotelegraphy.

Dalhousie, to be installed, and this was done and traffic resumed by 1.30 p.m. the same day. About half a dozen ships were delayed. The damage to the gate was not extensive, but the estimated cost of repairs and the installation of the spare gate is \$1,200.

Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties:—

Stranding of s.s. Imperoyal.

Held at Halifax, N.S., June 28, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. Neil Hall, and Capt. P. D. Bates of the s.s. Lord Kelvin, as nautical assessors, into the stranding of the Imperial Oil Ltd. s.s. Imperoyal on Grimes Rock, at the entrance to the Gut of Canso, N.S., June 15. Capt. C. G. Sloane, of the s.s. Imperoyal, stated that he sailed from Montreal for Halifax, and met with smoke and fog during the entire trip, which cleared somewhat on entering the Gut of Canso. He had been on the bridge most of the time, and from midnight until the grounding did not leave his post. He had been told by a previous captain that, on the southeasterly course, the standard compass had a 9 deg. east deviation, and having had no opportunity to verify his course, nor obtain observations, he had applied that deviation. When near Cerberus, the weather became very thick. He maintained his full speed of 11 knots, but was sounding his fog signals at regular intervals. The lookout was on the bridge and the chief officer was with him on the starboard side of the bridge. He heard the buoy off Cranberry Head twice and maintained his course, grounding at full speed in a fog so dense that he could not see a ship's length. The tide was ebbing and it was near low water. Full speed astern was ordered, and the boats were cleared and manned. Soundings were taken, and by filling some tanks forward, the ship came off without assistance. He had been sailing for 21 years and this was his first accident. The court found the Captain solely to blame for the accident, and, owing to the strong pleas for clemency, suspended his certificate for one month from June 28, cautioning him that leniency will not be shown should he ever appear before the court again.

Mapledawn-Brookdale Collision.

Held at Montreal, June 21 to July 6, into the collision between Canada Steamship Lines' s.s. Mapledawn, and the Century Coal Co's barge Brookdale, in tow of Sincennes-McNaughton Line's steam tugs John Pratt and Mathilde, near the King Edward pier, in Montreal harbor, June 1, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. J. O. Grey and D. M. Dickson, as nautical assessors. The Mapledawn's captain, E. Stauffer, stated that he left the Century Coal Co. dock, Windmill Point, outward bound, on June 1, at 3.30, and after straightening for the channel, noticed the steam tug Aberdeen and a scow leaving the Alexandra pier extension, and to avoid trouble he ordered full speed astern, and helm hard to port, at the same time noticing the barge Brookdale about 350 ft. ahead of him. Before the astern order was given, his ship was going about 3 miles through the water, and she canted her head to starboard, and in about 1½ minutes after, collided with the Brookdale, which eventually sank. When he saw the Brookdale first he felt sure she was being towed down the river, as her stern was toward him, as also one tug, the only one he saw at the time. The barge Brookdale was in a position in the channel which would have allowed passage of a ship

on either side of her, and was being towed stern first, by two tugs, one of which was also being run stern first. A casual glance would indicate that the barge and tugs were going down stream, but she was seen to leave Victoria pier, and her change of position up, which was seen by the Mapledawn's pilot, should have been sufficient to show that she was not doing down, but was manoeuvring. The court mentioned the unseamanlike method of towing, and pointed out that so far as its knowledge went, there are no rules or harbor regulations as to how towing should be performed. This method has, at times, to be performed when pulling off from a dock or wharf, but is rarely continued for any distance, and while the method was deprecated, it was not condemned. The tugs gave no signal that a collision was imminent or inevitable, and if this had been perceived on the tugs, of which there was no evi-

Dominion Marine Association.

Honorary President, A. A. Wright, Vice President and Managing Director, Davie Shipbuilding and Repairing Co., Montreal and Toronto.

President, T. R. Enderby, Operating Manager, Canada Steamship Lines, Ltd., Montreal.

First Vice President, G. J. Madden, George Hall Coal and Shipping Corporation Ltd., Ogdensburg, N.Y.

Second Vice President, A. E. Mathews, Mathews Steamship Co. Ltd., Toronto.

Executive Committee, The President, First and Second Vice Presidents; and W. E. Burke, Century Coal Co. and Canada Steamship Lines Ltd.; W. Crawford and Yvon Dupre, Sincennes-McNaughton Lines Ltd., Montreal; L. L. Henderson, formerly of Montreal Transportation Co., honorary member; W. J. McCormack, Algoma Central Steamship Lines, Sault Ste. Marie, Ont.; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; C. H. Nicholson, Canada Atlantic Transit Co., and Canadian National Rys. Central Region Car Ferries, Toronto; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Toronto; John Waller, Keystone Transports Ltd., Montreal; Senator L. C. Webster, Webster Steamship Co. Ltd., Montreal.

Counsel, Francis King, K.C., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

dence, some signal would have been compulsory. The evidence of the Mapledawn's pilot, D. Paquet, differed from the captain's in respect of the tug Aberdeen and scow, which he stated had not left the wharf, and the court therefore declined to accept the captain's version that the Aberdeen was a contributory cause. The court found that the Mapledawn's captain and pilot were alone at fault and responsible for the collision, and suspended their certificates for one month. The court suggested to Montreal Harbor Commissioners that the signal concerning narrow waters, article 25, be embodied in the bylaws and regulations governing navigation in the harbor, and that its application be made compulsory whenever ships are in sight of one another, and also, if possible, that the towing of ships be done so as to avoid any doubt as to the tow's direction or destination.

The American Association of Port Authorities will hold its annual meeting at New Orleans, La., Dec. 10 to 12.

Canadian Pacific Railway Ocean Steamship Services.

In connection with the s.s. Empress of Canada's recent voyage, when a new trans-Pacific record was created, the Vancouver Harbor Commissioners presented the ship with a silver shield recording the facts. The distance travelled is given as 4,179 knots; the time taken as 8 days 10 hr. 53 min., and the average speed as 20.6 knots.

The s.s. Marloch, on arrival at Glasgow, Scotland, from Montreal, early in July, was taken off the Canadian route, and sent to Hull, where she started on a cruise to Norway and Sweden, returning through the Kiel Canal. Her masts were shortened to enable her to pass certain bridges on the canal and on the conclusion of the trip, she is to be returned to the Canadian route.

The s.s. Borden, which has been added to the company's West Indian service, is in charge of Capt. G. H. Simpson, formerly chief officer of the s.s. Empress of Britain. He has been in the service continuously since 1900, when he was fourth officer of the s.s. Orcadian. The chief engineer is T. P. Whitmell, also transferred from the Empress of Britain. E. Waller, heretofore in the company's offices at Montreal, has been appointed purser.

Investigation into Shipbuilding Industry Asked.

The Canadian Manufacturers' Association passed the following resolution at its annual meeting in Toronto, recently: Whereas, 26 steel ships, especially designed for the Canadian lake trade, have been built abroad recently, and are now being delivered to Canadian owners; Whereas there is not one steel ship being built in Canadian yards, although there are many well-equipped and modern yards between Halifax and Victoria, representing a large investment of capital; Whereas this was once a flourishing Canadian industry employing thousands of skilled and unskilled workers; and Whereas the shipbuilding and ship repairing industry is a natural, as well as an essential, industry for which Canada is well suited, through the capacity of her people, and the possession of necessary materials; Therefore be it resolved that the Canadian Manufacturers' Association in annual general meeting assembled, respectfully urge the Dominion Government to appoint a royal commission for the purpose of making an investigation into the shipbuilding and ship repairing industry, in order to discover what measures are necessary to retain it in Canada.

Welland Canal Navigation.—L.D. Hara, Superintending Engineer, Welland Canal, has issued a notice to mariners stating that for some time past a temporary channel along the northerly side of Hog Island has been in use for entrance from the Niagara River into the Welland River, or Chippawa Creek, at Chippawa, Ont., about a mile above Niagara Falls. The temporary channel is being filled in and local shipping is using the new ship channel, south of the Hydro Electric Power Commission of Ontario's intake made recently. Ships entering the Welland River should not attempt to take the old temporary channel, but, should utilize the new ship channel, forming part of the H.E.P.C. new intake structure.

Dominion Marine Association's Activities.

The Dominion Marine Association's executive committee met in Montreal, July 9, under the chairmanship of A. A. Wright, Honorary President, owing to the absence of President T. R. Enderby, in Winnipeg.

A delegation consisting of the President and some 20 other representatives of the Chicago Sanitary District addressed the committee and requested the Association's sympathetic attitude towards their proposals for legislation authorizing the withdrawal of 10,000 cub. ft. of water a second, for its drainage canal, from the Great Lakes, and for the construction of compensation works, at the district's expense, at the heads of the Niagara and St. Lawrence Rivers and in the rivers between Lakes Huron and Erie. The quantity of water which is permitted to be withdrawn for this purpose was limited by an order in 1912, to 4,167 cub. ft. a second, but the amount actually withdrawn is, admitted to be in the neighborhood of 10,000 cub. ft. a second. The Association has consistently protested against the District exceeding the permissible withdrawal, and has pointed out the effect on the St. Lawrence levels, and the consequent danger to Canadian shipping, and as a result, the U.S. Government, on June 18, issued an order restraining the District's trustees from taking more than 4,167 cub. ft. a second permitted by the 1912 order. The proposal to offset the $5\frac{1}{2}$ in. lowering of the lake levels due to the withdrawal of water for the drainage canal, includes the construction of compensating works at various points, at an estimated cost varying from \$2,500,000 to \$5,000,000, and it is claimed that so far as navigation interests are concerned, as well as harbor levels, such works would furnish a certain remedy for the $5\frac{1}{2}$ in. lowering, and also restore levels, lowered by the diversion of 56,000 cub. ft. a second, or more, for water power at Niagara, the Welland Canal, and for enlargements in the Detroit and St. Clair Rivers. It has therefore been suggested in the Chicago Sanitary District's interest, that the construction of remedial works be proceeded with under the supervision of the International Joint Commission, and that a U.S. federal control of the diversion at Chicago be established, the Sanitary District being permitted to withdraw 10,000 cub. ft. a second. After hearing the delegation's arguments, the committee declined to commit itself to any opinion on the proposals, and reserved decision until further consideration can be given and additional information obtained.

The Dominion Public Works Department asked the committee for an expression of opinion as to the choice between Kingston and Prescott, Ont., for development as a deep water terminal for the new Welland Ship Canal. After hearing a delegation, and considering the matter, the committee decided in favor of Kingston, and advised the Department accordingly.

The probable effect of the Inland Water Freight Rates Act, 1923, the text of which is given on another page, was discussed by the committee, and while no definite opinions were expressed, it was felt that the tendency was towards a restraint of trade, and that there were other objectionable points, but that the matter would have to work itself out.

A letter was read from C. H. Nichol-

son, Manager Steamships & Car Ferries, Central Region, Canadian National Rys., respecting steamboat inspection rules, and action was again deferred.

Regarding the Association's proposals, in conjunction with action by the Shipping Federation of Canada, for the abolition of compulsory payment of pilotage dues on the St. Lawrence below Montreal, pilotage not being compulsory, and the endeavor to obtain legislation on the matter at the Dominion Parliament's last session, a communication from the Minister of Marine was read, declining to act at present. It was therefore decided to bring the question up again in good time to endeavor to get it included in next year's legislation.

A letter was read from W. B. Elsworth, Manager, Marine Department, Imperial Oil Ltd., about the drinking water regulations provided by order in council on June 22, but as they had been printed, and a copy was not before the meeting, action was deferred.

The Association is in correspondence with the Montreal Harbor Commissioners respecting conditions generally at that port, and has requested particularly, that a reduction be made in shovelling charges on grain, which compare very unfavorably with those at Georgian Bay ports and Port Colborne.

Suspension of Coasting Regulations Provided for.

The Canada Shipping Act, R.S.C., 1906, chap. 113, provided in part 6, that no foreign built British ship, whether registered in Canada or elsewhere, as a British ship, could engage in Canadian coasting trade, unless licensed by the Minister of Customs so to do, also that no goods or passengers could be carried by water from one Canadian port to another, except in British ships, the penalty for violation of this provision being a fine of \$400 on the captain, and any goods so carried to be forfeited as smuggled, the ship to be detained by the collector of customs at any place to which the goods or passengers were taken, until the penalty was paid, or security for it given, and until the goods illegally carried were delivered up to him. Sec. 958 was as follows: "The Governor in council may, from time to time, declare that the foregoing provisions of this part shall not apply to the ships or vessels of any foreign country in which British ships are admitted to the coasting trade of such country, and to carry goods and passengers from one port or place to another in such country."

In 1908, sec. 958 was repealed, and the following was substituted: "The Governor in council may, from time to time, (a) by order in council, declare that the foregoing provisions of this part shall not, while such order in council is in force, apply, either throughout Canada, or in any specified waters of Canada, to the ships or vessels, or to any specified, ascertained or ascertainable class or number of the ships, or vessels, of any foreign country in which British ships are admitted to the coasting trade of such country, and to carry goods or passengers from one port or place to another in such country; and (b) revoke or vary such order in council."

At the Dominion Parliament's recent session, sec. 958, as enacted in 1908, was

repealed, and the following was substituted: "The Governor in council may, from time to time, by order in council, declare that the foregoing provisions of this part shall not, for the period specified in such order in council, apply, either throughout Canada, or in any specified waters of Canada, to the ships or vessels, or to any specified, ascertained or ascertainable class or number of the ships or vessels, of any foreign country."

Briefly, the situation now is that the Government can, at any time, allow U.S. or other ships, to trade between Canadian ports, notwithstanding that the U.S., or other countries in which they are registered, will not allow Canadian ships to trade between their ports.

The Canadian Manufacturers' Association passed the following resolution at its recent annual meeting:—Whereas the commission appointed by the Federal Government to investigate certain allegations to the effect that a combine existed among lake carriers, has made its recommendations and the matter has been placed before the House by the Minister of Trade and Commerce: and whereas this report, among other things, recommends that the Governor-in-council be given power to suspend the coasting laws: and whereas such suspension would enable the great United States shipping companies to carry cargoes between Canadian ports while the U.S. Merchant Marine Act completely prohibits Canadian ships from carrying any cargoes between United States ports: and whereas this one-sided arrangement would have the following results: (1) The operation of Canadian ships on the Great Lakes would be most seriously restricted. (2) New ships would not be constructed, with the result that the Canadian shipbuilding and allied industries would be disastrously affected. (3) Canadian officers and sailors, and men employed in shipbuilding and allied industries would be deprived of employment in Canada and in order to follow their professions would be obliged to emigrate. Whereas it has been recognized for many years that the prosperity and safety of every part of the British Empire depends largely upon the encouragement given to shipping and navigation: therefore be it resolved that the Canadian Manufacturers' Association in annual general meeting assembled, views with alarm and strongly opposes, on national grounds any suspension of the coasting laws, and particularly objects to the proposal to delegate to the Governor General in council the power to suspend the Canadian coasting laws, thus substituting government by order-in-council for government by Parliament.

Quebec Export Terminals Ltd. has been incorporated under the Dominion Companies Act, with \$200,000 authorized capital, and office at Toronto, to take over any rights, privileges or franchises that may be, or have been, granted for the handling and exporting of live stock at Quebec, Que., and elsewhere in Canada; to carry on a general warehousing and forwarding business, and act as ship brokers and shipping agents. The incorporators are,—L. H. Coombes, W. E. Sommerville, G. A. T. Huckle, R. A. Cluff, J. R. Lawson, R. A. Williton and E. Johnston.

St. Lawrence River Charts.—The Marine Department has issued new editions of charts of the St. Lawrence River from Montreal to Sorel; Sorel to Batiscan, and Batiscan to Quebec, corrected to July.

Ship Building and Ship Repairing Throughout Canada and Newfoundland.

Alberta Motor Boat Co., Edmonton, Alta., has delivered a motor boat to Western Spruce Mills Co. to be used in pushing scows of lumber down the Athabasca River for dressing in the company's mill. She is 40 ft. long by 9 ft. beam, equipped with a 45 h.p. Sterling engine.

Canadian Vickers Ltd., Montreal, did the following repair work during June: Elder, Dempster & Co's s.s. Jan, 1,739 tons, docked for survey and undocked June 3; Imperial Oil Ltd. s.s. Royalite, 2,052 tons, docked June 3 for survey and shell damage repairs, owner's repairs and bottom painting, undocked June 6; U.S. Shipping Board's s.s. West Camp-gaw, 5,565 tons, docked June 6 for survey, owner's and voyage repairs, including rebor-ing h.p. cylinder, and bottom painting, undocked June 7; s.s. Cymric Queen, 3,847 tons, docked June 8 for survey and extensive bottom repairs due to ice damage and grounding, consisting of 31 new shell plates, 72 shell plates treated, 25 ft. of center girder renewed, 2 new margin plates, 40 side frames, 17 bottom floors, 60 ft. of side girder repaired or renewed, sundry repairs and bottom painting; Canadian Government Merchant Marine s.s. Canadian Leader, 5,492 tons, docked June 7 for underwriters' and owner's repairs and bottom painting, undocked June 8; Bay Steamship Co's s.s. Poplar Bay, new rudder and rudder tug, and expanding boiler tubes; Anchor-Donaldson Line's s.s. Lakonia, 4,743 tons, voyage repairs; Intercontinental Transports Ltd. s.s. Lisgar County, temporary repairs to side damage and voyage repairs; Mathews Steamship Co's s.s. India, 976 tons, new crank pin brasses; Clarke Steamship Co's s.s. Gaspesia, sundry repairs; Navigazione Triestina Libera's s.s. Timavo, 7,434 tons, voyage repairs; Scandinavian-American Line's s.s. General Konsul Pallisen, 2,130 tons, deck voyage repairs; Norwegian-American Line's s.s. Randsfjord, engine room voyage repairs; Scandinavian-American Line's s.s. Helmer Morch, 2,127 tons, voyage repairs.

Collingwood Shipbuilding Co., Collingwood, Ont.—The Great Lakes Transportation Co's s.s. Matoa, which, as mentioned in our last issue, is being lengthened by 36 ft., at this yard, will have a new keel length of 326½ ft. The new portion will be built with arch construction, in lieu of second deck beams and hold pillars. Doubling plates are being added, for about three-quarters of the length amidships, to spar deck stringer, topside plating and strake of plating next keel port and starboard, to take care of additional stresses due to increased length. There will be two additional cargo hatches, and other minor alterations and repairs will be made.

D'Eon Bros., Yarmouth, N.S., have built a cruising yacht for J. W. Cooper, New York. Her dimensions are,—length 35 ft., breadth 8.4 ft., depth 4 ft. She is equipped with a 14 h.p. double cylinder motor.

Halifax Shipyards Ltd., Halifax, N.S.—The Preston Steam Navigation Co's s.s. Gyp, which was docked May 28, for examination and repairs, was undocked June 15. The work included renewing 17 plates, fairing and replacing 13 plates, fair in place, 4 plates, repairs to floors, intercostals, keelson, etc., removing broken propeller and fitting new one, boilers and engines overhauled, and other miscellaneous work. The following ad-

ditional work was done during June: Canadian National Rys. car ferry Prince Edward Island, annual overhaul of engine and boilers, entailing drawing of 3 tail shafts, remounting stern bushings, repairing rudder, miscellaneous hull repairs, including calking seams, electric-welding rivets and scraping and painting, undocked June 20; Public Works Department's s.s. Tyrian, docked June 21, for annual overhaul, including removing propeller, drawing tail shaft for inspection, repairing rudder pintles and renewing bushings, placing steel chafing strips on each side of hull, calking seams, renewing rivets and scraping and painting, undocked June 26; Tocque & Co's steam trawler Commandant Roquigny, docked June 21, propeller removed, 4 blades straightened and replaced, rudder removed, new stock made and fitted, and a large area of copper sheathing on hull renewed, undocked June 26; Dominion Coal Co's s.s. Kamouraska, docked June 22, for repairs to starboard bow caused by collision, including 6 plates renewed, 2 plates off and 4 plates faired in place, stem removed, faired and replaced, and hawse pipe removed and refitted, undocked June 28; Royal Mail Steam Packet Co's s.s. Chaudiere, docked June 26 for half-yearly overhaul, including miscellaneous rivets and seams calked, sea valves opened for inspection, rudder raised and pintles and bushings repaired, and hull painted, undocked June 28; Dominion Iron & Steel Co's s.s. Haugarland, docked June 28, for painting and inspection, undocked June 30; Imperial Oil Ltd. s.s. Imperoyal, docked June 20, for survey of bottom damage caused by stranding in Strait of Canso while bound from Montreal to Halifax; survey showed 57 plates damaged. After tenders were invited the repair contract was awarded to Halifax Shipyards and the work commenced June 30.

Meteghan Shipbuilding and Marine Ry. Co., Meteghan, N.S., is building two boats to be equipped with auxiliary power, for St. John, N.B. parties. The yard is also busy on repair work to a number of sailing ships.

Newfoundland Dockyards Ltd., St. John's, Nfld., completed the annual survey and overhaul of the s.s. Glencoe and s.s. Senef, in June, and the s.s. Kyle was docked during July for similar treatment. The steamships Portia and Prospero were also expected to be docked shortly thereafter for survey and overhaul, and several other of the Newfoundland Government Coastal Department's ships will also be docked for overhaul and general repairs.

J. J. Robichaud, Meteghan, N.S., is building three boats to be equipped with auxiliary power, for Grand Manan firms, and is rebuilding the schooner Snow Maiden, built there in 1902, and originally named Hains Bros.

Smith and Rhuland, Lunenburg, N.S., launched the schooner I'm alone, July 14. Her dimensions are,—length 138 ft., breadth 27 ft., depth 11 ft. She is being equipped with two 100 h.p. crude oil engines. She has been built for U.S. owners, for freight trade.

Vancouver Shipyards Ltd., Vancouver, B.C., has completed the building of the first full Diesel engined tug built in British Columbia, for Young and Gore. She is 85 ft. long and has an engine of 200 h.p.

Victoria Machinery Depot Co., Victoria, B.C., did the following repair work during June: Canadian Government s.s. Estevan, 1,151 tons, docked, cleaned and painted, hull, deck, engine and boiler repairs, tail shaft drawn for inspection; Canadian Government Merchant Marine s.s. Canadian Transporter, 5,448 tons, docked, cleaned and painted, hull damage and engine repairs; C.P.R. s.s. Princess Maquinna, 1,777 tons, docked, cleaned and painted, renewed damaged propeller blades, hull and deck repairs, tail shaft draft for inspection; C.P.R. s.s. Tees, 679 tons, new smokestack; Central Wharfage Co's s.s. Forager, docked, cleaned and painted, hull repairs; Coastwise Steamship and Barge Co's s.s. Amur, 907 tons, docked, cleaned and painted, hull, deck and engine repairs, new cargo booms, tail shaft drawn for inspection; Consolidated Whaling Corporation's s.s. Gray, engine repairs; and two scows docked, cleaned, painted, new hull planking and calking.

Victoria (B.C.) Shipowners Ltd., Victoria, B.C.—The trustee in bankruptcy acting for this company has obtained judgment for \$5,000 against Cameron Lumber Co., and J. O. Cameron, on account of unpaid shares in Victoria (B.C.) Shipowners Ltd. The claim was for \$17,000, but the judgment declared that the liability was limited by an agreement which stated the amount of shares to be subscribed for was \$5,000 for each ship completed ready for sea, and proportionate payments as progress was made on others. Only one ship was completed under agreement with the Dominion Government.

Dominion Government's Arctic Development Work.—The original plans of the Interior Department's Northwest Territories and Yukon Branch, as stated in Canadian Railway and Marine World for July, have been changed, owing to shipyard strikes in England delaying the alterations necessary to fit the s.s. St. Finbarr, bought recently from the British Admiralty, for Arctic work. On this account, Capt. J. Bernier, who was in England to superintend the work, was instructed to lay up the ship there, and return to Canada, where he resumed command of the s.s. Arctic, and sailed from Quebec for the north, July 9. Apart from this, it is the intention of J. D. Craig, the officer in charge of the expedition, to carry out the plans laid, as far as possible. A number of the Department's technical officers have been included in the expedition for survey and exploration work, and they will remain in the north until next year. If the ice conditions are the same as last year, the plans will, in all probability be carried out. Soon after leaving Quebec, one of the ship's officers fell overboard and was drowned, as was also a member of the crew, who dived to his assistance.

International Waterways Navigation Ltd., Montreal, has been granted supplementary letters patent under the Dominion Companies Act, increasing its capital stock from 660 preference shares of \$100 each, and 1,200 common shares without nominal par value, to 922 preference shares of \$100 each, and 1,560 common shares without nominal or par value, and providing that it shall carry on business with \$100,000. The provision in the act of incorporation creating it a private company has been deleted.

Atlantic and Pacific Oceans.

The Norwegian s.s. O. A. Knudsen, 3,532 tons, laden with coal, was wrecked at St. Marys Bay, Nfld., July 1, and is reported to be a total loss.

The British s.s. Strandhill was libelled at Halifax, N.S., July 4, on claims for wages, amounting to \$5,082.84, and for general ships' supplies delivered.

The British s.s. Lingfield, which sailed from Montreal, July 7, for Venice, returned to port shortly after, having broken her propeller. After having a portion of her cargo removed, she was drydocked at Canadian Vickers' plant for repairs.

The Houston Line's s.s. Hilarius, bound from Montreal to South American ports, was reported ashore in Aulds Cove, Port Hastings, N.S., July 4. It was stated that she was high and dry, and in no immediate danger. She was built at Sunderland, England in 1914.

The North Atlantic ice patrol maintained by the U.S. Government, finished its season's work, July 5, no icebergs being reported south of lat. 40. Two cutters Modoc and Tampa, were maintained in the service, which has been of considerable assistance to steamships on the North Atlantic routes.

The officers and crew of Canadian Robert Dollar Co's s.s. Grace Dollar, will receive decorations from the Chinese Government, and the ship will be presented with a loving cup, for saving the passengers and crew of the Pingan Steamship Co's s.s. Hsin Pao Huo, which caught fire in Chinese waters recently.

Maritime Provinces and Newfoundland.

The Newfoundland Government s.s. Seal while running through heavy ice to the Labrador coast, at the end of June, lost 4 propeller blades, off Snug Harbor. She is under charter to the Newfoundland Government Coastal Department.

The s.s. Pro Patria, owned by La Morue Francaise Secheries de Fecamp of St. Pierre, was fined \$1,000 at North Sydney, N.S., recently, some of her crew having attempted to put five small kegs of rum ashore there. It is stated that an appeal will be made.

The British s.s. Newton stranded at the entrance to Lockport harbor, N.S., in an exposed position, July 6. It was reported that a salvage ship was not available, and that if such service was not forthcoming before a storm arose, it was feared she might become a total loss.

The Bunker Island light, on the end of the reef off the southwest point of Bunker Island, Yarmouth, N.S., will be discontinued and replaced by a tugboat, showing a red flag by day, and a red light by night. During thick or foggy weather, a fog bell will answer signals from ships.

The Mayflower Shipping Co's s.s. Bay Queen, operated by R. W. Hendry Ltd., Halifax, N.S., was reported ashore at Scatteredie, on the Cape Breton coast, July 6. She was built at Levis, Que., in 1917, and was used as a trawler during the war, after which she was converted into a freight ship for the coasting trade.

The French s.s. Bamba, from St. Pierre to France, ran aground in a dense fog, at Gull Point, St. Mary's Bay, Nfld., June 30, and was expected to be a total loss. The crew escaped. She had a net tonnage of 513 and was proceeding to

France with coal as ballast, her general route being between France, Scotland and St. Pierre.

The St. John, N.B., City Council is considering plans for the further development of the harbor. It is stated that a comprehensive plan will probably be developed, but that, in the meantime, attention will be given to the area between Pettinghill wharf and the sugar refinery, plans for which will be submitted to the Dominion Government.

The Newfoundland Shipping & Trading Co., which, as mentioned in our last issue, had been formed to operate a steamship service between St. John's and Montreal, and St. John's and Labrador, is reported to have abandoned the project. It was stated that the s.s. Mons had been chartered for the service, but the advertised sailing, after having been postponed several times, was dropped.

The Royal Mail Steam Packet Co. is reported to have decided to place its s.s. Teviot on the West Indies route temporarily, to replace the wrecked s.s. Caraque, her first trip being scheduled from St. John, N.B., about Aug. 5. She was built at Thornaby, Eng., in 1902, and is screw driven by engine of 234 h.p. Her dimensions are,—length 331.5 ft., breadth 46.2 ft., depth 25.1 ft.; tonnage, 3,271 gross, 2,108 net.

The Royal Mail Steam Packet Co's s.s. Caraque, which ran ashore on the reefs about 12 miles from Hamilton, Bermuda, June 25, was reported, July 3, a total loss. She was built at Belfast, Ireland, in 1894, and was originally named Guelph. Her dimensions were,—length 400.5 ft., breadth 47.3 ft., depth 19 ft.; tonnage, 4,890 gross, 2,975 net. She was equipped with engine of 418 h.p. driving a screw. John Hulbert, the company's representative at Halifax, N.S., is reported to have stated that she will be replaced as soon as possible.

The Intercolonial Navigation Co's s.s. Advance, operated between Halifax, St. John's, Nfld., and Boston, Mass., ran ashore on Shut In Island, near Halifax harbor entrance, during a dense fog, July 2, and broke in two, becoming a total loss. Her 65 passengers and crew of 55, were taken off by tugs about four hours after she struck. She was built at Chester, Pa., in 1883, and was 2,528 tons gross. She was owned formerly by the Panama Rd., was operated for a number of years between Panama and New

York, and was bought this year by the Intercolonial Navigation Co. for its service.

Province of Quebec.

The Three Rivers City Council is seeking authority to borrow \$115,000 on bonds redeemable in 20 years, to pay capital and interest, amounting to \$90,640 and \$23,360, respectively, in respect of the city's guarantee of Three Rivers Shipyards Ltd. bonds, which company is bankrupt.

Cross actions have been entered in the Admiralty Division of the Exchequer Court at Montreal, by the Ulster Steamship Co. (Head Line) for \$50,000, and the Kamouraska Shipping Co. (Dominion Coal Co.) for \$25,000, for damages sustained by their respective ships Fanad Head and Kamouraska, in a collision in the St. Lawrence River, near Bic, Que.

The Dominion Government s.s. Eureka, has been sold to Sincennes-McNaughton Line, Montreal. She was built at Glasgow, Scotland, in 1893, and is screw driven, by engine of 60 h.p. Her dimensions are,—length 94.7 ft., breadth 22 ft., depth 11.9 ft., tonnage 170 gross, 70 net. She was operated by the Marine Department.

Work was commenced, July 10, on the extension of the shore wall between secs. 27 and 30, Montreal harbor, by Atlas Construction Co., whose tender of \$275,000 was accepted early in the month. The building of a machine shop in the yards on Notre Dame St., to replace the building on the Mackay pier, which was burnt last year, has also been commenced by Quinlan, Robertson & Janin Ltd. A carpenter shop has been completed on the Mackay pier. Tenders were received during July for the construction of an office building on Victoria pier, for the staffs of the outside departments, including the police, shed superintendent, inspector of roads, timekeepers, outside engineers, and a plumbing and tinsmithing shop. The building will be 3 stories high, located in front of shed 16, and is expected to be completed by the end of the year.

Ontario and the Great Lakes.

The Ontario Gravel Freighting Co., Windsor, Ont., s.s. Crawford has had her name changed to Thomas A. Tees.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during June:

Articles	Canadian Canal	U.S. Canal	Total
Lumber	6,814	27,057	33,871
Flour	578,500	502,220	1,080,720

The Dominion Public Works Department has transferred the license to operate a ferry across the St. Clair River, between Courtright, Ont., and St. Clair, Mich., from F. Currier, St. Clair, to J. A. Miller, Jr., Marine City, Mich.

The Lakes & Ocean Navigation Co., of which W. Hansen, Bergen, Norway, is President, is reported to have decided to place about 15 steamships in operation between Great Lakes ports and Great Britain, Norway and other European ports, via the Welland Canal and St. Lawrence River.

The Peninsula & Northern Navigation Co. is reported to have been organized to operate the s.s. United States between Port Arthur and Houghton, Mich., as an automobile ferry, connecting the Port Arthur and Duluth highways. She is a new ship, 257 ft. long by 41 ft beam, and capable of a speed of 18 miles an hour.

The United States Lake Survey reports the levels of the Great Lakes in feet above mean sea level, for June, as follows: Superior, 607.67; Michigan and Huron, 579.86; St. Clair, 574.71; Erie, 572.02; Ontario, 245.93. Compared with the average June levels for the past 10 years, Superior was 0.76 ft. below; Michigan and Huron, 1.09 ft. below; Erie, 1 ft. below, and Ontario 0.95 ft. below.

During this navigation season, the U.S. Government dredge Gaillard will be working in the Bayfield channel, in the upper end of Little Rapids cut, in the St. Mary River. Masters of ships should slacken speed in passing, and take every precaution against accident, or interference, particularly during operations at the turn at light 27 they should give downbound ships plenty of room, and avoid forcing them close to the dredge. Dump scows and tugs will be passing from dredge to dumping grounds across the channel below the locks throughout the season, and in view of their slow speed and awkward maneuver, every consideration should be given them in passing.

Manitoba, Saskatchewan, Alberta and Northwest Territories.

The Hudson's Bay Co's s.s. Nascopie sailed from Montreal, July 14, on her annual trip to Arctic points, and was followed towards the end of the month by the company's s.s. Bayeskimo. The Nascopie's destination is Pond's Inlet, Baffin Land; the Bayeskimo will go to James Bay.

The projected inspection trip of a number of business men, from Montreal, to Hudson Bay points, which was being organized in Winnipeg, and for which it was proposed to charter the C.P.R. s.s. Montreal, has been cancelled, owing, it is stated, to the small number who made reservations. The intention was to make up a party of about 300, to obtain first hand information as to the possibilities of Port Nelson and Fort Churchill, and the development of the Hudson Bay route generally, for the benefit of the western provinces.

British Columbia and Pacific Coast.

The C.P.R. s.s. Princess Charlotte sailed from Vancouver, July 25, for Alaska, on a special summer cruise, following the usual course and making the usual ports of call.

The Puget Sound Navigation Co. has placed the s.s. Comanche in service as an

automobile ferry between Port Angeles, Wash., and Victoria, B.C. She has accommodation for about 30 cars, and is making three round trips a week.

A recent survey by the Marine Department Hydrographic Survey shows the existence of a shoal patch, about 2 cables wide, extending $3\frac{1}{2}$ cables southward from Low Rock, Esperanza Inlet, Vancouver Island, with a least depth of 6 ft. at low water.

The Hudson's Bay Co. is reported to have been granted exclusive rights, by the Russian soviet government, to trade on the north Siberian coast, and it is said that four U.S. trading schooners were detained at East Cape, Siberia, recently, under the agreement.

The Union Steamship Co. of British Columbia's s.s. Cardena, the arrival of which, from Great Britain, was announced in our last issue, was placed on a weekly service, early in July, between Vancouver, Ocean Falls, Swanson Bay, Prince Rupert, Anyox and Alice Arm.

The C.P.R. automobile ferry Motor Princess was compelled to use the landing slip at Saanichton, during July, owing to extremely low water at Sidney. It is stated that the Government will shortly undertake extensive dredging at Sidney, to deepen the approaches to the landing stage.

The Pacific Salvage Co. has completed the salvage of the cargo, consisting of steel rails, glass, etc., from the Prince Line's s.s. Tuscan Prince, which was wrecked at Austin Island, Barkley Sound, in February, and which became a total loss. The chief items of the cargo, which has been landed at Victoria by the salvage tug Salvor, are 300 tons of 75 lb. and 300 tons of lighter steel rails, 3,000 cases of window glass, and 50 cases of plate glass.

The Royal Mail Steam Packet Co's 84th annual report, for 1922, shows that the company and its affiliated lines control shipping aggregating 2,153,086 tons, the company owning directly approximately 380,000 gross tons. The report deals with reciprocal exemption from income tax by different shipping countries, as proposed by the British Government, and also the difficulties created by U.S. prohibitory laws, expressing the wish that the long established practice by which the laws of the flag under which the ship sails, be allowed to continue, whether the ship is on the high seas, or in territorial waters of any other nation.

North Vancouver Drydock.—In connection with the changes to be made in the drydock and plant to be built at North Vancouver, B.C., by Burrard Dry Dock Co., of which mention was made in a previous issue, we are officially advised that the changes do not affect the drydock proper, but only the appurtenant works, and the amount of the subsidy to be paid by the Government will not be varied thereby. In view of the delay in commencing construction, the time fixed for the completion of the drydock has been extended from Dec. 22, 1923, to March 29, 1925.

Inland Water Freight Rates Act Enforcement.—An Ottawa press dispatch states that the Minister of Trade and Commerce has detailed G. S. Wrong, B.Sc., Chief of the Dominion Bureau of Statistics, Transportation Branch, to supervise the whole carrying business on the Great Lakes, and that he will travel between all the grain shipping ports.

Mainly About Marine People.

Garnet W. Cox, Assistant Treasurer and Accountant, Port Arthur Shipbuilding Co., aged 40, died suddenly from heart failure, while at work, at Port Arthur, Ont., July 12.

Capt. Robert Foote, commodore of the Northern Navigation Co's fleet, has retired from active service, and left Sarnia, July 12, for Fergus, Ont., where he will reside. He has served 54 years on the Great Lakes, his first position as captain being on the s.s. Atlantic, sailing out of Collingwood in 1884. He was in Northern Navigation Co's service for about 40 years, having first been captain of the s.s. Huronic, and when the s.s. Hamonic was built, he was given charge of her, and later transferred to the s.s. Noronic, the company's largest ship. In 1870, he was one of the crew of the sailing ship Snowbird, which took supplies from Collingwood to Thunder Bay, for Sir Garnet Wolseley's column, in connection with the first Riel rebellion. At that time there was no dock or landing place provided at Thunder Bay, freight being merely unloaded and piled on the shore.

Miss Dorothy Henry, youngest daughter of Thomas Henry, Superintendent, Hotel Department, Canada Steamship Lines, Montreal, died there July 1, of meningitis.

Robert H. McBride, who died at the Western Hospital, Toronto, July 23, following an operation, was Treasurer of the Niagara Navigation Co. from its inception until it was acquired by the Richelieu and Ontario Navigation Co. in 1912, since when he lived a more or less retired life in Toronto. He was born at London, Ont., in 1844, and prior to entering Niagara Navigation Co's service, was private secretary to the late Sir Frank Smith, who was President of that company for many years.

Hcn. E. V. D. Parr, for many years Managing Director, Mackinnon, Mackenzie & Co., Hong Kong, China, representing the Peninsular & Oriental Steam Navigation Co. and the British India Steam Navigation Co., there, and also a member of the Hong Kong Legislative Council for five years, has retired from active service. He arrived at Victoria, B.C., July 2, by the C.P.R. s.s. Empress of Russia, on his way to England.

Advances to Montreal Harbor Commissioners.—The Dominion Parliament has passed an act to provide for further advances to the Montreal Harbor Commissioners, not to exceed \$10,000,000, for the construction of additional terminal facilities, as are necessary to equip the port properly, plans and estimates for which have already been approved by the Dominion Government, and also to authorize the commissioners to issue 25-year debentures at 5% to cover the loans as made.

Public Works Marine Contracts.—The Dominion Public Works Department awarded contracts as follows: June 20, dredging basin at Riviere du Loup, Que., to Lachance Ltd., Quebec, Que., class A at \$2.50 a cub. yd., class B at 34c a cub. yd., scow measure; June 23, renewal of 182 ft. of revetment wall at McGregors Creek, Chatham, Ont., to Wm. Bermingham, Kingston, Ont., at unit prices; June 28, superstructure of timber pile work wharf at Blind River, Ont., to T. P. Charleson, Ottawa, Ont., at unit prices.

Montreal Harbor Development.

In connection with Dominion Parliament's recent sanction of an advance of \$10,000,000 to the Montreal Harbor Commissioners, for dock development, Dr. W. L. McDougald, President, is reported to have stated that the project includes the extension of the handling and storage capacity of elevator B at Windmill Point, taken over recently from Canadian National Rys., and the provision of four additional loading berths there, as well, the reconstruction of the existing wharves and deepening of the basin; provision of extensive wharfage and railway connection for the elevator under construction on Tarte pier; the building of about 3,000 lin. ft. of additional high level wharves, and incidental dredging and reclamation work, as well as transit sheds and railway connections; extension of the transit sheds on the three main piers in the central harbor necessitated by its extension; electrification of the harbor railway system from Victoria Pier to McGill St., with additions to the power house and traction equipment, and the extension of power transmission lines and lighting circuits; the continuance of work already under way, including the extension of the Bickerdike pier, and some dredging, construction of industrial wharves, paving, etc. These works will be taken up at the most suitable times, and detailed specifications and plans will be submitted to the Dominion Government for approval and authorization before being proceeded with. During last year the Alexandria, King Edward and Jacques Cartier piers were extended to the pierhead line, about 200 ft. being added to each, thus permitting the berthing along each pier of two of the largest ships trading into the port. About 1,600 ft. of high level shore wharfage was also completed at sections 27 to 30, also an extension of a wharf at Montreal East, giving additional berthage of 500 ft. The marine pier jetty, with a system of steel and concrete fireproof construction galleries with belt conveyors for loading grain to ships, was completed and the quay walls were extended to a total of 5,838 lin. ft.

Welland Ship Canal Construction.—

The Minister of Railways and Canals gave the following information in the House of Commons, recently, in answer to questions. Up to April 30, 1923, \$34,813,512.84 had been spent, the percentages of principal items of work completed being as follows: earth excavation, 48%; watertight embankment, 60%; reinforced steel, 40%; rock excavation, 31%; concrete, all classes, 31%. The work is being done by contract, and the Government will in future allow tenderers to use their own plants on contracts. The upper entrance and guard lock will probably be placed under contract this year. It is hoped that, if annual appropriations necessary to economical construction are voted by Parliaments, and no serious interruptions are encountered, the canal will be completed by 1927.

Avery-Kernahan Shipping Co. Ltd. has been incorporated under the British Columbia Companies Act with \$25,000 authorized capital and office at Vancouver, B.C., to take over the shipping business conducted by Avery Kernahan Ltd., and to own and operate ships and act as commission and shipping agents.

Port Colborne, Ont., Dominion Government elevator received 9,052,511 bush. of grain during June.

Quebec Grain Receipts and Exports.

The Minister of Marine gave the following information, at the House of Commons's last session, as to the number of bushels of grain received at the public elevator at Quebec, Que., and exported from that port, from 1914 to 1922:

Year	Wheat received	Wheat exported	Other grains received	Other grains exported
1914.....	75,174	Nil	639,556	Nil
1915.....	2,519	Nil	264,739	Nil
1916.....	1,162,066	1,137,461	913,612	638,742
1917.....	9,764	Nil	941,277	Nil
1918.....	3,257,368	2,936,104	2,365,860	1,255,260
1919.....	3,943,393	3,606,563	249,430	69,352
1920.....	113,780	513,028	337,006	Nil
1921.....	1,265,967	1,243,285	4,345,277	2,838,893
1922.....	2,009,207	1,810,911	1,666,133	138,723

Harbor Commissioners' Yacht.—The Toronto Harbor Commissioners have sold the s.s. Bethalma to the Montreal Harbor Commissioners for \$25,000, for inspection trips round the harbor and to relieve the steam tug Sir Hugh Allan. The Bethalma was built at Wilmington, Del., in 1899, and was originally named Surprise. She has a steel hull, of the following chief dimensions,—length 110.3 ft., breadth 16.4 ft., depth 10.2 ft.; tonnage, 113 gross, 52 net. She is screw driven by engine of 31 h.p. It is stated that she originally cost about \$75,000, and she was used during the war as a patrol boat on the St. Lawrence, by the British Government, which is reported to have paid her then owner about \$40,000 for compensation for damage sustained in the service. She was bought in 1919 by the Toronto Harbor Commissioners, from A. E. Mathews, Toronto, for \$7,000, and some \$16,000 is said to have been spent on her in alterations and repairs.

Trade via Canadian Ports.—The Canadian Manufacturers' Association passed the following resolution at its annual meeting in Toronto, recently: Whereas Canada has splendid harbors, equipped with adequate facilities for handling traffic on both the Atlantic and Pacific, coupled with a complete system of rail and water transportation, representing a large investment of Canadian money, which should be utilized to the greatest extent; therefore be it resolved that the Canadian Manufacturers' Association in annual general meeting assembled, respectfully urge its members to route, as far as possible, all traffic in which they are interested, whether for export or import, via Canadian ports.

Tax on Ships' Profits.—The British House of Commons, while considering the Finance Bill recently unanimously adopted a new clause to provide relief from income tax on the profits of any shipping company, which are chargeable with income tax in any foreign country, provided that reciprocal exceptions have been agreed to by the foreign countries concerned. It was explained that the proposal was new in financial legislation, but the Government was desirous of getting rid of a troublesome double taxation, and a start was being made with the shipping business. The scheme would be worked out by an order in council, after a treaty with a foreign country had been concluded.

The s.s. **John C. Howard**, built for George Hall Coal and Shipping Corporation, at Three Rivers, Que., which was illustrated in Canadian Railway and Marine World for July, pg. 357, was mentioned as being 230 ft. long between perpendiculars, instead of 250 ft.

Canadian Government Merchant Marine Operations, Etc.

Officers of Steamships.—The following changes in captains have been made since those mentioned in our last issue, —Canadian Sailor, Capt. W. E. Redfern; Canadian Victor, Capt. W. J. Davies.

Ships for Cattle Trade.—The steamships Canadian Explorer, Canadian Leader, Canadian Mariner and Canadian Victor have been fitted up at Montreal, for the transportation of about 208 cattle in each. They will load at either Montreal or Quebec, one port only per ship, for Cardiff, Wales, and will maintain a fortnightly service.

Retaining Wall Break in Welland Canal.

A serious interruption was caused to navigation through the Welland Canal by a break in the retaining wall just below lock 23, July 18, when a small hole opened up. This was repaired immediately, and navigation was resumed July 19, after a delay of about 20 hours. On the following day, the wall gave way again, and navigation was suspended at noon July 20, for the making of permanent repairs. This was started at once and interlocking sheet piling was driven in and the whole faced with concrete. The work was continued without intermission, and navigation was resumed at noon, July 23, when 55 ships were awaiting passage through the locks. This is stated to be the first time in the history of the canal that it has been necessary to close down for a repair of this nature. It has been estimated that the suspension of traffic cost the navigation companies about \$25,000 a day, apart from the delay caused to the upper lake ships which were held at Port Colborne, owing to their not being able to unload in consequence of the elevator capacity all being taken up.

Welland Canal Traffic.—A St. Catharines, Ont., press dispatch: Freight traffic through the Welland Canal in June was 115,444 tons more than in June 1922. The total tonnage to June 30 this year was 26,920 tons less than same period in 1922, when navigation opened on April 17, while this year it did not open till April 25. The total tonnage of ships passing through the canal in June was 550,471, an increase of 115,928 over June, 1922. Of this 449,768 tons was represented by Canadian steamships, an increase of 138,874 over 1922. Canadian sailing ships represented 36,040 tons, a decrease of 14,279 tons over 1922. United States sailing vessels had a tonnage of only 4,905.

Grain Shipments from Fort William and Port Arthur.—Fort William press dispatch, July 15.—From the opening of navigation this spring up to July 7, 345 grain ships have cleared from these ports, carrying grain, as compared to approximately 250 within the same period last year. By far the largest part of the grain was wheat, of which 48,548,370 bush. were shipped. Fully one-third went to Buffalo and other U.S. points, 14,738-947 bush. going to Buffalo, and 1,001,665 bush. to other U.S. points. Of the remaining two-thirds, 1,801,922 bush. were shipped to Montreal, and 31,005,836 bush. went to Canadian lower lake ports.

The Inland Water Freight Rates Act, 1923.

As this act, passed at the Dominion Parliament's recent session, is of great importance to navigation companies' officials, etc., it is given in full as follows:

1. This Act may be cited as The Inland Water Freight Rates Act, 1923.

2. In this act, unless the context otherwise requires,—(a) "Board of Grain Commissioners for Canada" means the Commission constituted by The Canada Grain Act, chap. 27 of the statutes of 1912, and "Board" means the Board of Grain Commissioners for Canada as so constituted. (b) "Department" means the Department of Trade and Commerce. (c) "Grain" means and includes all kinds and varieties of grain, the inspection of which is provided for by The Canada Grain Act and its amendments. (d) "Lake and river navigation" includes all the rivers, lakes and other navigable waters within Canada. (e) "Minister" means the Minister of Trade and Commerce. (f) "Person" means any person, firm or corporation. (g) "Regulations" means regulations made by the Board under the authority of this act. (h) "Shipping company" means any person, firm or company who carries, or offers, advertises or proposes to carry grain between any ports in Canada or between any ports in Canada and the United States. (i) "Shipowner" means the registered owner of a ship or any share in a ship, and includes the lessee or charterer of any vessel having the control of the navigation thereof. (j) "Vessel broker" means a person engaged or acting as agent in chartering any vessel or contracting for cargo space for the carriage of grain by water.

3. Any shipping company or any shipowner or person who carries or who offers, advertises or proposes to carry grain for hire between Fort William, or Port Arthur and any other port or place in Canada or the United States, by lake or river navigation, shall, within 30 days after the passing of this act, or before entering into any contract for such carriage, file with the Board of Grain Commissioners for Canada a tariff of the rates which such company, owner or person charges or intends or proposes to charge for the carriage of grain as aforesaid, and thereafter from time to time if and when any such company, owner or person, changes, varies or proposes to change or vary the tariff or any item or charge thereof so filed, he shall, previously to the making of any such change or variation in the actual charges in respect of any shipment, file with the Board a copy of the tariff so changed, varied, or amended; and any such company, owner or person who fails or neglects so to file any such tariff within 30 days after the passing of this act, or before entering into any such contract, or to file with the Board notice in writing of any variation or change in any tariff so filed or subsequently filed by him, or who charges, contracts or stipulates or receives for the carriage of grain between Fort William or Port Arthur and any other port or place in Canada or the United States by lake or river navigation, any toll, charge or rate in excess of that shown by a tariff which has been so filed by him with the Board, or in excess of the tariff last notified by him to the Board as aforesaid, shall be guilty of an offence and liable therefor to a penalty not exceeding \$2,000 and not less than \$500, or to imprisonment

for a term not exceeding 6 months, enforceable and recoverable upon indictment, or upon summary conviction before any stipendiary or police magistrate having the jurisdiction of two justices of the peace, and moreover shall be disentitled to recover or to assert any remedy for the recovery of any freight for which he shall have stipulated at a rate in excess of that which shall have been notified to the Board in the manner aforesaid.

4. It shall be the duty of the Board to receive and tabulate all such tariffs and rates as may be filed with the Board as aforesaid, and moreover, to ascertain by all available means, the rates of freight which prevail or are exacted or required for the carriage of grain from Fort William or Port Arthur to any of the ports or places aforesaid, and to consider and report to the Minister of Trade and Commerce from time to time any facts which may come to the knowledge of the Board and which tend to show that there is a deficiency of cargo space, excessive freight charges, or discrimination in rates with respect to the carriage of grain as aforesaid, and all shipowners and other persons engaged in the grain carrying trade in Canada shall, upon reasonable request, immediately furnish to the Board such information as they may possess relating to any of the matters aforesaid, and shall for any wilful refusal or neglect to furnish the same be liable to a penalty recoverable upon summary conviction not exceeding \$1,000 and not less than \$200 for each such offence.

5. When in the opinion of the Board the toll, charge or rate which any company, owner or person charges or intends or proposes to charge for the carriage of grain as aforesaid is unreasonable or excessive, or amounts to an unjust discrimination against any person, company or class of persons as compared with the tolls or rates for similar traffic between Canadian and United States ports, or between one port and another in either of said countries, the Board may prescribe such maximum rates as it may consider reasonable; such maximum rates so prescribed may vary or be limited in their application according to the time or season of shipping, and the Board shall indicate in its order fixing such maximum rates whether the same are to prevail until further order or the period or periods during which they are respectively to prevail; the Board may also provide for the variation of such rates conditionally, having regard to conditions to be specified in its order, and the Board shall in like manner from time to time as it may consider necessary or advisable reconsider and vary or modify any order made by the Board in the premises. Any company, owner or person who charges, contracts or stipulates or receives any toll, charge or rate in excess of the maximum rates so fixed by the Board shall be guilty of an offence and liable therefor to a penalty not exceeding \$2,000 and not less than \$500, or to imprisonment for a term not exceeding 6 months, enforceable and recoverable upon indictment or upon summary conviction before any stipendiary or police magistrate having the jurisdiction of two justices of the peace, and moreover shall be disentitled to recover or to assert any remedy for the recovery of any freight

for which he shall have stipulated or charged at a rate in excess of the maximum rates so fixed as aforesaid.

6. Every one who is a vessel broker or person engaged or acting as agent or otherwise in the chartering of any vessel or in contracting for the hire or letting of cargo space for the carriage of grain from Fort William or Port Arthur to any port or place in Canada or in the United States by lake or river navigation shall post up, or cause to be posted up, at or before the hour of 10 o'clock in the forenoon of each day during which the Winnipeg Grain Exchange and the office of The Board of Grain Commissioners, Fort William, are open for business, and shall keep posted during the day for general inspection in a conspicuous place in the said Exchange and in the office of the Board of Grain Commissioners at Fort William, a statement in print or writing showing in detail the cargo space, time for shipment and destination for carriage of all grain for the carriage of which from Fort William or Port Arthur to any other port or place in Canada or in the United States of America by lake or river navigation he has contracted or entered into any charter on the day last preceding, or, if the day last preceding be Sunday or a holiday, during the two days last preceding.

7. It shall be unlawful for any person who is a vessel broker or person engaged or acting as agent or otherwise in the chartering of any vessel or in contracting for the hire or letting of cargo space for the carriage of grain from Fort William or Port Arthur to any other port or place in Canada or in the United States of America by lake or river navigation to solicit any risk, or to issue or deliver any receipt or policy of insurance, or to collect or receive any premium in whole or in part, or to inspect any risk, or to adjust any loss, upon, for or in connection with any consignment of grain so to be carried.

8. Every one who contravenes any provision of sections six and seven of this act or who fails or neglects to comply with any of the provisions thereof to which he is subject, shall be guilty of an offence and liable therefor to a penalty not exceeding \$1,000 and not less than \$100, or to imprisonment for a term not exceeding 3 months; or, if a corporation, shall be liable to a penalty not exceeding \$3,000, and not less than \$500; and any such offence may be prosecuted and the penalty therefor enforced or recovered either upon indictment or upon summary conviction before any police, stipendiary or other magistrate having the jurisdiction of two justices of the peace.

9. This act is intended to regulate the shipping rates of grain transported for interprovincial, foreign or export trade, and accordingly shall not apply to grain carried locally to be ground or consumed in the province in which the shipment originates, but the burden of proof that any shipment of grain is within this exception shall rest upon the carrier.

Atlantic Steamship Co. Ltd., has been granted supplementary letters patent, decreasing its capital stock from 2,000 shares, without nominal or par value, to 1,000 shares, without nominal or par value, by the cancellation of 1,000 unsold shares, provided that the amount with which the company shall carry on business shall be \$5,000.

Cattle Shipments to Great Britain.

The cattle shipments through Montreal, to Great Britain, to June 30, were 11,657, against 10,728 for the same period of 1922. The St. Lawrence navigation season opened nine days later this year than last.

We are officially advised that Canadian Government Merchant Marine has had the steamships Canadian Explorer, Canadian Leader, Canadian Mariner and Canadian Victor fitted up for the transportation of 208 cattle on each, the work being done in Montreal. Cattle will be shipped at either Montreal or Quebec, one port only per ship, for Cardiff, Wales, and will be carried from those ports during the St. Lawrence navigation season, and probably all the year round from other ports. The s.s. Canadian Leader sailed from Montreal, June 15, for Quebec, where she took on cattle, sailing thence, for Cardiff, June 16. These four ships will maintain a fortnightly service.

Canadian Railway and Marine World for July gave some details of the facilities provided at Quebec for handling cattle there, since when the Harbor Commission's secretary-treasurer has written us as follows: The Quebec Harbor Commissioners have installed, in shed 27, a feeding and loading station for export of cattle. The advantages of shipping through this port may be summarized, as follows: Quebec is 214 miles nearer Winnipeg, by the National Transcontinental Ry., than Montreal is by other lines. The average time from Winnipeg to Montreal is from 96 to 100 hours, and on May 26, 572 cattle were carried from Winnipeg to Quebec in 79 hrs, 40 min., including two stops of 5 hrs. for feeding and rest. The cattle are unloaded direct from the cars to the sheds on the docks, without having to pass through congested terminals, thus avoiding yard switching, which is hard on the cattle. They are then put direct on board ship, without being excited, minimizing handling and shrinkage in weight. The cattle station is on a pier, and the doors can always be opened on both sides of the shed. The general temperature at Quebec is about 10 deg. lower than at Montreal, and after the cattle are loaded it takes about 4 hrs. to reach salt water. The National Transcontinental route is an ideal one for the transportation of cattle, being straighter and with easier grades, as well as cooler and less congested, and it has been estimated that by the use of this route and the port of Quebec, 25 to 30 lb. a head on the weight of the cattle can

be saved, to the great benefit of the cattle men. About 2,000 cattle have been shipped through Quebec this season, on four ships, a fair proportion being from Ontario, and it is expected that there will be a considerable movement of cattle through the port during the balance of the season.

The s.s. St. Mihiel, owned by Maple Shipping Co., Toronto, was offered for sale at Toronto, recently, under an order of the Exchequer Court of Canada, Toronto Admiralty District. No bid was received. She is at present lying at a French port. She was built by the Dominion Shipbuilding Co., Toronto, in 1918 and is of the Frederickstadt type, Welland canal size, single deck steel bulk freight steamship, classed at Lloyd's plus 100 A1 for ocean service. Her dimensions are, — length over all 261 ft., length b.p. 251 ft. 2 in., breadth moulded 43 ft. 7 in., depth moulded 28 ft. 3 in., draft loaded 24 ft. 3 in., tonnage 2,742 gross, 1,670 net. She is equipped with triple expansion surface condensing engines with cylinders 20, 33½ and 54½ in. diam. by 40 in. stroke, supplied with steam by two Scotch marine boilers at 180 lb. under natural draft. The ship with her tackle apparel, furniture and appurtenances were offered subject to any existing engagements of charter and to a reserved bid fixed by the local judge in Admiralty.

Compensation for Crews of Wrecked Steamships.—The Minister of Labor is reported to have stated in the British House of Commons, recently, in answer to questions, that under the Unemployment Insurance Act of 1920, sec. 83, an insured contributor is disqualified while resident, temporarily, or permanently, outside of the United Kingdom, but, in regard to the crew of the C.P.R. s.s. Marvale, which was wrecked off the Newfoundland coast, May 20, he might have power, under sec. 39, to make a special order, which point would be considered. The President of the Board of Trade is reported to have stated that the crew had been paid their wages up to the time of the wreck, and the Government had no power to compel the company to pay beyond this.

Preston-Mann Towing Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$100,000 authorized capital, and office at Vancouver, to take over the steam tug Robert Preston, and to carry on a general towing and carrying business.

Montreal Grain Elevators.—The Minister of Marine stated in the House of Commons recently, in reply to a question by G. G. Coote, Macleod, Alta., that the Montreal Harbor Commissioners had bought the G.T.R. elevator there, from the Canadian National Ry., but that the price had not been determined. Its storage capacity is 2,150,000 bush. The total storage of other elevators owned by Montreal Harbor Commissioners is 6,662,000 bush. The total cost of them at Dec. 31, 1922, was \$6,841,665.20.

Transportation Meetings, Etc., in 1923.

The names of persons given below are those of the secretaries, unless stated otherwise:—

September.—Travelling Engineers' Association, Chicago, Ill. W. O. Thompson, 1177 East 98th Street, Cleveland, Ohio.

Sept. 4 to 6.—American Railway Association, Division 5—Mechanical, Equipment Painting Section, Hollenden Hotel, Cleveland, Ohio. V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill.

Sept. 4 to 7.—International Railway General Foreman's Association, Chicago, Ill. W. Hall, 1061 West Wabash Ave., Winona, Minn.

Sept. 17.—American Association of Passenger Traffic Officers, Montreal. W. C. Hope, Central Rd. of New Jersey, 143 Liberty Street, New York, N.Y.

Sept. 18 to 20.—Roadmasters' and Maintenance of Way Association, Chicago, Ill. P. J. McAndrews, Chicago & Northwestern Ry., Sterling, Ill.

Oct. 8 to 12.—American Electric Railway Association, Atlantic City, N.J. J. W. Welsh, 8 West 40th Street, New York, N.Y.

Oct. 16 to 18.—American Railway Bridge and Building Association, Seattle, Wash. C. A. Lichty, Chicago & Northwestern Ry., 319 North Waller Avenue, Chicago, Ill.

Dec. 10 to 12.—American Association of Port Authorities, New Orleans, La. T. S. McChesney, New Orleans.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries, unless otherwise stated:—

American Association of Port Authorities.—T. S. McChesney, New Orleans Port Commission, New Orleans, La.

Bureau of Explosives.—A. H. McMullen, Inspector, lines east of Port Arthur, 354 New Union Station, Toronto.—D. W. McNabb, Inspector, lines west of Port Arthur, C.P.R. station, Winnipeg.

Canadian Car Demurrage Bureau, Eastern Lines.—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal. Western Lines.—F. W. Thompson, Chairman, 805 Boyd Bldg., Winnipeg.

Canadian Electric Railway Association.—D. N. Gill, 248 Albert St., Ottawa, Ont.

Canadian Freight Association.—Eastern Lines, G. C. Ransom, Chairman, 909 Shaughnessy Building, Montreal.—Western Lines, F. W. Thompson, Chairman, 805 Boyd Bldg., Winnipeg.

Canadian Industrial Traffic League.—H. W. Blahout, 950 Woodbine Ave., Toronto.

Canadian Passenger Association.—Eastern Lines, G. H. Webster, 54 Beaver Hall Hill, Montreal.—Western Lines, E. J. Stone, 306 Union Station, Winnipeg.

SOLID CONCRETE CROSSING, ATCHISON, TOPEKA & SANTA FE RAILWAY.

Concrete For Railway Grade Crossings

Railway engineers have experimented with several types of Concrete crossing, in the effort to obviate the expense of frequent renewal.

Besides the pre-cast slabs in use by certain large Railroads, there are many successful installations of the monolithic type to indicate that even where fairly high speeds are reached by the trains, rigid track construction at street crossings gives excellent service.

A cross-section of one such installation is shown above, as used by the Atchison, Topeka & Santa Fe Railway.

Construction for these crossings was accomplished without interruption to traffic. First, excavation was made along and under the tie-ends to a depth of 13 inches, and 2 timber stringers placed just outside the rails and wedged up to give the ties a firm bearing.

The middle of the track was then excavated and filled with concrete; which was packed under the ties and allowed to set for two weeks. The stringers were then removed and Concrete filled in under and between ties to their ends.

The angle irons forming the flangeways are anchored into the Concrete above the ties by means of embedded bolts. The Concrete paving rests directly on the ties and Concrete base.

Reinforcement above ties and between rails, consists of woven wire mesh 26 inches wide.

Train speed of 20 miles an hour prevails over some of the crossings thus constructed; and experience indicates that even at such speed the Concrete does not make a noticeably "hard spot."

This "Little Giant" Is SOME Wrench!

It is the toughest, simplest, most efficient wrench ever offered to the mechanic. That sounds like a big order, but go ahead and read our story, order a few for trial, and we know you'll never be satisfied with anything else.

Barked knuckles and raw tempers have been eliminated in shops using the LITTLE GIANT Pipe Wrench.

The end opening jaw design and extra length handle give a leverage that will turn the tightest nuts, bolts and pipes with less muscular energy.

The ease with which it handles the tight-corner, and close overhead jobs puts it far in the lead when it comes to all-around utility.

There are two drop forged, heat-treated steel parts and a nut in the make up of the LITTLE GIANT. They are practically indestructible. The double sets of teeth on the smaller sizes and the quadruple sets on the larger ones assure a life of from two to four times that of any other wrench you can buy.

Service life is a big factor, but "getting it done in a hurry" is often just as important. The LITTLE GIANT gives both service and speed.

Ask your supply house or write direct to us.

G-R-S Electric Interlocking

The interlocking plant, shown in the above illustration, was installed in 1901 to handle a heavy traffic at the crossing of four railroads. The plant has been modernized to some extent, but the same interlocking machine, the same switch machines and most of the apparatus originally installed is in service today handling a traffic far in excess of that contemplated at the time of installation.

To meet the changed operating conditions that have taken place during a period of 22 years requires adaptability. To move the traffic of four busy railroads to the entire satisfaction of all operating officials requires dependability. The records show that the cost of operation and maintenance has been extremely low.

This is only one example of a number of

plants which were installed over 20 years ago and which are giving a highly satisfactory service today.

G-R-S Electric Interlocking is electric throughout, and therefore immune to the effects of cold or heat and conditions which result therefrom. It uses dynamic indication which absolutely guarantees the safety of operation, conserves power and reduces wear on parts to the minimum. It is of unit construction throughout, which makes it adaptable to any size plant, from the smallest to the largest. You may begin with a small plant, and add units as required to meet the growth of traffic.

Time Is Proving F.B.C. Welded Flexible Staybolts

They have been on the market long enough
to convince their first users of their worth.

*No road has reverted to the threaded type
sleeve because of dissatisfaction with the
welded sleeve, once having installed it.*

This is your assurance, as well as ours, that
this assemblage is living up to our claims of
being stronger, more efficient and more econ-
omical than any other type on the market.

May we advise with you regarding a trial
installation of the F. B. C. Welded Flexible
Staybolt assemblage?

FLEXIBLE STAYBOLTS

Steam Making Depends on Circulation

—The Heart of the Locomotive

WITH the sheets and tubes kept constantly hot, an important factor of the locomotive's steaming capacity is the rate at which the bubbles of steam are swept away.

This in turn is dependent on the rate of circulation within the boiler. Increase the circulation and the boiler steams faster.

Nicholson Thermic Syphons are located in the hottest zone of combustion and have one way circulation. They are great thermic pumps, stimulating the entire water circulation.

For a better steaming, larger earning locomotive, install Nicholson Thermic Syphons. Do it at the next shopping period.

Are You Using High Ash Coal?

HIGH ASH fuel increases the difficulty of keeping fires clean and burning freely.

Often the fuel quality can't be improved, but the method of burning it can.

Instead of permitting the fire to accumulate a load of dead ash, keep it clean by stirring on the road with the Franklin Steam Grate Shaker.

Then where an engine crew formerly wasted

forty-five minutes to two hours cleaning fires by hand at a division point, Franklin Steam Grate Shakers can do the job in six to nine minutes.

While running, limiting locks avoid any danger of dumping the fire.

And remember that a clean, free-burning fire saves fuel.

Look to Franklin Grate Shaker engines to help your fuel record.

Close-up View of a Thermit Rail Weld

The Cheapest Joint Even If It Cost Twice as Much

A prominent Engineer of Way recently made the remark that if the Thermit Rail Weld cost as much as \$15, it would still be the cheapest rail joint on the market.

This is the opinion of an Engineer who has used the process extensively for a period of over ten years and has many miles of Thermit welded track under his jurisdiction. The reason for his statement is, of course,

If you contemplate any track construction, tell us the approximate number of joints and the section number of the rail, and allow us to submit an estimate on the cost of eliminating your joints and prolonging the life of your track.

the fact that the Thermit Rail Weld eliminates the cost of the joint maintenance throughout the life of the rail, so that the first cost is the last cost.

The important point, however, is the fact that the cost is nearer one-half of \$15 on the average, and many properties are making these welds for less than that, so that it is safe to say that the Thermit Rail Weld costs no more than any other joint.

What A Dennisteel Cabinet Does for Your Office

THE Dennisteel Cabinet provides a place for stationery, supplies, books, etc., that keeps them from dust, vermin and fire danger.

It utilizes little space, yet provides plenty of room for the storing of the supplies required by most offices.

Above all, it promotes system. When you have your office books and supplies in a Dennisteel Cabinet, you know just where to lay hands on them.

Dennisteel Cabinets are a handsome article of office furniture. Shelving and pigeon-holing can be arranged for individual needs.

Standard finish of olive green. Can be furnished to harmonize with other furnishings if desired.

We also make Lockers.

to the
Pacific Coast
via an
Alpine Fairyland

GOING WEST? Then why not make the trip something more than a succession of train meals. Follow the Canadian Pacific route through the Rockies! The scenery is superb and you *don't* have to crane your neck to see it. You can view the snow-clad peaks from your seat in an open top observation car. Stop off at Banff and Lake Louise.

For full information write, phone or call this office.

WM. FULTON,
DISTRICT PASSENGER AGENT
Canadian Pacific Bldg. - Toronto, Ont.

CANADIAN PACIFIC RAILWAY

Dake Snub Line Winch for Canal Steamers

To handle the heavy wire snub line. Takes up very little deck space and drum holds 120 ft. 1 1/4 in. wire. For a safety and labor-saving device it has no equal. A money-saver for the vessel owner and a godsend for the master in canalling his vessel through the St. Lawrence and Welland Canals. Send for special booklet and price. We also make a full line of Marine Machinery. Complete Catalogue of Dake Machinery on request.

MONCRIEFF'S

Moncrieff's "Unific" is not a cheap glass. But because it outlasts many ordinary glasses, the "Unific" is economical. British made.

JOHN MONCRIEFF LIMITED, PERTH, SCOTLAND.

"UNIFIC" WATER GAUGE

GLASSES

The "Unific" does not readily corrode. It resists extreme changes of temperature and withstands the highest working steam pressure.

Service shows the most successful car roof to be the

All Steel Dry Lading Roof

which made possible the following specifications:

No. 1. That should be weather-proof under all conditions, also rust-proof, fire-proof and burglar-proof.

No. 2. That should not require maintenance for at least ten years.

No. 3. That should be of low deadweight and give the car a low center of gravity.

No. 4. That should lessen strain on the superstructure of the car when the car is in motion.

No. 5. That should strengthen, rather than detract, from the strength of the car frame.

No. 6. That should give the greatest interior capacity and the lowest clearance limits.

No. 7. That should be flexible enough to conform to every service condition of the car.

No. 8. That should be possible to use again on the same or another car, even in case of partial or total destruction of the rest of the car by fire or wreck.

No. 9. That should not require roofing boards.

No. 10. That should be of low first cost.

No. 11. That should permit of inspection on the part of any shipper by merely closing the doors of the car and if no rays of light are seen through the roof, the shipper to consider it a weather-tight roof.

No. 12. That should be so constructed that the carlines, purlines and ridge, tie the sides and ends of the car together firmly, so that the weather-proof roof has only the one duty of protecting the contents of the car from the elements.

This One Thing We Do

With capital to finance a number of publications and with an organization that has no superior in Canada, we have yet resisted resolutely, every temptation to engage in publishing by wholesale.

For 24 years we have concentrated the efforts of a trained staff on just **one** publication:

CANADIAN RAILWAY AND MARINE WORLD

From the chief executive down to the humblest worker, there is just one duty, one task, one ambition: To make this **one** monthly magazine as nearly perfect as lies in our single purposed power.

To us, the publication of a technical magazine, that wields so vast an influence in so vital a field as the land and water transportation of Canada, involves a responsibility too great to permit us to allow a moment of our thought or an ounce of our strength to be diverted into any other channel.

Every one of us is proud of his and her part in making this one magazine the recognized authority, the acknowledged leader, the valued guide and the text-book of Canadian transportation, in all its varied phases.

And we have been richly rewarded for our intensive devotion to the single "cause" of Canadian transportation, by a universally recognized supremacy in this field; and by the 100% good-will of the big, capable, far-seeing men who have made, and are making, a Greater Canada.

Above All—Efficiency!

Experienced railroad executives know that the first and most important point in the selection of lubricants is efficiency—the ability to render satisfactory service under the ever-changing conditions of operating service.

The attraction of “lower price per gallon” has sometimes induced the use of lubricants that are physically incapable of bearing the strains of railway work.

The results secured are always the same—trouble, hot boxes and driving journals, carbonization in cylinders, constant renewal of cylinder packing, delays, repairs and heavy depreciation in equipment.

Compared with the small saving in the first cost of the oils, the additional expenses arising from the use of inferior lubricants makes the item insignificant—shows it in its true light in relation to actual or final cost of lubrication.

Recently a large railroad made a complete service check on refinery lubricants, claimed to be “good as Galena.” A full year’s test on locomotives and cars permitted the fairest and most thorough observance of the oil’s service qualities. At its conclusion Galena lubrication was adopted as being not only much more efficient, but for its ultimate economy.

Wherever similar tests have been made the results have been the same. Service provides the one reliable means of determining lubricating values. It registers the actual efficiency of lubricants and marks the distinction between “cost of oils” and “cost of lubrication.”

*“When Galena Oils go in—
Lubrication troubles go out!”*

Galena-Signal Oil Company

Toronto of Canada, Limited

Brownhoist idlers are made of seamless steel tubing; mounted in heavy one-piece brackets and fitted with Timken Roller Bearings. Accurately machined, perfectly aligned throughout and practically dust proof.

Built To Reduce Conveying Costs

Brownhoist Products

*Heavy Dock Machinery
Locomotive Cranes
Monorail Trolleys
Concrete Bunkers
Chain Conveyors
Belt Conveyors
Coal Crushers
Bridge Cranes
Buckets*

Literature on request

The first cost is of course important in choosing belt conveyor equipment. But, because that cost is spread over a long period of service, up-keep is a more important factor.

Realizing this, Brownhoist Belt Conveyors have been designed to reduce up-keep cost to a minimum.

Up-keep in belt conveyors is measured by wear on the belt and on the idlers and by power requirements. Brownhoist idlers are designed to give perfect alignment and a minimum of frictional resistance. Timken Roller Bearings are standard in all Brownhoist idlers and each bearing is greased by means of a high pressure lubrication system.

These features undoubtedly make the Brownhoist idlers last longer and assure longer life for the conveyor belt.

An accurate maintenance record tells the unvarnished truth about a machine. It can always be consulted with confidence

Are being used with great success on small industrial locomotives

*The
G-E Turbine Generator
for headlight*

In one southern clay pit, sets are mounted on steam shovel roofs, furnishing current for G-E floodlights which light the workings.

Over Three Years in Operation Upkeep Only 37 Cents a Month

On one American railroad more than 250 G-E Headlight Turbine Generator Sets have been in operation for over three years. A carefully kept maintenance record shows but 37 cents a month per machine for spare parts. This exceedingly low upkeep, coupled with the dependability of this sturdy lighting set, accounts for its increasing popularity with engineers and executives.

The severe tests of four years' service and the manufacturing experience the General Electric Company has had with turbines great and small, combine to make G-E Headlight sets reliable. They are strong, highly efficient and can be closely regulated.

Note how little the Stoker
adds to the back head

APPLICATION

of the DUPONT-SIMPLEX STOKER to either new or old power is simple and inexpensive.

There is no rearranging of the back head or further congestion of the various appliances.

Only the distributing valves are located on the back head, all other parts are under the tension deck, out of the way, yet easily accessible.

This not only reduces the application cost, but also insures low maintenance costs.

Let us send you actual APPLICATION figures for both new and old power.

Scientific Treatment of Boiler Feed Water

Dearborn

Dearborn Scientific Treatment Cannot Injure Metal

You can place a piece of iron or steel in Dearborn Treatment and it will not be affected in any manner. The Treatment may be concentrated, or diluted to the point recommended for your boilers. It may be hot or cold. The metal may be left in the solution indefinitely.

We make this statement in reply to the question sometimes raised relative to the treatment attacking the metal.

In other words, if you should use too much, you would waste part of the treatment, but it would in no way harm the metal. This we guarantee.

The Action of Dearborn Treatment

In making up Dearborn Treatment, the harmful salts in the water that cause pitting and corrosion are always provided for, as this feature is of great importance, even though the outstanding trouble may be scale or foaming. Dearborn Treatment takes care of *all* injurious action the water may have.

Proven in Practice

A large percentage of the railroads in America are now using Dearborn—conclusive evidence of its superiority over soda ash and other methods of treating water. Dearborn first placed water treatment on a scientific basis by the method of laboratory analysis and constant laboratory and service control.

We invite every railway not using Dearborn to investigate—to give Dearborn a trial under their own service conditions.

*Gallon samples of water supplies required.
Analysis and recommendations made for you without obligation.*

"You Know Where to Find the Man"

"We want a man who
has specialized for that
position."

"Get the right man for the place from among those whom we already employ," were the President's instructions. "Pick out those who have not only been doing their work well, but have been studying in spare time getting ready for advancement. Among these you will find the right man."

Are you in the enviable position of that Executive Head when you wish to find the right man for the vacant place in your organization? Have you encouraged your employees to study? Have you let your employees know that trained competent men do not need to look elsewhere for promotion? Have you developed real, upstanding men who can fill positions of increased responsibility?

You cannot afford to overlook this vital factor in the success of your enterprise and of those associated with you.

The trained-man problem has been solved. All over this Continent business concerns, large and small, and in every line of trade and industry, have found in the International Correspondence Schools a medium of training and a source of trained men that has simplified one of the greatest problems in the building of an efficient organization.

For thirty-one years the I. C. S. has been training men for advancement, covering every technical trade and every phase of business—accountancy, salesmanship, advertising, traffic management, foreign trade, production, marketing, financing, drafting, electricity, engineering, shop practice and many others.

For a long time the I. C. S. worked only for the individual student. Then employers looking for men with certain qualities—ambition, industry, perseverance, special knowledge—suddenly made a discovery—these were the very characteristics of the I. C. S. trained man. Recognizing this, they began to seek out the men in their employ who were taking I. C. S. courses and to encourage others to enroll. Thus, there has developed a great co-operative plan through which the I. C. S. is serving over one thousand industrial concerns and three hundred railroads, solving the training problems for both employer and employee.

Some employers buy Courses for selected men. Some assist their men to pay for Courses. Others reimburse their men for the price that is paid for their Courses when they have completed them. Still others simply recommend I. C. S. Courses and then encourage those who take them. The I. C. S. offers a simple arrangement whereby employers are kept informed of the progress of employees who receive training from the Institution. **THE DEFINITE EDUCATIONAL ACHIEVEMENT OF THE I. C. S. STUDENT MAKES SUCH SERVICE DIRECTLY VALUABLE TO THE EMPLOYER WHO IS LOOKING FOR MEN FOR LARGER RESPONSIBILITIES.** An I. C. S. Course is a systematic, scientific, comprehensive and connected arrangement of specially prepared texts, easily studied, easily remembered and easily applied. From the day of his enrolment to the completion of his final examination, the I. C. S. Student is directed step by step, through every difficulty and helped over every obstacle.

Judgment, initiative, logical thinking, patience and application, so invaluable in every calling, are carefully cultivated in I. C. S. training. Not only is the I. C. S. Student put in possession of valuable knowledge of his chosen branch of commerce or industry, but the personal, practical, problem-solving method of instruction is the making of a trained mind and the building of sound character.

To build an efficient organization you must have trained men, and you cannot depend on finding them in other organizations. No matter how small or how great your needs, the I. C. S. can help you. You may have a single promising employee whom you want specially trained, or you may have ten or a hundred or a thousand employees in your plant or office who are good workers but lacking that special skill you like them to have.

Help them to equip themselves for better jobs and bigger responsibilities. Make them more valuable to you. The I. C. S. is ready with a practical way to do it.

Address: Industrial Service Division

International Correspondence Schools Canadian Ltd.
MONTREAL, CANADA

THE STANDARDS OF PRACTICE to which BUSINESS NEWSPAPERS ASSOCIATION OF CANADA members are required to conform

B. N. A. Standards of Practice

The members of this Association shall dedicate their best efforts to the cause of business and public service, and to this end shall pledge themselves:

- (a) To consider first the interests of the subscriber.
- (b) To work for truth and honesty in all departments.
- (c) To eliminate, in so far as possible, their personal opinions from their news columns, but be leaders in thought in their editorial columns and make their criticisms constructive.
- (d) To refuse to publish puffs, free reading notices, or paid write-ups, to keep their reading columns independent of advertising considerations and to measure all news by the standard "Is it real news?"
- (e) To decline any advertisement which has a tendency to mislead, or which does not conform to business integrity.
- (f) To solicit subscriptions and advertising upon the merits of the publication.
- (g) To supply advertisers with full information regarding character and extent of circulation, including detailed circulation statements, subject to proper authentic verification.
- (h) To co-operate with all organizations and individuals engaged in creative advertising work.
- (i) To avoid unfair competition.
- (j) To determine what is the highest and largest function in the field which they serve and then to strive, in every legitimate way, to promote that function.

It will be conceded that the working principles of the B.N.A. are unsurpassed in the field of advertising and publishing. They are not just a set of "dreamy hopes." Member publications must be dedicated to the true service of industry, must have high editorial standards, and their circulation methods and claims must be audited by the Audit Bureau of Circulations and be like Caesar's wife, "above reproach."

Only publications that are willing and able to live up to these high standards are members of the Association.

Adherence to these standards makes B. N. A. publications leaders in their respective fields.

B.N.A. membership to a business paper is what the "Sterling" mark is to silver.

WAST AD.

Line Material

The O-B list of fittings for trolley line suspension covers practically everything from the support at the pole to the trolley wire. Long and intimate contact with electric railway construction has rounded out our line to take care of every need.

Exclusive O-B features for Cross-Span, Pole Bracket and Catenary trolley suspension show that O-B leads—is not a trailer.

As manufacturers we ever hold five essentials to the front. Practicality, Ease of Installation, Endurance, Appearance and Engineering Service to the User. Our organization earnestly keeps these aims in mind.

If you are not fully familiar with all O-B line material products let one of our Specialists carefully go over the list with you. This is part of our Service and places you under no obligation.

For Railroad, Hotel and Steamship Upholstery CHOOSE "CHASE" MATERIALS

The trade mark "Chase" stands for seventy-five years' leadership in manufacturing.

CHASE GOAT BRAND CAR PLUSH: This product, made from the fleece of the Angora Goat, has been the choice of railroads and steamship lines for over thirty years. It is **DURABLE—FAST IN COLOR—RICH APPEARING—MOST SANITARY.**

Recently there was exhibited a car seat upholstered with our Mohair Plush, and the seat had already been in service twenty-five years.

CHASE LEATHERWOVE: The modern, leather-like upholstery material for use where flexible toughness is the one thought.

For cleaning Plush and other upholstery fabrics choose **CHASE PLUSH RENOVATOR**—That remarkable liquid cleanser which does not start the dyes or injure the fabric. **GUARANTEED** effective, but **NOT HARMFUL.** Write for samples.

install
FAIRBANKS
Globe
Valves

1. Renewable Disc can be replaced in less than one minute.
2. Rounded Seat prevents sediment from lodging on it.

3. No locknuts to stick fast.
4. No obstructions to prevent a free flow.
5. Greatest number of engaged spindle threads.

These five convincing reasons are described in detail in our Valve Circular. It shows why this famous Bronze Valve really surpasses all other similar Valves in durability, service and adjustment. Write our nearest branch for it.

You need the power of new locomotives

The Booster puts every loading trailing wheel to work.

ARE you going to get them? Is the money available? Can you get delivery for your immediate needs?

Roads unable to secure new locomotives now, are finding the Booster a ready solution to the new power problem.

The Locomotive Booster increases the tonnage rating of any engine to which it is applied and it makes 5 old ones equal to one new engine.

The larger earnings of Booster-equipped locomotives quickly pay for the Booster.

On one road, in the course of a year, each Booster-equipped Mikado has hauled enough additional tonnage to buy two new Mikados.

We are prepared to work up figures showing how the Booster will help earn more with present power and pay for the new ones you should buy.

Circulation Gives Increased Steaming Power

WATER is only converted into steam when in contact with a heating surface. There is practically no conduction of heat between water particles.

This explains the 10 to 20% increased steaming power secured from Nicholson Thermic Syphons. When circulation is stimulated, the whole process of steam-making is speeded up.

To under-boilered locomotives, this capacity means an ability to haul more tons.

To properly proportioned locomotives, this capacity is a reserve against the operating emergencies that now cause failures and delays.

Increased steaming capacity can be had at the next shopping. Start a Syphon Program Now!

Concrete Roads Needed in Transporting Canada's Grain to Market

Canada has become the World's second greatest grain-producing country.

According to figures of the Dominion Bureau of Statistics, the total value of 1922 field crops for the whole of Canada amount to \$962,616,200. This is an increase of more than \$30,000,000 over the year previous.

The Dominion's continued growth in grain production is emphasizing the need for greater transportation facilities throughout the Provinces. Farmers and motorists, alike, are demanding more Good Roads.

Concrete Roads are the only permanent solution of the transportation problem. Durable and serviceable in all weather and during any season of year, Concrete meets every requirement of traffic.

Concrete Roads also have maintenance *built into* them. They do not require the usual seasonal reconstruction work of other less durable types. This is why tax-payers, too, prefer Concrete.

Is your Province realizing some of these dividends of Concrete Roads?

Laid out and checked to the same standards —his work is sure to pass the inspector

THERE was a time when high-class gage blocks cost so much that they were kept locked away in a safe or tool crib. They were to be used only on "state" occasions or when a super-accurate check upon the work seemed desirable. But that time is past.

Hoke Gages, though guaranteed accurate to within .000005 inch, are being sold to-day at a price that permits you to issue them not only to the inspector, but to the man who lays out the work.

With a set or more in the shop, your men can work to one definite standard that will give you the highest accuracy you require. The use of Hoke Gages in the shop makes "home-made" size blocks and other unreliable standards unnecessary and uneconomical.

Work thus built to and checked by Hoke Gages is bound to be more satisfactory than when built to one standard and checked by another.

Canadian Railway and Marine World

September, 1923

British Columbia and Alberta's Appeal on Rate Equalization.

British Columbia and Alberta's appeal to the Dominion Government from the Board of Railway Commissioners' decision in the equalization of rates case was heard in Ottawa on Aug. 9, 10, 13 and 14. Particulars of the circumstances leading up to the appeal were given in preceding issues of Canadian Railway and Marine World. The case's history may be briefly summarized as follows: The Dominion Government, on Oct. 6, 1920, dealing with an appeal from the Manitoba and Saskatchewan Governments, various cities, and boards of trade, directed the Board of Railway Commissioners to institute an enquiry into the question of equalization of rates as between Eastern and Western Canada. (See Canadian Railway and Marine World for Nov., 1920, pg. 591.) The Board commenced hearings Nov. 22, 1920, and held sittings at practically every important point in the country. With the exception of the western rates case, which was terminated in 1914, after three years' investigation by the Board, the enquiry was the most exhaustive in Canadian freight rates history. General order 366, issued June 30, 1922, specified, among other things, that a new Pacific standard mileage tariff should be introduced, by applying to the prairie standard tariff $1\frac{1}{4}$ miles for one mile, with distributing rates from recognized distributing centers in B.C., except Vancouver and New Westminster, constructed from the new standard mileage tariff, and with commodity mileage rates applying between stations in Pacific territory, and on interchange traffic between Pacific and prairie territory, reduced so as to bear the same relationship to the new standard mileage tariff as they did to the preceding one, which was based on $1\frac{1}{2}$ miles to 1 mile on the prairie scale. The Board's judgment was given in full in Canadian Railway and Marine World for Aug., 1922, the portion of it applying to British Columbia appearing on page 398. Not satisfied with the reduction thus afforded in rates applying to B.C. territory, Premier Oliver of British Columbia, and business interests of that province generally, and of Vancouver in particular, began an agitation for the removal of the complete differential as between prairie and mountain rates, which led to an appeal to the Dominion Government.

Canadian Railway and Marine World has given, in preceding issues, the arguments advanced by British Columbia as to why the mountain differential should be removed, and the railways' arguments as to why it should not be; also the Winnipeg Board of Trade's contention, that what British Columbia really sought was the introduction of a rate system that would enable Vancouver to take away from Winnipeg that city's distributing trade in the western prairie territory, and Alberta's contention, which is, chiefly, that rates are higher from eastern points to Alberta centers than they are to the Pacific coast, and that Alberta farmers are called upon to pay higher rates on grain than they would have to

if westbound grain rates were on a parity with eastbound rates. While the arguments at the hearing of the appeal before the Government by representatives of all parties were similar to those advanced on former occasions, the matter is of sufficient importance to repeat them, and they are, therefore, summarized in the following account of the appeal's progress.

The appeal, beginning Aug. 9, was heard by Premier King, Minister of Finance Fielding, Minister of Agriculture Motherwell, Postmaster-General Murphy, and other members of the Government. F. H. Chrysler, K.C., appeared for the Railway Association of Canada; E. P. Flintoft, Assistant General Solicitor, for the C.P.R.; Gerard Ruel, K.C., Vice President and General Counsel, for Canadian National Railways; G. G. McGeer, K.C., for British Columbia; Frank Ford, K.C., for Alberta, and Isaac Pitblado, K.C., for Winnipeg Board of Trade and Manitoba Government. Premier Oliver of British Columbia was present but did not participate in the argument.

Mr. McGeer, in opening argument for British Columbia, is reported to have stated that he relied on the Railway Act, 1919, sec. 314, s.s. 4, which states that "No toll shall be charged which unjustly discriminates between different localities." Basing his argument on the broad general principle that British Columbia is entitled to the same treatment as concerns railway rates as other parts of the country, he claimed that the agreement by which B.C. entered confederation provided for this and that the present rates constitute a violation of that agreement. He claimed that B.C. manufacturers are discriminated against and cannot market their products in the middle west in competition with eastern manufacturers, who, he said, are favored by the present rate structure. Mr. McGeer contended that the mileage rates out of St. John, N.B., are the lowest in the country; that those out of Montreal are higher than those out of St. John; that those out of Winnipeg are higher than out of Montreal, but that those out of Vancouver are the highest of all. He claimed that this in itself is unfair to the Pacific territory. As to the railway argument of higher cost of construction in B.C., Mr. McGeer said that B.C. had met her obligations in this regard by the subsidies given the C.P.R. by that province. He contended that the fact of water competition existing in the east should not allow the railways to make the western rates such that B.C. manufacturers cannot get into the prairie market. As an example, he called attention to conditions in the canning industry, pointing out that the rate on canned goods from Vancouver to Regina is \$1.37 $\frac{1}{2}$ per 100 lb., compared with a rate from Windsor, Ont. to St. Leonards, of 66c. He claimed that the differential in rates on canned goods runs from 41 to 100%. As a further example, he pointed out that the rates are such that a Montreal sugar manufacturer can keep the Vancouver manufac-

turer out of the Winnipeg market, and said: "The mountain rates are not higher due to higher operating costs in the Pacific territory, but are higher because of the desire to make every ton of freight produce the maximum number of ton miles." He claimed the present rates are designed to force grain through Fort William to export markets, and that is bad, because people in the Peace River country, and in Alberta generally, cannot afford to move wheat east at present rates, while the high rates prevailing on the westbound haul afford them no relief. As to operating costs, he contended that the grades on the Canadian National Rys. through the Yellowhead Pass to Vancouver are much more favorable than those on either the Canadian National or C.P.R. between Edmonton and Calgary, and Fort William. He said that the grades on the C.P.R. to Vancouver are not so good, but the same rates are charged on the C.N.R. as on the C.P.R., and in his opinion it did not much matter whether the Canadian National had adopted the C.P.R. rates voluntarily, or had been ordered to do so by the Board of Railway Commissioners. He stated that the C.P.R. had agreed to build through the Yellowhead Pass, but chose the Kicking Horse, and that it was making B.C. pay for its mistake. He argued that the cost of operation is no higher on the mountain section than elsewhere, and he quoted a statement to the effect that the cost of operation on the Canadian National between Edmonton and Vancouver is the lowest of any road on the continent. He also said that heavy construction cost is no argument; as the cost is borne so as to make possible reduced operating cost, and he pointed out that the Canadian National Montreal-Ottawa line cost much more to build than the line through the Fraser River canyon. On Gerard Ruel objecting to this, he admitted that the Ottawa-Montreal line costs were due largely to terminal construction. As to grain rates, Mr. McGeer claimed that 100,000,000 bushels of Canadian grain are now going through U.S. ports annually, a large part of which should go through Vancouver. Comparing rates on an 880-mile haul to Vancouver and to Fort William, he showed that the Vancouver rate is 27 $\frac{1}{2}$ c., compared with a 20c. rate to Fort William. He also claimed that the differential on the local grain rates to B.C. points is imposing an annual tax of \$375,000 on B.C.'s flour consuming populace. He also claimed that lumber rates are unreasonable, and said that lumber can be shipped from Pacific coast ports to Boston, via the Panama Canal, for \$8 a thousand feet, while the rate to Manitoba points, is \$15. He said that the only reason that Mr. Pitblado was at the hearing was because the Winnipeg Board of Trade was afraid that Winnipeg might lose the trade monopoly which the present rates give it, and he expressed the opinion that while the removal of the mountain scale might make the railways suffer some temporary financial loss, this would be nothing to the rev-

enues they would enjoy from the larger traffic due to hastened western development, made possible by equalized rates. He touched on the transcontinental rate situation to the extent of explaining how it costs more to send goods from Montreal to Alberta cities than it does to Vancouver; Mr. Flintoft objected to this matter being introduced, but Mr. Ford suggested that the Government could hear argument upon it, and, if thought advisable, order the Board of Railway Commissioners to make an investigation. This was agreed to.

During Mr. McGeer's argument, the Minister of Finance asked how westbound rates in Canada compared with those in the U.S. Mr. Flintoft showed that the Canadian rates are lower, but Mr. McGeer produced a map designed to show that there could be no comparison due to differences in physical conditions. Mr. Chrysler submitted that this was new evidence which should not be submitted in appeal.

Frank Ford, K.C., representing Alberta, read a statement from Premier Greenfield of that province, pointing out the disadvantage the Alberta farmers are at because of the relationship between eastbound and westbound grain rates; they have to pay the maximum rate in either direction. As to transcontinental rates, Mr. Ford stated that the rate from Montreal to Edmonton and Calgary is 25% higher than from Boston and other Atlantic points to Spokane, and that he did not think this condition fair.

Isaac Pitblado, K.C., presented his argument on Aug. 10 and is reported to have stated that B.C. was not after a legitimate rate reduction, but was seeking an equalization which is entirely unwarranted by conditions. In his opinion, the result of ignoring railway costs in the mountainous and sparsely settled portions of B.C. would be to raise rates all over the country. He contended that nature had favored the Pacific coast cities with water transportation, making ship competition possible and producing rate conditions very favorable to B.C. He maintained that the B.C. appeal represented an attempt to retain all the advantages it had, and to insist on all its disadvantages being removed, at the expense of her sister provinces. He considered that the Board of Railway Commissioners' decision in regard to B.C. rates was a just and equitable one. The Commission had considered cost of construction, cost of operation, originating traffic, diversity of traffic and all other relevant factors, and the Government would be ill-advised to interfere with the Board's ruling for the reason that the Board had evidence on which to base its judgment which the Government had not time to collect. At this point the Postmaster General interrupted and said that the Railway Act gave the Government power to deal with a question arising from the Board's decisions, if it was satisfied that the Board had not dealt with the matter in accordance with the principles laid down in the Act. Continuing, Mr. Pitblado explained why operating costs are twice as high in B.C. as on the prairies. He said the railways could do almost three times as much business in Manitoba as in B.C. for the same expense. He claimed that a 100% locomotive (C.P. rating) hauled an average train of 618 tons in Manitoba in 1920, compared with 538 in Saskatchewan, 471 in Alberta, and only 373 in B.C. He also called attention to higher fixed charges due to higher construction costs

in B.C., to the lower traffic density on B.C. lines compared with the prairie lines, and to the fact that B.C. originates less traffic per mile of line than any other province. He pointed out that 85% of B.C.'s tonnage is carried on commodity rates, and stated that the real reason for the appeal is to deprive prairie distributing centers of their natural areas of distribution for B.C.'s benefit. He made it clear that he was not opposing the B.C. argument on selfish grounds, but it seemed to him and those whom he represented that B.C. was "trying to make Vancouver a second Montreal at the expense of Winnipeg." He pointed to the rapid and substantial growth and development which B.C. is experiencing as evidence of the reasonableness of existing rates.

F. H. Chrysler, K.C., presented his argument on Aug. 13, and is reported as first wanting to know just how far Parliament had intended to authorize appeals to the Government from the Board of Railway Commissioners; he wondered if opposing counsel contended that the Government should have the authority to say that, though the Board had acted within the terms of the Railway Act, for other reasons the Board's ruling should be upset. If so, he argued, such a contention would have the effect of substituting the Government for Parliament, which alone could amend the act. He traced the history of rate making in Canada in such a way as to show the futility of Mr. McGeer's argument to the effect that rates should be on a similar basis in all localities. He pointed to the Railway Act of 1903, which originally gave authority to the Board of Railway Commissioners to approve more than one standard mileage tariff, evidence in itself that Mr. McGeer's argument was unsound. As to the contention that the Canadian National cost of operation in B.C. is less than that of the C.P.R. he pointed to the fact that although the C.N.R. line from Edmonton to Vancouver is 128 miles longer than the C.P.R. from Calgary to Vancouver, the charges for transportation thereon are on the same basis. As to construction costs, he quoted C. A. Hayes, formerly Vice President, Traffic, Canadian National Rys., to the effect that fixed charges on the C.N.R. mountain sections are 3½ times what they are on the prairie sections. As to the contention that B.C. is entitled to special consideration by reason of implications related to the covenants contained in the agreement between British Columbia and Canada at the time the former entered confederation, he argued that these had no foundation in fact. The agreement was only to the effect that a railway should be built to connect with the Canadian railway system, and it contained no provisions as to equality or inequality of tolls. As to Mr. McGeer's argument based on the C.P.R. relocation from the Yellowhead to the Kicking Horse Pass, he said that the B.C. Government had offered no objection at the time, and that if the line had not been built through the Kicking Horse Pass, development of British Columbia's southeastern valleys would not have been possible. He argued further on operating costs and traffic density in such a way as to demonstrate that there is ample justification for the present rate arrangement.

Gerard Ruel, K.C., occupied only about as many minutes in his argument as other counsel had taken hours. He is reported to have stated that as a previous

Government direction to the Board of Railway Commissioners had stated that no attention was to be given to Canadian National Rys. financial requirements in adjusting rate levels, the C.N.R. was not as vitally interested in the matter as the C.P.R. He thought that the appeal represented an attempt to tell the members of the Government in a few hours what the Board had considered for years, and that the Government should interfere only on two possible occasions, either where there had been an error in principle in a decision by the Board, or where a constitutional right was involved. He did not think the B.C. appeal involved any constitutional question.

F. Ford, on Aug. 14, in order to save time, agreed to allow Mr. McGeer to conduct rebuttal argument on behalf of both B.C. and Alberta. Mr. McGeer presented his concluding argument on that date, his representations being of the same nature as those presented by him before. This concluded the proceedings. Premier King assured Premier Oliver of B.C. that a decision would be arrived at as soon as all conditions would permit.

Freight Car Condition and Supply.

The Railway Association of Canada reports that on Aug. 1 there were 203,841 freight cars on Canadian lines, of which 14,018 were in bad order, this number being equivalent to 6.9 per cent. The bad order percentage at July 1 was 7.6, and at June 1 was 7.7, so that there is some improvement. A shortage of 543 cars was reported as of Aug. 1, compared with a shortage of 750 at July 1 and 350 at June 1.

In the U.S., at July 15, there were 188,621 freight cars in need of repairs, this being 8.3 per cent of the number on line, and the smallest percentage since Dec., 1920. On July 1 the number of bad order cars on U.S. lines was 190,411, equivalent to 8.4 per cent of the total. Despite the fact that the loading of revenue freight on U.S. roads for the week ended July 21 totalled 1,028,927 cars, the largest number in railway history, there were on hand on July 22 on those roads 79,710 surplus freight cars in good repair.

According to the transportation efficiency programme adopted by U.S. lines on April 15, the number of bad order cars is to be reduced to 5 per cent of the total by Oct. 1. From the figures given above it is evident that between July 15 and Oct. 1 the roads will have to repair 3.8 per cent of the total cars on line, in addition to doing current maintenance, if the programme is to be carried out.

The American Railway Association's operating rules committee met in Montreal, Aug. 14, and following days. On Aug. 14 they were entertained at the Windsor Hotel by the Canadian National Rys. and the C.P.R., and in the evening they left on the Canada Steamship Lines s.s. Montreal for Quebec, where they were entertained at luncheon at the Chateau Frotenac by the C.P.R., on Aug. 15, returning to Montreal by train.

Sir Henry Thornton at Winnipeg.—A Winnipeg press dispatch of Aug. 25 said it was officially announced that Sir Henry Thornton, President, Canadian National Rys., had established a personal office in the Fort Garry station, and that he would be there at regular intervals of five weeks.

The Wawa Hotel Disaster and the Relief Work.

While the deepest sympathy is felt universally for the relatives of the eight victims who perished, and for the others who were injured in the terrible fire at the Wawa Hotel, Lake of Bays, Ont., on the night of Aug. 18-19, that of transportation people goes out especially to C. G. Bowker, General Manager, Central Region, Canadian National Rys., in the loss of his younger daughter, Margaret Mary, aged 14; also to the Canada Railway News Co., of which T. P. Phelan, of Toronto, is President, which owned the splendid hotel, at which it gave a most satisfactory service and which steadily grew in popularity as the years went by. J. D. Warde, the company's Secretary Treasurer, who was staying in a cottage near the hotel, rendered great service in aiding the nearly 200 guests who escaped, and in facilitating their return to their homes. Too much cannot be said of the tremendous aid given by C. O. Shaw, President Anglo-Canadian Leather Co. of Huntsville, who is also President of the Huntsville and Lake of Bays Navigation Co., and proprietor of the Bigwin Inn, which is but a short distance from the Wawa. He acted with great promptitude in dispatching launches and other available small craft, which ran for several hours carrying as many of the burned out people as possible to his hotel, where he generously provided them with food and accommodation, and many of them with money, and made splendid arrangements for their conveyance by his steamboats and short portage railway to the G.T.R. Toronto-North Bay line at Huntsville, 145.9 miles north of Toronto.

Miss Margaret Bowker's death was particularly sad. Mr. Bowker, who, with his wife, son and two daughters, were in a suite on the ground floor, got out with all of them to safety, but, for some unexplained reason, in the terrible excitement which prevailed, Miss Margaret Bowker went back into the hotel, possibly, it is said, thinking her mother had not got out, and perished near the room she had been occupying.

Directly the news of the disaster reached W. E. Weegar, Superintendent, Allandale Division, Central Region, Canadian National Rys., at Allandale, early on the morning of Aug. 19, he had a special relief train made up, consisting of a baggage car, 5 passenger cars, and a sleeping car, and, accompanied by W. S. Thompson, Director of Publicity, C.N.R., Montreal, he went on it to Huntsville, 83.2 miles, where it awaited the arrival of the steamboats carrying the refugees from the Lake of Bays. Another special train was dispatched as quickly as possible from Toronto, consisting of 5 passenger cars to replace those taken from Allandale, so as not to disturb the regular service, a parlor car, a dining car, hastily but well provisioned, and Assistant General Manager Kingsland's car Kaien. C. S. Moore, General Superintendent of Transportation, Central Region, and C. E. Horning, District Passenger Agent, Toronto, went on this train. R. H. Fish, General Superintendent, Southwestern Ontario District, C.N.R., Toronto, who was at Parry Sound, rushed to Huntsville, 61.3 miles, on his business car 2901, which was added to the cars sent from Allandale, and the relief train thus made up left Huntsville on Aug. 19, at 6.10 p.m. standard time. At Martins, 4.4 miles south of Huntsville, it met the special train from Toronto,

from which the parlor car, dining car and business car Kaien were switched on to it. Everything that the C.N.R. officials could do for the refugees' comfort was willingly performed. They were made as comfortable as possible, and, in addition to being carried free, were served with free meals in the dining car, the crew of which deserve great credit for the way in which they worked. At 11.15 p.m., standard time, the train reached Toronto union station, where excellent arrangements had been made for the transfer of the injured in ambulances to the hospitals, and numerous motor cars took the others to hotels, private houses, etc. The Toronto arrangements were made under the direction of A. L. Smith, Superin-

bie, Chief of Transportation; W. A. Kingsland, Assistant General Manager, Central Region; R. H. Fish, General Superintendent, Southwestern Ontario District; W. R. Davidson, General Superintendent, Montreal District; G. T. Bell, Executive Assistant to Vice President, Traffic Department; G. C. Jones, General Manager, Telegraph and Telephone Department; Major F. L. C. Bond, Chief Engineer, Central Region; C. R. Moore, General Superintendent of Transportation, Central Region; J. Coleman, General Superintendent Car Equipment, Central Region; J. C. Garden, General Superintendent of Motive Power, Central Region; W. S. Wilson, Superintendent of Transportation, Southwestern Ontario District; W.

Miss Margaret Bowker's Funeral.

The coffin being placed on C.N.R. business car Quinte at Toronto Union Station, en route to Shamokin, Pa., where the burial took place.

tendent, Union Station, who gave orders from his house, where he was laid up owing to having been knocked down by a train in the station a few days before. A second relief train took the balance of the refugees to Toronto on Aug. 20.

Miss Margaret Bowker's Funeral.

A requiem mass for Miss Bowker was celebrated at St. Peter's Roman Catholic Church, Toronto, on Aug. 21, by Rev. Monseigneur McKeown, of London, Ont., all the Paulist priests in the city being in the sanctuary. In addition to Mr. Bowker and his remaining family, the large congregation contained, among others, the following C.N.R. officials: S. J. Hungerford, Vice President, Operation and Construction Department; D. Crom-

E. Weegar, Superintendent, Allandale Division; M. S. Blaiklock, Assistant Chief Engineer, Operation Department; J. B. McLaren, Comptroller, Central Region; Lorne MacDonald, Assistant Freight Traffic Manager; L. L. Grabill, General Baggage Agent, Central Region; L. W. Buller, Assistant Superintendent, Nipissing Division; C. E. Horning, District Passenger Agent; G. A. Stokes, Superintendent, Toronto Terminals, and E. W. Burns, Chief Clerk to General Manager, Central Region. U. E. Gillen, General Manager, Toronto Terminals Ry., and a number of C.P.R. officials were also present. After the service, Miss Bowker's remains were taken to Toronto Union Station, placed in the C.N.R. business car Quinte and taken to Shamokin, Pa.

Railway Operating Revenues, Expenses and Other Statistics for May.

The following comparative table for May, 1923 and 1922, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There has been no change in the roads operating, but the 1922 figures, given in the reports this year, include certain revisions, and are not in all cases the same as reported in 1922.

The column headed "Canadian National" gives the figures for the combined steam railways in Canada, under the

Canadian National Ry. Co's directors' management, including the former Canadian Northern System, the Intercolonial, Prince Edward Island, National Transcontinental and other Canadian Government Rys., the Hudson Bay Ry. and the Grand Trunk Ry. of Canada and the Grand Trunk Pacific Ry. It includes all G.T.R. lines in Canada and 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Province Line Ry., 9.77 miles, and Black Rock terminal. It does not include other lines in New England, nor lines west of the Detroit and St. Clair Rivers.

The column headed "Canadian Pacific"

includes also the Montreal & Atlantic and Esquimalt & Nanaimo Rys.

The first six items under the heading "Operating revenues" include rail lines only and not water lines. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. Total train miles include freight; passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, baggage, parlor cars, etc.

*Contains a proportion of mixed train miles.

Railway Operating Revenues, Expenses and Other Statistics.

The table on the preceding page gives the operating revenues, operating expenses, net earnings and other operating statistics for Canadian railways as a whole for May, and separately for the Canadian National and Canadian Pacific. Tables on another page give the Canadian National and Canadian Pacific results for June. All the tables show that traffic conditions on Canadian railways continue to improve, and the individual tables show that in June the railways were able to handle the large traffic offering with expenses that made the net earnings more favorable than in June, 1922.

Analyzing first the table on the preceding page, which gives the May results for all roads, collectively, and the two larger roads, individually, perhaps the most striking thing about the results secured, next to the expansion in business done, as indicated by the operating revenue, operating expense and traffic figures, is the fact that although the operating ratio for May, 1923, was slightly greater than for May, 1922, the net earnings for May, 1923, were more than \$300,000 greater than for May, 1922. This brings home in a realistic manner the fundamental principle that the operating ratio in itself is not the most important factor in the railways' business; and that on a small volume of business, with a favorable operating ratio, the earnings on invested capital may not be nearly so good as with a larger volume of business and a somewhat less favorable operating ratio. A favorable operating ratio applied to a large business is what the railways need.

Bearing in mind the rate relationship between May, 1922, and May, 1923, the average receipt per revenue ton mile having declined from 1.248c. in May, 1922, to 1.079c. in May, 1923, the increase in freight traffic indicated by the increase in operating revenues, and shown by the ton mileage statistics to have taken place, shows greater activity in the country's economic life this year than last. The passenger earnings, also, despite the average rate per passenger mile having increased over May, 1922, indicate an increase in travel, which the number of revenue passengers carried one mile shows actually took place. This is another indication of the economic trend. Operating revenues for all railways in May, 1923, were better than for May, 1922, in all the main earning divisions; the increase in operating revenues being 10.2 per cent over May, 1922, and 4.7 per cent over April, 1923. Freight earnings were 8.4 per cent. more than in May, 1922, and passenger earnings 8.6 per cent. more.

Operating expenses were 4.7 per cent more in May than in April, 1923, and 10.5 per cent more than in May, 1922. They increased in all departments compared with May, 1922. The chief increase was in transportation expenses, amounting to \$1,959,460, and examination of the payroll figures indicates that most of this increase was for additional wages. The increase in operating expenses, in relation to that secured in operating revenues, produced an operating ratio for May, 1923, of 88.62, compared with 88.36 in May, 1922. The operating ratio for April, 1923, was 88.66, almost the same as for May.

Attention was directed above to the

betterment in net earnings, despite the increased operating ratio; this betterment was carried through to the operating income, and a comparison of the income for May, 1923, compared with May, 1922, shows that the improvement was substantial. The operating income for April, 1923, was \$3,943,417.09, so that an improvement is also evident in May, compared with the preceding month.

Analysis of the operating statistics having to do with traffic handled, and the way in which it was handled, shows the causes of the increased operating revenues, operating expenses, net earnings and operating income. The increase in the number of ton miles of revenue freight handled, from 1,954,000,000 to 2,451,000,000 represents an improvement of more than 25 per cent. While the increase was not so great in the number of revenue passenger miles, it was, however, when combined with a slight increase in the average passenger rate, sufficient to produce a substantial increase in earnings from passengers. It is also noteworthy, in connection with passenger business, that the increase in the number of passenger train miles was not so great, on a percentage basis, as in the number of revenue passengers carried, while the number of passenger train car miles operated decreased by 8 per cent from May, 1922. It is encouraging to passenger traffic men to know that the "increasing and decreasing returns" part of their business works both ways, i.e., when passenger traffic is falling off, it is difficult to make reductions in service that will reduce expenses proportionately to the loss in revenues suffered, but, on the other hand, when business is picking up, additional revenues will flow in to the railways' coffers without proportionately increased expenditures having to be made. Preliminary reports for weeks in July and the first part of August indicate that passenger business has been picking up well; and, as this end of railway traffic has been in a more or less depressed condition for some time, the betterment is encouraging and it is to be hoped that it will continue.

Train and car loading figures show that there was better train loading in May, 1923, than in May, 1922, the average revenue trainload being 19.4 tons heavier in May, 1923. This came about not only from a betterment in car loading (24.2 tons a car in May, 1923, compared with 23.3 in May, 1922), but also from a higher average number of loaded cars per train. Although the reduction in the average receipt per revenue ton mile was too large for the increase in the average train load to make freight revenues per freight train mile as good a figure as in May, 1922, the small increase in the average passenger rate, combined with the increased average number of passengers per passenger car mile, produced better passenger earnings per passenger train mile. The figures showing operating results indicate increased efficiency in handling both freight and passengers; the relative differences in earnings as between freight and passenger train miles was brought about solely by the rate changes.

The increased traffic handled necessitated the addition of a large number of employees. The roads as a whole had 14,891 more employees in May, 1923, than in May, 1922, and the payroll in-

creased by \$1,594,386.37.

On the Canadian National Rys., including the Canadian Northern, Intercolonial, Prince Edward Island, National Transcontinental and other Government railways the Hudson Bay Ry., the Grand Trunk Ry in Canada, and the Grand Trunk Pacific Ry., and 36.16 miles of the G.T.R. in the U.S., viz., Champlain and St. Lawrence Ry., 1.21 miles, United States and Canada Ry., 22.18 miles, Vermont & Province Line Ry., 9.77 miles, and the Black Rock Terminal, but not other U.S. Grand Trunk lines nor the Central Vermont Ry., in May there were increases in both operating revenues and operating expenses, the greater increase being in operating revenues, with the result that the operating ratio improved from 96.26 to 94.50. Operating revenues increased 9.4 per cent, and operating expenses 7.4 per cent. Freight earnings increased 8.5 per cent, and passenger earnings 18.7 per cent. Revenue ton mileage increased 28.1 per cent, and average train loading increased from 443.8 to 526.8 tons. The Canadian National Rys. contribution to the increase in employes and wages for all roads as stated was 8,103 in employes and \$875,736 in wages, compared with May, 1922. The C.N.Rys. financial results for May were commented upon in our August issue, pg. 389.

The Canadian Pacific Ry., including the Montreal & Atlantic and the Esquimalt & Nanaimo Rys., financial results for May were also commented upon in our August issue. While it had a 2.5 per cent increase in operating revenues, it also had a 9 per cent. increase in operating expenses, due largely to an increase of 20.3 per cent in maintenance of way and structures expense. While revenue ton mileage and revenue passenger mileage had gains, compared with May, 1922, of 15.1 and 6.3 per cent, respectively, both train and car loading fell off. The C.P.R. payroll for May was \$651,173 more than for May, 1922, and the number of employes was 6,371 more. The larger increase in operating expenses than in operating revenues increased the operating ratio from 82.72 in May, 1922, to 87.99 in May, 1923.

By examining the results secured by the two largest systems in June, it is seen that the C.P.R. operating revenue was \$14,943,918, an increase of \$1,133,471 over June, 1922; and operating expenses, \$12,521,918, were \$1,073,783 more, which resulted in net earnings of \$2,422,001, being \$59,687 more than in May, 1922. The increase in net obtained in June was not, however, sufficient to bring the net for the first 6 months up to that for the first 6 months of 1922. At the end of May the C.P.R. was \$307,398 behind in its net, compared with the first 5 months of 1922; and the June results left it still \$247,711 behind, despite an increase in gross of \$4,550,135 in the first six months of 1923, compared with the same period of 1922. The increase in operating expenses for the 6 months was \$4,797,845.

The Canadian National Rys. June operating revenues were \$20,475,149, compared with \$18,308,716 in June, 1922; and operating expenses were \$19,354,677, compared with \$18,432,527, which resulted in net earnings of \$1,120,471, compared with an operating deficit of \$123,812 in June, 1922. For the first

6 months of 1923, operating revenues were \$116,778,673, an increase of \$14,208,039 over the first 6 months of 1922; and operating expenses, \$115,266,441, were \$9,769,810 more, which gave net earnings of \$1,512,232 for the first 6 months of this year, compared with an operating deficit of \$2,925,997 in the first 6 months of 1922.

From the May figures as given in the table on the preceding page and as analyzed above, and from the June results as also mentioned, it is evident that the railways are operating on a pretty narrow margin. They are moving heavy traffic and doing it efficiently; if the traffic was not heavy, or if they were not moving it efficiently, they would not be able to break even. The operating ratios they are obtaining are not what they should be; they are exceptionally good, however, with conditions as they are. A falling off in traffic would, with rates remaining as they are, make the operating ratio more unfavorable than it is, and cut the net earnings to the vanishing point. While traffic remains good the railways are sorely beset by employees who want more wages, and by patrons who want rates reduced, through direct reduction and so-called equalization. It does not require much imagination to see that the railways are not getting results to put them in a position to afford either wage increases or rate reductions.

Self-Propelled Cars on Steam Railways.

Previous issues of Canadian Railway and Marine World have contained descriptions and illustrations of the numerous self propelled cars acquired by the Canadian National Rys. (including a large gasoline car ordered by the G.T.R., before the amalgamation), Greater Winnipeg Water District Ry., Quebec Central Ry. (including the car operated by the C.P.R. on its LaSalle Loop Subdivision), and Quebec, Montreal & Southern Ry., each car having been described as it was acquired. Most of the cars are in operation on the runs specified in previous issues, but some redistribution has been effected on the Canadian National Rys., as follows: No. 15,800, formerly a gasoline-electric car operating between Winnipeg and Transcona, Man., is being converted into a storage battery car at the Niagara, St. Catharines & Toronto Ry. shops at St. Catharines, Ont. At the time of writing (Aug. 15) this work is nearly completed, and on being finished the car will be returned to its former run. No. 15,801, a storage battery car bought from the Storage Battery Car Co., is operating between Toronto and Beaverton, Ont.; 15,802, the larger of the 2 storage battery cars bought from the Cambria & Indiana Rd., is operating between Bathurst and Campbellton, N.B.; 15,803, the other storage battery car bought from the Cambria & Indiana Rd., is operating between Brockville and Westport, Ont.; 15,804, steam car, has been taken out of service and returned to the builders; 15,810, a small gasoline driven car built on a Winton chassis, operating formerly between Souris and Elmira, P.E.I., has been taken out of service and replaced by steam train service; 15,811, a small gasoline car built by Ledoux, Jennings, Ltd., formerly in operation between Cross Creek and Stanley, 5.74 miles, on the Nashwaak and Stanley Subdivisions, Ed-

mundston Division, Atlantic Region, is now being operated between Dalhousie and Dalhousie Jct., 6.21 miles, on the Dalhousie Subdivision, Campbellton Division, Atlantic Region, service between Cross Creek and Stanley being now given by steam trains 27 and 28, which en route from Newcastle to Fredericton and vice versa, on the Nashwaak Subdivision, operate from Stanley Jct. to Stanley and return; 15,812 and 15,813, gasoline cars built by Ledoux, Jennings, Ltd., are operating between Victoria and Milne's Landing, 26.6 miles, on Cowichan Subdivision, Vancouver Island Lines, British Columbia District; 15,814, a Service gasoline car, and 15,815, a Ledoux, Jennings gasoline car, are operating between Trenton, Picton and Napanee, Ont.; 15,816, the large gasoline car ordered by the G.T.R. from National Steel Car Corporation, and described in Canadian Railway and Marine World for February, is not yet completed. In addition the Canadian National Rys. have had 2 small gasoline cars built at the Fort Rouge shops, Winnipeg, and these have been numbered 15,700 and 15,701.

Toronto Viaduct Situation.

While there has been a considerable amount of discussion lately with respect to what is likely to be done about the construction of a viaduct along the Toronto waterfront by the railways and the city, the matter is no nearer a settlement. R. P. Gough, one of the Canadian National Rys. directors was reported to have said in July: "A meeting of the C.N.R. directors will be held in Toronto on Aug. 20 when various matters of interest to the people of Toronto will be considered by the board, and particularly the question of grade separation on the waterfront, together with such steps as can be taken to open for public travel as soon as possible the new union station. It would be premature for me to express any opinion with respect to the action of the board in advance of this meeting, however I feel that I am not going too far when I say that the board is anxious to carry out any obligations into which it has entered, and I believe that the policy which it will eventually determine upon will be satisfactory to the people of Toronto. I have the interests of Toronto very much at heart, and in addition to fulfilling my full responsibility as a director of the C.N.R., I am always anxious to do whatever will best serve the interests of the city. Toronto is one of the most important cities on the C.N.R. lines; we derive a very large annual traffic from it, and we consider the goodwill of the community to be one of our most valuable assets."

In preparation for this meeting there was talk of a conference of civic officials with the directors. The mayor said he believed Sir Henry Thornton, President, C.N.R., would declare himself to be in favor of building the viaduct, and the city would work in harmony with him. T. L. Church, M.P. for North Toronto, was authorized by the Toronto Harbor Commissioners to arrange for a conference of all parties interested. The Minister of Railways, who was apparently invited to the conference, is reported to have informed Mr. Church that it would not be wise for him to interfere with a matter that could be dealt with by the railways and the city. Aug. 20 came and went, but the mayor and other Toronto officials were not invited to meet the C.N.R. directors, and R. P. Gough was

only able to attend the meeting for a short time, having business elsewhere, probably in connection with the inspection of the Home Bank, of which he was Vice President, and apparently the viaduct question was not dealt with. Following the meeting, Sir Henry Thornton was reported to have said that the question was one for settlement by the Toronto Terminals Ry. Co., that he believed that the C.P.R., as well as the C.N.R., is anxious to have it settled so that the new union station may be opened; but the matter is a big one and requires a great deal of deliberation before any conclusion can be reached. Within a year it would probably be possible to say what the railways would do.

Railway Earnings.

Canadian National Railways.

Canadian Railway and Marine World is again unable, as in August, to publish its usual comparative monthly table of C.N.R. earnings, owing to changes which have been made in the form in which they are furnished. The following figures have been supplied by the C.N.R. Publicity Department for the "Amalgamated System." Apparently they include the total revenue and expenses of some of the subsidiary companies which were not included formerly.

	Earnings	Expenses	Net	Increase
May	\$20,992,772	\$19,092,414	\$1,900,358	\$ 925,126
June	20,475,149	19,354,678	1,120,471	1,244,282

For 6 months ended June 30	\$116,778,673	\$115,266,441	\$1,512,232	\$4,438,229
Increases	\$14,208,039	\$ 9,769,810	\$4,438,229

Another statement issued by the C.N.R. Publicity Department states the gross revenues for the Canadian National Rys., including the Central Vermont Ry., for June were \$21,216,499.11, operating expenses, \$20,039,053.85, net revenue, \$1,177,445.26.

The C.N.R. Publicity Department states that the Canadian National Rys. gross earnings for July were \$20,976,770, against \$19,333,721 in July, 1922; that for the 3 weeks ended Aug. 21 they were \$14,772,289, against \$13,682,333 for the same period in 1922, and that from Jan. 1 to Aug. 31 they were \$152,559,185.90, an increase of \$16,967,497.18 over same period in 1922.

Operating ratios—	1923	1922
January	102.57	110.46
February	116.55	107.71
March	102.10	98.92
April	89.93	107.09
May	90.95	94.72
June	94.53	100.68
For 6 months ended June 30	98.71	102.85

The C.N.R. official figures, as reported to the Dominion Bureau of Statistics for May, for practically Canadian lines only, are given on pg. 420 of this issue.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1923, compared with those for 1922. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimalt & Nanaimo Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World:—

	Gross.	Expenses.	Net.	Increase or Decrease
Jan.	\$13,148,914	\$12,428,888	\$ 720,026	* 236,549
Feb.	11,159,865	10,664,371	495,494	*158,994
Mar.	13,585,763	11,606,049	1,979,714	*440,793
April	13,651,494	11,700,615	1,950,879	*402,107
May	14,355,539	12,357,292	1,998,247	*346,266
June	14,943,919	12,521,918	2,422,001	59,687

\$80,845,493	\$71,279,133	\$9,566,360	*\$247,711
Incr. \$ 4,550,135	\$ 4,797,846
Decr.	\$ 247,711

Approximate gross earnings for July, \$15,118,000 and for three weeks ended Aug. 21, \$10,581,000, against \$13,940,000 and \$10,165,000 for same periods in 1922.

Allan Cameron, Oriental Manager, C.P.R., Hong Kong, China, writes: "I have been a subscriber to Canadian Railway and Marine World for many years, and enjoy it immensely."

Railway Rolling Stock Orders and Deliveries.

Belgo-Canadian Paper Co. has received 12 forestry cars from Canadian Car and Foundry Co.

Selmet Solvay Co. has received 1 four wheel (0-4-0) switching locomotive, with cylinders 14 x 22 in. from Montreal Locomotive Works.

Quebec Development Co. has received 3 four-wheel (0-4-0) switching locomotives, with cylinders 14 x 22 in. from Montreal Locomotive Works.

The C.P.R., between July 15 and Aug. 16, received 36 vans, 2 single truck steel snow ploughs and 1 steel underframe box car 36 ft. long, from its Angus shops, Montreal; 9 steel baggage and express cars from National Steel Car Corporation, and 4 Pacific (4-6-2) type locomotives, with cylinders 25 x 30 in. from Montreal Locomotive Works.

Canadian National Railways.

Canadian National Rys. have received 500 automobile cars and 12 first class passenger cars from Canadian Car and Foundry Co.

The Canadian National Rys. have ordered 1,000 forty-ton steel frame automobile cars from Pressed Steel Car Co., Chicago, Ill.

Canadian National Rys., between July 12 and Aug. 17, received 9 mountain type locomotives from Canadian Locomotive Co.

Canadian National Rys. have received 3 Mikado (2-8-2) locomotives, with cylinders 27 x 30 in. from Montreal Locomotive Works.

Canadian Railway and Marine World for July stated that the C.N.R. had ordered 44 locomotives from American Locomotive Co., for use on lines in the U.S., all of which are being built at Schenectady, N.Y. Following are the chief details of each type:

Consolidation

Number ordered	16
Service	Central Vermont Ry.
Cylinders, diar. and stroke	24 x 32 in.
Tractive power	50,000 lb.
Factor of adhesion	4.0
Wheel base, driving	17 ft.
“ “ total engine	25 ft. 10 in.
“ “ total engine and tender	59 ft. 1 1/4 in.
Weight in working order	227,000 lb.
Weight on drivers	200,000 lb.
“ on engine truck	270,000 lb.
“ engine and tender	387,000 lb.
Boiler, type	extended wagon top
“ diar. inside first ring	72 11/16 in.
“ working pressure	200 lb.
Firebox, length and width	102 1/2 x 75 1/4 in.
Tubes, no. and diar.	229 2 in.
Flues, no. and diar.	36 5 1/2 in.
Tubes and flues, length	15 ft.
Heating surface, tubes	1,803 sq. ft.
“ “ flues	755 sq. ft.
“ “ firebox	175 sq. ft.
“ “ arch tubes	28 sq. ft.
“ “ total	2,761 sq. ft.
Superheater surface	630 sq. ft.
Grate area	53.4 sq. ft.
Wheels, driving, diar.	63 in.
“ driving, material	cast steel
“ engine truck	rolled steel, 30 in.
“ tender truck	rolled steel, 33 in.
Journals, driving, main	10 1/2 x 14 in.
“ other	9 1/2 x 12 in.
“ engine truck	6 x 12 in.
“ tender truck	6 x 11 in.
Journal boxes	cast steel
Tank, type	water bottom
Water capacity	8,000 gals.
Coal capacity	16 tons

8-Wheel Switching

Number ordered	13
Service	8 for Central Vermont Ry., 5 for Grand Trunk Western.
Cylinders, diar. and stroke	22 x 28 in.
Tractive power	45,200
Factor of adhesion	4.45
Wheel base, total engine	14 ft. 6 in.
“ “ engine and tender	50 ft. 0 1/4 in.
Weight in working order	200,000 lb.
“ engine and tender	332,000 lb.
Boiler type	extended wagon top
Boiler, diar. inside first ring	73 in.
“ working pressure	200 lb.

Firebox, length and width	95 15/16 x 75 1/4 in.
Tubes, no. and diar.	210 2 in.
Flues, no. and diar.	32 5 1/2 in.
Tubes and flues, length	15 ft.
Heating surface, tubes	1,653 sq. ft.
“ “ flues	687 sq. ft.
“ “ firebox	165 sq. ft.
“ “ arch tubes	26 sq. ft.
“ “ total	2,531 sq. ft.
Superheater surface	580 sq. ft.
Grate area	50 sq. ft.
Wheels, driving type and diar.	cast steel, 54 in.
“ tender truck type and diar.	cast iron plate, 33 in.
Journals, driving	main 10 x 12 in.
“ “ other	9 1/2 x 12 in.
“ tender truck	5 1/2 x 10 in.
Journal boxes	cast steel
Brakes	Westinghouse American
Tender frame	cast steel
Tank, type	water bottom
Water capacity	6,000 gals.
Coal capacity	9 tons

Pacific

Number ordered	10
Service	Grand Trunk Western
Cylinders, diar. and stroke	25 x 28 in.
Tractive power	40,700 lb.
Factor of adhesion	4.05
Wheel base, driving	13 ft.
“ “ total engine	34 ft. 11 in.
“ “ total engine and tender	70 ft. 7 1/2 in.
Weight in working order	280,000 lb.
“ on drivers	165,000 lb.
“ on trailer	58,000 lb.
“ on engine truck	57,000 lb.
“ engine and tender	474,000 lb.
Boiler, type	Conical Conn.
“ diar. inside first ring	74 1/2 in.
“ working pressure	200 lb.
Firebox, length and width	114 1/8 x 84 1/4 in.
Tubes, no. and diar.	188 2 1/4 in.
Flues, no. and diar.	36 5 1/2 in.
Tubes and flues, length	19 ft.
Heating surface, tubes	2,092 sq. ft.
“ “ flues	980 sq. ft.
“ “ firebox	242 sq. ft.
“ “ arch tubes	27 sq. ft.
“ “ total	3,341 sq. ft.
Superheater surface	794 sq. ft.
Grate area	66.7 sq. ft.
Wheels, driving, type and diar.	cast steel, 73 in.
“ engine truck type and diar.	rolled steel 33 in.
“ trailing truck, type and diar.	cast steel, 43 in.
“ tender, type and diar.	rolled steel, 36 in.
Driving journals	main 11 x 13 in.
“ other	10 x 13 in.
Journals, engine truck	6 1/2 x 12 in.
“ trailing truck	9 x 14 in.
“ tender truck	6 x 11 in.
Journal boxes	cast steel
Brakes	Westinghouse American
Air signal	Westinghouse
Engine and trailing truck	Commonwealth constant resistance
Tender frame	cast steel
Tank type	water bottom
Water capacity	10,000 gals.
Coal capacity	16 tons

Mikado

Number ordered	10
Service	Grand Trunk Western
Cylinders, diar. and stroke	26 x 30 in.
Tractive power	54,700 lb.
Factor of adhesion	4.18
Wheel base, driving	16 ft. 9 in.
“ “ total engine	36 ft. 1 in.
“ “ total engine and tender	71 ft. 5 1/2 in.
Weight in working order	304,000 lb.
“ on drivers	28,500 lb.
“ on trailer	54,500 lb.
“ on engine truck	21,000 lb.
“ engine and tender	494,000 lb.
Boiler, type	Conical Conn.
“ diar. inside first ring	76 1/2 in.
“ working pressure	200 lb.
Firebox, length and width	114 1/8 x 84 1/4 in.
Tubes, no. and diar.	216 2 1/4 in.
Flues, no. and diar.	40 5 1/2 in.
Tubes and flues, length	19 ft.
Heating surface, tubes	2,407 sq. ft.
“ “ flues	1,090 sq. ft.
“ “ firebox	253 sq. ft.
“ “ arch tubes	27 sq. ft.
“ “ total	3,777 sq. ft.

500 70-ton steel hopper coal cars.

Coal capacity	16 tons

The Canadian National Rys. single sheathed box cars, 60 tons capacity, 750 of which have been ordered from Canadian Car and Foundry Co. and 250 from National Steel Car Corporation, as mentioned in our last issue, will be equipped with steel underframes of fish belly center sills type, arch bar type of trucks, 5 1/2 x 10 in. journals, Camel door fixtures, Westinghouse air brakes, KC 1012, etc. Of the total number of cars, 500 will be equipped with Miner A-2-S draft gear, with Farlow 2-key attachment, and 500 with Cardwell draft gear; 3 different types of side bearings will be used, viz., Laughlin, Stucki, and Woods; 3 different types of journal boxes will also be used, viz., National, McCord, and Symington; Hutchins all steel flexible 16 g. steel roofs will be used on 750 of the cars, and Chicago Cleveland Car Roofing Co's Viking outside metal roofs on 250. The chief dimensions are as follows:

Capacity	120,000 lb.
Length inside	40 1/2 ft.
Width inside	8 1/2 ft.
Height, floor to bottom of carline	9 ft.
Width of side door opening	6 ft.
Height of side door opening	8 ft. 7 15/16 in.
Height, rail to floor	3 ft. 8 in.
Height, rail to bearing surface of center plates	2 ft. 1 1/4 in.
Center to center of bolsters	31 ft.
Height, rail to top of running board	13 ft. 10 in.

United States Orders

U.S. locomotive builders shipped more locomotives in July, 1923, than in June, 1923, or in July, 1922, but there were fewer unfilled orders on hand at the end of July, 1923, than at the end of June, 1923, although there were more than twice as many as there were at the end of July, 1922. In July, 1923, 239 locomotives were shipped from the builders' plants, compared with 232 in June, 1923, and 128 in July, 1922. In the first seven months of 1923 1,644 were shipped, compared with 490 in the corresponding period of 1922. At the end of July, 1923, there were on hand unfilled orders for 1,738, compared with 1,958 at the end of June, 1923, and 811 at the end of July, 1922. Of the 1,738 unfilled orders on hand at the end of July, 1923, 1,652 were for service in the U.S. and 86 for export.

The Interstate Commerce Commission has authorized the Philadelphia and Reading Ry. to issue equipment trust certificates from the proceeds of which the following rolling stock which has been received, is to be paid for:

	Unit price.	Total cost.
500 70-ton steel hopper coal cars.	\$2,072.45	\$1,036,224.33
500 “ “ “ “ “ “	2,135.37	1,067,682.72
500 “ “ “ “ “ “	2,067.82	1,033,908.33
500 “ “ “ “ “ “	2,075.58	1,037,790.50
15 Steel passenger cars	18,710.62	280,659.30
30 “ “ “ “ “ “	18,723.19	561,695.76

5 Steel combination passenger and baggage cars, suburban type.	16,702.12	83,510.60
5 Steel baggage cars	17,241.68	86,208.41
25 Consolidation locomotives	38,192.00	954,800.07
Total		\$7,003,783.30

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Board of Railway Commissioners.—W. R. FOLLIS, heretofore passenger locomotive man, C.P.R., running between Toronto and Hamilton, has been appointed Inspector of Railway Safety Appliances, with office at Toronto, vice L. D. Gillett, deceased.

Canadian National Rys.—D. E. BROWN.—Sir Henry W. Thornton, President, has issued a circular as follows: "Until further notice, the accounting and financial departments will be under the direction of D. E. Brown, Chief Assistant to Financial Vice President. The appropriate officers in those departments will report to and receive instructions from him, and he will, in turn, report directly to the President, in all matters relating to accounting and finance." Office, Montreal.

MAJOR J. L. CHARLES, heretofore Resident Engineer, Neebing Yard, Fort William, Ont., has been appointed Terminal Engineer, there vice S. B. Wass, appointed Engineer in charge of construction, Toronto Eastern Ry., Oshawa, Ont. It is not anticipated that the position of Resident Engineer, Neebing Yard, will be filled.

A. DEVINE, heretofore Master Mechanic, Campbellton, N.B., has been appointed Master Mechanic, Edmundston, N.B., vice H. D. Mackenzie, appointed Master Mechanic, Campbellton, N.B.

R. GILMOUR, heretofore Superintendent, Montreal Terminals, has been appointed Assistant to General Superintendent, Montreal District, Central Region. Office, Montreal.

J. B. HERON, heretofore on location and construction work between Ottawa and Capreol, Ont., has been appointed Resident Engineer, Toronto Eastern Ry. Office, Oshawa, Ont.

GEO. C. JONES, heretofore Assistant Manager, Central Region, Canadian National Rys., Montreal, has been appointed General Manager, Telegraph and Telephone Department, C.N.R., including Canadian National Telegraphs, Geo. D. Perry, Vice President and General Manager, Canadian National Telegraphs, having retired after long and faithful service. Office, Toronto.

H. L. McCaughey, heretofore City Passenger Agent, Chicago, Ill., has been appointed General Agent, there, vice C. G. Orttenberger, appointed General Western Passenger Agent, Chicago, Ill.

J. H. McDIARMID, heretofore Assistant Superintendent, Fort William Division, Manitoba District, Sioux Lookout, Ont., has been appointed Yardmaster, Transcona, Man.

H. D. MACKENZIE, heretofore Master Mechanic, Edmundston, N.B., has been appointed Master Mechanic, Campbellton, N.B., vice A. Devine, appointed Master Mechanic, Edmundston, N.B.

Y. MOODY, Assistant Superintendent, Sleeping, Dining, Parlor Cars, and Railway Restaurants, Central Region, has been appointed acting Superintendent, of that department, Toronto, while E. W. Smith is acting General Superintendent at Montreal.

W. S. MURPHY, heretofore Assistant Chief of Wage Bureau, Montreal, has been appointed by S. J. Hungerford, Vice President, Operation and Construction, as General Time Supervisor, with jurisdiction

over all steam lines. It will be his duty to reorganize the timekeeping service, supervise the same, and take up with the proper territorial officers, any matters relating thereto, and he will also give special attention to matters relating to economical operation. Office, Montreal.

J. NEWMAN, heretofore in charge of yard, Stratford, Ont., has been appointed Roadmaster between Paris Jct. and Goderich, Goderich Subdivision, and of Otterville Subdivision, Stratford Division, Southwestern Ontario District, Central Region, vice C. J. Carey deceased. Office, Stratford, Ont.

C. G. ORTTENBERGER, heretofore General Agent, Chicago, Ill., has been appointed General Western Passenger Agent, with jurisdiction in Chicago, Ill., and the State of Ohio. Office, Chicago.

C. PRICE-GREEN, heretofore Commissioner, Industrial and Resources Department, Toronto, has been appointed Commissioner, Colonization and Development Department, reporting to W. D.

H. E. Whittenberger,
General Manager, Grand Trunk Western Lines,
Canadian National Railways.

Robb, one of the Vice Presidents. Office, Montreal.

R. C. RENNIE has been appointed acting Assistant Superintendent, Sleeping, Dining, Parlor Cars and Railway Restaurants, Central Region, Toronto, while Y. Moody is acting Superintendent of that department.

F. A. RUTHERFORD, heretofore Passenger Trainmaster, Southwestern Ontario District, Central Region, Toronto, has been appointed Superintendent of Transportation, Montreal District, Central Region, vice C. M. Walton, appointed Superintendent, Montreal Terminals. Office, Montreal.

E. W. SMITH, Superintendent, Sleeping, Dining, Parlor Cars and Railway Restaurants, Central Region, Toronto, has been appointed acting General Superintendent of that department, during the absence of J. M. Grieve, who has been

granted 3 months sick leave. Office, Montreal.

J. P. TOBIN has been appointed City Passenger Agent, Chicago, Ill., vice H. L. McCaughey, appointed General Agent, Passenger Department, there.

H. L. VERCOE, at one time in the Engineering Department, has been appointed Special Engineer on Electric Lines. Office, Toronto.

W. WALKDEN, heretofore Assistant Bridge Engineer, Western Region, Winnipeg, has been appointed Bridge Engineer, Western Region, vice J. G. LeGrand, deceased. Office, Winnipeg.

C. M. WALTON, heretofore Superintendent of Transportation, Montreal District, Central Region, Montreal, has been appointed Superintendent, Montreal Terminals, Montreal District, Central Region, vice R. Gilmour, appointed Assistant to General Superintendent, Montreal District, Central Region. Office, Montreal.

H. E. WHITTENBERGER, heretofore Manager, Michigan District, Central Region, has been appointed General Manager, all lines west of the Detroit and St. Clair Rivers, which has been detached from the Central Region and are designated "Grand Trunk Western," for operating purposes. Office, Detroit, Mich. He reports to S. J. Hungerford, Vice President, Operation and Construction, Montreal, instead of to C. G. Bower, General Manager, Central Region, as heretofore. The Manager of Car Ferries, (C. H. Nicholson), reports to the General Manager, Grand Trunk Western, in respect to Lake Michigan ferries, and to the General Manager, Central Region, in respect to Detroit River and Lake Ontario ferries, and Canada Atlantic Transit Co's services.

R. WRIGHT, heretofore Division Agent, Toronto, has been appointed Passenger Trainmaster, Southwestern Ontario District, Central Region, Toronto, vice F. A. Rutherford, appointed Superintendent of Transportation, Montreal.

Canadian Pacific Ry.—**J. M. CAMPBELL**, heretofore Division Engineer, Portage Division, Manitoba District, Winnipeg, has been appointed Division Engineer, Moose Jaw Division, Saskatchewan District, Moose Jaw, vice C. S. Moss, appointed Division Engineer, at Nelson, B.C.

T. MARTIN, heretofore Division Engineer, Nelson Division, British Columbia District, Nelson, has been appointed Division Engineer, Portage Division, Manitoba District. Office, Winnipeg.

C. S. MOSS, heretofore Division Engineer, Moose Jaw Division, Moose Jaw, Sask., has been appointed Division Engineer, Nelson Division, British Columbia District, vice T. Martin. Office, Nelson, B.C.

A. SWANSON has been appointed Roadmaster, from mile 68 to Neudorf, Lanigan Subdivision, Saskatoon Division, Saskatchewan District, vice O. Hibbert, transferred. Office, Lipton, Sask.

Newfoundland Railway.—**H. J. RUSSEL**, heretofore Superintendent, Eastern Division, and Assistant to General Manager, has been appointed acting General Manager, R. C. Morgan, General Manager, having resumed his former position with the C.P.R. at Winnipeg, as announced in a previous issue. Office, St. John's, Nfld.

Toronto Eastern Ry.—See Canadian National Rys.

The Canadian National Rys. Car Buying in the United States.

In connection with complaints about the Canadian National Rys. having ordered cars in the United States, recently, Sir Henry Thornton, President, is reported to have said: "A thousand automobile box cars have been ordered to be built in the U.S. for the Canadian National Rys., and they are going to stay ordered. The time has come when it must be clearly laid down that a dissatisfied contractor cannot come in and take charge of running this railway system. Tenders were originally called for these cars in Canada. Later, it was brought to my notice that as the cars were to be almost exclusively used on the C.N.R. in the U.S., they would be subject to 30% duty on entering the U.S., if manufactured in Canada. This duty would have added \$1,000,000 to the cost, and rendered it impossible to place the order in Canada. Either they had to be made in the U.S. or not at all. Some of the people whom I invited to show me how I could give the order in Canada, and who admitted they did not see how it could be done, have now started to agitate, apparently with the idea of hampering the C.N.R. They went to Mr. Smith, the head of the Canadian Manufacturers' Association, and he came to see me. After I had put the facts before him he declined to interfere any further in the matter. I can tell you that neither the Canadian Car & Foundry Co. nor the Eastern Car Co. are in on this agitation. I spoke with Mr. Wolvin about this matter and while regretting that the order should go out of Canada, he agreed that there did not seem to be any other alternative. Incidentally, I may add that we are saving a big sum of money on the tenders, and that is to be spent among Canadian firms in additional equipment, which I could not otherwise have bought."

The National Steel Car Corporation's Stand.

The Montreal Star published an interview with R. J. Magor, President, National Steel Car Corporation, on May 21, crediting him with saying as follows: "All we hear from one end of this country to the other is the slogan, 'Buy in Canada,' but when we come down to realities and purchases are actually being made, we find that all kinds of reasons are given by the purchaser why it is necessary that items required should be bought outside of this country. The slogan, 'Buy in Canada,' does not seem to hold water when the test comes, and in consequence both labor and industry, which are the backbone of the country, suffer. Several U.S. railways operating in Canada never buy any equipment in this country, and a definite policy should be outlined by the authorities in Ottawa in order to determine what percentage of U.S. equipment used here on U.S. owned railways should be purchased in this country. Having just returned from spending the week-end in the Laurentian Mountains, I did not see, until you showed it to me, the article which appeared in the Star of Aug. 18, in reference to the purchase of 1,000 cars by C.N.R. in the U.S., and I am naturally not in a position to say what Sir Henry had in mind when he gave this interview. We, of course, were anxious to secure our share of this business, and naturally would be very severely criticized by our directors and stockholders if we did not put forth every effort to secure orders to keep our factory operating, particularly when orders

here in Canada are so scarce. Last March apparently the same condition existed, in connection with the last 1,000 automobile cars which were purchased by the C.N.R. The Canadian Manufacturers' Association and car companies and other manufacturers interested, were active in keeping this business in Canada, and the final decision was favorable, as our plant is now producing a share of this order.

"However, I do not think the problem is reduced to any one specific order, but on account of the many ramifications of this complicated matter, a determined stand should, in my opinion, be taken by the C.N.R., the manufacturers and all interested, in securing a ruling from Ottawa as to just where they all stand.

"We have at present a condition where the C.N.R. are operating 1,000 or more miles of railway in the U.S., and U.S. railways operating even a greater mileage in Canada, and on the one hand, the Canadian railways in the U.S. are forced, as in this particular instance, to buy there, whereas on the other hand, I have never heard of our Government taking any stand in forcing the U.S. lines in Canada to purchase a proper percentage of their equipment up here. This practice, if carried far enough, could absolutely ruin this country, as it is a known fact that the railways are the biggest buyers in practically any country, and prosperity is usually gauged by their buying activity; so, if our railways buy in the U.S., and the U.S. lines do not purchase here, it means a constant flow of money across the border, accentuating the already adverse financial and trade conditions that exist. It means reduced employment in this country, which will tend to accentuate the migration of our population across the border. This reduces our bank deposits, and lessens the quantity of commodities that have to be transported by our railways. It means increased producing costs of manufactured products in this country, as the smaller the demand, correspondingly higher is the cost of production. It further means that, with the low price (on account of having to pay no duty or tax), of U.S. freight equipment, in use on U.S. lines in this country, competing against the higher price of Canadian equipment purchased here, and on which duty and tax have been paid to the Canadian Government, that a condition exists where the income from the respective cars is the same, and the earnings therefore on the higher priced Canadian equipment is securing a smaller return on the money invested, so that it seems to me that the railway and manufacturing interests should strenuously take up this matter.

"We hear continually the slogan, 'Buy in Canada,' and I have before me an article headed 'Produced in Canada Campaign, 1923'; but the process of permitting such conditions as I have outlined above to exist, absolutely holds up to ridicule this all-important slogan I have just quoted, as assuredly this country cannot possibly be successful and attain the position in the world that it is entitled to, unless we give up this penny-wise and pound-foolish idea, in other words, we make all our five-cent purchases in Canada, and our dollar purchases elsewhere. In talking this matter over with the officials of the Canadian Manufacturer's Association, they have advised me that this specific matter is under investigation, and they are secur-

ing data relative to the tonnage being moved by U.S. lines in Canada, and when they have it completely compiled, they propose to use their good offices by endeavoring to secure the passing of proper regulations that will ensure the purchase in Canada of a proper percentage of this U.S. equipment, and I certainly trust that they will secure the results which this problem deserves, but, in order to secure these results, the closest kind of co-operation between all interests is essential."

Tie Creosoting Contract Negotiations.

Canadian Railway and Marine World for July stated that Major General Alex. McDougall, C.B., formerly of Ottawa, and latterly of London, Eng., was representing Calders Limited of London, in negotiations with the Canadian National Rys. for creosoting ties, and that it was proposed to establish two plants, one near Cochrane, Ont., and the other near Quebec, Que.; that the proposed contract would be for 10 years from Aug. 1, 1924, subject to renewal, and would provide for the treatment of a minimum of 300,000 ties a year at the Cochrane plant and a similar number at the Quebec plant. We also stated that negotiations were going on with the Timiskaming & Northern Ontario Ry., for tie treatment at the Cochrane plant, and with the C. P.R. for tie treatment at the Quebec plant. We understand that the negotiations with the Canadian National Rys. and the T. & N. O. R. are still going on, but that up to Aug. 21 no agreement had been entered into. The giving of a contract by the C.N.R. for treating at Cochrane appears to be dependent on the T. & N. O. Ry. also giving one, so that a lower price may be secured for the larger number to be treated, and in this connection we are advised the T. & N. O. R. negotiations are for the treating of from 150,000 to 200,000 a year.

We are also advised that Calders, Canada, Limited has been formed to operate creosoting plants, that it will erect them at Cochrane and Quebec, that the chairman will be either John J. Calder, or Sir James Calder, C.B., of London, and that Major General Alex. McDougall will be Managing Director.

The Pacific Great Eastern Railway's Future.

Montreal press dispatch, Aug. 24.—It is reported here that an agreement is practically completed whereby the C.P.R. will take over the operation of the Pacific Great Eastern Ry. from the British Columbia Government. The contract is said to cover 10 years and to provide for the acquisition of the 422 miles of line at the end of that time if the company so desires. It will likely be linked up with the Edmonton, Dunvegan and B.C. line, now operated by the C.P.R. It is declared here that plans call for Vancouver being the terminal for Peace River grain shipments when the line is completed to link up with the E.D. and B.C. and eventually with the Alberta Great Waterways Ry. running to Fort McMurray.

A subsequent Montreal press dispatch credited E. W. Beatty, K.C., President, C.P.R., with stating that there was no foundation for the press dispatch quoted and that no negotiations had taken place.

Traffic Orders by Board of Railway Commissioners.

Demurrage on Lumber from United States.

33,938. July 27.—Re application of Canadian National Ry. Co. for an order restricting the time during which carloads of lumber and forest products shipped from the United States to Canada shall be held without demurrage charges at rate-basing points, awaiting reconsignment instruction, from 48 hours (as required under order 22,237, July 18, 1914) to 24 hours. Upon the report and recommendation of its Chief Traffic Officer, the complainants under order 22,237 having been advised of this application and having made no objection thereto, the Board orders that order 22,237, dated July 18, 1914, be amended by striking out paragraph (3) of the operative part thereof, and substituting the following therefor: "3. Demurrage be charged and collected in accordance with Canadian Car Demurrage Rules upon any such cars delayed at said rate-basing point over 24 hours free time awaiting reconsignment instructions." That this amendment be effective from Aug. 1, 1923.

Release Form for Empty Cream Cans

33,956. July 5. The Express Traffic Association of Canada's application under the Railway Act, 1919, sec. 365, for an order approving a form of release for empty cream cans left on station platforms. Upon hearing the application at Edmonton and Calgary, Alta., on June 26 and July 10; at Regina, Sask., on July 12, and at Winnipeg, on July 16, in the presence of counsel for the Traffic Association, the Alberta Dairymen's Association, the United Farmers of Alberta and the Saskatchewan Co-operative Creameries, Ltd., and upon the evidence offered and what was alleged. The Board orders that the application be dismissed.

Supplement to Express Classification.

33,961. Aug. 1. Re the Express Traffic Association of Canada's application for approval of Supplement E to Express Classification for Canada, no. 5. Upon reading what has been filed in support of the application, and on behalf of the Canadian Manufacturers' Association, the Montreal and Toronto Boards of Trade, and upon the report and recommendation of its Chief Traffic Officer, the board orders that the said supplement be approved.

Windsor, Essex and Lake Shore Rapid Ry. Freight Tariff.

33,966. July 31. Re Windsor, Essex and Lake Shore Rapid Ry's application under the Railway Act, 1919, sec. 330, for approval of its standard mileage freight tariff C.R.C., 307. Upon reading the application and what is filed in support thereof, no objection to the proposed tariff having been filed, the board orders that the said tariff be approved.

Great Northern Railway's Log Tariff.

34,021. Aug. 10. Re A. J. Farquharson's application for a revised minimum shipping weight on carloads of logs shipped from his spur at mile 65 of the Great Northern Ry. Co. to Fernie, B.C. Upon hearing the application at Fernie on July 9, 1923, in the presence of the applicant and a representative of the Great Northern Ry. Co.; the evidence offered and what was alleged, and upon the report and recommendation of its Chief Traffic Officer, the board orders that the G.N.R. revise its tariff on logs shipped in carloads from the applicant's

spur, to provide for a minimum for carloads of 8,000 ft. a car, except that the minimum will be 7,000 ft. a car, where cars of 60,000 lb. capacity or less are furnished; such revised tariff to be filed for the Board's approval, and to become effective two weeks from this date.

Express Classification Supplement Approved.

34,037. Aug. 13.—Re Express Traffic Association of Canada's application for approval of Supplement F to Express Classification for Canada, no. 5. Upon reading what has been filed in support of the application, and on behalf of the Canadian Manufacturers' Association and the Montreal and Toronto Boards of Trade, and upon its Chief Traffic Officer's report and recommendation, the Board orders that the said supplement be approved.

Abolition of Halifax Export and Import Arbitrary.

At the time of the extension of the Intercolonial Ry's service to Montreal some years ago, when running rights were secured over the G.T.R. from Ste. Rosalie to Montreal, an agreement was made between the Dominion Government and the G.T.R., establishing the rates on export and import traffic from and to overseas British and foreign countries at 1c per 100 lb. over St. John, N.B. We are officially advised that it has now been agreed between the Government and the Canadian National Rys. management that the clause of the agreement will be suspended, and in consequence the C.N.R. tariffs will be amended on or about Oct. 1, by eliminating the differential mentioned. The change will put Halifax on a parity with other Atlantic ports for handling export and import business.

In this connection J. E. Dalrymple, Vice President, Traffic Department, C. N.R., telegraphed the Halifax Board of Trade on Aug. 15 as follows: "Am pleased to advise you that we are preparing tariffs eliminating the so-called one-cent arbitrary rate on export and import traffic to and from European and continental ports via Halifax. This change does not apply to furtherance, nor Newfoundland, business. The new arrangement will be effective about Oct. 1 next."

Canadian Railways and United States Grouping Plans.

In connection with the proposals for the grouping of railways in the United States, now under consideration, the Boston Chamber of Commerce committee issued a report, Aug. 18, upon the Storrow committee's proposals for the unification of the New England railways. The Chairman of Commerce Committee recommends the rejection of the proposals to consolidate the New England lines with one of the great trunk roads, and urges the consolidation of the New England lines, with the exception of the Boston and Albany Rd., and the Grand Trunk Ry., into the New England system. The report says in part:—"The Canadian rail routes are far more important than appears from the percentage of New England traffic which they handle. The differential rates via these routes attract sufficient business at all times to keep them open, and in time of embargo and congestion, which have occurred so frequently, traffic via Canadian lines largely increases and it often happens

that the Canadian routes are the only open channels of communication between New England and the west. The experience of the past six months indicates the vital necessity to New England industry of keeping alive and increasing in efficiency every line and every gateway reached by New England rails. To us it seems clear that trunk line control would practically end all advantages which New England now enjoys by these differential routes, and by many of the gateways now open to New England industries. Obviously the main reason for trunk lines acquiring control of New England railroads would be to control the routing of freight. This would mean, as has been pointed out, the speedy destruction of the rail differential routes."

Buffalo and Fort Erie Bridge Co.

The Dominion Parliament has incorporated the Buffalo & Fort Erie Bridge Co., with authorized capital of \$500,000, and office at Fort Erie, Ont., to build a general traffic bridge, with accommodation for electric railway cars, across the Niagara River, between Walnut St., Fort Erie, and Hampshire St., Buffalo, N.Y., the provisional directors being W. F. Wilson, W. Douglas, R. Cooper, W. M. German, M.P., L. B. Duff, of Welland, Ont.; D. McGillivray and C. Steele, of Port Colborne, Ont. The company is reported to have obtained the New York State Land Board's approval for the erection of the bridge, and a similar application is before the War Department. An organization meeting is reported to have been held in Fort Erie, Aug. 9, and to have elected the following directors: W. M. German, M.P., President; D. McGillivray, Vice President; W. Douglas, Fort Erie, Secretary; W. F. Wilson, Fort Erie, Treasurer; J. C. Duffin, L. B. Spencer, Welland; W. G. Wilson, M.L.A., Ridgeway, C. E. Steele, Port Colborne; H. H. Greene, New York. The company, it is said, proposes to issue \$3,000,000 of 7% bonds at 96½. A meeting of shareholders was called, to be held at Fort Erie, Aug. 23, to arrange for amalgamation with the U. S. company, and for other purposes.

Railway Finance, Meetings, Etc.

Canadian Pacific Ry.—The directors, on Aug. 13, declared the following dividends: On preference stock, 2% for half year ended June 30; on common stock, 2½% for quarter ended June 30, from railway revenues and special income. Both dividends are payable on Oct. 1 to stockholders of record Aug. 31.

Canadian National Rys.—There has been deposited with the Secretary of State at Ottawa a first mortgage made between the Canadian National Rys. as mortgagors, the Minister of Finance and Receiver General as trustee and the Dominion of Canada as guarantor, securing an issue of \$22,500,000 of C.N.R. 5% serial guaranteed bonds in connection with Equipment, Series G, 1923. Particulars of the sale of the bonds to a Toronto syndicate were given in Canadian Railway and Marine World for August, pg. 380.

Pennsylvania Rd. and Pere Marquette Ry.—We are officially advised that the Pennsylvania Rd. Co. has not made any overtures whatever to the P. M. Ry. Co. for running rights over the latter's lines in Canada, as stated recently in the daily newspapers.

Mainly About Railway People Throughout Canada.

Mrs. Baker, wife of W. R. Baker, C.V.O. ex Secretary, C.P.R. Co., who has been spending some months in Austria and Germany, has returned to Montreal.

Major Graham A. Bell, C.M.G., Deputy Minister of Railways and Canals, left Ottawa, Aug. 9, for New York, whence he sailed for England, on railway business. He will, later, join the Minister of Railways and Canals, at a meeting of the League of Nations at Geneva, Switzerland.

David R. Bell, one of the most widely known conductors on the C.P.R., died at Guelph, Ont., Aug. 5, from pneumonia. He was born at Toronto, July 19, 1862, entered C.P.R. service Aug. 11, 1884, as freight conductor, and subsequently was passenger conductor. For a short while he was Superintendent at Toronto, but at his own request was returned to passenger service as conductor.

Mrs. M. S. Blaiklock, wife of M. S. Blaiklock, Assistant Chief Engineer, Operation Department, Canadian National Rys., Montreal, who spent a portion of the summer at Metis, Que., went to her summer home at Sonnevill, Que., early in August, for the balance of the season.

C. G. Bowker, General Manager, Central Region, Canadian National Rys., Toronto, and R. Muirhead, Yardmaster, Don station, Toronto, had a narrow escape while fishing on the Lake of Bays, during the third week of August. In attempting to land a fish, Mr. Bowker stumbled in the boat which capsized, but both he and Mr. Muirhead being good swimmers, they managed to keep afloat until another guest at the Wawa Hotel rescued them.

E. R. Bremner, of W. C. Edwards Co., wholesale lumber, Ottawa, formerly Assistant General Freight Agent, Canada Atlantic Ry., Ottawa, and afterwards Division Freight Agent, G.T.R. there, is one of the directors of Ottawa and Hull Power Co., which has been formed to acquire the Ottawa and Hull Power and Manufacturing Co.

Sir George McLaren Brown, European General Manager, C.P.R., London, Eng., has been re-elected President of the Canadian Chamber of Commerce there.

Stuart B. Brown, who has been appointed Manager, Transportation Department, Canadian Manufacturers' Association, Toronto, was born at Ottawa, Ont., Jan. 14, 1891, and entered transportation service July 1, 1906, since when he has been, to Sept. 1, 1907, clerk, local freight department, Ottawa & New York Ry., Ottawa; Sept. 1, 1907, to May 1, 1908, clerk, General Freight Department, same road, Ottawa; May 1, 1908, to Nov. 10, 1911, clerk, Tariff Bureau, New York Central Rd., New York; Nov. 10, 1911, to July 15, 1912, in private business; July 15, 1912, to Jan. 17, 1919, Assistant to Manager, Transportation Department, Canadian Manufacturers' Association, Toronto; Jan. 17, 1919, to June 28, 1923, Assistant Manager, same department, C.M.A., Toronto.

H. V. Caldwell, District Passenger Agent, Canadian National Rys., Liverpool, Eng., arrived in Canada, Aug. 6, and spent a short time in the Maritime Provinces, before proceeding to the Pacific Coast, on a tour of the Dominion, in the company's interests, to obtain first hand information for prospective

immigrants and tourists from Great Britain.

C. J. Carey, Supervisor of Track, Canadian National Rys., Stratford, Ont., died there suddenly, Aug. 7, aged 52. He entered G.T.R. service in 1885 and prior to his appointment at Stratford, was Roadmaster at Brantford, Ont.

Granville Carlyle Cunningham, formerly of Canada, and now living at Farnham Common, Buckinghamshire, Eng., celebrated his 'golden wedding' there, Aug. 14, having been married at St. James Cathedral, Toronto, Aug. 14, 1873. He was born at Edinburgh, Scotland, April 27, 1847, and is a son of the late Alexander Cunningham, Secretary to the Commissioners of Northern Lighthouses, (Great Britain), his mother being a daughter of the late R. P. Crooks,

sulting engineer. He is a member of the Institution of Civil Engineers, England, and Engineering Institute of Canada.

H. R. Charlton, Manager, Advertising Bureau, Canadian National Rys., Montreal, was in France early in August, in connection with the Canadian exhibition train at Dijon and other points, and returned to London, Eng., Aug. 17, to place contracts for the erection of a C.N.R. building at the Empire Exhibition at Wembley.

J. E. Dalrymple, Vice President, Traffic, Canadian National Rys., Montreal, returned east from Winnipeg, early in August, and was met in Toronto by Mrs. Dalrymple, who accompanied him to Buffalo, Chicago and Pittsburgh, prior to returning to Montreal.

E. W. Beatty, K.C., President, C.P.R., leaving London, Eng., for Canada, recently. Left to right—Sir Hamar Greenwood; E. W. Beatty; Senator Smeaton White, Montreal; Sir George McLaren Brown, K.B.E., European General Manager, C.P.R.

barrister, Toronto. He was educated in Edinburgh, and from 1870 to 1871 was engaged in surveying for a railway in Honduras; 1871 to 1874, in railway work in Ontario; 1874 to 1875, on preliminary surveys for C.P.R.; 1875 to 1879, engineer in charge, Prince Edward Island Ry., and of harbors on the island; 1879 to 1881, on Canada Southern Ry.; 1881 to 1883, Chief Engineer, same railway; 1884 to 1886, General Assistant to Manager of Construction, Rocky Mountain Division, C.P.R.; 1886 to 1889, railway contractor in Lower Canada; 1889 to 1892, Assistant City Engineer and City Engineer, Toronto; 1892 to 1897, General Manager and Chief Engineer, Montreal St. Ry.; 1897 to 1899, Managing Director, City Tramways, Birmingham, Eng.; 1899 to 1911, General Manager, Central London (Tube) Ry., London, Eng., since when he has acted as a con-

F. O. Finn, General Agent, Chicago, Milwaukee and St. Paul Ry., Victoria, B.C., left recently for London, Eng., on a holiday.

C. O. Foss, formerly District Engineer, National Transcontinental Ry., and Chief Engineer, St. John Valley Ry., and latterly Chief Engineer, New Brunswick Hydro Commission, has resigned, and has removed to New Hampshire.

Hon. G. P. Graham, Minister of Railways and Canals, left Ottawa, Aug. 22, for Montreal, and sailed on Aug. 25 for Europe, to represent Canada at the League of Nations meeting at Geneva, Switzerland, and at the Imperial Economic Conference in London. He was accompanied by Mrs. Graham and his private secretary, Miss Hazel Sherritt.

H. C. Grout, General Superintendent, Ontario District, C.P.R., Toronto, spent

part of his holidays in August, in St. John, N.B., where he was General Superintendent formerly, and at Westfield, N.B. Mrs. Grout accompanied him.

Mrs. Grant Hall, wife of the Vice President, C.P.R., returned to Montreal, early in August, after spending a month at Guelph, Ont.

W. A. Hendry, Chief Engineer of Highways for Nova Scotia, who died at Halifax, N.S., July 29, was engaged at one time in the construction of the Cape Breton Ry., from Port Hawkesbury to Sydney, N.S., and also with the building of the Sydney and Louisburg Ry., the electrification of the Halifax Tramways, the building of the Halifax and South-western Ry., and survey work for the Halifax and Eastern Ry., the last two now forming portions of the Canadian National Rys.

Edward C. Lalonde, Senior Inspector of Railway Operation, Board of Railway Commissioners, Ottawa, died suddenly, at the Canadian National Rys. station, Moncton, N.B., Aug. 1, aged 63, while waiting for a train on which he was going to St. John. He had been in Moncton on business during the day, and had just left the office of the Superintendent, of the Moncton Division, and was proceeding to the train, when he collapsed, and died before a doctor could be summoned. He entered railway service at the age of 16, in the general offices of the old Canada Central and Brockville and Ottawa Rys., now part of the C.P.R. In 1881 he was appointed secretary to A. B. Chaffee, then Manager, South Eastern Ry., Montreal, and when that railway was absorbed in the C.P.R., he remained, and was later appointed Superintendent of the South Shore Ry., then owned by the Beaucehem interests, of Sorel, Que. On that line being acquired by the Delaware & Hudson Co., he was appointed an inspector under the Board of Railway Commissioners, retaining the position until his death. He lived at Longueuil, Que., for about 40 years, and was an alderman there for 21 years and mayor for 2 years.

George McCallum, station agent, Canadian National Rys., Galt, Ont., who has retired after 40 years of service there, with the company and its predecessors, was presented with a purse of money and an address, recently, by a number of local business men.

F. H. McGuigan, of Toronto, formerly Fourth Vice President, G.T.R., was appointed by the Minister of Labor, recently, to represent the Toronto Hydro Electric Commission, on the board of conciliation dealing with the dispute between the Commission and its employees, regarding wages and working conditions. He is also representing the Algoma Steel Corporation on a similar board, regarding wages and conditions of labor of that company's employees.

Mrs. C. E. McPherson, wife of the Assistant Passenger Traffic Manager, Western Lines, C.P.R., Winnipeg, spent part of the summer at St. John, N.B.

A. D. MacTier, Vice President, Eastern Lines, C.P.R., Montreal, and Mrs. MacTier, have announced the engagement of their only daughter, Adeline W., to D. A. White, of Ottawa, son of the late Lieut.-Col. Frederick White, C.M.G., formerly Commissioner of the Royal Northwest Mounted Police. Mrs. MacTier left Montreal, Aug. 6, to spend the remainder of the summer at Murray Bay, Que.

C. D. Manuel, formerly Inspector of Bridges and Buildings, Western Lines, C.P.R., Winnipeg, died at Brockville,

Ont., Aug. 7, aged 79. He retired from active service on pension several years ago. W. H. Manuel, Travelling Auditor, Western Region, Canadian National Rys., is a son.

Charles James Milligan, who has been appointed Regional Counsel, Atlantic Region, Canadian National Rys., Moncton, N.B., was born at St. John, N.B., Jan. 15, 1870, and is a B.A. and M.A. of the University of New Brunswick. He became a barrister in Sept. 1892, and practised at St. John, N.B., until April 1908, when he was appointed Master of Titles and Inspector of Legal Offices, for Saskatchewan, at Regina, with the rank of a deputy minister, which position he held to July 1, when given his present appointment. By an unfortunate mistake Mr. Milligan was referred to in our last issue as Mulligan.

Tom Moore, one of the Canadian National Rys. directors, and President of Canadian Trades & Labor Congress, has been named by the latter's executive council to represent Canadian labor at the International Labor Conference in Geneva, Switzerland, and will probably start from Ottawa early in October.

G. A. Mountain, Chief Engineer, Board of Railway Commissioners, Ottawa, and Miss Mountain, spent August at Moose Lake.

Robert Cooper Rennie, who has been appointed acting Assistant Superintendent, Sleeping and Dining Car Department, Canadian National Rys., Toronto, was born in Ayrshire, Scotland, Oct. 20, 1884, and entered transportation service in 1900, since when he has been, to 1905, ticket clerk, Glasgow and South Western Ry.; 1906 to 1908, in Auditor of Disbursements office, G.T.R., Montreal; 1908 to Apr. 1, 1923, chief clerk, Dining and Parlor Car Department, G.T.R., Toronto; Apr. 1 to Aug., 1923, chief clerk, Sleeping and Dining Car Department, Canadian National Rys., Toronto.

Senator J. D. Reid, formerly Minister of Railways and Canals, and Mrs. Reid, have announced the engagement of their daughter, Miss E. E. Reid, to Aemilius Jarvis, Jr., Toronto, the wedding to take place in September.

T. E. Roberts, who has been appointed Assistant Manager, Colonization and Development Department, C.P.R., London, Eng., was born in England, Dec. 3, 1887, and entered the company's service June 6, 1910, as accountant in the Land Department, and acted as a conductor for several land seeking parties arranged by the C.P.R. He was in military service from June 13, 1916, to Sept. 1, 1919, in connection with the Transport Department, and on his return to civil life re-entered C.P.R. service as Chief Assistant, Colonization and Development Department, London.

T. J. Riggs, who retired from active service as Superintendent, Blacksmith Shop, Pennsylvania Rd., Buffalo, N.Y., recently, has been placed on the company's honor roll, for long and faithful service. He was presented by his fellow employees with a diamond ring and a mahogany chair. He was born at Warsaw, Ont., July 8, 1853, and entered railway service in 1868 as apprentice blacksmith, Great Western Ry. (now Canadian National Rys.), Hamilton, Ont., and later served at Niagara Falls and Toronto.

A. L. Smith, Superintendent, Toronto Union Station, had a rib broken and was rather severely bruised, Aug. 2, when he was struck by a shunting passenger

train in the station. He resumed duty Aug. 20.

Sir Campbell Stuart, Managing Director of the Times, London, Eng., who visited Canada, during August, is a grandson of the late C. J. Brydges, who was appointed Managing Director of the Great Western Ry. of Canada in 1853, General Manager of the Grand Trunk Ry. in 1864, one of the commissioners of the construction of the Intercolonial Ry. in 1868, and subsequently General Superintendent of Canadian Government Railways.

J. G. Sullivan, consulting engineer, Winnipeg, formerly Chief Engineer, C. P.R., read a paper on transportation as related to national development, recently in Chicago, before the American Society of Civil Engineers, of which he is a member.

J. G. Sullivan, formerly Chief Engineer, C.P.R., has been elected President of the recently organized Canadian Engineering and Construction Co., Ltd., in Winnipeg, which intends undertaking general engineering and construction work, and has a contract for the erection of 51 miles of high tension line for the Manitoba Power Commission.

Sir Thomas Tait, President, Fredericton Ry. and Coal Co., Montreal, narrowly escaped serious, and possibly fatal, injury, Aug. 12, when the motor car, in which he was being driven from his summer home at St. Andrews, to Minto, N.B., crashed through a bridge in Sunbury County.

Charles Baultimas Trites, who has been appointed Assistant Superintendent of Pensions and Relief, Canadian National Rys., Moncton, N.B., was born there, Dec. 26, 1877, and entered railway service, May 5, 1892, since when he has been, to May, 1893, messenger, Intercolonial Ry.; May, 1893, to July 20, 1907, clerk, I.R.C.; July 20, 1907, to Dec. 1, 1915, chief clerk, I.R.C.; Dec. 1, 1915, to April 1, 1917, Assistant General Secretary, Intercolonial and Prince Edward Island Rys. Employees Provident Fund; April 1 to May 29, 1917, acting General Secretary, and from May 29, 1917, to Nov. 1, 1921, General Secretary, same organization; Nov. 1, 1921, to May 16, 1923, General Secretary, same organization, and Staff Recorder, Canadian Government Rys., all at Moncton, N.B.

William Walkden, who has been appointed Bridge Engineer, Western Region, Canadian National Rys., Winnipeg, was born at Alderley Edge, Cheshire, Eng., June 1, 1885, and served as an indentured pupil and assistant with P. Pierce & Son, Architects and Engineers, Stockport, Eng., from Oct., 1902, to July, 1907. He entered transportation service in Nov., 1907, since when he has been, to July, 1909, draftsman, Engineering Department, Canadian Northern Ry.; July, 1909, to May, 1912, draftsman and Assistant Engineer, Bridge Engineer's Department, same road; May to Nov., 1912, chief draftsman, same road; Nov., 1912, to Feb., 1917, Assistant to Bridge Engineer, same road; Feb., 1917, to Apr., 1919, acting Bridge Engineer, same road; Apr., 1919, to Sept. 1, 1920, Bridge Engineer, G.T.P.R., Winnipeg; Sept. 1, 1920, to July 3, 1923, Assistant Bridge Engineer, Western Region, Canadian National Rys., Winnipeg.

Mrs. Wallace, wife of J. J. Wallace, formerly General Freight Agent, Intercolonial Ry., at Moncton, N.B., died at Vancouver, B.C., July 28, and was buried at Moncton.

Canadian Railway AND Marine World

Founded in 1898 by Acton Burrows.

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transportation
Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

AUBREY ACTON BURROWS, Business Manager.

Assistant Editors, John Keir, Donald F. Keir and
Edwin Winfield.

United States Business Representative,
A. Fenton Walker, 143 Liberty St., New York.

Member of
Associated Business Papers, Audit Bureau of Cir-
culations, Business Newspapers Association of
Canada, Canadian National Newspapers and
Periodicals Association, Canadian Press Associa-
tion.

Authorized by the Canadian Postmaster General
for transmission as second class matter.

SUBSCRIPTION PRICE, including postage,
Canada, United Kingdom, most other British Pos-
session, (except Australia), and to Mexico, \$2 a
year. Extra postage to United States, 50c a year;
to other foreign countries, except Mexico, \$1.50
a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or
post office money order. If remittance is made
by cheque, 15 cents should be added to cover cost
of collection, unless cheque is payable at par in
Toronto or Montreal.

ADVERTISING RATES furnished on application.

ADVERTISING COPY must reach the publishers
by the 10th of the month preceding the date of
the issue in which it is to appear.

TORONTO, CANADA. SEPTEMBER, 1923.

The Inland Water Freight Rates Act's Injurious Effects.

The Marine Department of this issue contains, on pg. 454, full particulars of the undesirable and threatening situation which has developed consequent on the coming into operation of the Inland Water Freight Rates Act, 1923, the complete text of which was given in our August issue. The most noticeable thing about the situation is that the flood of complaints concerning it is coming, not from the ship owners, to discipline whom the act was passed, but from the grain trade, many members of which were most vociferous in their demands for the legislation. The serious aspect of the situation is that the act's operation threatens a grain blockade of unprecedented proportions, with consequent loss to all connected with the production and sale of Canada's grain crop, and injurious effect on the whole country's economic welfare. It will be a most regrettable thing if the situation which threatens comes about; the low prices prevailing for grain provide sufficient discouragement for farmers, without their financial returns being further reduced, indirectly, but none the less surely, through possible forced transportation of their crops through uneconomic channels.

The complaints now coming from the grain trade show that the act was passed without consultation with any person familiar with the situation, and that these complaints are well founded there can be no doubt. The contention advanced by Canadian grain shipping firms that they cannot do business with a demurrage clause is well founded; on the other hand, Canadian ship owners have ample justification for their attitude, which is, briefly, that they have no desire to again place rates on a level which would, at least partly, compensate them for losses caused by delays in unloading their ships, and have everybody shrieking "profiteer" at them from the housetops, when a demurrage clause similar to that applied to the railway business would protect them. The grain shipping firms' contention that the section of the act requiring brokers to post up details of preceding days' business will leave them open to exploitation is no doubt founded on fact. Their greatest apprehension, however, is to be found in U.S. ship owners' refusal to file tariffs in compliance with the act, or to carry Canadian grain to U.S. ports under the act's operation. The reason for this is that if Canada's western grain crop is to be moved expeditiously and through the most economic channels, with a consequent maximum return to the producer, it is necessary for some of that crop to be carried by U.S. ships to U.S. ports. There is no necessity for the carriage of Canadian grain by U.S. ships to Canadian ports; there are enough, and more than enough, Canadian ships to match the facilities the Canadian ports provide, but not enough to move the balance of the grain to U.S. ports, chiefly Buffalo. Last year, while Vancouver was handling to capacity, Canadian ships took from the head of Lake Superior, between Sept. 1 and the close of navigation, 389 cargoes, and U.S. ships took 432 cargoes, the average U.S. ship cargo being larger than the average Canadian one. In that period, 72,666,304 bush. of grain were sent to Canadian ports, and 115,843,757 to U.S. ports. During the 1922 navigation season, 123,870,583 bush. went to Canadian ports, and 150,226,044 to U.S.

ports. From these figures, the desirability of having U.S. ships participate in the movement to U.S. ports of the 1923 crop should be evident without further explanation.

A great deal has been said to the effect that Canadian Government Merchant Marine ships, by being placed in the lake trade, could obviate the necessity of having U.S. ships participate. The facts of the matter are that the 10 C.G.M.M. ships that have been on the lakes all summer could carry about 14,000,000 bush. between Sept. 1 and the freeze-up. These ships, Canadian Trader, Canadian Adventurer, Canadian Sailor, Canadian Sower, Canadian Pathfinder, Canadian Engineer, Canadian Signaller, Canadian Warrior, Thomas J. Drummond and J. A. McKee, have been working on the lakes all summer, with the exception of two laid up part of the time. The two last named ships have recently been sold, but presumably they will remain in the lake grain trade. Seven other C.G.M.M. ships, Canadian Gunner, Canadian Beaver, Canadian Farmer, Canadian Observer, Canadian Rover, Canadian Coaster and Canadian Logger, all of which are more or less fit for the carriage of grain, but are not now on the lakes, could be taken from their present employment, if they are now employed, and pressed into lake grain service, but the C.G.M.M. ships would not be a material factor in the situation which threatens to develop.

The chief reason given for U.S. ship owners' refusal to file tariffs and participate in the Canadian grain trade is their fear that by so doing they would greatly weaken their position as concerns certain prominent U.S. politicians' desires to have lake rates controlled by the Interstate Commerce Commission. If the public had more complete knowledge of the brand of regulation that Commission extended to U.S. railways prior to the passing of the Transportation Act, resulting in a threatened physical and financial railway breakdown, which influenced the U.S. Government to take over and operate the U.S. railways for more than two years, at a loss to the U.S. people of about two billion dollars, in addition to the direct transportation charges paid at high rates, U.S. ship owners certainly would not be blamed for wanting none of it. But there is another reason for U.S. ship owners' attitude, and that is the possibility of diverting a substantial portion of the Canadian grain crop to Duluth, which has elevator capacity for some 38,000,000 bush. for lake furtherance. A move to have this done is under way. It will certainly be a regrettable thing if all the business and revenue incidental to the movement of, say, 50,000,000 bush. of grain through Fort William and Port Arthur are lost to Canada, and gained by the U.S., through movement via Duluth, on account of the workings of the act.

The recent journey of Leslie Boyd, Chairman of the Board of Grain Commissioners, to Cleveland, for the purpose of endeavoring to secure participation by U.S. ships in the 1923 crop movement, does not tend to breed much confidence in the reported statement of the then Dominion Minister of Trade and Commerce, Mr. Robb, that the act would be enforced, and that if U.S. ships refused to come in the only result would be that they would lose so much trade.

The arrangement discussed in Winnipeg, which in effect was to allow the law to be winked at through requiring ship owners to file only copies of contracts made, instead of tariffs, was most undesirable; if laws are made they should be enforced, and if any law is such that the injuries worked by it far outweigh its benefits, it should not be in the statutes. It is greatly to be deplored that the Canadian Government should so humiliate itself as to say, in effect, to U.S. ship owners: "For Heaven's sake, come in, even with the law as it is, and we will make it as easy as we can for you," and to be turned down at that. While Mr. Boyd was reported, in a Winnipeg press dispatch of Aug. 21, as saying that he expected at least 50 U.S. ships to participate in the 1923 movement under the act, we were informed on Aug. 23, by a person intimately in touch with the shipping business, that when he was in Cleveland on Aug. 22, he met only one owner, out of many, who expressed himself as willing to let his ships enter the Canadian Great Lakes grain trade while the act is in force.

One of the strongest things in connection with government interference in the shipping industry was its action in placing suspension of the coastal laws in its own hands, so as permit it to let foreign ships come in and compete with Canadian ships in Canadian port-to-port trade, without Canadian ships having any opportunity to compete in foreign port-to-port trade, whenever it felt such action desirable, and then following that with legislation which has the effect of keeping U.S. ships out altogether. But apart from this feature of the Government's action, the wisdom of its course in extending to itself Parliament's power to suspend the coastal laws is seriously open to question. The effect that this would be liable to have on the Canadian shipping and shipbuilding industries was pointed out by Canadian Railway and Marine World in previous issues, and there is no doubt but that the action has produced much apprehension as to its ultimate effect, among shipping men and shipbuilders.

The interfering legislation recently applied to the shipping business has undoubtedly done a lot of harm. The Inland Water Freight Rates Act, which ostensibly was passed to restrict the profits of shipping companies which have been earning little enough, has created a situation wherein they, while recognizing the harmful nature of the act, stand ready to operate under it, and to assist the Board of Grain Commissioners and the Government in its administration, it has caused the grain trade to find efficient functioning difficult to the point of impossibility, and threatens serious loss to farmers and the grain trade as a whole. It is certainly to be hoped that the conditions which threaten to obtain this autumn may be avoided, and if the Government has any regard for the economic welfare of the country at large, to say nothing of its own political fortunes, it should employ all its powers to ensure that they will be. It might do that by consenting to have the law obeyed in the breach rather than in the observance. Its action last autumn in connection with the coastal law certainly establishes ample precedent for such procedure. Now that Mr. Robb has been succeeded in the Ministry of Trade and Commerce by Mr. Lowe, there is a good opportunity for the latter to reverse his predecessor's mistaken policy.

The Shop and Maintenance Men's Wage Increase Applications.

Canadian Railway and Marine World has generally refrained from commenting editorially on railway employees' wages or working conditions, because we have felt that railway officials have shown themselves very competent to safeguard the financial interests of their properties, and to fulfil their obligations to the public, which looks to them to provide freight and passenger transportation at reasonable rates, and that railway employees and their leaders, while naturally bending every effort to securing as good terms as are to be obtained, have in the great majority of cases shown good judgment and exhibited an attitude towards the railways and their officials which, fortunately, is not marked by any of the bitterness which apparently exists in the minds of railway employees on some U.S. lines. About the only departure from this policy was when certain employees threatened to seriously oppose the reduction made in their wages, consequent on the great degree of deflation which had taken place in business generally, and at that time we pointed out that by accepting the reductions proposed they would probably be farther ahead in the long run than if the reductions were not made, for the reason that transportation costs had to deflate in some measure, just like the cost of wheat and everything else, if business in the country was to become good and if unemployment was to become a thing of the past.

Exactly similar considerations prompt us to again express an opinion on the applications for wage increases made recently by railway shop employees and maintenance men. We believe, after considerable study of the matter, that this is no time to seek higher wages. Altogether apart from the railways' inability to pay more, with earnings and operating ratios as they have been, the situation in this country is that a fair start has been made in establishing the relationship as between industries which is necessary for nation-wide prosperity, and wage increases now would tend to create new disparities and increase existing ones, particularly as between agriculture and other lines of endeavor, with the effect that progress toward good times would be stopped and the creation of bad times and unemployment would be encouraged. We have no intention of indulging in any long economic discussion to prove these statements, but they can easily be demonstrated as correct; rather, we confine ourselves to the simple statement that while we thoroughly recognize that railroading is an industry in which good wages should be paid, we are of opinion that if the employees now seeking increases will be content to keep on at the wages they are receiving, they, and particularly those among them with less seniority than the others, will ultimately reap greater economic advantage than if the increases applied for were granted.

The New Zealand Government Rys. are reported to have opened for traffic a tunnel 5.3 miles long, connecting the east and west coast railways on the southern island. This is said to be the longest tunnel in the British Empire, and the seventh longest in the world. Traffic through it and on the connecting lines is operated by electricity.

British Columbia's Erroneous Contention.

An Ottawa press dispatch of Aug. 9, reported G. G. McGeer, K.C., counsel for British Columbia in its rate appeal before the Dominion Cabinet, as arguing that that province is entitled to the same treatment in regard to railway rates as other parts of the Dominion, that the Confederation agreement provided for this, and that the present rates constitute a violation of that agreement. Another Ottawa dispatch of Aug. 13 reported F. H. Chrysler, K.C., counsel for the Railway Association of Canada, which opposed the B.C. application, as arguing that the contention of Premier Oliver, of B.C., as advanced by Mr. McGeer, that B.C. is entitled to special consideration by reason of implications arising from, and covenants contained in, the agreement made by B.C. with the Dominion Government at the time B.C. was admitted into Confederation, have no foundation in fact.

Mr. Chrysler's contention that the agreement providing for B.C.'s entry into Confederation contained no provision as to transportation charges is apparently borne out by the facts. The terms on which B.C. entered Confederation are defined in the Imperial Privy Council's order of May 16, 1871, and are, so far as railway matters are concerned, simply as follows: "The Government of the Dominion undertake to secure the commencement simultaneously, within two years from the date of the union, of the construction of a railway from the Pacific toward the Rocky Mountains, and from such point as may be selected, east of the Rocky Mountains, toward the Pacific, to connect the seaboard of British Columbia with the railway system of Canada; and further, to secure the completion of such railway within 10 years from the date of the union."

The agreement also contains details of lands B.C. agreed to convey to the Dominion Government, "to be appropriated in such manner as the Dominion Government may deem advisable in furtherance of the construction of the said railway," and also specifies that in consideration of the land to be so conveyed, the Dominion Government pay to B.C., from the date of the union, \$100,000 a year, in half yearly payments in advance. The terms contain nothing as to rates to be charged upon the railways, the construction of which was provided for.

Railway Lands Patented.—Letters patent were issued during July for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres
Alberta and Great Waterways Ry.....	133.76
Canadian Northern Ry.....	2,217.15
Canadian Northern Western Ry.....	.97

Canadian Pacific Ry. roadbed and station grounds.....	36.80
Grand Trunk Pacific Ry.....	18.82
Total.....	2,409.86

Sunday Trains in Manitoba.—The Lord's Day Alliance is reported to have filed a bond of £200 on Aug. 10, in connection with its appeal to the Imperial Privy Council against the Manitoba Court of Appeal's decision affirming the validity of the act passed by the Manitoba Legislature last season permitting the operation of trains on Sundays. It is expected that the case will be argued in London, Eng., in January next.

Publicly Owned Utilities and the Industrial Disputes Investigation Act.

Some little time ago the Toronto Hydro Electric Commission's employees applied for an increase in wages. The Commission stated that as the present wages were set in 1920, when living costs were at their peak, the employees were not entitled to an increase, but it was willing to submit to arbitration, any issues that could not be settled by direct negotiation. The employees applied for a conciliation board under the Industrial Disputes Investigation Act, which was granted, and they named J. G. O'Donoghue, Toronto, as their representative. The Commission refused to appoint a representative, taking the stand that the act does not apply to publicly owned utilities. The Minister of Labor appointed F. H. McGuigan to act for the Commission, and Judge Snider of Hamilton, Ont., was appointed chairman.

The following statement was issued on Aug. 4: "The Commission has considered the enquiry before a board under the Industrial Disputes Investigation Act, which has been established by an order of the Dominion Minister of Labor, on the request of the Canadian Electrical Trades Union, Toronto Branch. On a previous occasion, when a board was established, such a board was withdrawn, the Deputy Minister of Justice advising that it was very doubtful, indeed, if the act was applicable in such instances. The Commission has been advised that such act is not applicable to publicly owned enterprises. Having regard to the foregoing, the Commission, in the interest of public ownership in Toronto and the province, has decided to test the legality of the act as applied to public services, and has instructed its legal advisers accordingly."

The conciliation board, acting on instructions from the Minister of Labor, decided at a meeting on Aug. 20 to proceed and take evidence, the first meeting for that purpose being set for Aug. 24. E. M. Ashworth, acting general manager of the Commission, is reported to have stated, on Aug. 20, that the Commission's attitude was unchanged, and that the board's legality would be fully determined.

An Ottawa press dispatch of Aug. 20, stated that the Dominion Government had instructed Lewis Duncan, Toronto, to act on its behalf with respect to any matters that might arise in connection with the board of conciliation.

The Commission made application for a writ, which was issued at Osgoode Hall on Aug. 21. The members of the Commission are named therein as plaintiffs and the members of the board of conciliation as defendants. It asks for a declaration that the defendants are without lawful authority to act as a board of conciliation under the Industrial Disputes Investigation Act. The matter was set down for hearing on Aug. 23.

The Commission's contention that a board appointed under the act is without authority to pass upon disputes between a municipally owned enterprise and its employees is based upon its interpretation of the British North America Act, sec. 91, setting forth the matters upon which the Dominion Government may legislate, and sec. 92, stating in part as follows: "In each province the Legislature may exclusively make laws in relation to matters coming within the classes of subjects

next hereinafter enumerated, that is to say: 8. Municipal institutions in the province. . . . 10. Local works and undertakings other than such as are of the following classes: (a) lines of steam or other ships, railways, canals, telegraphs and other works and undertakings connecting the province with any other or others of the provinces or extending beyond the limits of the province; (b) lines of steamships between the province and any British or foreign country; such works as, although wholly situate within the province, are before or after their execution declared by the Parliament of Canada to be for the general advantage of Canada or for the advantage of two or more of the provinces."

On Aug. 23, at the request of the Ontario Attorney General, hearing on the injunction proceedings was postponed by Mr. Justice Orde, to Aug. 27. G. H. Kilmer, K.C., counsel for the Toronto Hydro Electric Commission, having stated that, as directed by Mr. Justice Orde, he had communicated with the Ontario Attorney General concerning the dispute, and had been advised that a few days were desired in which to consider the matter. Mr. Kilmer suggested that possibly the Attorney General wished to intervene in the proceedings or become a party to the dispute, and contest the Dominion Labor Department's assumption of legality as concerns its action in appointing a board. He also pointed out that the controversy is really based on the question of division of authority as between the Dominion and Provincial Government, Mr. Justice Orde stated that he would leave it to the members of the board of conciliation as to whether the sittings scheduled for Aug. 24 should be gone ahead with.

The board met on Aug. 24 and decided to postpone its sittings for the taking of evidence till Aug. 29. On Aug. 24, the Ontario Attorney General, Mr. Nickle, stated that the Ontario Government considered it advisable to take the stand that the Dominion Minister of Labor has no jurisdiction, under the Industrial Disputes Investigation Act, to appoint a board to deal with a dispute between a municipally owned undertaking and its employees, and that, therefore, the Deputy Attorney General would appear at the injunction hearing and argue that such action would constitute a distinct instance of attempted Federal interference with provincial rights. The Attorney General said in part: "The municipality is exercising powers delegated to it by the province; the exercise of these powers, both legislative and administrative, is in effect a right of the province under the British North America Act, with which the Dominion Parliament has no jurisdiction to interfere. From the course taken by the present board of conciliation and investigation, it is apparent that the Dominion Government have decided to test in this matter the jurisdiction of the Minister of Labor to enforce the act in the case of municipal employees or employees of a public utility carried on for a municipality."

Municipally owned electric railway managements are, of course, vitally interested in this matter, as if the Dominion Minister of Labor can appoint a board in connection with a municipally owned hydro system he would apparently also be able to appoint one in connection with an electric railway owned by a municipality.

Freight and Passenger Traffic Notes.

The Timiskaming & Northern Ontario Ry. started a dining car service on Aug. 27, which is being operated under the General Freight and Passenger Agent, A. J. Parr.

Peterborough, Ont., City Council will, a press report says, renew its application to Canadian National Rys. management to operate self-propelled cars on lines in that vicinity.

The Okanagan Valley apple crop in British Columbia is estimated at about 4,620 car loads, an increase of 20% over 1922. The Kootenay and Boundary districts' crop is estimated at about 380,000 boxes.

A delegation, headed by the Dominion Minister of Labor, interviewed the Canadian Passenger Association in Montreal, recently, and asked for a passenger rate of 1½c a mile for unemployed travelling from one center to another to seek work.

The Canadian National Rys. management is reported to have authorized a special reduction of 25% on freight for shipments of necessities into sections of Charlevoix County, Que., where crops are reported to have failed. The Quebec Government has given \$25,000 for the relief of distress there.

The shipments of grain from the prairie provinces to Vancouver, B.C., for the 1922-23 season were reported, on Aug. 7, to have practically ceased, and very little more was expected. The total shipments over the C.P.R. to Vancouver for the year to Aug. 7 are reported to have been 9,579 cars, containing 14,244,916 bush., compared with 3,433 cars containing 4,878,293 bush. for the 1921-22 season.

The Canadian National Rys. and the C.P.R. began the operation of harvest excursion special trains from the Maritime provinces, Aug. 3, and on subsequent days from different sections of Quebec and Ontario, on fixed days of the week, extending to Aug. 30. The outward rate was \$12 to Winnipeg, with ½c a mile to points beyond. Special equipment was used by each of the railways, with separate cars for women and children, and luncheon counter cars.

The C.P.R. will, on Sept. 1, discontinue operating the special train between Windsor station, Montreal, and Quebec, on the morning of the sailing of steamships for Great Britain. The service to be substituted for this special train will consist of special cars allotted for steamship passengers, to be attached to train 350, the Frontenac, leaving Windsor station half an hour earlier than the special train left. The cars will be detached at Quebec and switched to the wharf and run alongside the liners.

The C.P.R. steamships and the steamship lines working in conjunction with the Canadian National Rys. made a special rate of £12 for male laborers from any part of Great Britain to Winnipeg on ships sailing between Aug. 1 and 11, inclusive. To points beyond Winnipeg the men were given the rate of ½c a mile to points available to all harvest excursionists. Upon production of a certificate that they have worked one month harvesting, they will be given a \$20 rate to a Canadian seaport and a 25% reduction on the ocean to Great Britain. This return offer will be available to Nov. 30, and will be extended for another month if conditions require it.

Unclassified Items.

Berlin, Germany, Municipal Council is reported to have suspended the operation of its entire street car service, owing to the enormous loss sustained in running it.

Quebec Railway, Light, Heat & Power Co. has ordered 10 standard one-man safety cars with two-door, instead of one-door, vestibules, from Ottawa Car Manufacturing Co.

Canadian Stevedoring and Contracting Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$50,000 capital, and office at Vancouver, to take over any stevedoring business in the province, to carry on a general stevedoring business, and to own and operate ships, etc.

Taxation of Public Utilities.—The Ottawa city board of control is reported to have recommended that the council back up the Niagara Falls Board of Trade's request to the Ontario Government, for power to tax public utilities in the same way as privately owned ones are.

Freight Rate Reduction in Great Britain.—The London, Midland & Scottish, the London & North Eastern and the Great Western Rys. put into effect, on Aug. 7, a reduction of freight rates for coal, coke and patent fuel. The reduction is from 60% above the rates in effect Jan. 14, 1920, to 10% above them. No alteration was made in the flat rate additions.

Webster Steamship Co., Ltd.—Application has been made under the Quebec Companies Act, by the following companies, — Steamer Howard W. Ltd., Steamer Richard W. Ltd., Steamer Stuart W. Ltd., and Steamer Eric W. Ltd., for leave to surrender their charters. The companies are owned by Webster Steamship Co. and the ships named have been sold.

Grain Shipping Control Matters.—Canadian Railway and Marine World received advice, on Aug. 23, from a reliable source that the Chairman of the Board

of Grain Commissioners had, on that date, issued the following statements that the Board concedes it is without authority to order ship owners to omit demurrage clauses from contracts entered into for transportation of grain; and that the Board is without authority to prohibit shipping brokers from charging grain shippers a brokerage fee.

Esquimalt Drydock Progress.—A Victoria, B.C., press report states that the excavation and placing of cement for the drydock being built for the Dominion Government at Esquimalt is expected to be completed about the end of April next, and that the drydock should be in operation during 1924. Tenders have been asked for the electric equipment, and it is stated that the electric pumping station, which will include 3 main pumps with a capacity of 180,000 gall. a minute, will be capable of emptying the entire dock in 4 hours.

The Chief Justice of New Brunswick, on July 30, refused to grant the New Brunswick Power Co. an interim injunction against the Hydro Electric Commission of St. John, N.B., to restrain the latter from erecting poles within 4 ft. of the plaintiff's poles, and placing its wires within 3 ft. of the plaintiff's wires, and ordering the removal of the poles and wires which had been placed in position. Costs of the application were directed to be made costs of the action. The application for a permanent injunction was set down for hearing on Aug. 21.

The Great Lakes Transportation Co., Midland, Ont., has sold a \$500,000 issue of 10-year 5½% sinking fund bonds, redeemable during the first three years at 103, during the second three years at 102, during the third three years at 101, and during the last year at par. The issue is secured on the steamships Glenelg, Glenrig and Glensannox, which are insured for \$1,000,000, and are, in addition, a floating charge on the company's fixed assets. It was expected that the issue would be offered to the public on a 6.65% basis.

The C.P.R. s.s. Empress of Scotland, while running between Hamburg, Germany, and Southampton, England, Aug. 21, struck an obstruction, believed to be a submerged wreck, about three miles west of the Nab lightship, off the east coast of the Isle of Wight. She was escorted to Southampton by five tugs and arrived there, under her own steam, slightly down at the head, without any casualties. She had about 234 passengers on board, about 75 of them being for Canada. These were transferred to another ship, and the Empress of Scotland was drydocked for examination and repairs.

Norway Bay Ferry Co., Ltd. has been incorporated under the Dominion Companies Act, with \$25,000 authorized capital, and office at Ottawa, Ont., to carry on a general transportation business by land and water and to own and operate ships, vehicles, hotels, amusement resorts, for the transportation and accommodation of passengers and freight. The incorporators are,—L. W. Gates, F. T. C. Gamble, W. M. Unger, E. L. Gamble and R. V. Reaume, Ottawa, Ont. It is having a steel automobile ferry built by Canadian Vickers Ltd., Montreal.

Steamship Signal for Bridge Opening.—The Board of Railway Commissioners passed general order 383, June 12, as follows:—Re general order 124, April 30, 1914, prescribing regulations governing operation by railways of draw, swing, or bascule bridges over navigable waters.

Upon reading the draft report to Council, dated May 14, 1923, filed and the report of its Chief Engineer, the board orders that the said order be amended by striking out paragraph 3 and substituting in lieu thereof the following, viz: "3. The signal to be given by steamer to have a swing bridge opened shall be three long whistles."

The United States regulations regarding alcoholic beverages on ships entering U.S. ports, came before the British House of Commons, recently, when the Prime Minister was asked whether the Government had considered the advisability of taking retaliatory measures against U.S. ships arriving at British ports. Prime Minister Baldwin is reported to have stated that representations had been made to the U.S. Government, and the effect of the regulations on British shipping was being carefully watched, to see whether it would be necessary to resort to special measures to counteract any injury which might be inflicted by the regulations. At that time, the British authorities had received no complaint from the owners of any British ship, which, according to dispatches, had been fired on by a U.S. ship, but if they are made, and it appears that the British ship was outside the three mile limit, a protest will be made, in view of its importance as a precedent.

French Railways' Special Rates.—Paris press dispatch: The encouragement given by the state to people to have large families includes reduced fares for railway travel. For example, a couple with three children, which is regarded nowadays as quite a large family, have the privilege of travelling, when going on holidays, at reduced fares. The reductions vary with the number of offsprings under 16 years of age, from 30 to 70%. Parents who lost five sons in the war are entitled to a reduction of 50% in the regular railway passenger fare, even if they have no children living.

Northern Construction Co's Chinese Railway Contract.—Winnipeg Board of Trade is reported to have received advice that the Northern Construction Co., Vancouver, has been given a contract by the Chinese Government for the construction at an estimated cost of \$20,000,000, of 1,200 miles of railway from Canton to Cheugtu, and passing through a rather difficult country involving considerable rock work and tunnel construction. The contract was negotiated by the company's Vice President, C. V. Cummings, who returned to Canada from China recently.

The Pere Marquette Rd. Co. gave notice recently of application to the Board of Railway Commissioners for a recommendation to the Governor in council for the sanction of an agreement between the Lake Erie & Detroit River Ry. Co. and the P. M. Ry. Co., dated June 1, under which the P. M. Ry. Co. is granted the exclusive right to run its trains over all the Lake Erie and Detroit River Ry. Co's lines for 21 years from the date of the approval of the agreement by the Governor in council.

Quebec Bridge Vehicular Traffic.—A press report states that a movement has been started in Quebec City for the construction of a roadway across the Quebec Bridge, for automobile and other traffic as a part of the provincial highway system. Quebec Government highway engineers are reported to have had a consultation with Dominion Government engineers about the matter.

TENDERS

TENDERS addressed to the undersigned at Ottawa, and endorsed on the outside of the envelope "Tender for Ice Breaking" will be received up to noon of the

10th DAY OF SEPTEMBER, 1923,

for breaking ice in the Harbours of Port Arthur and Port William, Thunder Bay and Lake Superior in accordance with the specifications prepared by the Department of Marine and Fisheries. A contract will be entered into with the successful tenderer for a period of five years, but the tenderer must quote a price per annum.

Specifications covering the work required can be obtained from the Harbour Masters at Port Arthur and Port William and from the Purchasing Agent of the Marine and Fisheries Department, Ottawa. There are no special tender forms for this work.

Each tender must be accompanied by an accepted cheque on a Chartered Canadian Bank for the sum equal to 10% of the tendered price per annum in favour of the Deputy Minister of Marine and Fisheries, which cheque will be forfeited if the successful tenderer declines to enter into a contract, or fails to carry out the work in accordance with the specification prepared by the Department. Cheques will be returned to unsuccessful tenderers.

The Department does not bind itself to accept the lowest or any tender.

Newspapers inserting this advertisement without authority will not be paid for same.

A. JOHNSTON,
Deputy Minister, Ottawa.

August 18, 1923.

Canadian National Railways Construction, Betterments, Etc.

Prince Edward Island Ry. Standardization.—The standardization of gauge on the Tignish Subdivision, Island Division, Atlantic Region, between Summerside and Tignish, 67.74 miles, preparatory work for which had been in progress for over a year, was completed Aug. 13. All the 3½ ft. gauge rolling stock was removed from the subdivision on Aug. 11, and the changing of the rails from narrow to standard gauge was done on Aug. 12 and 13, in 18 hours and 20 minutes, so that, as Aug. 12 was a Sunday, there was practically no interruption of traffic. Shortly before the changing of the gauge, where rails then in use were to be retained, every other spike was drawn, ready for the moving out, and where new rails were to be used, they were laid outside the narrow gauge ones. In the standardization work, rails were used between the points mentioned, as follows:—Between Summerside and Wellington, 11.69 miles, 50 lb. rails theretofore in use. Between Wellington and Ellerslie, 11.76 miles, 67 lb. second hand rails from other C.N.R. lines. Between Ellerslie and Coleman, 13.33 miles, 50 lb. rails theretofore in use. Between Coleman and Alma 21.90 miles, 67½ lb. rails which were rolled for the old Russian government. Between Alma and Tignish, 9.11 miles, 50 lb. rails theretofore in use. The gauge of the most important sidings was changed practically simultaneously with the main line, and the others are being done as fast as possible. The standardization work was done under the direction of T. B. Grady, Superintendent, Island Division, and A. Scott, Division Engineer, J. J. Bethune, Roadmaster, being in direct charge.

The standardization of Tignish Subdivision gives a standard gauge track through from Charlottetown to Tignish, 115.17 miles. There is also standard gauge on the Borden Subdivision, 12.11 miles, between Emerald Jct., 30.30 miles west of Charlottetown, and Borden. The standardization between Charlottetown and Summerside, 47.38 miles, and also on the Borden subdivision, was completed in Aug., 1919. Out of a total mileage of 276.77 on the Island Division, the following portions are still narrow gauge: Souris Subdivision, from Royalty Jct. to Souris, 54.98 miles; Elmira Subdivision, from Harmony Jct. to Elmira, 9.85 miles; Georgetown Subdivision, from Mount Stewart Jct. to Georgetown, 24.10 miles; Montague Subdivision, from Montague Jct. to Montague, 6.33 miles; Murray Harbor Subdivision, from Charlottetown to Murray Harbor, 47.70 miles; and Vernon Subdivision, from Lake Verde to Vernon, 3.78 miles.

The three rails, providing for both standard and narrow gauge operation, have been left down between Charlottetown and Royalty Jct., on Kensington Subdivision, 5.26 miles, so that standard gauge rolling stock may be operated between those points and on west via Summerside to Tignish, and from Emerald Jct. to Borden; and so that narrow gauge rolling stock may be operated between Charlottetown and Royalty Jct. and on to Souris and Elmira, on the Souris and Elmira Subdivisions; and to Georgetown and Montague on the Georgetown and Montague Subdivisions. One of the three rails laid from Royalty Jct. west and on the Birden Subdivision, will be taken up, so that these lines will be standard gauge only.

A full description, with plans and illustrations, of the laying of the third rail between Charlottetown and Summerside, and between Emerald Jct. and Borden, so as to allow the operation of both standard and narrow gauge trains, was given in Canadian Railway and Marine World for Feb., 1922.

Halifax and Southwestern Ry. Bridges.—The Board of Railway Commissioners has authorized the replacement of the following bridges:—Mile 65.9, across the Mush-a-Mush River, Chester Subdivision; mile 52.4, across the Annapolis River, Middleton Subdivision, Bridgewater Division, Atlantic Region.

St. John Improvements.—Canadian National Rys. and the Public Works Department engineers are reported to be collaborating on plans for the development of the harbor and terminal facilities at St. John, N.B. Three different suggestions are said to be under consideration for the area at the South End, near Reed's Point, as follows:—1. That a wharf be built from the sugar refinery wharf to Reed's Point, and the area inside be reclaimed for yardage, etc. 2. That instead of closing up the gap, additional shipping be provided for, and one of two new berths be built according to a scheme which would not involve a straight line wharf. This would give the south end industries access to the harbor by water. The third scheme aims primarily at the removal of the present trestle and carrying the railway in the rear of the properties facing on Britain St.

Hardwood Ridge to Minto.—We are officially advised that a contract has been let to J. W. McMulkin and Fraser H. Fox, Upper Gagetown, N.B., for building a spur line from Hardwood Ridge, mile 58.84, Chipman Subdivision, Atlantic Region, to Minto coal mines, 4.88 miles. It will have gradients up to 1.5%, and curvatures up to 7 degrees. The only structure of any size will be an 85 ft deck plate girder span over Newcastle Creek. The work will be done under the general supervision of A. F. Stewart, Chief Engineer, Atlantic Region.

Fredericton Improvements.—A press report states that the plans for extensions at the terminals at Fredericton, N.B., include the erection of a 5-stall locomotive house, and the installation of a number of switches.

Meductic to International Boundary.—In connection with the project to build a line from Meductic, N.B., on the St. John and Quebec Ry., to the International Boundary, provision for which was included in the \$28,000,000 three year program which was rejected by the Dominion Senate last session, a press report states that United States interests have secured a right of way from the International Boundary to the projected junction with the proposed line to Bangor, Me., and are having the surveys made.

Washburn, Me., to La Fontaine, Que.—A press report states that negotiations between Canadian National Rys. officials and A. R. Gould, President Arnostook Valley Rd., in regard to the construction of a railway from Washburn, Me., on the A. V. Rd., to a connection with the National Transcontinental Ry. at La Fontaine, Que., are being gone on with, and have reached a point which makes the carrying out of the project reasonably assured. The line in Maine would be

approximately 100 miles long and would be constructed by the A. V. Rd., and the line from La Fontaine, Que., to the International Boundary near Ludwig Pond, 20 miles, would be built by the C. N. Rys. In this connection it may be pointed out that the Dominion Parliament has not made any appropriation for such a line and that it was not even included in the \$28,000,000 three years programme which was rejected by the Senate at its last session.

Quebec Station.—A Quebec press report states that plans are being prepared for a station building to be erected a few hundred yards distant from the present station on Parent Square, there.

St. Charles River Bridge.—The Board of Railway Commissioners issued a judgment, Aug. 11, giving reasons for declining to make an apportionment of the cost of rebuilding the railway bridge over the St. Charles River at Quebec. It is owned by the old Quebec and Lake St. John Ry. and the Quebec Ry., Light, Heat and Power Co., and the latter company's application was to have the cost of rebuilding apportioned between the two companies and the Public Works Department. The Board found that there was no evidence to warrant it in forming an opinion that the bridge was unsafe so far as the weight of the electric railway rolling stock was concerned.

Ottawa Cross Town Tracks.—The engineer's report in regard to the doing away with the cross town tracks in Ottawa, has been prepared, and we are advised that a proposal regarding the matter will be submitted to the city council shortly.

Abandonment of Canadian Northern Ry. between Cobourg and Brighton.—The Canadian National Rys. management decided recently to abandon the portion of the Canadian Northern Ry. Toronto-Ottawa line between Cobourg and Brighton, Ont., 22.8 miles, and the taking up of the rails was started on Aug. 6. This line which is being abandoned is part of the Orono Subdivision, Ottawa Division, Northern Ontario District, Central Region, via which Cobourg is 72.8 miles from Toronto. Parts of the Orono Subdivision line from Cobourg west will be used in connection with the management's scheme of electrification for the Toronto district. The rails being lifted are 80 lb. and in good condition, and fit for main line use elsewhere. The G.T.R. line is now being used for all C.N.R. traffic east of Cobourg.

Burlington Second Track.—The item in our last issue respecting this work was erroneously headed "Burlington Third Track." The Board of Railway Commissioners has authorized the operation of traffic over the second track with its crossing of the Hamilton Radial Ry. at Brant Ave., Burlington, Ont., the C.N.R. to pay cost of any changes required in the interlocking plant there.

Hamilton Improvements.—Following the conference between C. G. Bowker, General Manager, and F. L. C. Bond, Chief Engineer, Central Region, with the city authorities on the railway situation in Hamilton and vicinity, at which matters connected with the layout of the railway lines, the improvements desired by the city, and the necessity for an increased train service were discussed, there have been a good deal of discussion and a number of conferences. Business men favor the construction of a new

station at the corner of James and Stuart Streets, and a general plan of betterments is reported to have been prepared by the City Engineer to be sent to the C.N.R. officials for consideration.

The C.N.R.s. have applied to the Board of Railway Commissioners for approval of plans for the erection of a new station at the corner of King St. and Ferguson Ave., to replace the present Ferguson Ave. station. The plans show a building 71½ x 20 ft., with a roofed over space at the south end, 18 ft. long, the building to be of brick on a concrete foundation, 1½ stories high, with gabled roof. The city council's railway committee considered the plans on Aug. 17 and authorized the City Solicitor to protest against such approval.

Bridgeburg Interlocking Plant.—An interlocking plant is being installed at the Canadian end of the international bridge, at Bridgeburg, Ont. The interlocking machine, which was made at the railways' Toronto shops, is a 13 lever one, and is located at the station. The interlocking governs movements at the end of the yard near the bridge approach, and slow movements only are made over the switches. Four of the levers govern switches, and the balance are for the operation of dwarf signals. The installation is being made under the direction of C. H. Tillett, Signal Engineer, Central Region, C.N.R.

International Bridge, Bridgeburg.—A press report states that H. A. Stewart, Vancouver, B.C., appeared before the Bridgeburg, Ont., Town Council, Aug. 20, and stated that he had authority from the Canadian National Rys. management to build a driveway and footpath addition to the International Bridge across the river, and that a company had been formed to do the work as the railways did not have the money to carry out the project. The council is reported to have endorsed the project and to have expressed its willingness to submit a bylaw to the ratepayers to guarantee \$1,000,000 of bonds.

In connection with this report, it may be recalled that the Buffalo and Fort Erie Bridge Co., promoters' application to the Dominion Parliament at the 1921-22 session, was not agreed to owing to opposition by the then Minister of Railways, who stated that the Government was considering whether it should authorize the building of a highway section to the International Bridge as provided in the charter of incorporation. When the Buffalo and Fort Erie Bridge Co. renewed its application last session, it was stated that the C.N.R. had no intention of adding highway accommodation.

Georgetown Bridge.—We are advised in connection with the reported reconstruction of a bridge carrying the highway over the railway tracks near Georgetown, Ont., that it will be a steel and concrete structure carrying a 20 ft. highway, on a 6% approach grade, at an elevation of 23.3 ft. above the railway tracks. It is 20 ft. long, consisting of three 40 ft. spans, carried on 2 steel bents on concrete dwarf piers with buried concrete abutments at each end. The superstructure will consist of through plate girders with I-beam stringers and steel I-beam bents with sway bracing. The floor will be of concrete slab 9 in. thick, reinforced with steel nails at 9 in. centers running longitudinally. The railways will supply the materials for the concrete substructure and will make the excavations and erect the bridge complete with their own

forces. The main girders, bents and reinforcing will be supplied from the railways' own stock, and the steel I stringers will be bought locally. The work is expected to be completed about the middle of September.

Southwest Ontario District Highway Bridges.—We are advised in reference to the 6 overhead highway bridges at Main St. Harrisburg; Given Road Beverley Tp.; Concession 5 and 6 Innisfail Tp.; between lots 24 and 25 Wilmet Tp.; Queen St., Newmarket; and in Concession 1. north of Governor's Road, Beverley Tp., that they are of wood construction on frame or pile bents, and are to be replaced by permanent material as part of the yearly programme of betterments. The new structures will consist of small concrete abutments, with dwarf piers located close to the main tracks, to be carried below the frost line. The superstructures will consist of 3 spans supported by steel bents, with an approach span on each side taking support on the concrete abutments. The roadways will be rebuilt for 20 ft. horizontal clearance, and in some instances the floor system will be extended so as to provide for a sidewalk. With the exception of steel bents and rolled beams these bridges will be built from stock material and designed to carry trucks of 15 tons capacity. All the work will be done by the railway's forces.

Kitchener Grade Separation.—Kitchener, Ont., City Council is reported to have appointed James, Proctor and Redfern, consulting engineers, Toronto, to investigate and report a plan for the elimination of level crossings over the C.N.R. tracks in Kitchener.

Midland Elevator.—We are officially advised that the addition to Tiffin elevator no. 2, Midland, Ont., which will be built by Fegles Construction Co., Fort William, Ont., will consist of 30 large cylindrical bins and 20 interstice bins, having a total capacity of 2,250,000 bush., together with a movable marine tower, and a number of changes in the old house so that it can be operated in conjunction with the new storage annex. When the improvements are completed the three marine towers will have an unloading capacity of 60,000 bush. an hour. The entire plant will be operated by electricity. The plans and specifications for the annex were prepared by Canadian Stewart Co., and the construction will be supervised by them.

Beaudette Station.—Tenders were received recently for the erection of a station at Beaudette, Minn.

St. Rose du Lac to Rorketown.—Settlers in the district beyond St. Rose du Lac, Man., the terminus of a branch line, are reported to have petitioned the Dominion Government for the construction of an extension of the line to Rorketown, 22 miles.

Canadian National Rys. Elevators.—Tenders were received to July 21, by C. J. Smith, General Manager, Elevators and Warehouses, Canadian National Rys., Montreal, for leasing for three years, from Sept. 1, 1923, working elevator A, of timber construction, and working elevator B, of steel and concrete construction; with concrete and tile storage tank, contiguous thereto with steam power plant, electric substation, machine shop, office building, dryer and docks, for a total capacity of 8,750,000 bush., at Port Arthur, Ont., and the Transcona elevator, Transcona, Man., with 1,000,000 bush. capacity. A Regina press dispatch of Aug. 17 stated that the Saskatchewan

Co-operative Elevator Co. of Regina, had made tentative arrangements for leasing elevator B at Port Arthur.

Amaranth-Winnipegosis Branch.—A press report states that the soldier settlers in the Eddystone district have advised the Soldier Settlement Board that they will not make payments on account of loans until the projected Amaranth-Winnipegosis extension is completed. This is one of the branch lines which was proposed to be built under the three years building programme rejected by the Senate at its last session.

Dauphin Freight Shed.—We are officially advised that it is intended to use the railways own forces to build the new freight shed at Dauphin, Man., the tenders received recently being too high.

Hudson Bay Ry.—A Pas, Man., press dispatch of Aug. 12 stated that work was progressing satisfactorily on the improving of the line from that point, 48 men being out on the line, with another gang of 22 just arrived, and three additional gangs expected from Winnipeg. A Saskatoon, Sask., dispatch of Aug. 17 stated that the work was being retarded owing to the difficulty of getting men at the wages being offered, and through delays in the shipping in of material.

Manitoba and Saskatchewan Fencing.—Tenders were received recently for approximately 70 miles of fencing on lines in Manitoba and Saskatchewan.

Saskatchewan District Pipe Lines.—Tenders were received recently for construction of pipe lines at Clarkboro, mile 484.8 Langham Subdivision; and Flaxcombe, mile 143 Oyen Subdivision, Saskatchewan District.

Melville Branch.—A press report states that to obviate snow difficulties work is to be started near Victoria Plains, 9 miles from Regina, on the Melville branch, to widen the cuts to the full width of the right of way. The excavated material will, it is said, be used to fill in a ravine, now spanned by a pile trestle, near Pattie, 16 miles from Regina, on the Regina-Riverhurst line.

The Avonlea-Gravelbourg Extension is being operated for freight and passenger traffic from Avonlea to Gravelbourg, 80 miles, and for freight traffic from Gravelbourg to Hodgeville, at mile 105. The line is projected to be extended into Swift Current, and a press report states that a further 14 miles of track will be laid westerly this year. Ballasting is reported to be in progress on a section of the line not yet fully completed.

Edson Division Trestles.—Tenders were received recently for dismantling abandoned trestle bridges on Edson Division, Alberta District.

Peace River District Surveys.—Surveys are being made under the direction of H. A. Dixon, Chief Engineer, Western Region, for a route for an extension of the C.N.R. into the Peace River area. No information is at present available as to what routes are being surveyed.

Vancouver Island Lines.—The Board of Railway Commissioners has authorized the opening for traffic of the line from mile 52.6 to 69.4, Cowichan Subdivision. The service is operated by a gasoline motor car. (Aug., pg. 378.)

Steel Rail Order.—The C.P.R. has ordered 35,000 tons open hearth steel rails, 102 lb. C.P.R. section, from Algoma Steel Corporation, Sault Ste. Marie, Ont., delivery of which is expected to be completed by the end of September.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John, N.B., Improvements.—Repairs to the company's elevator at Sand Point are reported to be nearing completion.

The St. John City Council is reported to be making extensive repairs to the trestle work at Sand Point, and when these are completed the C.P.R. will lay a new top thereon.

Mont Laurier to Ste. Anne du Lac.—A deputation from Labelle County waited on the Quebec Government recently to ask for support for the extension from Mont Laurier to Ste. Anne du Lac of the C.P.R. line, now in operation between St. Therese Jct., 24.9 miles from Montreal, and Mont Laurier, 138.2 miles from St. Therese Jct. H. A. Fortin, M.P., is reported to have said in introducing the deputation that the C.P.R. management had expressed its willingness to build an extension if the Government would provide its share under its colonization programme. The Premier promised full consideration to the request.

Lachute Subdivision Bridges.—The Board of Railway Commissioners has authorized work on bridges on Lachute Subdivision, Quebec District, as follows: Bridge 62, over La Rouge River, replacing three 150 ft. deck truss spans, with 3 spans of similar dimensions and type; bridge 84.6, over North Nation River, replacing 150 ft., 200 ft. and 100 ft. through truss spans by two 78 ft. deck plate girder spans, one 200 ft. through truss span, and two 53 ft. deck plate girder spans; bridge 89.2, over Blanche Creek, to replace span; bridge 106.1, over Blanche River, to replace span; bridge 109.4, over Blanche River, to replace present 100 ft. through truss span by a 100 ft. through plate girder span.

Westmount Station.—A press report states that considerable improvements have been completed at Westmount station, near Montreal. The work includes a new subway leading from the west side of the main entrance; the extension of the westbound platform for 100 ft.; the erection of a brick signal tower to control switches and signals for the traffic through the station and the Glen yards. The old signal tower has been removed to permit of the platform extension.

Interprovincial and James Bay Ry.—A press report of Aug. 9, stated it was expected that the extension from near Kipawa to the Quinze River Falls, and the branch to Ville Marie, would be ready for operation by Aug. 31 or early in September, to the point of divergence of the branch, and also the branch to Ville Marie was concerned. Preparations for celebrating the opening of the line were being made.

In connection with the reported probable extension of the line from the Quinze River Falls into the Rouyn gold mining area, it is reported that, as a result of a recent conference between C.P.R. officials and the Quebec Government, plans are being prepared for a 36 mile extension, and that a subsidy for the same will be submitted at the Quebec Legislature's next session.

Ignace-Kenora Track.—C. Murphy, General Manager, Western Lines, is reported to have stated recently that the relaying of the double track between Ignace and Kenora, Ont., 147 miles, with 100 lb. rails, which was started in 1922, had been completed, and that the ballasting was being rushed to completion.

Tuffnell-Prince Albert Line.—We are officially advised that a contract was let to Grant Smith and Co. and McDonnell, Ltd., Calgary, Alta., on May 26, for grading 50 miles from Tuffnell towards Prince Albert, Sask., and that on June 25, a second contract was let to same contractor for the grading of a further 45 miles. It is stated that this 95 miles of construction will carry the line to Tisdale on the Canadian National Rys., 88 miles easterly from Prince Albert. A Y is reported to have been completed at the starting point of the line, for handling of construction material, and grading is stated to be in progress. Another report states that grading is being gone on with southerly from Tisdale and that F. Millen, Battleford, has a sub-contract on it.

Lanigan to Welfort.—The line from Lanigan, Sask., is being operated to Naicam, 50 miles. A press report states that an additional 32 miles of grading is to be done and that it is expected to lay track on it this year.

Wilkie-Cutknife Branch.—A press report states that this branch is being extended northwesterly for 40 miles and that it is expected to lay track on it this year.

Milden-Empress Line.—We are officially advised that grading contracts were let in 1919 to Stewart and Welch, Calgary, Alta., for 34 miles, and in 1920 to Canadian Construction Co., Winnipeg, for an additional 25 miles on this line, which starts from the Moose Jaw-Outlook branch at Milden, Sask., and is intended to connect with the Swift Current-Bassano line at Empress, Alta. A press report states that good progress is being made with the work, and that it is expected to have track laid in the autumn to the end of the first 34 miles, where the Rosetown southeasterly branch construction was started in 1919.

Rosetown Southeasterly.—The Canadian Construction Co., Winnipeg, was given a contract in 1919 for grading 25 miles, and in 1921 for an additional 20 miles. This work started about 20 miles southeasterly of Rosetown, where the Milden-Empress line connects. Track laying is reported to be in progress on the 45 miles.

Wymark-Archive Line.—As stated in Canadian Railway and Marine World for June, pg. 277, grading for the first 25 miles of this line had been done by the J. W. Stewart Construction Co., Vancouver, B.C., under a contract let in 1919. We are officially advised that a contract for grading an additional 25 miles was let May 26, to W. A. Dutton, Winnipeg. A press report states that rails are being laid on the completed grading out of Wymark, and that the grading on the second 25 miles is being rushed. The Board of Railway Commissioners has approved the revised general location of this line between mile 68 and 77.

Leader Southerly.—This branch starts from Leader, Sask., on the Swift Current-Bassano line. The first grading contract was let in 1919, to Stewart and Welch, Vancouver, up to mile 25. A second contract for grading an additional 25 miles was let in 1920 to W. A. Dutton, Winnipeg. Grading has been done on this line into Alberta, and one mile of track was laid in 1922. A press report says that track laying is in progress and that 25 miles will be laid this season.

Consul Easterly.—Grading on the line from Consul, Sask., easterly, was started in 1919, when a contract for 30 miles was let to Stewart and Welch, Vancouver. A second contract for an additional 30 miles was let to W. A. Dutton, Winnipeg in 1920. This 60 mile stretch extends to Climax.

Drumheller-Bullpond Line.—We were officially advised recently that no contract has yet been let for the construction of the projected line between Drumheller and Bullpond, Alta.

Kipp-Retlaw Line.—We were officially advised recently that no contract had been let for further work on the Kipp-Retlaw line described in Canadian Railway and Marine World for July, pg. 219.

Field to Lake Louise Track.—C. Murphy, General Manager, Western Lines, is reported to have stated recently that the track between Lake Louise and Field, Alberta District, 20 miles, was being relaid with 100 lb. rails, and that the work would be completed in the autumn.

Mountain Subdivision Bridges.—The Board of Railway Commissioners has authorized the replacement of bridges 68.31 across Six Mile Creek, and 73.85, Mountain Subdivision, and bridge 17.7 over Eagle River, Shuswap Subdivision, British Columbia District.

Vancouver Pier.—D. C. Coleman, Vice President, Western Lines, visited Vancouver at the end of July and is reported to have stated that the delay in starting work on the new B.C. pier was due to the fact that it had been found necessary to revise the plans in some details. As soon as this was completed the work would be gone on with.

Victoria Terminal Building.—D. C. Coleman, Vice President, Western Lines, who visited Victoria, B.C., at the end of July, is reported to have had a conference with J. W. Troup, Manager, B.C. Coast Steamship Service, with regard to the erection of the building proposed to be erected on Belleville St. Plans have been prepared by F. M. Rattenbury, architect, Victoria, the estimated cost being reported at between \$150,000 and \$200,000. Tenders are reported to have been received up to Aug. 14. (Aug., pg. 374.)

Freight Car Location Statistics.

The Railway Association of Canada has issued a report on location of freight cars on Canadian railways on Aug. 1, based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Kettle Valley; Napierville Jct.; Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo, as follows: Number of cars owned, 210,415; home cars on Canadian foreign lines, 10,423; home cars on U.S. lines, 35,231; home cars on home roads, 164,761; Canadian owned foreign cars on home lines, 8,670; U.S. and foreign cars on home lines, 30,410; total cars on lines, 203,841; per cent on lines to total owned, 96.9; deficiency on line to total owned, 6,574; home cars in bad order, 13,535; foreign cars in bad order, 483; total cars in bad order, 14,018; per cent in bad order, 6.9; privately owned U.S. cars on line, 2,517; privately Canadian cars on line, 1,466.

Railway Wages and Working Conditions in Canada and the United States.

Trainmen.—Reports are current that general chairmen for Canadian lines, Order of Railway Conductors and Brotherhood of Railway Trainmen, who attended a meeting in Cleveland on Aug. 9, when wage matters were discussed, have stated that plans were made to attempt to get higher wages, and that any effort to secure wage increases on U.S. lines will be duplicated in Canada.

Shopmen.—The application made by Canadian railway shopmen, the majority of whom are members of the American Federation of Labor's Railway Employees' Department, Division 4, for a re-opening of negotiations with the Railway Association of Canada, was mentioned in a preceding issue of Canadian Railway and Marine World. The employees ask increases of 10c. an hour, to make the rates for mechanics 80c. an hour, freight car men 73c. and helpers 57c. The agreement providing present rates of 70c., 63c. and 47c. respectively for these three classes went into effect Dec. 1, 1922, and at that time the following decreases from former rates took effect: mechanics, 7c. an hour, car repair men 9c. and helpers 7c. The employees also ask restoration of the rules allowing time and a half for Sundays and holidays, and the abolition of paint spraying machines. Negotiations between the Railway Association's operating committee's sub-committee and the shopmen's representatives began in Montreal on July 30. The C.P.R. was represented by R. A. Pyne, Superintendent of Motive Power, Western Lines; Geo. Hodge, Assistant General Manager, Eastern Lines; J. Burns, Works Manager, Angus shops; and the Canadian National Rys. by C. E. Brooks, Chief of Motive Power; A. E. Crilly, Chief of Wage Bureau, and J. C. Garden, General Superintendent Motive Power, Central Region. The employees were represented by R. J. Tallon, President, American Federation of Labor's Railway Employees' Department, Division 4, and F. McKenna, Vice President, and Chas. Dickie, Secretary, and the following representing individual crafts: G. F. Chadburn, Winnipeg; F. Harrison, Montreal; Jos. Corbett, London; L. McKinnon and W. R. Rogers, Moncton; T. B. Riley, Calgary; C. E. Shaw, Winnipeg; A. McGuire, Stratford, and W. Lister, P. A. Jardin, and S. J. Irwin, Montreal. While no official statement has been issued as to the progress of negotiations, which took place July 30 and Aug. 6, 9 and 13, unofficial information is that the railways' representatives, basing their argument on the fact that there have been no increases of consequence in living costs since the present agreement was drafted, and that the present condition of affairs in the railway and other industries is such that wage increases are not advisable in the country's interest, refused to meet the employees' demands in whole or in part. This is apparently substantiated by an Ottawa press dispatch of Aug. 16, which stated that the shopmen had applied for a board of conciliation and investigation under the Industrial Disputes Investigation Act.

Shopmen, Canadian National Rys. Central Region.—Canadian Railway and Marine World for August gave particulars of the meeting in Montreal attended by Grand Trunk and Canadian Northern Ry. shopmen to wind up the shopmen's G.T.R. System Federation's affairs, and

to form a new body to replace it, and to include all Canadian National Rys. Central Region shopmen in its membership. The new organization has been named the Canadian National Rys. Federation, Central Region, and on July 21, the chief officers of the old body were re-elected without opposition, as follows: President, F. Harrison, Montreal; Vice President, W. A. McGuire, Stratford; Secretary, J. Corbett, London. The new federation's constitution providing for a second vice president, H. B. Foster, Montreal, was elected. Resolutions were passed providing for action to promote amalgamation of the 16 standard railway labor organizations; urging the railways' management to stop contracting out car and locomotive repairs, and urging to do away with piecework and bonus system in shops where in force.

C.P.R. Clerks.—Chairmen and other officers of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, representing chiefly C.P.R. western lines employees, held their regular biennial meetings at Calgary, Alta., beginning July 30. W. E. Turner, General Chairman, presided. J. H. McNally, of San Francisco, President of the organization, attended. Following the business meetings, the delegates spent some days at Banff, Alta.

Maintenance Employees.—The Railway Association of Canada's operating committee's sub-committee, appointed to deal with the maintenance of way employees' requests for wage increases, details of which were given in preceding issues of Canadian Railway and Marine World, negotiated with the employees' representatives in Montreal during the first part of August. Unofficial information is to the effect that the railways have declined to meet the employees' requests. The railways were represented by Geo. Hodge, Assistant General Manager, Eastern Lines, C.P.R.; A. E. Crilly, Chief of Wage Bureau, Canadian National Rys., and M. S. Blaiklock, Assistant Chief Engineer, Operation Department, Canadian National Rys. The employees were represented by A. McAndrew, General Chairman, C.P.R. Division, United Brotherhood of Maintenance Employees and Railway Shop Laborers; W. Aspinall, Secretary; J. J. O'Grady, C. Winters, P. Woods, P. Johnston, F. Baggett, R. Sale, G. H. Commings and G. Gerald. An Ottawa press dispatch of Aug. 16 stated that the employees had applied for a board of conciliation and investigation under the Industrial Disputes Investigation Act.

Train Service Men, Canadian National Rys. Western Region.—The seniority differences between the trainmen of the former Canadian Northern Ry. and the Grand Trunk Pacific Ry., since the inclusion of the latter road in the Canadian National Rys. have constituted a bone of contention among the employees affected for a considerable time. A Winnipeg press dispatch of Aug. 1 stated that the Minister of Labor, Mr. Murdock, presided at a meeting in Winnipeg on July 31, at which the differences were fully discussed, and that a settlement of all difficulties appeared to be in sight. A determined, though unsuccessful, effort to settle the differences was made last winter, when some 50 delegates were in session in Winnipeg for some weeks engaged in it. Employees located all the

way from Sioux Lookout and Fort William on the east to Prince Rupert and Vancouver on the west are affected.

The Canadian Brotherhood of Railway Employees will hold its biennial meeting at Calgary beginning Sept. 17. Among the more important matters to be considered will be the proposals for affiliation of the brotherhood with other Canadian railway labor organizations. A. R. Mosher, President, C.B.R.E., is reported in an Ottawa press dispatch as stating that the question of public ownership of railways will be thoroughly discussed, and as also saying: "The employees have a far different attitude when working for the public, and getting treatment which they recognize as reasonably just, than when working for the profit of investors."

Railways Pay and Boards of Trade.—Winnipeg Board of Trade, on Aug. 10, considered a communication from Halifax Board of Trade transmitting a resolution passed by the latter recommending that "steps be taken to reduce the salaries and wages of railway employees, both executive and operative," with a preamble giving about a dozen reasons as to why railway employees' wages are considered excessive. The Winnipeg Board decided to file the resolution and to take no action on it.

Merit System, Canadian National Rys.—The merit and demerit system of recording employees' standing, often referred to as Brown's System of Discipline, which has been in effect on Canadian Northern Ry. lines for some years, and on the original Canadian National Rys., which did not include the Grand Trunk and subsidiaries, was, on Aug. 1, made applicable to all lines. Dismissal follows the accumulation of 60 demerit marks. The system will embrace the usual feature of having merit marks to counterbalance demerit ones and of having demerit marks removed from previously penalized employees on account of them having periods free from further imposition of such marks.

U.S. Situation.—The U.S. Railroad Labor Board held hearings on requests for higher wages by the Brotherhood of Railway Signalmen and the Brotherhood of Railway and Steamship Clerks, Freight Handlers Express and Station Employees on July 19 and 23.

Approximately 125 general chairmen of the Eastern U.S. Association of General Chairmen of the Order of Railway Conductors and Brotherhood of Railroad Trainmen met at Cleveland on Aug. 9, to consider wages. At a meeting in Chicago on July 10, chairmen of the western association voted to ask for restoration of the 64c. a day by which the U.S. Labor Board cut wages by its order effective July 1, 1921, and at a meeting in Washington on July 24, chairmen of the southern association adopted a similar resolution. Press dispatches state that at the Cleveland meeting it was decided to ask for even higher wages than those obtaining in 1920.

A Cleveland press report of Aug. 13 states that approximately 350 general chairmen of the Brotherhood of Locomotive Firemen and Enginemen have been notified by a circular issued by D. B. Robertson, President of the Brotherhood, to meet at Chicago on Sept. 6 to consider the question of inaugurating an increased wages movement.

The C.P.R.'s St John River Bridge Case Judgment.

Mr. Justice Grimmer's judgment in the action brought in the New Brunswick Chancery Court by the Attorney General of New Brunswick against the C. P. Ry. Co. and its subsidiary, the St. John Bridge & Ry. Extension Co., in connection with the building of the bridge across the St. John River, at the reversing falls, St. John, was referred to briefly in Canadian Railway and Marine World for August. The judgment recited the various claims made by the Attorney General, and the declarations, decrees and injunctions asked for, and pointed out that the railway companies denied generally the plaintiff's allegations that the regulation of navigation of the St. John River was vested in the Province of New Brunswick by the Ashburton Treaty, and has not since been transferred to the Dominion Government; asserted that the plaintiff had been guilty of laxities in permitting construction of the original bridge in 1886, and of the construction of the new bridge which was completed in Nov., 1921, and making no complaints about the same until Dec., 1921; and that the statement of claim is bad in law and discloses no cause of action against either of the companies. It was agreed by both parties that questions of law should be considered and determined before any questions of fact were submitted or considered. The railways first submitted that the New Brunswick Attorney General was not the proper person to institute proceedings as by the British North America Act, sec. 91 (10), navigation is a matter over which the Dominion Parliament had exclusive authority. The plaintiff founded and rests his entire case upon the Ashburton Treaty, made between Great Britain and the United States in 1842, and alleged that its article 3 conferred the right of regulating navigation on the St. John River, upon the State of Maine and the then colony of New Brunswick, which article is still of full force and effect. The railways contended that there is no statute of any kind which has confirmed this article. It was contended that the reference to the treaty in the International Waterways Treaty, Dominion Statutes, 1911, chap. 28, amounted to a confirmation, and that in any event the treaty was a law before Confederation, being a treaty of peace or to avoid imminent war. It appeared that the Dominion Attorney General was asked to be a party to the action, but replied that upon consideration of the correspondence and the facts as they appeared, he was not disposed to intervene in the litigation at that stage.

The original bridge was erected under a provincial statute passed in 1881, which contained a proviso that it should not interfere with navigation, and that it should be erected at an elevation above water equal to or greater than the highway suspension bridge. For about 40 years it was never asserted that this bridge was an obstruction to navigation, and the judge did not think that the plaintiff, or anyone else, could now come forward and claim that the bridge should be removed because it had become an obstruction to navigation. The new bridge was built in 1921 with the full knowledge and apparent consent of the province, for its Legislature passed an act authorizing its Minister of Lands to grant certain lands to the railways for a nominal sum for the erection of the piers.

The plaintiff is bound by the fact that at no time prior to the erection of the new bridge was the allegation made that it could not be built without the authority of the province. It was just and equitable to conclude that there had been laxities and acquiescence on the plaintiff's part, so far as the original bridge was concerned, and the action in respect to it must be dismissed. With regard to the new bridge the question was whether or not the control of the navigation of the St. John River is vested exclusively in the Dominion Government or is vested in the Province of New Brunswick, and how, if at all, is it affected by the Ashburton Treaty. The Dominion Parliament was, by the British North America Act, given exclusive legislative authority over navigation and shipping, and after reviewing a number of cases on various points, the judge said: "I find that under existing law the control over the navigation of the St. John River at St. John is vested exclusively in the Dominion Government, including therein the right to authorize the construction of bridges across the same." The next question was whether this right was in any way affected by the Ashburton Treaty. He did not see any sufficient reason to compel him to find, or to convince him, that that treaty was one to make peace or to avoid imminent war; or was anything more than one for settling the boundary line between Canada and the United States. Under the treaty authority given to New Brunswick to make regulations in respect to the navigation of the river, but it does not appear that any were made, and even if any had been, in his opinion, they would have been absorbed and wiped out by the British North America Act. It is well settled law that a treaty does not of itself create law, by which courts are bound. After reviewing decided cases, the judge said: "I have therefore reached the conclusion that the control of navigation on the St. John River is in no way affected by the Ashburton Treaty; nor are the Dominion Government's powers as designated in the British North America Act in respect thereof limited or abridged thereby. What I have stated and found in respect to the new railway bridge, so far as the control of navigation and the effect of the Ashburton Treaty are concerned, applies with equal force and effect to the old railway bridge."

The final question was whether the Dominion Government was competent to enact the Railway Act of 1919, sec. 248, under which the new railway bridge was built. The Imperial Privy Council's Judicial Committee, in 1898, held that the Dominion Parliament had power to pass the Revised Statutes, chap. 92, an act respecting works in or over navigable waters, which required government approval for such works. The Railway Act, sec. 248, is to much the same effect as the provisions of chap. 92, consequently he had no doubt of Parliament's right and power to enact it. If so the new railway bridge was legally built under Parliamentary authority and under plans made and properly approved under the Railway Act, sec. 248.

The judgment concluded as follows: "It follows then from the conclusions I have reached in this matter, viz., that the control of the navigation of the St. John River is invested exclusively in the Dominion Government, including therein

the right to authorize the construction of bridge across the same, and that this control is in no way affected by the Ashburton Treaty, nor are the powers of the Dominion Government, as set forth in the British North America Act, in respect thereof, limited or abridged thereby; that the objection that this action was not properly brought, and that the Attorney General for New Brunswick is not the proper person to institute these proceedings must prevail. The injunction asked for will therefore be refused, and the action be dismissed with costs."

Fredericton City Council passed a resolution Aug. 7 urging the New Brunswick Government to appeal Mr. Justice Grimmer's judgment.

Newfoundland Railway Taken Over by the Government.

The Newfoundland Legislature, which, on Aug. 8, concluded its first session after the general election in May, has passed an act authorizing the Government to buy from the Reid Newfoundland Co. all the latter's interest in the Newfoundland Ry. its steamships and its dry-docks at St. John's, for \$2,000,000, all claims by the Government against the company, and all claims by the company against the Government, being withdrawn. The Legislature has also authorized the Government to borrow \$3,500,000, of which, the Premier stated, on Aug. 17, in introducing the resolution, \$400,000 is on account of estimated loss on railway operation. The railway is to be managed by a commission, and the following are reported to have been appointed as its members for one year, or until other arrangements are made:—The Colonial Secretary, the Auditor General and the Government Engineer.

CANADIAN NATIONAL RAILWAYS

Central Region, Quebec District

TENDERS FOR RAILWAY CONSTRUCTION

Sealed tenders will be received at the office of the undersigned until twelve o'clock noon, Standard time, on the fifteenth day of September, 1923, for the construction of Donnacona cut-off, between Donnacona on the Grand Mere Subdivision and Mile Sixteen on the La Tuque Subdivision, in the province of Quebec.

Forms of tender and instructions for tendering may be obtained at the offices of the district engineer, Champlain Market, Quebec, division engineer, Tunnel Terminal Station, Lagauchetière street, Montreal, and division engineer, corner of Parks and Metcalfe streets, Ottawa; and at the office of the undersigned.

Plans, specifications and form of contract may be seen at the above offices or copies may be obtained by application to the undersigned on depositing a certified check on a chartered bank of Canada for twenty-five dollars (\$25.00) made payable to the treasurer, Canadian National Railways, which will be refunded on return of plans.

Lowest or any tender not necessarily accepted.

F. L. C. BOND,
Chief Engineer,
Canadian National Railways,
Central Region,
Room 436, New Union Station,
Toronto, Ontario.

Toronto, August 27th, 1923.

Birthdays of Transportation Men in September.

Many happy returns of the day to:—
Wm. Aird, ex Master Mechanic, Locomotive Works, G.T.R., Montreal, now of Barrie, Ont., born in London, Eng., Sept. 3, 1843.

W. B. Bamford, District Freight Agent, C.P.R., Nelson, B.C., born at Belleville, Ont., Sept. 10, 1863.

G. T. Bell, Executive Assistant to Vice President of Traffic, Canadian National Rys., Montreal, born there, Sept. 7, 1861.

E. J. Blais, Foreman Tinsmith, Canadian National Rys., Transcona, Man., born Sept. 26, 1876.

V. T. Boughton, ex Assistant Superintendent, Chapleau Division, Algoma District, C.P.R., Chapleau, Ont., now of New York, born at Troy, N.Y., Sept. 9, 1888.

E. R. Bremner, ex Division Freight Agent, Ottawa Division, G.T.R., Ottawa, born at Toronto, Sept. 9, 1875.

W. E. Burke, ex General Traffic Manager, Canada Steamship Lines, now Vice President, Century Coal Co., Montreal, born at Belleville, Ont., Sept. 23, 1881.

A. D. Cartwright, Secretary, Board of Railway Commissioners, Ottawa, born at Kingston, Ont., Sept. 30, 1864.

A. S. Dawson, Chief Engineer, Natural Resources Department, C.P.R., Calgary, Alta., born at Pictou, N.S., Sept. 6, 1871.

G. F. Diekroeger, District Freight Agent, C.P.R., St. Louis, Mo., born there, Sept. 11, 1871.

W. E. Duperow, Passenger Traffic Manager, Central Region, Canadian National Rys., Toronto, born at Stratford, Ont., Sept. 4, 1872.

R. S. Elworthy, General Agent, Passenger Department, Ocean Traffic, C.P.R., Chicago, Ill., born at London, Eng., Sept. 10, 1877.

H. G. Foreman, Assistant General Treasurer, Canadian National Rys., Montreal, born there, Sept. 2, 1882.

C. B. Foster, Passenger Traffic Manager, C.P.R., Montreal, born at Kingston, N.B., Sept. 30, 1871.

G. J. Fox, Superintendent, Calgary Division, Alberta District, C.P.R., Calgary, Alta., born at Montreal, Sept. 24, 1883.

R. S. Gosset, Auditor of Disbursements, Central Region, Canadian National Rys., Toronto, born there, Sept. 28, 1879.

E. Goulet, Agent, C.P.R., New Westminster, B.C., born at Quebec, Que., Sept. 1865.

W. B. Howard, Assistant General Passenger Agent, Eastern Lines, C.P.R., Montreal, born at Chatham, N.B., Sept. 15, 1877.

W. R. Howard, dispatcher, C.P.R., Brownville Jct., Me., born at St. Andrews, N.B., Sept. 14, 1871.

Lt. Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., Montreal, born at Brockville, Ont., Sept. 15, 1858.

G. C. Jones, General Manager, Telegraph and Telephone Department, Canadian National Rys., Toronto, born at Clyde, N.Y., Sept. 24, 1869.

C. B. King, Manager, London St. Ry., London, Ont., born at Galena, Ind., Sept. 12, 1871.

S. King, London, Ont., formerly in car building service, born at Thetford, Norfolk, Eng., Sept. 12, 1853.

C. C. Labrie, Purchasing Agent, Canadian National Rys., Vancouver, B.C., born at Quebec, Que., Sept. 8, 1882.

R. E. Larmour, General Freight Agent, Eastern Lines, C.P.R., Montreal, born at Brantford, Ont., Sept. 26, 1868.

W. A. Mather, General Superintendent, Saskatchewan District, C.P.R., Moose

Jaw, born at Oshawa, Ont., Sept., 1885.

J. A. Morice, Foreign Freight Agent, C.P.R., Toronto, born at Stratford, Ont., Sept. 17, 1878.

M. B. Murphy, Manager, Winnipeg Joint Terminals, Winnipeg, born at Napa, Cal., Sept. 11, 1866.

H. J. Page, Chief of Investigation Department, Canadian National Rys., Montreal, born at St. John, N.B., Sept. 25, 1871.

J. Paul, District Freight Agent, Canadian National Rys., Winnipeg, born in Euphrasia Tp., Ont., Sept. 13, 1858.

W. J. Pickrell, Master Mechanic, New Brunswick District, C.P.R., St. John, born at London, Ont., Sept. 15, 1880.

H. T. Rawlings, ex Lake Forwarding Agent and Fuel Inspector, Canadian National Rys., now Vice President, Baier Coal Co., Cleveland, Ohio, born at London, Eng., Sept. 27, 1883.

C. S. Richardson, District Freight Agent, C.P.R., Buffalo, N.Y., born at New York, Sept. 26, 1870.

W. D. Robb, Vice President, Insurance, Lands, Express, Telegraphs, Colonization, Development and General Matters, Montreal, born at Longueuil, Que., Sept. 21, 1857.

A. Scott, Division Engineer, Island Division, Atlantic Region, Canadian National Rys., Charlottetown, P.E.I., born at Kirkcaldy, Scotland, Sept. 6, 1884.

F. A. Shaw, General Agent, Freight Department, Canadian National Rys., Cleveland, Ohio, born at Smiths Falls, Ont., Sept. 29, 1872.

J. M. Silliman, Resident Engineer, C.P.R., Ville Marie, Que., born at Easton, Pa., Sept. 8, 1885.

F. W. Sterling, ex District Freight Agent, C.P.R., Edmonton, Alta., now of Quelch and Sterling, Vancouver, B.C., and Shanghai, China, born at Thornbury, Ont., Sept. 13, 1879.

R. B. Thomson, Secretary, Canada Steamship Lines Ltd., Montreal, born there, Sept. 5, 1886.

W. M. Tisdale, Superintendent of Investigation, Northern Ontario, Southwestern Ontario and Montreal Districts, Central Region, Canadian National Rys., Toronto, born at Otterville, Ont., Sept. 7, 1872.

Hon. L. C. Webster, President, Webster Steamship Co., born at Quebec, Que., Sept. 30, 1871.

F. G. Wood, Ontario Freight Agent, Canadian Government Merchant Marine, Toronto, born there, Sept. 15, 1890.

H. A. Young, Northern Navigation Co., Duluth, Minn., born at Brooklyn, N. Y., Sept. 1, 1864.

The Pacific Cable Board has commenced laying its duplicate Pacific cable, the first section undertaken, being from Sidney to Southport, Australia. On the completion of this section, the cable ship Stephan will proceed to Fiji, where the section from Auckland, N.Z., to Suva, will be commenced. The distance of the survey route between Sidney, and Southport is 460½ miles, but the actual length of cable laid will be 492 miles. The type of cable used is 2.12 in. diam. for the inshore section and protected with lead covering and brass tape, and the deep sea cable is 0.829 in. diam. The surveyed route from Auckland to Suva is 1,170 miles, the actual length of cable to be laid being 1,260 miles. On the completion of these two sections, a decision will be made as to the duplication of the section from Suva to Bamfield Creek, B.C.

Diversion of Freight Traffic Between Toronto and Washago.

Heretofore the bulk of freight traffic north and southbound between Toronto and Gravenhurst and beyond, and between Gravenhurst and beyond to Toronto, handled by the Canadian National Rys. has been moved over the G.T.R. line via Allandale, which is the home terminal for locomotive and train men working on the Newmarket and Huntsville Subdivisions, Allandale Division, Southwestern Ontario District, Central Region, and is on Lake Simcoe, 62.7 miles from Toronto. Gravenhurst is on the Huntsville Subdivision, 112 miles from Toronto via Allandale. Haulage tests made recently show that locomotives can haul much heavier trains between Toronto and Washago on the Canadian Northern Ry. north from Toronto, which makes a junction with the G.T.R. line at Washago, at the head of Lake Couchiching, 89 miles from Toronto by the C.N.R. line and 98.5 miles by the G.T.R. line via Allandale, than by the latter line. This Canadian Northern line is part of the Bala Subdivision, Nipissing Division, Northern Ontario District, Central Region. The tests referred to showed that train tonnage could be increased by almost 50 per cent, by routing freight over the Bala Subdivision, due to more favorable gradients, and for this reason the railway management decided to route freight by the Bala Subdivision line, Toronto to Washago, and from Washago north by the G.T.R., Huntsville Subdivision, Allandale Division, the northern terminus of which is North Bay. The arrangements to effect the change necessitated transferring some locomotive and train crews from Allandale to Gravenhurst, the home terminal for the Bala Subdivision men. Some of the men expressed an unwillingness to move from Allandale to Gravenhurst, but this difficulty has been satisfactorily adjusted and four runs bulletined were bid in by Allandale men.

Transportation Events of Twenty-five Years Ago.

From Railway and Shipping World, now Canadian Railway and Marine World, for Sept., 1898.

Sir Casimir Gzowski, C.E., dies in Toronto.

C.P.R. builds two rotary snow ploughs for eastern lines.

Gillman Cheney, Vice President, Canadian Express Co., dies in Montreal.

C.P.R. commences double tracking Montreal-Toronto line from Montreal end.

C.P.R. completes copper telegraph wire from Montreal to Vancouver.

H. E. Whittenberger appointed Trainmaster, Hamilton to Port Dover, G.T.R.

Interstate Commerce Commission decides C.P.R. not entitled to differentials on Pacific Coast passenger business.

West Shore Rd. reduces round trip fare from Buffalo to New York to \$10, Lehigh Valley reduces to \$6, and New York Central and other lines follow suit.

D. B. Hanna, Superintendent, Lake Manitoba Ry. & Canal Co., also given jurisdiction over Manitoba & Southeastern Ry., under construction.

C. M. Hays' salary, as President, G.T.R., increased from \$25,000 to \$35,000; he also receives \$10,000 a year as Central Vermont Ry. receiver.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Abitibi Transportation and Navigation Co.—A press report states that the operation of this railway, which extends from the terminus of the Timiskaming and Northern Ontario Ry. branch at Iroquois Falls, to Hughes, Ont., on the National Transcontinental Ry., 15.76 miles, together with an 8-mile logging branch, is enabling the Abitibi Pulp and Paper Co. to operate its plant more efficiently and economically. It is expected that the newsprint output, which now runs from 18 to 20 cars a day, will be maintained all winter. (March, pg. 118.)

Alaska Rd.—The last spike on the Alaska Rd., built by the U.S. Government and extending from Seward, at the head of Resurrection Bay, to Fairbanks, 471 miles, was driven by the late President Harding, on July 15.

Alma and Jonquiere Ry.—A press report states that the foundations for piers and trestles on this 10 mile railway, which the Quebec Development Co. is building in connection with its power development at the Grande Discharge of Lake St. John, Que., are completed and ready for the superstructures. This work has been done by Wm. I. Bishop, Ltd., Montreal. The Dominion Bridge Co. is supplying approximately 900 tons of steel work to be used in connection with the trestle bridge across the Bedard River, and the Canadian Bridge Co. has the contract for the fabrication and erection of the superstructure of the other three bridges, descriptions of which structures have already been given in Canadian Railway and Marine World. (July, pg. 30.)

Burrard Inlet Tunnel and Bridge Co.—The Board of Railway Commissioners has authorized the company to build a bridge across the second narrows of Burrard Inlet, Vancouver, B.C., and has approved the general location of the same and its approaches, and the location plans for the bridges. The shareholders, at an extraordinary general meeting on July 16, authorized the directors to issue \$630,000 of debentures to provide for construction of the bridge. The contract for the work between the company and the Northern Construction Co. and Major General Stewart is reported to have been signed July 25. G. B. Strauss, of the Strauss Bascul Bridge Co., Chicago, Ill., was in Vancouver recently in connection with the designs for the bascule span. It is reported that it was decided it will be of the single leaf type, details of which are being worked out. (Aug., pg. 376.)

The Canadian Niagara Bridge Co. is the Canadian end of a project represented in the United States by the American Niagara Rd. Corporation, in which are associated the New York Central Rd. Co., the Michigan Central Rd. Co., and the Toronto, Hamilton and Buffalo Ry. Co., through the last of which the C.P.R. Co. is interested. The Canadian company has power to build certain railway lines in Canada to connect with the bridge, and to associate itself with the U.S. company in building the bridge. The United States Rd. Corporation has applied to the Interstate Commerce Commission for authority to build about 10 miles of railway in Erie County, N.Y., from a connection with the New York Central Rd., at its junction with the Lehigh Valley Rd. at Tonawanda Jct., to a junction with the Canadian Niagara Bridge Co's railway at the center of the

projected bridge at the international boundary. A similar application was made by the company to the New York State Public Service Commissioners on Aug. 14, when decision was reserved.

There will be two bridges necessary as the river channel is divided by Grand Island, on which it is proposed to lay out yard tracks. There will be a draw span in each bridge to facilitate navigation, and accommodation will be provided for vehicular and pedestrian traffic. A. H. Smith, President New York Central Rd., is President of the American Niagara Rd. Corporation. (Aug., pg. 376.)

The Duluth and Ontario Ry. Co. is reported to be negotiating for putting on the market an issue of bonds for the purchasing of the old Duluth and Northern Minnesota Rd., and its extension to Fort William, Ont. R. Waldron, Duluth, is the principal promoter.

Edmonton, Dunvegan and British Columbia Ry.—Central Canada Ry.—We are officially advised that the Alberta Government has invited tenders for the supply of approximately 3,300 gross tons of 60 lb. rails and fastenings therefor for the extensions of the Edmonton, Dunvegan and British Columbia Ry. and the Central Canada Ry. The extension of the first mentioned railway will be from the present terminus of the Grande Prairie branch at Grande Prairie, 15 miles westerly to Sec. 21-71-8 west of 6th Meridian, 15 miles through a well settled country, consisting of open prairie with occasional bluffs. There will be three wooden trestles, one of 42-bents pile and frame construction across Bear Creek; a 4-bent trestle across Flyingshot Creek, and a 15-bent pile and frame trestle across Spring Creek. The location plans show a maximum gradient of 0.7%, with a maximum curvature of 4 degrees, and the grading will involve approximately 12,000 cubic yards a mile. The extension of the C. C. Ry. will be for 13 miles westerly from the present terminus at Berwyn to Sec. 15-18-1 west of 6th Meridian, through a well settled farming district, consisting of open prairie with occasional bluffs. The plans show a line with a maximum gradient of 5%, with only 2 short curves, and no bridge work. A press report states that the contract for grading on this line will probably be let to James Mohler, Strome, Alta.

C. E. Cartwright and James Kennedy are reported to be making surveys as to the general condition of the two lines for the Government, to determine whether or not there was any foundations for Alberta's Deputy Minister of Railways strictures on the manner in which they had been reconditioned by the C.P.R. as operating lessee, contained in his report for 1922. The funds for this work were provided by the Alberta Government. (Aug., pg. 376.)

Esquimalt and Nanaimo Ry.—The Victoria B.C., City Solicitor, is reported as expecting that the construction of the final section of the railway and highway bridge at Johnson St. will be completed by the end of September or early in October, when the short strip of paving westward, necessary to finish the entire undertaking will be laid. (Aug., pg. 376.)

Fort Alexander Ry.—An announcement was made recently in Winnipeg by B. W. Thompson, that tenders would be invited at once for the construction of the Manitoba Pulp and Paper Co's pulp and paper mills at Fort Alexander, Man.

The company is reported to have completed the preliminary work including a dock at the site of the mill, and a pier in Traverse Bay. It proposes to build a railway from Beconia, mile 52 on the Canadian National Rys. Winnipeg-Victoria Beach line to Fort Alexander at the head of Traverse Bay, Lake Winnipeg. (July, pg. 320.)

Kettle Valley Ry.—The Board of Railway Commissioners has authorized the replacement of the following bridges:—21.4, 28.4, 30.8, 33.7 and 39.0 over the Nicola River, Merritt Subdivision, B.C. (March, pg. 119.)

Lake Huron and Northern Ontario Ry.—A deputation from the company waited on the Premier of Ontario, Aug. 1, and asked for a revival of its charter powers to extend the line from the present terminus at Rock Lake northerly, and so enable it to earn the land grant authorized some years ago. The original company was the Bruce Mines and Algoma Ry., which built a line from near Bruce Mines, Ont., on the C.P.R. North Bay-Sault Ste. Marie line, to Rock Lake, about 17 miles. The title was subsequently changed to the Lake Huron and Northern Ontario Ry., power being given to extend the line northerly towards Hudson Bay, a land grant being authorized upon certain conditions of colonization and development. The mining operations at Rock Lake having ceased the railway stopped running, and the company was reorganized. Several efforts were made to raise capital to revive the project, but all failed. The charter, however, was kept alive, the last extension of time expiring in 1922. When the matter was then before the Ontario Legislature, the Premier, E. C. Drury, announced that the Government was considering the advisability of taking over the railway from Bruce Mines to Rock Lake and extending it to the Missigua Forest reserve. He made an inspection of the property during the following autumn, but the Government did not take any action in the matter prior to its defeat on June 25. Premier Ferguson advised the delegation that the Government would look into the matter. We were officially advised, Aug. 16, that the matter was being thoroughly investigated by the Lands and Forests Department and that when the officials have secured sufficient data to form a conclusion the question will be considered by the Government. (May, pg. 206.)

Michigan Central Rd.—A press report states that it is estimated that the expenditures on additional facilities and general betterments on the Canadian lines for this year will amount to approximately \$2,000,000, distributed as follows: Laying rail, \$760,000; ties, \$700,000; ballasting, \$175,000; St. Thomas yard extension, \$500,000. At the end of July it was reported that of the 250,000 new ties proposed to be laid, 140,000 had been put in; that 60 miles of track out of 75 miles had been relaid; and that stone ballasting was being put down on about 25 miles. Considerable progress is reported to have been made in the yard extension at St. Thomas. Some additions are reported to be under construction at St. Thomas station, and a new 75-ton coal dock is being built at Fargo. (Aug., pg. 376.)

Newfoundland Ry.—The Newfoundland Finance Minister, in presenting his budget to the Legislative Assembly, Aug. 1, stated that the Government proposed to

raise a loan of \$3,000,000 for railway equipment required as a result of the Government taking over the railway system and for its interest in the Humber River development project.

Quebec Central Ry.—We are officially advised that it is not likely that any construction will be done this year on the proposed diversion and rebuilding of the line from Beauce Jct. to Beauceville, and the extension therefrom to a junction with the Temiscouata Ry. at Cabano, Que. (Aug., pg. 376.)

Timiskaming and Northern Ontario Ry.—We are officially advised that the Commission has given some consideration to the construction of a branch line to serve the South Lorrain silver mining camp, but that no instrumental surveys have been made. A press report states that the starting point of the branch would be either North Cobalt, Kerr Lake or Cassidy siding.

Location plans for the branch line under construction, under the Nipissing Central Ry. charter, from Swastika to Larder Lake, have been completed. They show a line running from Swastika northeast for about 2 miles, then swinging easterly to the site of the new Kirkland Lake station, through the Kirkland Lake mining property, round the north side of Gull Lake, crossing the narrows of Gull Lake, thence through a number of mining properties, in Labal and Gautier Tps., then turning south of east crossing in Blanche River, on to the north shore of Larder Lake in McVittie Tp. We are officially advised that the Sinclair Construction Co., Toronto, the general contractors, have let the following sub-contracts: Clearing right of way, Andrew Devine, North Bay, Ont.; grading mile 0 to 1, Thomas Marshall Co., Swastika, Ont.; grading mile 1 to 8, Chisholm Construction Co., Kirkland Lake, Ont.; grading mile 8 to 16, James Dempsey, Swastika, Ont.; grading mile 16 to crossing of Blanche River and as far as the general contract runs, W. W. Murray, Dane, Ont.; concrete and masonry work, G. W. Jewett Co., Montreal, with construction headquarters, Swastika, Ont.; timber bridges, Brennan and Egan, Arnprior, Ont., with construction headquarters at Swastika, Ont. All these subcontractors have their plant and men on the job and work is being prosecuted vigorously. The work is being supervised for the general contractors by W. J. Bishop, Division Engineer, with M. S. Sutherland, T. H. Harrison and E. W. Bennett as resident engineers, general headquarters being at Swastika.

Members of the Timiskaming and Northern Ontario Railway Commission were reported to have returned on Aug. 15 from an inspection trip over the 70 mile extension being built from Cochrane to near New Post on the Abitibi River, Aug. 15. Tracks have been laid at the end of 1922 to the second crossing of the Abitibi River, mile 44.4, and grading and other work is being pushed forward on the remaining mileage. The contract, which is held by Grant Smith & Co. and McDonnell Ltd., calls for the completion of the extension this year.

We are officially advised that the Ontario Government has under consideration a proposal for encouraging the establishment of a creosoting plant at Cochrane, Ont., for the treatment of ties. The railway uses 200,000 a year for replacements on the line, and the proposition is that the T. and N.O.Ry. Commission will enter into a contract with the creosoting plant for its requirements.

It is also expected that the Canadian National Rys. management would give a contract for creosoting about 300,000 a year. As creosoting is claimed to approximately double the life of ties it is estimated that a saving of about \$50,000 a year would be made on maintenance costs, besides providing employment for a considerable number of men. (Aug., pg. 376.)

Negotiations for the creosoting are being carried on with Calder, Canada, Limited, the Chairman of which will be either John J. Calder or Sir James Calder, C.B., of London, Eng. Major General Alexander McDougall, C.B., will be Managing Director. (Aug., pg. 376.)

Transportation of Alberta Domestic Coal.

Canadian Railway and Marine World has, in previous issues, dealt with the transportation aspect of the Canadian fuel situation, particularly as concerns the possibility of an eastern market for Alberta domestic coal. A new feature has been injected into the situation by a proposition that this coal be brought to Toronto and other Ontario points by the lake and rail route, with trans-shipment at the head of Lake Superior, as stated in a Toronto press report of Aug. 16, which said in part: "Premier Ferguson was yesterday waited upon by a delegation of Alberta coal men, headed by Sir Geo. Filmer, who said that they were prepared during the coming autumn and winter to ship 100,000 tons of coal here under the conditions of transport which now prevail. The plan which they propose is to ship the coal by rail to Fort William and by steamship the remainder of the distance. They claimed that a substantial reduction from rail haulage charges could be thus effected, and the coal laid down at a price which would make it compete attractively with the product of U.S. mines."

In the absence of definite information at this time as to what rate the coal operators expect to get from the Alberta mines to Fort William, and by ship from Fort William to port of destination, and also as to trans-shipment costs and final distribution charges, attention may be given to another important feature of the proposed movement, viz., the Alberta coal's ability to stand the increased handling and exposure incidental to the proposed method of transporting it. The following questions and answers, contained in the report for April 13, of the House of Commons committee investigating the fuel question, are interesting in this connection: Question by D. Spence, M.P. for Parkdale, Ont.: "You would not want the Alberta coal exposed to rain?" Answer by H. Stutchbury, Trade Commissioner for Alberta: "No, it should be under reasonable cover. As long as it is away from the rain and out of the hot sun, you are not going to see much disintegration. It will stand a reasonable amount of handling." Question by E. J. Garland, M.P. for Bow River, Alta.: "You know there is a prejudice against these coals, because of the danger of slacking?" Mr. Stutchbury: "Yes." Mr. Garland: "Of course your opinion is that that does not take place when it is put into the cellars?" Mr. Stutchbury: "Not at all. It would not be possible to ship many of our coals, which are quite suitable for this market, to Ontario in open cars. We could not use the big U.S. gondolas."

The following questions and answers in the April 12 report of the Senate fuel committee are also of interest: Question by Senator J. S. McLennan: "How would the Alberta domestic coal stand on a dump in the open air?" Mr. Stutchbury: "It would not stand at all." Mr. McLennan: "And it has a disadvantage of not being able to be stored in the open air?" Mr. Stutchbury: "No, it cannot be stored in the open air. It can be stored in an ordinary shed." Senator Laird, "What are the rates today?" Mr. Stutchbury: "From Edmonton, Drumheller or Lethbridge to Toronto is \$12.70; to Ottawa it is about \$13.20; that is all rail." Mr. Laird: "What would it be lake and rail?" Mr. Stutchbury: "I don't think lake and rail would be a feasible proposition for our domestic coals; it would break it up too much; the same is true of the Welsh anthracite."

From Mr. Stutchbury's replies, as quoted, it would seem that the Alberta domestic fuel's ability to stand the lake and rail trip without serious disintegration is doubtful, and that the attempt to get the coal into the Ontario market by that route would meet with many difficulties. If the coal had to be carried from the mines to the head of Lake Superior in box cars, the work of unloading them for trans-shipment would be costly; and the coal would have to be put on dumps at Fort William and again at the unloading port on the lower lakes, and this, together with the disintegration due to repeated handling, would, according to Mr. Stutchbury, cause considerable deterioration in the quality. In regard to Mr. Stutchbury's reference to Welsh anthracite, our understanding is that the trans-shipment involved in the handling of it does not affect it seriously, although it results in the formation of a certain amount of slack. The testimony of G. R. Pratt, Fuel Engineer for the Alberta Government, before the House of Commons fuel committee on May 17, was to the effect that he thought Alberta domestic fuel would carry in open cars without disintegration taking place more than two or three inches in from the surface, and that while in the west the demand was for large lump coal, it seemed to him that the bulk of the eastern demand was for the smaller lump varieties, so that breakage in handling and trans-shipment would not be such a serious matter as would first appear. It would seem that the only conclusive way to demonstrate whether the Alberta coal can stand a rail and water journey to Ontario markets would be to make a trial shipment. In the meantime, the chief concern for the Alberta operators who are reported as considering the lake and rail route will be the transportation rates which they can obtain from the rail and water carriers.

Railway Accidents Throughout Canada.

—The number of railway accidents during July, reported to the Board of Railway Commissioners, was 267, in which 2 passengers, 13 employees, and 23 others were killed, and 38 passengers, 179 employees and 63 others were injured. Included in "others" were 8 persons killed and 38 injured, in 32 highway crossing accidents, the crossings being protected in 12 cases by bells, gates or watchmen, and being unprotected in the balance. Motor vehicles were concerned in 22 of these accidents, other vehicles in 6, pedestrians in 3, and a bicycle in 1.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a complete record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

33,898. July 14.—Approving plans of station building in Emerson, Man., to replace building destroyed by fire.

33,899. July 13.—Declaring that for the present the C.P.R. crossing at mile 7, MacLeod Subdivision, near Midnapore, Alta., is protected to Board's satisfaction.

33,900. July 14.—Authorizing Canadian National Rys. to build highway crossing, between Sec. 19, Tp. 5, Range 16, and Sec. 24, Tp. 5, Range 17, west Principal Meridian, Man.

33,901. July 16.—Approving supplement 6 to Express Classification for Canada 5, making a reduction on bodies of freight motor trucks.

33,902. July 14.—Approving plan E-3-122, showing location of station building at St. Hermas, Que.

33,903. July 14.—Extending for 30 days from date, the time within which C.P.R. may complete installation of automatic bell and wigwag signal at Pembroke St., Pembroke, Ont.

33,904. July 13.—Approving C.P.R. clearances at track scale on Mildand Grain Co's siding, Calgary, Alta., C.P.R. to keep men off sides of cars.

33,905. July 14.—Authorizing Canadian National Rys. to build spur at mile 1469, Telkwa Subdivision, in Lot 3553, Range 5, Coast District, B.C., to be completed within three months.

33,906 to 33,908. July 14. 13.—Authorizing C.P.R. to replace 100-ft. through truss span by 100-ft. through plate girder span at bridge 109.4 over Blanche River, three 150-ft. deck truss spans by 3 150-ft. deck truss spans at bridge 62.0 over La Rouge River; and 150-ft., 200-ft. and 100-ft. through truss spans by two 78-ft. deck plate girder spans, one 200-ft. through truss span and two 53-ft. deck plate girder spans, at bridge 84.6, over North Nation River, Lachute Subdivision, Que.

33,909. July 16.—Authorizing Canadian National Rys. to build second track across Hamilton Radial Electric Ry. at Brant Ave., near Burlington, Ont.; C.N.R. to pay the cost of any changes in interlocking plant and the cost of installing and maintaining new diamond in west track.

33,910. July 14.—Certifying that Canadian National Rys. book of reference on plan 1310 which shows H. B. Jarman as owner of part of land affected, should show W. Rainsfelt instead, and that correction has been allowed.

33,911. July 16.—Granting C.P.R. relief from approval of shareholders and publication in electoral districts of agreement dated June 1, 1921, with Grand Trunk Pacific, Canadian Northern, Edmonton, Dunvegan & British Columbia Ry. Companies and recommending same to Governor in council for sanction.

33,912. July 18.—Declaring that for present, C.P.R. crossing at Richmond St., London, Ont., is protected to Board's satisfaction.

33,913. July 18.—Ordering Canadian National Rys. within 60 days to install improved type of wigwag signal at crossing of Riddell St., Woodstock, Ont.

33,914. July 18.—Relieving for the present, C.P.R. from providing further protection at crossing of public highway, mile 106.2, Cascade Subdivision, B.C.

33,915. July 19.—Suspending, until further order, provisions under certain Canadian National Rys. tariffs regarding shipments to and from Prince Edward Island points. This order was given fully in Canadian Railway and Marine World for August, page 390.

33,916. July 18.—Extending for 30 days from date, the time within which C.P.R. may complete installation of wigwag signal at Eglinton, Ave., York Tp., Ont.

33,917. July 18.—Authorizing C.P.R. to build freight shed and dock at Fort William, Ont.

33,918. July 18.—Approving C.P.R. clearances at proposed canopy over platform at Beach Foundry siding, Ottawa, Ont.

33,919. July 18.—Authorizing Canadian National Rys. to cross public highway known as Petit Brule Road, Que.

33,920. July 18.—Approving plan C-150, July 10, 1923, showing standard form of pile trestle, to be used on Nipissing Central Ry. Swastika-Wendigo Lake extension.

33,921. July 18.—Authorizing Canadian National Rys. to build subway at crossing of Fairfield St., Moose Jaw, Sask.

33,922 to 33,926. July 18.—Approving Bell Telephone Co. agreements with Murray-Brighton Telephone System; Pontiac Rural Telephone Co.; Northcote Farmers Telephone Co.; Wotton Local Telephone Co., and Lanark and Ramsay Telephone Co.

33,927. July 18.—Authorizing Canadian National Rys. to cross Cote des Anges South Road, Two Mountains County, Que.

33,928. July 18.—Authorizing C.P.R. to build spur for D. D. Wood & Sons, Ltd., in n.w. ¼ Sec.

23, Tp. 13, Range 9, east of Principal Meridian, Man.

33,929. July 20.—Approving supplements 1 and 2 to connecting agreement between Bell Telephone Co. and Dummer Municipal Telephone System.

33,930 to 33,934. July 18.—Authorizing Canadian National Rys. to cross public highways between St. Canut and St. Jerome parishes; between Cote St. Jean and Cote des Saints concessions; between Cote St. Louis Corbeils and Petit Brule concessions; Cote des Anges North Road and between St. Monique and St. Augustin parishes, Two Mountains County, Que.

33,935. July 24.—Authorizing City of Vancouver, B.C., to build overhead pedestrian bridge across C.P.R. right of way at foot of Carrall St.

33,936. July 24.—Amending order 32,673, July 29, re Michigan Central Rd. bridge over Niagara River just below Niagara Falls, Ont.

33,937. July 26.—Authorizing Canadian National Rys. to open for traffic its line from mile 52.6 to 69.4, Cowichan Subdivision, B.C.

33,938. July 27.—Amending order 22,237, July 18, 1914, restricting to 48 hours, time during which carloads of lumber and forest products shipped from U.S. to Canada by Canadian National Rys. shall be held without demurrage charges at rate basing points, awaiting reconsignment. This order is given fully on another page.

33,939. July 26.—Extending to Sept. 1, time within which Canadian National Rys. may complete installation of interlocking plant at Hurdman, Ont.

33,940. July 25.—Approving C.P.R. plan showing revision of interlocking plant at crossing of Canadian National Rys. at Canpa, Ont.

33,941. July 26.—Extending to Sept. 15, time within which Canadian National Rys. may complete fencing on its Swan River-Prince Albert line as required by order 33,212.

33,942. July 26.—Approving C.P.R. clearances at two-track coaling plant at Ignace, Ont.

33,943. July 14.—Dismissing City of Montreal application to open and extend Green Ave. across Canadian National Rys.

33,944. July 25.—Authorizing Canadian National Rys. to cross Brant St., Burlington, Ont., with second track.

33,945. July 24.—Authorizing International Coal & Coke Co., Coleman, Alta., to cross under C.P.R. in Sec. 8, Tp. 8, Range 4, west 5th Meridian, Alta., with necessary haulageways and airways for mining coal.

33,946. July 25.—Authorizing Canadian National Rys. to cross with second track, highway at station 20-54, south of Burlington, Ont.

33,947. July 25.—Authorizing Halifax & Southwestern Ry. to replace existing timber bridge over Puddle River, N.S.

33,948. July 24.—Approving general location of Burrard Inlet Tunnel & Bridge Co's Second Narrows bridge and approaches, Vancouver, B.C.

33,949. July 24.—Authorizing Nipissing Central Ry. to build level crossings on its Wendigo-Swastika Lake Branch.

33,950. July 30.—Approving Burrard Inlet Tunnel & Bridge Co. plan showing location across Second Narrows at Vancouver, B.C.

33,951. July 24.—Dismissing application of Vancouver, Victoria & Eastern Ry. and Navigation Co., for authority to remove its railway station at Grand Forks, B.C.

33,952. July 24.—Extending to Sept. 30, time within which C.P.R. may complete erection of standard class A-3 station at Erickson, B.C.

33,953. July 30.—Dismissing complaint of Transcona, Man., Ratepayers Association, against passenger accommodation, train service and fare charged by Canadian National Rys., between Transcona and Winnipeg.

33,954. July 30.—Ordering C.P.R. to build spur for Buchanan & Wilband's sawmill near Choate, B.C.

33,955. July 30.—Amending order 33,895 re Canadian National Rys. locomotives operated through non-forested territory in Prairie Provinces being exempted from clause 8 of general order 362, by providing that for present year, these provisions be suspended in case of locomotives, steam shovels, ditching machines or pile drivers equipped with barrel type of spark arresters.

33,956. July 25.—Dismissing Express Traffic Association's application for order approving form of release for empty cream cans left on station platforms.

33,957. July 24.—Approving supplement 1 to agreement between Bell Telephone Co. and Thamesville Telephone Co.

33,958. July 24.—Approving agreement between Bell Telephone Co., American Telephone & Telegraph Co., New York Telephone Co., New England Telephone & Telegraph Co. and Michigan State Telephone Co.

33,959. July 30.—Ordering that fencing on both sides of Edmonton, Dunvegan & British Columbia Ry., mile 85.8 to 90.8 and 92.3 to 94, be completed by Sept. 15.

33,960. July 26.—Authorizing Saskatchewan Highways Department to carry highway across C.P.R. in s.e. ¼ section 10, Tp. 37, Range 16, west 3rd Meridian.

33,961. Aug. 1.—Approving Supplement E to

Express Classification for Canada no. 5.

33,962. July 31.—Authorizing Burrard Inlet Tunnel & Bridge Co. to build bridge at Second Narrows, Vancouver, B.C.

33,963. July 31.—Relieving Canadian National Rys. from providing further protection at Cockburn St. crossing, Kerwood, Ont.

33,964. July 31.—Relieving Niagara, St. Catharines & Toronto Ry. from providing further protection at crossing at Dainsville Road 3 miles south of Welland, Ont.

33,965. July 31.—Relieving C.P.R. from providing further protection at crossing at mile 3, Megantic Subdivision, Que.

33,966. July 31.—Approving Windsor, Essex & Lake Shore Rapid Ry. standard mileage freight tariff C.R.C. 307.

33,967. July 30.—Authorizing C.P.R. to close and divert highway crossing in Lot 687, Range 7, and Lot 545, Range 6, Bolton Tp., Que.

33,968. 33,969. July 31.—Approving supplements to connecting agreements between Bell Telephone Co., South Malahide Telephone Co. and Howick Municipal Telephone System.

33,970. July 20.—Authorizing Canadian National Rys. to cross Cote St. Augustin Road, Two Mountains County, Que.

33,971. July 31.—Relieving Canadian National Rys. from providing further protection at crossing at St. Claire, Loretteville, Que.

33,972. Aug. 1.—Authorizing Kettle Valley Ry. to replace bridge 21.4 over Nicola River, Merritt Subdivision, B.C.

33,973. Aug. 1.—Authorizing Canadian National Rys. to divert Little Saskatchewan River and to build bridge across same in Sec. 24, Tp. 12, Range 21, west first meridian, Sask.

33,974. Aug. 1.—Relieving Canadian National Rys. and C.P.R. from maintaining night signalman between 10.30 p.m. and 6.30 a.m. at crossing at Strathcona, Alta.

33,975. Aug. 1.—Approving C.P.R. clearances at bridges 99.9 and 102.96, Winchester Subdivision, Ont.

33,976. 33,977. Aug. 3.2.—Authorizing Kettle Valley Ry. to replace bridges 30.8 and 28.4 over Nicola River, B.C.

33,978. Aug. 3.—Authorizing Halifax & Southwestern Ry. to replace bridge over Annapolis River, mile 52.4 Middleton Subdivision, N.S.

33,979. Aug. 3.—Authorizing Kettle Valley Ry. to replace bridge 39.0 over Nicola River, B.C.

33,980. 33,981. Aug. 3.—Authorizing C.P.R. to replace bridges 68.31 over Six Mile Creek, and 73.85, Mountain Subdivision, B.C.

33,982. Aug. 3.—Authorizing Halifax & Southwestern Ry. to replace bridge across Mush-a-Mush River at mile 65.9 Chester Subdivision, N.S.

33,983. Aug. 3.—Authorizing Kettle Valley Ry. to replace bridge 33.7 across the Nicola River, Merritt Subdivision, B.C.

33,984. Aug. 3.—Authorizing C.P.R. to replace span in bridge 106.1, over Blanche River, Lachute Subdivision, Que.

33,985. Aug. 4.—Ordering C.P.R. to place broken stone on southern approach to crossing at 26th St., Brandon, Man., widen crossing and level knolls obstructing view, City to trim trees and place warning signs.

33,986. Aug. 3.—Authorizing C.P.R. to replace span in bridge 89.2, over Blanche Creek, Lachute Subdivision, Que.

33,987. Aug. 4.—Ordering Canadian National Rys. to commence widening cut to full width of right of way for 300 ft. on each side at first crossing east of Rivers, Man.

33,988. Aug. 4.—Authorizing C.P.R. to replace span on bridge 17.77, over Eagle River, Shuswap Subdivision, B.C.

33,989. Aug. 3.—Extending to Sept. 5, time within which C.P.R. may install wigwag signal at Brock Road crossing, Puslinch, Ont.

33,990. Aug. 4.—Authorizing C.P.R. to build spur for City of Nelson, B.C.

33,991. Aug. 3.—Authorizing C.P.R. to build bridge at mile 56.4, over Otter River.

33,992. Aug. 7.—Declaring that for the present, Hamilton Radial Ry. crossing at Brant St., Burlington, Ont., is protected to Board's satisfaction.

33,993. Aug. 7.—Declaring that for the present, Canadian National Rys. crossing at Robin Yard, Man., is protected to Board's satisfaction.

33,994. Aug. 8.—Declaring that for the present, C.P.R. crossing of East Broadway Ave., Merrickville, Ont., is protected to Board's satisfaction.

33,995 to 34,005. Aug. 7.—Approving Bell Telephone Co. agreements with Augsburg Telephone Association; North Algonia Telephone System; Balmoral Telephone System; Moscow Rural Telephone Association; Burgessville Rural Telephone Co.; Dare Bay Telephone Co.; Donegal Telephone Co.; Lower Bonnechere Telephone Co.; Grattan No. 7 Telephone Association; East Wakefield Telephone Co.; and Wilberforce Rural Telephone Co.

34,006. Aug. 4.—Amending order 33,308, Jan. 20, re C.P.R. crossing east of Sec. 15, Tp. 9, Range 17, West 3rd Meridian, Sask.

34,007. Aug. 7.—Amending order 33,895, re Canadian National Rys. equipment provided with

barrel type spark arrester operating through non-forested territory in Prairie Provinces.

34,008. Aug. 7.—Authorizing Burrard Inlet Tunnel & Bridge Co. to erect overhead bridge as highway crossing over C.P.R. between mileposts 124 and 125, Vancouver, B.C.

34,009. Aug. 7.—Authorizing Hydro-Electric Power Commission of Ontario to erect its trolley system over Windsor, Essex & Lake Shore Rapid Ry. along Erie St., Windsor, Ont.

34,010. Aug. 9.—Authorizing Temiscouata Ry. to remove station agent at Whitworth, Que.

34,011. Aug. 8.—Approving revised general location of C.P.R. Archive-Wymark Branch mile 68.0 to 77.0, Sask.

34,012. Aug. 8.—Ordering that 25% of cost of improving view at C.P.R. crossing west of Locust Hill, Ont., be paid out of railway grade crossing fund.

34,013. Aug. 8.—Extending for 90 days, time within which Canadian National Rys. may complete installation of wigwag at Dixie Road, or golf links crossing, between Mimico and Port Credit, Ont.

34,014. Aug. 9.—Authorizing Canadian National Rys. to use bridge at St. Paul St., St. Catharines, Ont.

34,015. Aug. 7.—Authorizing St. Andrews municipality, Man., to make highway crossing over C.P.R., at Matlock Beach, Man.

34,016. Aug. 8.—Authorizing Canadian National Rys. to cross John St., Shelburne, N.S., with a siding.

34,017. Aug. 4.—Authorizing Pitt Meadows municipality, B.C., to make highway crossing over C.P.R. at McTavish Road.

34,018. Aug. 7.—Approving agreement between Bell Telephone Co. and Wheatley Telephone Co.

34,019. Aug. 9.—Authorizing Canadian National Rys. to build spur for R. B. Herron and Co., Tionaga, Ont.

34,020. Aug. 9.—Declaring that for the present, Canadian National Rys. crossing west of Humber River Bridge, Toronto, is protected to Board's satisfaction.

34,021. Aug. 10.—Ordering Great Northern Ry. to revise its tariff on logs in carloads from A. J. Farquharson's spur at mile 65 of its line, to Fernie, B.C., to provide for minimum for carloads of 8,000 ft. a car, except that minimum will be 7,000 ft. a car, where cars of 60,000 lbs. capacity or less or furnished; revised tariff to be filed for Board's approval and to become effective two weeks from date.

34,022. Aug. 15.—Authorizing Three Rivers Traction Co. to cross the C.P.R. at St. Philippe St., Three Rivers, Que.

34,023. Aug. 15.—Approving supplements to connecting agreement between Bell Telephone Co. and Nelson Telephone Co.

34,024. Aug. 9.—Ordering Canadian National Rys. to build farm crossing for J. W. Woodward, at mileage 23, Clearwater Subdivision, B.C.

34,025. Aug. 16.—Authorizing Manitoba Power Commission to erect power wires across Canadian National Rys. at Newton Siding.

34,026. Aug. 15.—Extending to Nov. 1, the time within which Canadian National Rys. may complete interlocking plant at Harrowsmith, Ont.

34,027. Aug. 11.—Authorizing Essex Terminal Ry. to operate over crossings of its line by Hydro Electric Rys., Essex Division, at Main St., south of Langlois Road, and north of Chappus St., Sandwich West Tp., Ont.

34,028. Aug. 13.—Approving revised location C.P.R. Bassano Easterly Branch (Empress-Milden), mile 192.46 to 196.69.

34,029. Aug. 10.—Declaring that for the present, the second highway crossing south of Emery, Ont., over C.P.R., is protected to Board's satisfaction.

34,030. Aug. 9.—Authorizing Maryfield Village, Sask., to make highway across C.P.R. at Main St.

34,031. Aug. 13.—Authorizing C.P.R. to build ballast pit spur across road allowance between Secs. 22 and 23, Tp. 3, Range 21, West of 2nd Meridian, at Echo, Sask.

34,032. Aug. 14.—Approving plan showing proposed layout of Canadian National Rys. station at Napanee, Ont.

34,033. Aug. 14.—Authorizing Canadian National Rys. to cross with its second track the Port Arthur Civic Ry. on Fort William Road.

34,034. Aug. 13.—Authorizing Canadian National Rys. to divert east and west road allowance between Secs. 22 and 27, Tp. 49, Range 27, West 3rd Meridian, Sask.

34,035. Aug. 13.—Authorizing Canadian National Rys. to build spur for Kaministiquia Lumber Co., Port William, Ont.

34,036. Aug. 13.—Authorizing C.P.R. to build spur for North West Lumber Co., across Government surveyed road in s.e. ¼ Sec. 1, Tp. 62, Range 27, West 4th Meridian.

34,037. Aug. 13.—Approving supplement F to Express Classification for Canada 5.

34,028. Aug. 13.—Declaring that for the present, the first public crossing west of L'Orignal station, Ont., across Canadian National Rys., is protected to Board's satisfaction.

34,039. Aug. 14.—Authorizing Canadian National Rys. to close interlocking plant at crossing of C.P.R. in s.e. ¼ Sec. 32, Tp. 9, Range 20, West Principal Meridian, against its trains on Sundays and between 7 p.m. and 3 a.m. weekdays.

34,040. Aug. 16.—Authorizing Alberta Public Works Department to make highway across C.P.R. between Secs. 3 and 4, Tp. 25, Range 2, W. 5th M.

Long Regular Locomotive Runs.

Canadian Railway and Marine World for August called attention to the Canadian National Rys. management's intention to operate six of its new 6,000 class mountain type locomotives in passenger service through from Montreal to Toronto, 334.04 miles, and vice versa. As then stated, locomotives on this run have heretofore been changed at Brockville, 125.64 miles from Montreal, and Belleville, 208.4 miles from Montreal. Attention was directed in the same article to the prevalence of long passenger locomotive runs on some U.S. lines, and the economies to be effected by operating passenger locomotives over two or more divisions were also pointed out. We have since been advised that the C.N.R. 6 mountain type locomotives assigned to the Central Region will be used on train 14, leaving Toronto at 9.20 a.m. and arriving at Montreal at 5.40 p.m.; on train 15, leaving Montreal at 10 a.m. and arriving at Toronto at 5.40 p.m.; on train 16, leaving Toronto at 11 p.m. and arriving at Montreal at 7.30 a.m.; on train 17, leaving Montreal at 11 p.m. and arriving at Toronto at 7.30 a.m., and that locomotive crews will be changed at Belleville. On account of large tender capacity, it is expected that the locomotives will have no trouble in making the trip without having to take coal en route.

The 10 mountain type locomotives assigned to the Atlantic Region are being used on trains 1, 2, 3 and 4, as follows: three on Springhill Subdivision, Moncton Division, between Truro and Moncton, 124.73 miles; three on Harcourt and Bathurst Subdivisions, Campbellton Division, between Moncton and Campbellton, 185.57 miles; and four on the Matapedia and Rimouski Subdivisions, Campbellton Division, between Campbellton and Riviere du Loup, 188.78 miles. When the facilities at Halifax will permit, three of them will operate on the Bedford and Springhill Subdivisions, between Halifax and Moncton, 188.8 miles.

Some other long regular locomotive runs have come under our notice recently. One of these is on the Batiscan and Jonquiere Subdivisions of the Saguenay Division, Quebec District, Central Region, Canadian National Rys., where, for many years, one locomotive has hauled a passenger train from Quebec to Chicoutimi, 227 miles, on one day, and back the next. The locomotives now in this service are 1300 class 10-wheel, of 30% capacity (30,000 lb. tractive power), built by Montreal Locomotive Works. One of them hauls train no. 21, which operates daily except Sunday, leaving Quebec at 9 a.m., arriving at Lake Edward, 111.9 miles from Quebec, at 1.55 p.m., leaving there at 2.10 p.m., and arriving at Chicoutimi, 227 miles from Quebec, at 7.30 p.m. The next day it takes back train no. 22, leaving Chicoutimi at 7.30 a.m., arriving at Lake Edward at 12.45 p.m., leaving there at 1 p.m. and arriving at Quebec at 6 p.m. A similar locomotive handles train 22 on the day on which the first locomotive handles 21, and takes 21 back to Chicoutimi on the following day.

On the Algoma Central & Hudson Bay Ry., train no. 1, a mixed, with make-up averaging 3 passenger and 5 freight cars, leaving Sault Ste. Marie at 9 a.m. daily except Sunday, is hauled by the same locomotive to Franz, 194.5 miles, arriving there at 7.45 p.m. The same locomotive

takes back train no. 2, operating daily except Monday, on the following day, this train leaving Franz at 10.15 a.m. and arriving at Sault Ste. Marie at 8.15 p.m. Ten-wheel locomotives of 24,400 lb. tractive power are used, and coal is taken both ways at Frater, 102 miles from Sault Ste. Marie. Each run is made by the one crew; the crew which takes no 1 from Sault Ste. Marie to Franz returning with no 2 the following day. We are advised that the schedule is pretty closely adhered to, that no particular difficulty is experienced in doing this in winter, and that A.C. and H.B. Ry. officials believe that this is the longest mixed train run made by any railway on the continent, certainly in Canada, and that it is made in as satisfactory a manner as possible considering the type of railway covered, the grades being heavy and curvature high. Trains 1 and 2 are given 75% of the A rating handled by regular freight trains over the Sault Ste. Marie-Franz section.

The United States Railways' Financial Results.

U.S. railways did not secure quite so good returns in June as in May, although they were considerably better than in June, 1922. Net railway operating income for the class 1 roads for June, 1923, was \$87,741,876, compared with \$76,270,663 in June, 1922, equivalent to an annual rate of return on tentative valuation of 5.47 per cent in June, 1923, and 4.86 per cent in June, 1922. In May, 1923, the roads earned at the annual rate of 6.3 per cent.

Roads in the eastern part of the U.S. have been enjoying more prosperous times than those in other districts, but the northwestern roads results cannot be called other than unsatisfactory. In the eastern district, earnings for June were at the annual rate of 6.39 per cent, in the southern district at the rate of 5.78 per cent, and in the western district at the rate of 4.20 per cent. For the first 6 months of 1923, eastern roads earned at the annual rate of 6.59 per cent, southern roads at 6.64 per cent, and western roads at 4.20 per cent, the same as in June. Some of the northwestern roads, such as the Northern Pacific, Great Northern, Chicago, Milwaukee & St. Paul, etc., due principally to Panama canal competition, inadequate rates and high operating expenses, have had very restricted earnings in 1923 to date, and these results have been reflected in severe depreciation in their securities on the New York market.

For the class 1 roads as a whole, operating revenues for June, \$541,162,978, were 14.6 per cent more than for June, 1922, and operating expenses, \$416,907,785, were 11.7 per cent more. Net earnings were 15 per cent more. For the first 6 months of 1923, net operating income for the roads as a whole, \$443,912,892, was 27.2 per cent more than in the first 6 months of 1922. The equivalent annual rate of return on tentative valuation for the first 6 months of 1923 was 5.64 per cent and for the first 6 months of 1922 it was 4.53 per cent.

The London & North Eastern Ry. of England, which has established an office in Australia recently, will, it is reported, probably also open an office in Canada. Austin Wilson, the company's Superintendent of Dock and Overseas Trade, of London, passed through Canada in August, en route to Australia.

Telegraph and Cable Matters.

Canadian National Telegraphs, Hamilton, Ont., employees held their annual picnic at Wabasso Park, Burlington Bay, recently.

The Maritime Telegraph and Telephone Co. is arranging to lay a cable across the harbor from the foot of Pitt St., Sydney, N.S., to the opposite shore north of Shingle Point.

Canadian National Telegraphs have opened offices at Boischatel, Griffin Cove and Marsouins, Que., and have closed offices at Rougemont and St. Gregoire, Que. The name of the office at Deer Lake, Ont., has been changed to Ardbeg.

The board of conciliation appointed to deal with matters between Canadian National Rys. and its telegraph and other employees, regarding wages, etc., has reported to the Labor Department. It is stated that the report is unanimous and embodies an agreement reached between the management and the employees, for increases, aggregating approximately \$125,000.

Canadian National Telegraphs have completed the erection of two no. 8 copper wires from Montreal to Toronto; 2 wires Toronto to Kitchener, Ont.; 2 wires, St. Thomas to Windsor, Ont.; and 1 wire, Toronto to Ottawa, Ont., no. 9 copper. Work will be commenced shortly on the erection of a wire from Toronto to Winnipeg; 2 wires, Toronto to Niagara Falls; 1 wire, Toronto to Hamilton, Ont., and 2 wires, Montreal to St. Hyacinthe, Que., all copper. The company's lines comprise 125,000 miles of wire and 25,000 miles of poles, and it is claimed to be the largest telegraph system in Canada, and in conjunction with the Western Union Telegraph Co.'s facilities, the largest telegraph and cable system in the world.

The Dominion Telegraph Co.'s report for the year ended June 30, 1923, shows a balance at credit of profit and loss of \$285,286.53. The assets are \$1,301,169.66. The company's plant is under lease to the Western Union Telegraph Co., and the guaranteed dividends have been paid quarterly in advance by that company since June, 1879. The directors are: President, Sir Henry Pellatt; Vice President, Aemilius Jarvis; Secretary-Treasurer, H. H. Macrea; directors, G. W. E. Atkins, J. C. Willever, E. Y. Gallagher, Sir John M. Gibson and F. Le M. Grassett, the last named replacing D. B. Hanna, who retired.

George D. Perry, whose resignation as Vice President and General Manager, Canadian National Telegraphs, Toronto, was announced in our last issue, was born at Whitby, Ont., Apr. 19, 1858. He commenced his business career in Nov., 1877, as clerk in the Standard Bank at Colborne, Ont., and left there July, 1879. From Feb., 1880, to Feb., 1881, he was cashier, Credit Valley Ry., Toronto; Feb. to Sept., 1881, bookkeeper, Dominion Telegraph Co., Toronto; Sept., 1881, to Dec., 1891, chief clerk and Travelling Auditor, Great North Western Telegraph Co., Toronto; Dec., 1891, to Sept., 1902, Secretary and Auditor, same company, Toronto; Oct., 1902, to March, 1911, Secretary-Treasurer and Superintendent of Supplies, same company, Toronto; March, 1911, to Dec., 1920, General Manager, same company, Toronto; Jan. to Apr., 1921, General Manager, Canadian National Telegraphs, Toronto, and from April, 1921, to July 31, 1923, Vice President and General Manager, Canadian

National Telegraphs and also Vice President, Great North Western Telegraph Co., Toronto.

George Colvin Jones, who has been appointed General Manager, Telegraph

Geo. D. Perry,
Who has resigned as Vice President and General
Manager, Canadian National Telegraphs.

Geo. C. Jones,
General Manager, Telegraph and Telephone
Department, Canadian National Rys., includ-
ing Canadian National Telegraphs.

and Telephone Department, Canadian National Rys., including Canadian National Telegraphs, Toronto, was born at Clyde, N.Y., Sept. 24, 1860, and entered

railway service in June, 1874, since when he has been, to 1878, messenger, yard clerk and operator, consecutively, Erie Rd.; 1878 to 1887, dispatcher, Cleveland, Cincinnati, Chicago & St. Louis Ry., Erie Rd., and Chicago, Burlington & Quincy Rd., respectively, except for a short service with the Western Union Telegraph Co.; 1887 to 1896, dispatcher, chief dispatcher, and district operator, Wabash Rd.; July, 1896, to Mar., 1898, Superintendent, G.T.R., London, Ont.; Mar., 1898, to May, 1899, Superintendent G.T.R. and Wabash Rd., St. Thomas, Ont.; May, 1899, to Dec. 31, 1904, Superintendent, Middle Division, G.T.R., Toronto; Jan. 1, 1905, to Sept. 1, 1917, General Manager, and Vice President and General Manager consecutively, Central Vermont Ry., St. Albans, Vt.; Sept. 1, 1917, to Oct. 31, 1922, Assistant to President, G.T.R., Toronto; Oct. 31, 1922, to Feb. 28, 1923, attached to Vice President and General Manager's office, G.T.R., Montreal. Feb. 28 to Aug. 1, 1923, Assistant General Manager, Central Region, Canadian National Rys., Montreal.

Among the Express Companies.

The Canadian National Rys. Express Department has opened offices at Casey, Que., and Cavalier, Sask., (star point); and has appointed agents at Boucherville, Que., and Crerar, Ont.

The Board of Railway Commissioners passed order 33,961 Aug. 1, granting the Express Traffic Association of Canada's application for approval of Supplement E to Express Classification for Canada, no. 5.

The Canadian National Rys. Express Department has opened offices at Bear River, P.E.I., and Fort Frances, B.C. Rosedale, Ont., is eliminated from the list of offices, as there is now no such station on the C.N.R.

The Canadian National Rys. Express Department and the Dominion Ex. Co. have, as mentioned in Canadian Railway and Marine World for August, issued through their Foreign Department, new tariffs, applying eastbound and westbound, between Great Britain and Canada, reducing the ocean charge by approximately 20 per cent., with the object of helping preferential trade between the two countries. The service arranged over all Canadian passenger steamships, calls for what is known as top stowage on the steamships, in order to permit of first discharging from ship on arrival, and traffic is then dispatched from the port by fast express trains, connecting directly with the ships. This service gives delivery of goods from ports in Great Britain to eastern Canadian centers, of from 9 to 11 days, and a proportionately longer time for western Canadian points. To encourage express shipments, "to order" bills of lading are issued, so that an importer can pay his invoice through his local bank, and avoid the expense of large credit abroad. This rapid service, reasonable rates, and order bills of lading should aid the importer so that he may be able to buy in small lots, under the existing commercial condition, and have a continuous flow of goods to meet his requirements. Both companies' foreign departments are administered by men who have had very broad world trade experience and who will gladly offer their services to Canadian exporters and importers.

Electric Railway Department

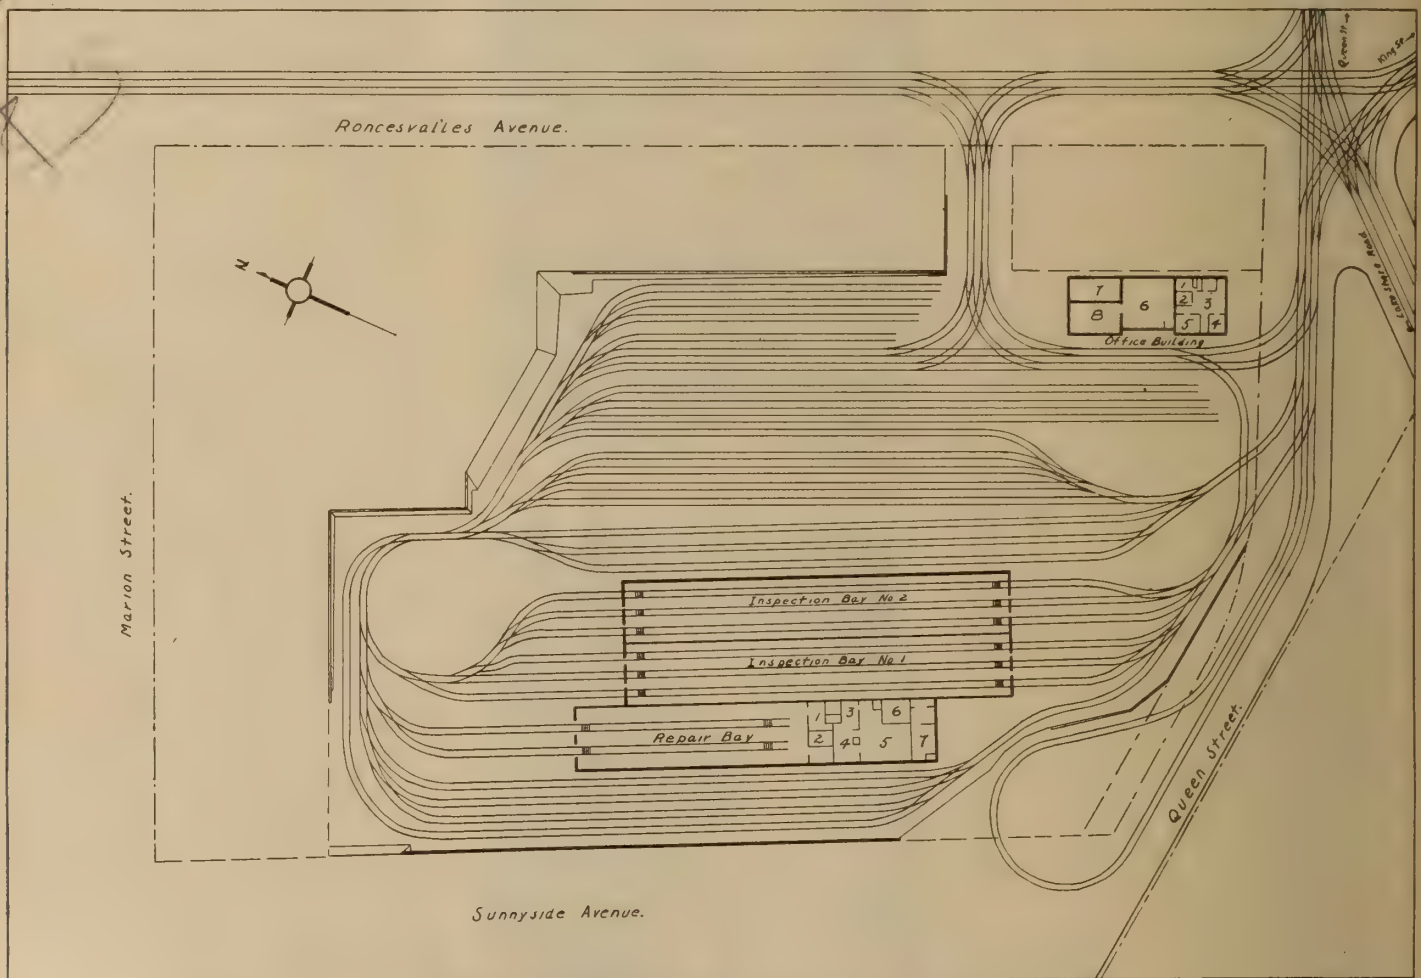

Roncesvalles Car House, Toronto Transportation Commission.

A further forward step by the Toronto Transportation Commission in making Toronto's street railway system thoroughly modern and adequate is the construction of a large car house on the property bounded by Queen St., Roncesvalles Ave., Marion St. and Sunnyside Ave., preliminary particulars of which were given in previous issues of Canadian Railway and Marine World. The Toronto Railway Co. had a car house on a portion of this property, but with the growth of the city and the introduction by the Commission of much larger roll-

from Roncesvalles Ave., the yard being to the north of it, and the plans for the new house and trackage called for the complete removal of the old house. Accordingly a contract for its demolition was let to W. H. Bagshaw, Toronto, who completed it on July 7. In order to accommodate the new trackage, additional lands were necessary, and these consisting of a parcel at the southwest corner of the property, fronting on Queen St. and Sunnyside Ave., and two parcels north of the old yard, but not extending to Marion St., were secured

the storage tracks north and west of the office building, will show how trailers may be attached with minimum delay, the trailers being pushed up to the waiting motor cars by a small electric yard locomotive.

The total track in the work will be 3.373 miles, this including track in the yard, in the repair and inspection bays of the house, and special work. Approximately 95% of the special work layouts will conform to the Commission's standards. The special work in the yard will be 114 and 108 lb. girder rail, Lorain

Roncesvalles Avenue Car House, Toronto Transportation Commission.

ing stock than used formerly, the old car house proved entirely inadequate to meet the new conditions. The old house, of brick construction, accommodated only 34 of the old type cars, and the yard trackage was also of limited capacity, and the new cars, full particulars of which have been given in these columns as they were ordered or received, are too large for the old clearances. On account of these clearance limitations, and the necessity for greater car storage and terminal accommodation, the Commission was able to demonstrate to the city authorities the necessity for a new house, and the passing of a bylaw providing \$800,000 for its construction and for the expropriation of necessary lands, followed.

The original car house was operated

by expropriation proceedings.

The accompanying plan shows the layout of the new house, office building and yard. The main entrance to the house and yard will be from Queen St., with an auxiliary entrance from Roncesvalles Ave., and the track layout, like that at the Eglinton house, built by the Commission last year at Yonge St. and Eglinton Ave., will provide the greatest facility possible in operation, not only for getting cars on to and off the storage, inspection, and repair tracks, but also in getting trailers attached to cars which have been operating without them, but to which it is desired to attach them. An inspection of the arrangement of the loops round the office building and the leads to the main lines on Queen St. and Roncesvalles Ave. with their relation to

sec. 398; special work at the main line connections will be 122 and 140 lb. girder guard rail of A.E.R.E.A. section; track in the car house will be 93 lb. T rail, Lorain sec. 507; in the storage tracks 85 lb. C.P. R. section rail will be used, and in the trailer storage and other yard tracks 60 lb. A.S.C.E. section rail. The yard tracks will hold 138 large cars.

The car house building, so far as construction materials are concerned, will be similar to the Eglinton car house, which was described fully in Canadian Railway and Marine World for Nov. 1922, pg. 574, with the exception that the branch ducts for heat transmission will be of concrete, instead of tile. It will be 285 ft. long, and each of the 3 bays will be 44½ ft. wide. Two of the bays, as shown in the plan, will be for inspection

purposes, and will have 3 tracks each, with a continuous pit under all 3 tracks and steps leading to the pits at each end of both bays. The repair bay will be served by 2 tracks, also equipped with a continuous pit. The repair tracks will not extend the full length of the repair bay, but the south end of that part of the building will be arranged for the provision of various facilities, located in accordance with the numbering shown as follows: 1, wheel and axle storage; 2, small stores; 3, valve room; 4, coal storage; 5, boiler room; 6, lavatory; 7, lunch room. The car house building will be of fireproof construction, with steel frame and brick and tile walls, and will be equipped with a sprinkler system throughout. The track pits will be of reinforced construction, with drainage facilities, and the repair bay will be equipped with hoists, jib cranes, wheel grinders and other miscellaneous tools and machines for running repairs. Heating in the main building will be provided by two large motor driven fans, with underground ducts to convey the heated air, which will be brought from the boiler room through a central tunnel running below the level of the pit floors, and distributed through concrete branch ducts to openings in the pit floors. Longitudinal skylights in the roof, running the full length of the bays, will supplement the window area in providing adequate natural lighting, and stationary and portable electric lighting units will be installed. Ventilation will be secured in the repair shop portion by the inclusion of standard ventilators in the skylight ridge. The doors at each end of the inspection bays, and at the north end of the repair bay, will be of the vertical roller type, operated by motor, with the control switch at convenient height above the floor level.

The office building will be 118 x 42 ft., and will have steel frame, brick and tile walls, and slate roof. Its divisions, as shown by the numbering on the plan, will be as follows: 1 and 2, clerks' and cashiers' cages; 3, main office; 4, car starter's office; 5, superintendent's office; 6, platform men's room; 7, platform men's lavatory; 8, platform men's recreation room. The building will have artificial stone trim, and there will be a basement under the office portion. The office portion will have hardwood floors, and in the platform men's room, lavatory and recreation room there will be mastic flooring. The walls will be finished in plaster. The building will be heated by steam, the boiler room being located in the basement under the office portion of the building, where there will also be a storeroom.

A feature of the layout will be the fire protection system. In addition to standard hydrants throughout the yard, there will be located, in strategic positions, large steel monitor towers, on each of which will be mounted a nozzle, arranged on a ball joint in such a way that a stream of water may be directed in any desired direction. This arrangement, together with the equipment of the main building with a sprinkler system, and assurance of an adequate water supply at all times from large connections to the city mains on both Roncesvalles Ave. and Queen St., should provide the greatest protection possible against fire damage.

In preparing the property for beginning construction, considerable grading was necessary. Generally, the land was high toward the northeast and low to-

ward the southwest; this required a cut of 8 ft deep in the northeast corner and a fill of the same depth in the southwest corner, cut and fill about balancing. The grading was done by the Commission's own forces. The provision of concrete retaining walls around a large portion of the property was found necessary, and a contract for their construction was given to Power & McAllister, Toronto, the work to be completed before the end of July. The total area to be occupied by the new facilities will be 5.87 acres. In the complete property held by the Commission after the acquisition of the additional lands expropriated, there is somewhat more than 7 acres, but it is the intention to sell the land fronting on Roncesvalles Ave. north and south of the Roncesvalles entrance, and as this frontage is suitable for business purposes, it is expected that its sale will materially

Canadian Electric Railway Association.

Honorary President: Major General Sir John M. Gibson, K.C.M.G., M.A., LL.B., LL.D., K.C., director, Dominion Power & Transmission Co.

Honorary Vice President: Acton Burrows, Proprietor, Canadian Railway and Marine World.

Honorary Advisory Council: Thos. Ahearn, President, Ottawa Electric Ry.; F. A. Gaby, Chief Engineer, Hydro Electric Power Commission of Ontario; Lt. Col. J. E. Hutcheson, General Manager, Montreal Tramways Co.; Geo. Kidd, President, British Columbia Electric Ry.

President: H. H. Couzens, General Manager, Toronto Transportation Commission.

Vice President: D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.

Treasurer: E. P. Coleman, General Manager, Dominion Power & Transmission Co.

Executive Committee: The President, the Vice President, the immediate Past President (Major F. D. Burpee, Manager and director, Ottawa Electric Ry.), the Treasurer, and G. Gordon Gale, Vice President and General Manager, Hull Electric Co.; W. S. Hart, Treasurer, Quebec Railway, Light, Heat & Power Co., and Vice President, Three Rivers Traction Co.; D. W. Houston, Superintendent, Regina Municipal Ry.; C. B. King, Manager, London Street Ry.; M. W. Kirkwood, General Manager, Grand River Ry. and Lake Erie & Northern Ry.; H. K. McLean, Superintendent of Transportation, New Brunswick Power Co.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry.; W. R. Robertson, General Superintendent of Railways, Hydro Electric Power Commission of Ontario; H. E. Weyman, Manager, Levis County Ry.; C. L. Wilson, Superintendent, Hydro Electric Ry., Toronto & York District.

Auditor: Lt. Col. G. C. Royce.

Secretary: Eustace Smith, Jr., Executive Assistant, Toronto Transportation Commission, 35 Yonge St., Toronto.

Official Organ: Canadian Railway and Marine World, Toronto.

reduce the expenditure for land acquisition.

The general contract for the construction of the car house and office building was given to Sullivan & Fried, and sub contracts were awarded as follows: plumbing and heating, and sprinkler system for car house, Mechanical Trades, Ltd.; structural steel, McGregor & McIntyre; electric wiring, Richardson & Cross; miscellaneous iron work, Dennis Wire & Iron Works; painting and glazing, F. G. Roberts. All the track work will be done by the Commission's own forces. It is expected that the new facilities will be ready for operation late in the autumn. The house and yard will be used by cars on the King, Queen, Roncesvalles Ave. and Lake Shore Road runs.

The intersection shown in the plan,

at the junction of Roncesvalles Ave., Queen St., King St. and the Lake Shore Road, which is claimed to be the largest piece of street railway special work on this continent, was described fully in Canadian Railway and Marine World for June, pg. 288.

British Columbia Electric Railway's Victoria-Saanich Line.

The British Columbia Electric Ry. Co. has an interurban line on Vancouver Island from Victoria city limits through the Saanich Peninsula, to Deep Bay, 24.29 miles. It has not paid its way from its opening in 1913, and it was reported recently that the company contemplated ceasing operating it. Residents adjacent to the line, feeling that this would injuriously affect the peninsula's business, interested Saanich Municipal Council, Victoria City Council and Victoria Chamber of Commerce, and representatives of these bodies met A. T. Goward, Vice President, B. C. E. R. Co., and other Vancouver Island officials, recently, to discuss the situation. Mr. Goward is reported to have stated that the company must cease operating unless the heavy loss could be eliminated. The company's investment in the line is approximately \$1,000,000, of which, if the line were taken up and the property disposed of, about \$250,000 would be salvaged. With this money invested and the operating loss eliminated the company would save something like \$36,000 a year. The discussion showed that buses and sight-seeing cars are taking most of the business, and it was pointed out that it is of no use for municipalities to attempt to regulate those services, if they could be run in unorganized districts without regulation. It was also stated that the extension of the Canadian National Rys. line to Patricia Bay, which had been urged by the people of the district for its freight possibilities, had also affected the electric line's business. A suggestion was made that the line be scrapped between Tripp and Deep Bay, and diverted into Sidney, about two miles. Other suggestions favored the curtailment of the service and the operation of combined freight and passenger cars. Nothing definite resulted, but the representatives of the several bodies present undertook to have the matter thoroughly discussed by their members, with a view to some definite proposal being made.

Niagara, St. Catharines and Toronto Ry. Franchises.—Particulars of the propositions made by the Canadian National Rys. management to the municipalities served by the Niagara, St. Catharines & Toronto Ry., viz., Port Dalhousie, St. Catharines, Merritton, Thorold and Niagara Falls, in regard to improved service, and as to the franchise rights desired, were given in Canadian Railway and Marine World for July, pg. 352. The management's plans for improving the service were also given, and it was explained that some of the improvements would not be made unless the desired franchise agreements were obtained, while others would be gone ahead with in any event. We are advised that at time of writing (Aug. 7) new franchises have not been arranged with any of the municipalities, that none of the work contingent upon new franchises has been commenced, but that work has been started on an extension to the car shops on Welland Ave., St. Catharines.

Block Signal Installation, Hydro Electric Railways, Toronto & York District, Metropolitan Division.

The portion of the Hydro Electric Railways, Toronto & York District, Metropolitan Division, from the southern terminus at the Toronto city limits to Morgan's siding, mile 4.78, is being equipped with a block signal system. There will be 5 blocks, as shown in the accompanying plan. In addition, signals, with manually operated levers to change the indications of the signals at either end of the block, will be located in 1, 3 and 5.

The signals to be used, Nachod type CD, will indicate to the motorman if the block is clear, let him know when he has set the stop signal at the other end of a block to prevent an opposing car from entering it at the other end, and give each motorman an indication that he is protected in entering, in the meanwhile holding stop signals against opposing cars. The system is a permissive one, in which several cars may follow through the same block, as desired, such permissive operation being generally required in modern electric railway practice, except on very short blocks.

On a typical siding-to-siding block, the signal is located along the single track near the switch point, with a setting contactor one or two spans back of the signal. This permits the motorman, before

that point, and will operate as follows: if the block is unoccupied, a southbound car, on passing the contactor at signal 3, will set signals 1 and 2 at stop. If the car leaves the main line at the spur at signal 2, all signals will clear in the same manner as if the car had left the block at the south end. If the car is to re-enter the block from the spur, the manually operated lever, close to signal 2, will put either signal 1 or 3 at stop, as desired, and prevent cars from entering the block. If the car is to continue south, signal 1 will be put in stop position; if the car is to return north, signal 3 will be put in stop position. When the car has left the block, the signals assume the neutral position in the same way that they would if the manual indications had not been given. If, while the car occupied the spur, signal 2 went to stop position, it would indicate that the block had been occupied by another car, and the main line could not be again entered until the signal had been cleared. The intermediate signals at Bowden, to provide for switching movements on the spur and tracks connected thereto, and at mileage 3.7, to provide for reversing movements of local cars, will operate on the same principle. The signal system is so designed that up to 15 cars may

extracted by bent wire hooks tipped with rubber cement, and were then disposed of through various agencies.

Samuel Thompson and George Wood, conductors, were charged with stealing tickets and were arrested, and James Esson, motorman, was arrested charged with receiving tickets knowing them to have been stolen. The three were taken before R. M. Noble, a city magistrate, on Aug. 10, and pleaded guilty, and on the following day were each sentenced to 10 days imprisonment. The sentences were, in Canadian Railway and Marine World's opinion, entirely inadequate. Whatever other considerations might have weighed with the magistrate in thinking 10 days imprisonment sufficient punishment for a systematized robbery, extending over a lengthened period, the only ones he mentioned were their loss of position and disgrace. While there is a good deal to be said in favor of considering these two factors as being of themselves adequate punishment for infractions of the moral laws, it requires something more than sentimental punishment to impress law breakers with the enormity of their offence, and the sentences of ten days imprisonment were altogether out of proportion to the gravity of the crime.

The company's platform men are reported to have met on Aug. 10 and passed a resolution endorsing the prosecution, and generally disclaiming knowledge of the thefts.

Block Signal Layout, Hydro Electric Railways, Toronto & York District, Metropolitan Division.

passing the signal, to observe the change of signal indication caused by the passage of his car under the contactor. Another trolley contactor is placed on the siding, enabling the block to be taken before the car passes the switch point. Some installations have been made with only one trolley contactor, located outside the switch point, so that switching may be done at the end of the siding without touching the contactor, but the two contactor system will be used on the Metropolitan Division. Each block is independent of all others.

The signal aspect consists of lights and colored discs combined, for night and day indications. No light or disc, played, or neutral indication, displayed when no car is in the block, indicates that a car may enter the block if its orders will permit; a white light and disc, or permissive indication, means a car is in the block and entered from the same direction, and gives right to the following car to enter under control. A red light and disc, or stop indication, means that the block is occupied by a car in the opposite direction, and conveys an order to stop and wait behind the entering contactor until the signal returns to neutral. When a car enters a block, the signal at the entrance shows white, and the one at the other end shows red.

As stated above, extra signals will be located in blocks 1, 3 and 5 for special purposes. The signal at York Springs spur, in block 1, for example, will be used to protect switching movements at

occupy one block at the same time, making following movements.

The Hydro Electric Rys. have a similar installation on the Essex District, on Sandwich St. in Windsor, Ont., on 1½ miles of track on which cars from three divisions operate, on 6 min., 22½ min., and 45 min. schedules. We are officially advised that that installation has rendered possible the postponement of double tracking.

In equipping the first 4.78 miles of the Metropolitan Division, the block between the Don siding and Bale's siding, mileage 0.63 to 1.5, was first completed, the others being equipped as material was delivered. We are officially advised that it is the intention to extend the signal system until the southern portion of the division will be equipped to Newmarket, 22.71 miles from Toronto.

Ticket Thefts by Winnipeg Electric Railway Employees.

Winnipeg Electric Ry's management, some little time ago, began investigating an extensive system of ticket stealing which is estimated to have amounted to about \$25,000 during the past two years. The methods used by the conductors implicated were to allow the tickets dropped into fare boxes to accumulate on the platform of the box, instead of springing it and letting the tickets fall into the locked compartment. At the end of the run, and when there were no passengers on the car, the accumulated tickets were

Toronto-Weston Railway Service.

Canadian Railway and Marine World for August, pg. 406, gave full details of the proposition made the town of Weston by the Canadian National Rys. management, as stated in a letter from S. J. Hungerford, Vice President, Operation and Construction, to Mayor Flynn, concerning improvement of the transportation service on the Toronto Suburban Ry. between Toronto and Weston. It was pointed out that the improvements were contingent upon the City of Toronto failing to take over from the Canadian National Railways the portion of the Toronto Suburban Ry. from the north city limits to Woodbridge. The city has been approached by the railway's management on this subject, but no indication has been given as to the city's intention as to this portion of the line, the feeling however appears to be that the city will not acquire anything beyond the portions of the line within its limits.

Part of the proposed work in the event of the city failing to take over the line to Woodbridge is the moving of the Toronto Suburban Ry. track on Weston Road, which is known as Main Street through Weston, from the west side of the road to the center, within the town limits. At the time of writing (Aug. 17) nothing had been done in this connection. The railways management's proposition also contemplated trial of a battery car service between Parkdale or the old Union Station in Toronto, but to the time of writing no arrangements have been made.

Electric Railways Proposed for York Township, Ont.

At the request of York Township, which adjoins the City of Toronto on the north and northeast, the Toronto Transportation Commission had an investigation made recently, and has submitted a report on five lines, the estimated cost of which would be \$2,173,265. Following are extracts from the report:

Route 1, St. Clair.—From St. Clair and Oakwood Aves. via Oakwood Ave., Vaughan Road and Eglinton Ave., to Canadian National Rys. Newmarket line. Length, 2½ miles; population served, 9,500; estimated revenue rides per annum, 2,920,000; estimated car miles per annum run, 292,365; fare necessary to cover cost of operation, 3c. Cost of track, foundation, special track work and overhead construction, \$358,750; cost of street widenings, replacing permanent pavements and walks, and paving track allowance, \$314,100; total capital cost, \$672,850; annual fixed charges, \$49,118.05. Of the above capital cost \$29,768 is for construction within the City of Toronto. Local improvement frontage, rate suggested—From car line to 700 ft. at 20c. a foot frontage; from 700 to 1,500 ft. at 15c. a foot frontage; from 1,500 to 2,640 ft. at 10c. a foot frontage; from 2,640 to 3,300 ft. at 5c. a foot frontage; 3,300 ft. is the limit of assessment.

Route 2, Oakwood.—From Rogers and Oakwood Ave., west on Rogers Road and private right-of-way to reserve through Prospect Cemetery; thence by new street to be opened to a subway under Canadian National Rys. at Hillary Ave.; thence westerly by Hillary Ave. and Weston Road to Northland Ave. Length 2.23 miles; population in township served, 8,500; estimated revenue rides per annum, 3,102,500; estimated car miles per annum run, 328,500; fare necessary to cover cost of operation, 3.17c. Cost of track, foundations, special trackwork and overhead construction, \$360,972. Cost of street openings, subways and bridges, replacing permanent pavements and walks and paving track allowance, \$401,309. Total capital cost, \$762,281. Annual fixed charges, \$55,646.44. Local improvement frontage, rate suggested—From car line to 700 ft. at 20c. a foot frontage; from 700 to 1,500 ft. at 15c. a foot frontage; from 1,500 to 2,640 ft. at 10c. a foot frontage; from 2,640 to 3,300 ft. at 5c. a foot frontage. 3,300 ft. is the limit of assessment.

Route 3, Pape Ave.—Pape Ave. from Danforth to Don Mills Road—Length, 1.1 miles; population served, 4,800; estimated revenue rides per annum, 1,277,500; estimated car miles per annum run, 114,975; fare necessary to cover cost of operation, 2.70c. Cost of track, foundations, special track work and overhead construction, \$179,500; cost of replacing permanent pavements and walks and paving track allowance, \$98,800; total capital cost, \$278,300. Annual fixed charges, \$20,315.90. Of the above capital cost \$101,840 is for construction within the City of Toronto. Local improvement frontage, rate suggested—From car line to 700 ft., at 20c. a foot frontage; from 700 to 1,500 ft. at 15c. a foot frontage; from 1,500 to 2,640 ft. at 10c. a foot frontage; from 2,640 to 3,300 ft. at 5c. a foot frontage; 3,300 ft. is the limit of assessment.

Route 4, Coxwell.—From Danforth and Coxwell Aves., via Coxwell Ave., Mc-

Michael and Lumsden Aves. to Main St. Length, 1.67 miles; population served, 6,000; estimated revenue rides per annum, 1,825,000; estimated car miles per annum run, 186,150; fare necessary to cover cost of operation 3.06c. Cost of track, foundations, special track work and overhead construction, \$273,167; cost of improving street alignment, replacing permanent curbs and walks, and paving track allowance, \$146,667; total capital cost, \$419,834; annual fixed charges, \$30,647.88. Of the above capital cost \$76,840 is for construction within the City of Toronto. Local improvement frontage, rate suggested—From car line to 700 ft. at 20c. a foot frontage; from 700 to 1,500 ft. at 15c. a foot frontage; from 1,500 to 2,640 ft. at 10c. a foot frontage; from 2,640 to 3,300 ft. at 5c. a foot frontage; 3,300 ft. is the limit of assessment.

Route 5, Runnymede.—Dundas St. from Runnymede Road to top of hill at Humber. Length 1.0 mile; population in township served, 3,500; estimated revenue rides per annum, 1,275,000; estimated car miles per annum run, 100,375; fare necessary to cover cost of operation, 2.37c. Cost of purchase and rehabilitation of existing single track line, \$40,000; annual fixed charges based on 10 year life of single track, \$6,000. If in this case the fixed charges were carried in operating charges, the fare necessary to be charged would be increased to 2.84c. Local improvement frontage, rate suggested—From car line to 700 ft. at 20c. a foot frontage; from 700 to 1,500 ft. at 15c. a foot frontage; from 1,500 to 2,640 ft. at 10c. a foot frontage; from 2,640 to 3,300 ft. at 5c. a foot frontage; 3,300 ft. is the limit of assessment.

It is expected that the construction of one or all of the lines suggested will be voted on at the municipal elections in the township in January.

Ottawa Electric Railway Substitutes Advertising for Publishing.

For some years the Ottawa Electric Ry. Co. issued a weekly sheet, the Ottawa Electric News, giving information relating to the company's business, safety hints, information as to the company's views on wages, franchise, and other matters concerning its business in which the public might be interested. The sheet of course had a somewhat limited circulation, and being distributed from the company's office and through its conductors and motormen, on the cars, it was probably not as carefully or widely read as it might otherwise have been. The management therefore decided to stop issuing it, and beginning with Aug. 4, to publish in the two English newspapers and the one French newspaper published daily in the city, a column of news and other matters, every Saturday under the heading of "O. E. R. News." The management expects that in this way its matter will reach at least three times the number of readers its weekly news sheet did.

The New Brunswick Power Co. was reported recently to be having its plants in St. John inspected by J. D. Bowles, Chief Engineer, and W. S. Dole, gas expert of the Federal Light and Traction Co., New York, so as to recommend what is necessary to improve their efficiency.

Montreal Tramways Company's Results for 1922-1923.

The Montreal Tramways Commission's report on the Montreal Tramways Co's operations for the year ended June 30, has been issued. The following information is extracted from it:

Receipts and Expenditures		
	1922-23	1921-22
Passengers	\$11,752,441	\$11,446,383
All other sources.....	302,924	266,142
Gross receipts	\$12,056,365	\$11,712,525
Op. exp. and taxes.....	6,099,993	5,769,403
Maintenance	2,492,792	2,579,200
Op. profit	48,304	47,959
Int. on cap. value.....	2,344,681	2,329,457
Financing exp.	181,431	181,431
City's rental	500,000	500,000
Res. fund	41,597	171,125

Surplus\$ 347,553 \$ 187,947

The amount paid the city during the year was made up of \$229,629 taxes, \$190,800 for snow removal, and \$889,151 on rentals.

Statistics:	
Total length of tracks, miles	271.422
Length of tracks in operation, miles.....	253.176
Gross receipts per mile of tracks in operation	\$47,620
Percentage of gross receipts devoted to operating expenses and taxes.....	51
Percentage of gross receipts devoted to maintenance and renewals.....	20.67
Percentage of gross receipts devoted to total operating expenses.....	71.67
Revenue passengers carried	193,519,038
Transfer passengers carried.....	79,123,158
Percentage of transfer passengers to number of revenue passengers.....	40.89
Average fare per passenger	6.23c.
Operating expenses per passenger.....	4.47c.
Car miles	22,918,701

Operating Expenses and Taxes.—The allowance for operating expenses was fixed at 25.91c. a car mile for motor cars and 18.73c. for trailers, at a density of 8.5. The allowance granted at this rate was \$5,866,155, compared with \$5,832,844 for 1921-22. The actual operating expenses and taxes were \$6,099,993, an excess of \$233,837, which the Commission authorized the company to appropriate from gross receipts as follows: On account of snow removal, \$93,316; on account of taxes, \$140,187, and on account of injuries and damages, \$41,460. The total operating expenses for the year showed an increase over those for 1921-22 when they were \$5,796,403.

The Operating Profit was allowed at ½ of 1 per cent., as in 1921-22, on the average capital of \$38,643,734, being \$48,304, compared with \$47,959 allowed on an average value of \$38,367,983 for 1921-22.

Maintenance and Renewal Fund.—The Commission fixed the allowance at 11.22c. a car mile for motor cars, and 9.853c. for trailer cars, which worked out at \$2,740,778 against \$2,579,200 for 1921-22. The actual expenditure for maintenance and renewal was \$2,618,874, leaving a reserve of \$121,903 to the credit of the account.

The additions to capital value of physical assets was \$481,065, and after deducting the value of property and materials discarded and scrapped, the net addition was \$15,901.

At the commissioners' annual meeting, when the report was considered, a difference of opinion arose as to the payment of the Dominion income tax. J. S. Archibald differed from Chairman J. F. Saint Cyr and the vice chairman, J. F. Herdt, contending that this tax should be paid by the Montreal Tramways Co. out of its percentage, and not made a charge on the gross receipts. The amount involved for 1922-23 is \$57,606.

Toronto Transportation Commission's Activities.

Track Work.—The Commission has the following major track work under way: Queen and Sherbourne Sts. intersection, installation of new special work and widening of about 100 ft. of devilstrip; on Harbord St. between Ossington Ave. and Spadina Ave., complete rehabilitation of track; on Front St., between Bathurst St. and Spadina Ave., complete rehabilitation of track; intersection of Front St. and Spadina Ave., installation of new special work.

Additional Buildings for Hillcrest Shops.—The Commission has marked tenders for the following subsidiary buildings to be erected on the property at Bathurst St. and Davenport Road, where shop and stores buildings are being built: 1. Office building. 2. Frog shop for way department. 3. Garage. 4. Building for storage of cement, charcoal, and salt, and for the drying and storage of sand. The shop and stores buildings were thoroughly described in Canadian Railway and Marine World for March, pg. 132. Progress on the shop and stores buildings is satisfactory, and it is expected that they will be in operation about Dec. 1.

Equipment for Repair Shops.—The Commission has ordered machine tools, etc., for repair shops under construction at Bathurst St. and Davenport Road, as follows: 1—36 in. x 14 ft. Bertram bed lathe; 1—24 in. MacDougall lathe; 1 Preston pattern lathe; 1—20 in. x 10 ft. MacDougall bed speed lathe; 1—18 in. x 10 ft. MacDougall bed speed lathe; 1—16 in. Springfield tool room lathe; 1 Herbert no. 9 21 in. turret lathe; 1 Long Co. 13 in. x 6 ft. bed speed lathe; 1 Lund 4-spindle drill; 1 no. 2 Detroit 5-spindle automatic drill; 1 Herbert 3-spindle automatic drill; 1 Canada Machinery Corporation 20 in. stroke shaper; 1 Brown-Bogg inclinable power press; 1 Brown and Sharp universal milling machine; 1 no. 5 Marvel power hack saw; 1 Stevens tool room grinder; 1 Grand Rapids wet twist drill grinder; 5 Ford Smith wet wheel grinders; 2 Ford Smith combination floor buffers and grinders; 1 Landis bolt cutter; 1 Brown and Sharp bench log; 1 Brown and Sharp surface plate; 1 Brown and Sharp dial test indicator; 12 sets of Peerless armature stands; 3 Columbia coil winding machines; 1 Brantford baking oven, 10 armature capacity; 1 Tuec stationary cleaner; 6 Jacobson gas heaters for soldering irons; 6 Ashton gas and air blow torches; 1 Bertram bulldozer; 2 Ireland gas furnaces; 1 Brown Bogg roll former; 1 42 in. Regent square shear; 1 Can. B. & F. Co. portable forge; 1 Ideal electric babbitt furnace; 1 Canada Machinery Corporation chain mortiser; 1 Rogers F. knife grinder; 1 Clark automatic rip and cross cut saw sharpener; 1 no. 2 Black Diamond band saw filer; 1 type 365K grindstone; 1 Shepard 5-ton electric monorail hoist; 1 Canadian Ingersoll-Rand 40 lb. safety chipping hammer; 1 Little David 60 lb. safety rivet hammer; 14 Lo-head 1½-ton electric hoists; 1 Shepard 1-ton electric hoist; 2 Black and Decker ¾ universal electric drills; 1 Black and Decker ¾ universal electric drill; 1 Black and Decker 1¼ universal electric drill; 6 Trance no. 4 lift trucks, 17 x 37 in.; 4 Trance no. 1 lift trucks, 24 in. x 5 ft.; 2 Elwell Parker electric elevating trucks; 5 National time recording clocks; 14 Beath jib cranes; 8 Beath car hoists; 1 Hendy 14 in. x 7 ft. engine lathe; 1

Warner-Swasey no. 2 turret screw machine with standard equipment; 1 American no. 4 high speed positive blower; 1 Hanchet no. 2 saw-swage; 1 Hanchet no. 3 saw swage. The foregoing machinery, etc., is being supplied by: W. D. Beath & Son; John Bertram & Son; Canadian Fairbanks-Morse Co.; Canadian Ingersoll-Rand Co.; Canada Clock Co.; Columbia Gramophone Co.; Garlock Machinery Co.; General Supply Co. of Canada; Alfred Herbert, Ltd.; Industrial Equipment Co.; Lyman Tube & Supply Co.; H. W. Petrie Machinery Co.; Railway and Power Engineering Corporation; Rudel-Belnap Co.; United Electric Co. of Canada; A. R. Williams Machinery Co.; Chas. S. Wright Co.. The machines, etc., are of the most modern character. The Commission is providing for equipment maintenance which will be marked by the same adequacy and efficiency that characterises the Commission's rolling stock and its operation. The new repair shops and the facilities to be installed in them will mark another forward step by the Commission in its effort to provide a thoroughly efficient transportation service, which can be rendered economically because of the efficiency made possible by the capital expenditures made, of which the amount spent for the repair shops and machine tools is an example.

Car Deliveries.—At Aug. 15 Canadian Car and Foundry Co. had delivered 53 motor cars out of an order for 60, and Ottawa Car Manufacturing Co. had delivered 36 out of an order for 50.

Car Conversion.—Details of the conversion of the majority of 350 p.a.y.e double truck cars taken over from the Toronto Railway Co. into front entrance cars of the pay-leave type were given in Canadian Railway and Marine World for August, pg. 402. At the time of writing (Aug. 15) some 11 of the cars have been changed, and the shops are now turning out about one daily. The p.a.y.e cars not so converted will be used for making 2-car trains, of the type of which some details were given in the August issue, page 402.

Service for Canadian National Exhibition.—Canadian Railway and Marine World for Oct., 1922, gave details of the loading platforms the Commission built at the eastern and western entrances to the Canadian National Exhibition grounds. By using these platforms fares were paid at gates leading into the platform enclosures, the loading of passengers into cars to leave the grounds was greatly facilitated, and much time was saved in getting the cars away. This year, as the Commission is using its front entrance motor cars, and center entrance trailers, to handle the exhibition crowds, the loading platforms have to be operated differently, and it is not possible to collect fares at the gates. The reason for this is that if the fares were collected at the gates, there would be passengers in the front portion of the motor cars and trailers who would have their fares paid, and as the scheme of operation calls for the use of the front portions by passengers who have not paid their fares, when the cars got out on the streets and more passengers were picked up, the conductors would have no means of telling whether they had paid or not. The gates are, therefore, being used this year only to regulate the flow of passengers to the loading platforms. To facilitate loading,

extra conductors are stationed at the side of outgoing cars, to collect fares from passengers who are directed into the "paid" portions of the motor cars and trailers through the doors ordinarily used as exit doors, while the passengers entering at the usual entrance doors pay their fare en route in the ordinary manner. By this means all doors are as entrance doors at the loading platforms.

Use of Track Allowance by Vehicles.—Interesting facts concerning the use of the track allowance by vehicles other than street cars were brought out by some recent traffic studies made by the Commission. Of four counts taken, two showed that 84 per cent. of all such vehicles used the track allowance, one showed 78 per cent., and the other 67 per cent. Another count, in another part of the city, showed that of the total vehicles passing a given point 87 per cent. were other vehicles and 13 per cent. street cars. The former carried 27 per cent. of the people and the latter 73 per cent. Another analysis of the same count showed that there were 45 per cent. more motor trucks than street cars. These figures are of value as showing the use made of the street car tracks by other vehicles, and the relative service given to the travelling public by street cars and by other vehicles. These counts were made in the summer; in the winter the proportion of other vehicles is much higher.

Baby Carriages on Cars.—When the Toronto Ry. Co. operated the street railway it had hooks on the back of its cars on which baby carriages could be hung. With the advent of the front entrance cars introduced by the Commission, the hooks were done away with. Recently, many complaints have been received concerning lack of facilities for women to transport baby carriages, it being stated that many conductors refused to allow folding go-carts in the cars. The Commission has ruled that go-carts of the folding variety may be taken on the cars, and the crews have been instructed accordingly, but hooks on the rear of cars will not be restored.

Signs on Bloor-Danforth Cars.—Consequent on the Commission's complete re-routing of cars, the cars operating east-bound on Bloor St. and Danforth Ave. were furnished with a route sign, at front of car, in center, reading "Bloor," and a destination sign, at the front, to the left, reading "Luttrell," because the cars turn at the east end of their run on a loop at Luttrell Ave. The Danforth Business Men's Association objected to this and requested that the route sign be changed to "Bloor-Danforth." The Commission stated this name was too long, but consented to change the destination sign on eastbound cars to "Danforth." Westbound, the cars carry the route sign "Bloor" and the destination sign "Lansdowne," on account of turning on a Y at Lansdowne Ave., at the west end of their run.

Roadside Signal at Car Stops.—During July there was brought to the management's attention a signal of the semaphore type, designed to be attached to posts at car stops, and to assume a horizontal position when there are passengers to board an approaching street car. The signal was originated by R. Rutledge, Toronto, and was advocated by him as a means of preventing passengers from leaving the sidewalk and going out

into the street to attract the attention of the motorman on approaching car, thus making themselves liable to be struck by automobiles, but there is no necessity for passengers leaving the curb to have street car motormen stop for them, and for that reason the management considered the signal unnecessary and declined to experiment with it, for the present at least.

Automatic Street Announcers.—During the past few months the Commission has conducted examinations, under the supervision of W. R. McRae, Superintendent of Rolling Stock and Shops, of about 30 devices designed to automatically indicate to passengers the name of the street at which the car will stop next. We are advised that none of those examined were of sufficient practical value to deserve a trial. There are some 150 patents in Canada of such a device and about ten times that number in the U.S., but nothing has been discovered which will satisfactorily fill the requirements.

Transportation for York Township.—Details were given in a preceding number of Canadian Railway and Marine World of the agreement entered into between the Commission and York Township council, by which the Commission's engineers were to make surveys and traffic studies, at the township's expense, to determine whether it would be advisable to extend any of the city electric railway lines into the township. These surveys and studies, made principally under direction of N. D. Wilson, Traffic Engineer, T.T.C., were completed about the end of July, and resulted in the Commission making recommendations for lines into York Township as follows: 1. On Oakwood Ave. from the city limits to Vaughan Road, along Vaughan Road to Eglinton Ave., and along Eglinton Ave. to the Canadian National Rys. tracks. Total cost, including street widening and the construction of about 100 ft. of track within the city, from St. Clair Ave. to the city limits, about \$675,000. Approximate length, 2½ miles. 2. On Rogers Road to Oakwood Ave., west on a private right of way through Prospect Cemetery, west on Hillary Ave. under Canadian National Rys. tracks to meet Weston Road at Northlands Ave. Approximate distance 2¼ miles and approximate cost \$760,000. 3. On Dundas St. west from the city limits to the top of the hill at Lambton Mills. The Toronto Suburban Ry. line would be acquired and rehabilitated, at an approximate cost of \$40,000. The Commission proposed that these three lines, all of which leave the city at its northwestern limits, and which would serve the western part of the township, should be built as local improvements and paid for by taxation spread over a period equivalent to the life of the lines and that they should be operated by the Commission at cost, this including car rental and a charge for car house and shop facilities. The township would have the ownership of no equipment. The township council, soon after the Commission submitted its proposition, declared unanimously in favor of it. The next step will be to put it to a vote of the people, and if the result is favorable validating legislation will be applied for. In view of the fact that the parts of the township affected are becoming densely populated, that transportation facilities are lacking, that the plan proposed would give the Commission control over transportation in the area

immediately adjoining the city, in the direction of its most rapid growth, and that it would impose no additional financial burden upon the Commission, it would seem that the Commission's plan should be suitable to all concerned.

Toronto Eastern Railway Construction.

Particulars of preparations being made by the Canadian National Rys. management to complete the Toronto Eastern Ry's construction as part of a general scheme to provide a radial railway service for the district east and west of Toronto, were given in previous issues of Canadian Railway and Marine World. The Toronto Eastern work will involve considerable relocation and reconstruction within the limits of Oshawa, Ont., and the railway management, in return for laying track of the most substantial character within the town, asked the town to assume the cost of paving on the track allowance, but the town council objected to this. Under agreement, made in 1910, the Toronto Eastern management undertook to pave between the rails whenever the town paved streets on which tracks were located, but the present management wants the town to pave the whole surface, the railway to provide the track substructure. At a meeting in Oshawa on Aug. 7, attended by E. W. Oliver, Manager, and S. B. Wass, Resident Engineer Toronto Eastern Ry., and members of the town council, the matter was discussed, and the mayor moved that the matter of paving costs be referred back to a meeting of the whole council, which was carried. Mr. Oliver is reported to have stated that work on the Toronto Eastern would be stopped at once and the construction forces on the work would be transferred to work on the electrification project around Toronto. An Oshawa press dispatch of Aug. 14 stated that ex-Mayor Stacy of Oshawa, was circulating a petition among the ratepayers, protesting against the stand taken by the council in regard to the paving matter and urging that the Toronto Eastern's offer be accepted. He is reported to have expressed strong dissatisfaction with the council's attitude, which was placing obstacles in the way of an undertaking that would be of great benefit to the town and would cost it nothing, and his activities evidently had good effect, for a press report of Aug. 17 stated that the town council had decided to accept the railway's offer, and added: "The agreement, which was submitted by Mr. Oliver recently, provides for the paving by the town of an 8 ft. strip on Bond St., where the tracks run. This clause was responsible for the delay in the acceptance of the agreement. As a compensation for the expense entailed, the railway will deed back to the town the right of way between Mary and Division St. As a result of the acceptance of the agreement, work on the rehabilitation of the line from Oshawa to Bowmanville will start immediately."

As explained in previous issues of Canadian Railway and Marine World, the Cobourg-Toronto radial line, in which the Toronto Eastern Ry. will be a link, is to be linked up at Toronto with the Toronto Suburban Ry. running from Guelph to Toronto. Particulars of the railway management's application for approval of a plan for a diversion of the Toronto Suburban Ry., to enable it

to be connected with the line to the east, are given elsewhere in this issue.

We are officially advised that the Toronto Eastern Ry. will be equipped with catenary type construction for current distribution, the overhead work to be of substantial design and suitable for high speeds. The 1500 volt d.c. system will be used. The weight of rails to be used will vary, in the country and on unpaved streets in towns and villages 80 or 85 lb. T rails will be used, according to present plans, and on unpaved streets in towns 128 lb. girder rails will be used. It is expected that power will be secured from the Hydro Electric Power Commission of Ontario.

New Transfers on Montreal Tramways.

A Montreal paper gives the following description of a new transfer put in use by Montreal Tramways Co. on July 1. The principal change is that the transfers are now of a uniform color, white. They bear no day or date at the top, but these are marked along the margin, two series a month being issued, as the dates run from the 1st to the 15th and from the 16th to the 31st. The months are printed at the bottom, February to June being on one issue, and July to January on the other. The month and date are punched at the office. One transfer is used for day and night, and the a.m. and p.m. are no longer required. The transfer bears a black stub, which is detached by the conductor between 4 a.m. and 4 p.m., but which is left with the transfer between 4 p.m. and 4 a.m. The direction of the car is marked in a square, compass fashion, instead of along the corners, as formerly. Transfer points, time limit, and tram lines are marked as on the old style, except that these have been arranged so that they may all be punched from the right side of the slip. Two new notations are used, in the form of a 2 and 3. When a passenger uses a transfer for the first time, the 2 is punched by the conductor, and the third transfer is also indicated by the remaining number. When this has been punched, the transfer is to be lifted and automatically becomes void. As some 200,000 transfer are issued a day, and all unused transfers under the old system had to be discarded, it will readily be seen that the saving under the new system is large.

Hull Electric Company's Pagan Falls Development.

The Hull Electric Co. is applying to the Quebec Government for authority to build a dam on the Gatineau River, bordering on Lot 17, Range 3, Aylwin, to Lot 40, Range 2, Low, on the west, and Lot 28, Range 3, Hincks, to Lot 40, Range 1, Delholm on the east, and has deposited plans and specifications with the Minister of Lands and Forests at Quebec. The location of the proposed development is at the Pagan Falls, about 35 miles northwest of Hull. The plans include the building of a dam 125 ft. high, above which a lake of about 8 or 10 square miles will be formed, stretching from Low to Kazabazua. The ultimate capacity of the plant will be 150,000 h.p., and it is estimated that the cost will be approximately \$10,000,000. Some details of the project were given in Canadian Railway and Marine World for Oct., 1922, pg. 530.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Railway.—A press report states that the construction of the second track on Victoria Road was completed, Aug. 4, and that traffic was started over it Aug. 6.

Work is reported to have been started Aug. 6 on relaying tracks on the Fraser Ave. line, from Kingsway to Twenty-fifth Ave. Traffic was re-routed, so as to leave this section of the line clear for the work, which includes a concrete base, with new heavy steel rails, and concrete block paving. (Aug., pg. 403.)

Calgary Municipal Ry.—A press report states that it is proposed to make a test on the Louise bridge tracks, of a new system of surfacing, which if successful will be tried fully on the reconstruction of the double track on Seventeenth Ave. The plan is to fill in over the ties to a level with the paving on the rest of the street, with fine hard packed gravel, and then lay a coat of asphalt over it. The work on the Seventeenth Ave. line is being gone on with and it is proposed to fill in the portion of the roadway between the tracks to the top of the ties this year, and giving it plenty of time to settle before doing anything more. The new track is being laid with 60 lb. rails. The tracks on the Second St. subway are being taken up and replaced by new ones laid in concrete. The old 40 lb. rails on Langevin bridge are being replaced by new 80 lb. rails. The new manganese steel intersection in Riverdale is reported to have been installed. The curve on Ninth Ave. at Sixth St. W., is to be relaid with heavier steel, and the roadbed repaired. This latter work will, it is stated, complete the betterment for this year. (July, pg. 353.)

Hull Electric Co.—A press report states that a suggestion has been made for the construction of a loop at Mackenzie Ave., via St. Patrick St., the estimated cost of which is \$150,000. (July, pg. 353.)

London St. Ry.—The City Surveyor is reported to have advised a city council committee, Aug. 6, that arrangements had been completed with the company for the paving on Richmond St., and that the work would be gone on with at once. The rails for relaying the street railway tracks were expected to be delivered within a few days. The paving work on Oxford St. is expected to be laid over until next year owing to the company not being able to get the rails. (Aug., pg. 403.)

Montreal Tramways Co.—Mr. Justice Hackett, sitting in the Quebec Practice Court at Montreal, July 31, heard arguments on a petition by E. Fournier, a Montreal East ratepayer, for an injunction to restrain the Town of Montreal East and the company from building an extension of the car line on Marien St. The proposed extension would be half a mile long, and the Montreal East Town Council passed a bylaw providing for its construction, the town to provide for the substructure, and to pay the company 6 per cent. interest on the cost of the completion of the line. The plaintiff alleged that the extension would be in the National Cement Co's interests and not in the public interest. Judgment was reserved.

The Board of Railway Commissioners gave judgment Aug. 1, on the company's application to extend its Atwater Ave. line across the Canadian National and

Canadian Pacific Rys. tracks, to enable connection to be made between the city and Point St. Charles. The Chief Commissioner in the course of the judgment said: "When I realize that Parliament for many years has granted to this Board \$200,000 annually for eliminating level crossings existing prior to 1909, I do not think this Board is justified in opening up other level crossings especially in such a congested area as this location, for the purpose of granting the small relief which the opening of this street would afford." The application, which was supported by the city, was, therefore, refused. (Aug., pg. 403.)

New Brunswick Power Co. is, a press report states, again considering the possibility of extending its electric car line to Millidgeville and Rockwood Park.

Ottawa Electric Ry.—At a meeting of the Ottawa Board of Control, July 31, a delegation from the Retail Merchants' Association presented the following resolution for consideration:—"This meeting urges the city authorities to proceed without delay with the formulation of such an agreement so that the street railway may be so extended and improved as to give a service commensurate with the importance of the city and adequate to meet the demands of a growing population." The delegation was assured that the city would forward the resolution to the company, after the Mayor had reviewed the situation, regarding the negotiations that had taken place during the past two years, and stated that the onus was on the company in the matter and that it was a question if it could be induced to make any extensions.

The company has issued a statement reviewing the negotiations between the company and the city since 1919, which concluded as follows: "On Aug. 1 the company enters upon a five-year extension of the old franchise under which extensions and improvements requiring a large capital expenditure are not possible unless the franchise is somewhat amended. We appreciate perhaps more than the average business man that most of the extensions recommended last year by Mr. Feustel are urgently needed. If we have to wait for them another five years the growth and prosperity of Ottawa will be seriously affected. We have always been and are now ready to discuss this most important matter with city representatives who are sincere in their desire to arrive at a satisfactory solution. We do not consider that the majority of the members of last year's street railway committee were actuated by such a motive." The Mayor is reported to have said in commenting on this statement that negotiations will be opened by the city with the company for new extensions as soon as the company makes some definite proposition.

The proposed agreement between the company and the Hull, Que., City Council with respect to the construction of a loop crossing Bridge St., near the Eddy Co's offices and the Eddy Park, was discussed by the council Aug. 11, and its further consideration was postponed. A press report states that the proposed agreement, which is to run for 25 years from Sept. 1, provides that in the event of the Ottawa Electric Ry. being acquired by the City of Ottawa the company's obligations to the City of Hull will be terminated. During the life of

the agreement the company is required to maintain the part of Bridge St., from Main St. to the Eddy Slide, and the north east section of Eddy Park, under the City Engineer's control; improved cars are to be provided; a 5-minute service is to be maintained and passengers boarding the cars in Hull are to be charged the same fare and given the same transfer privileges as prevail in Ottawa; the company is also to provide a waiting room in Hull which is to be heated during the winter. The cost of the loop, line, the new cars, and the waiting room was estimated by Major Burpee, the company's manager, at about \$100,000. The principal section of the agreement which is still the subject of negotiation is one retaining to Hull the right to impose a business tax.

Eastview Township Council, on Aug. 1, appointed a special committee to confer with the company with respect to the extension of the line now terminating at the Protestant Hospital, Rideau St., to a short distance west of Notre Dame Cemetery, Eastview. The company suggested that a 30-year franchise be given, in return for which the company would give a 5c. fare, with 8 tickets for 25c., with a 6 minute service to be operated by 4 cars. (Aug., pg. 402.)

Waterloo-Wellington Ry.—Consequent on the carrying of a bylaw by Kitchener, Ont., ratepayers, authorizing the raising of \$70,000 of debentures to buy the electric railway between Kitchener and Bridgeport, 3.45 miles, and provide for its reconstruction, the Kitchener Light Commissioner, who will have charge of its future operations, will consolidate it with the Kitchener and Waterloo Electric Ry. The reconstruction work will, it is expected, be put in hand at an early date.

Windsor, Essex and Lake Shore Rapid Ry.—A press report states that Leamington Town Council has decided to apply to the Ontario Railway and Municipal Board for an order to compel the company to pave the road between its tracks on Erie St. there. (June, pg. 295.)

Winnipeg Electric Ry.—The city council's public improvement committee is reported to have approved plans for the extension of the car line on Notre Dame Ave. from the present terminus to Midland St. (Aug., pg. 403.)

Hydro Electric Power Commission Bridge.

The Hydro Electric Power Commission of Ontario on Aug. 20 awarded contracts for the construction of a highway bridge at Victoria Road, Stamford Township, Ont., over the Chippewa power development canal, as follows: substructure, Campbell and Lattimore, Toronto; superstructure, Hamilton Bridge Works, Ltd., Hamilton, Ont.

This bridge, necessitated by the construction of the power development canal, will replace the present temporary wooden structure. It will be of the deck truss type, with three 90 ft. spans, and in addition to a 02 ft. clear roadway will carry two 6 ft. sidewalks. It will have a reinforced concrete floor. It will not cross the canal at right angles, but will be set on a skew of 34 deg. Work on the substructure is to begin immediately, and it is expected that the bridge will be completed this year.

Electric Railway Employes' Wages, Working Conditions, Etc.

British Columbia Electric Ry.—Early in June the employes applied for an increase of wages, and revised working conditions, which, a press report stated, meant the practical restoration of the wage schedule in force prior to 1922. This schedule, which was put in operation Oct., 1920, provided the following rates:—City motormen and conductors, 65c.; interurban motormen and conductors, 67c.; car repairers, 70c.; mechanics' helpers, 65c.; car cleaners, 58c.; carpenters, 77c.; blacksmiths and machinists, 80c.; trackmen, 60c. Towards the end of 1921, the company gave notice of its intention to reduce wages 15 per cent., but the men declining to accept this a board of conciliation was appointed and the majority report recommended a 10 per cent. reduction. This the company agreed to, but the men refused. Following conferences a new agreement was entered into Jan. 5, 1922, with the following rates per hour on city and suburban lines:—Conductors and motormen, 1st 6 months, 48½c.; 2nd 6 months, 53c.; 3rd 6 months, 56c.; thereafter 58½c. One-man car operators, 64½c. Conductors and motormen in work train service, 2c. an hour extra. On interurban lines, District 1, District 4, 16th St. yard and Carroll St. yard the rates per hour are: passenger conductors and motormen, 1st 6 months, 48½c.; 2nd 6 months, 54c.; 3rd 6 months, 57½c.; thereafter 60½c. Freight conductors and motormen, 1st 6 months, 51½c.; 2nd 6 months, 56½c.; 3rd 6 months, 60½c.; thereafter, 63c. Passenger brakemen, 1st 6 months, 48½c.; 2nd 6 months, 52c.; 3rd 6 months, 55c.; thereafter, 57½c. Freight brakemen, 58½c. Trolleyman, 56½c. Sunday work to be paid at rate of time and a quarter, holidays, time and a half. Extra men to be guaranteed a minimum monthly earning of \$87.50. These rates do not apply to conductors and motormen on the Lulu Island Branch; the Fraser Valley line, and the Saanich Division on Vancouver Island.

A joint advisory board, with W. H. Cottrell as chairman, represents the men in the negotiations, which up to Aug. 9, had proved fruitless. The men have given the company 30 days notice of their desire to have the agreement readjusted, and have applied to the Labor Department at Ottawa for the appointment of a board of investigation and conciliation.

Montreal Tramways Co.—The strike of the laborers and trackmen on July 19, in which about 300 or 400 men were involved, was settled, a press report of July 25 stating that the men were given 5c. an hour increase from July 1, and pay for the 4½ days the strike lasted.

In connection with the differences between the company and its conductors, motormen and other car employes, the negotiations which were in progress when Canadian Railway and Marine World for August went to press, resulted in the management declining to consider any advance in wages paid to motormen and conductors, affirming that wages have been increased 100 per cent. since 1913, and are now 65 per cent. higher than they were in 1918, while the cost of living for a family of five, according to the figures of the Department of Labor, was only 6.52 per cent. higher than in April, 1918.

The management proposed to enter into a one, two or three year contract on

the basis of the present rates of wages for motormen and conductors; certain readjustments in the outside departments, and the formation of a pension fund for employes as soon as the company's debt to the city is paid. This was voted on by the men July 30, three questions being submitted, and the result was announced, Aug. 1, as follows:—In favor of accepting the company's offer, 1,211; in favor of referring the matter to arbitration, 195; in favor of striking within 48 hours, 661. Subsequently there have been conferences between the company and the men's representatives with respect to the readjustment of the shopmen's wages, and a general meeting of the management with representatives of outside departments was held Aug. 13, to discuss the draft agreement prepared by the company, but did not result in a final decision being arrived at.

Moose Jaw Electric Ry. Co.—The motormen walked out on the morning of Aug. 1, in protest against the dismissal of motorman T. Tyndall. It is stated that he was dismissed following the burning out of two motors alleged to have been caused by his carelessness, but was given six weeks to find other employment. On Aug. 1, Tyndall reported for duty, but found his car assigned to another motorman, whereupon the other men refused to take their cars from the barns. Following a conference the company's management changed Tyndall's dismissal into a suspension until the matter was settled, and arrangements were made for resuming service on the following day. An organizer of the Amalgamated Association of Street and Electrical Railway Employes of America, went to Moose Jaw and discussed this, and a number of other matters, with the management, and suggested the drawing up of a written agreement between the company and its employes to take the place of the verbal agreements that have been made up to the present. By arrangement the question of Tyndall's dismissal or suspension was referred to J. Pascoe, M.L.A.; S. A. Hamilton and C. Green, who after hearing what both parties had to say exonerated him of the charges preferred against him.

Mainly About Electric Railway People.

H. H. Couzens, General Manager, Toronto Transportation Commission, and President Canadian Electric Railway Association, was entertained at dinner, at the Engineers' Club, Toronto, by the Commission's various department heads, on Aug. 7, and was presented with a valuable pipe and a huge canister of tobacco, prior to sailing from Montreal, on Aug. 10, for a six weeks holiday in England. Mrs. Couzens, who has been in England for some months, will return with him.

H. A. Cromwell, Auditor, London and Port Stanley Ry., London, Ont., has resigned to enter insurance business at Port Stanley, Ont.

R. J. Fleming, ex-General Manager, Toronto Railway, has had his appeal against an income tax assessment on \$20,000 for 1923, in York Township, Ont., dismissed. He appealed on the ground that he has no assessable income for 1923, having severed his connection with

the Toronto Ry Co. prior to the end of 1922, and that the tax on his income for 1922 had been paid. An amendment to the act under which the assessment is made, states that every resident in a municipality shall be assessed in 1923 for the income he received during the previous year, whether he has any assessable income for 1923 or not.

A. T. Goward, whose appointment as Vice President, British Columbia Electric Ry., Victoria, B.C., with jurisdiction over all the company's matters on Vancouver Island, was announced in our last issue, was born at Tenby, Wales, in 1872, and educated in the principality. He came to Canada after completing his education, and entered the service of the National Electric Tramway and Lighting Co., now British Columbia Electric Ry. Co., in 1890 as conductor and a few months later he opened the books of the company's lighting department, and was placed in charge of them. He was made Manager of the Vancouver Island lines in 1897. He is a member of the Union Club, the Victoria Chamber of Commerce, and of local golf clubs.

Wm. C. Hawkins, Managing Director and Secretary, Dominion Power & Transmission Co., Hamilton, and his son, did some salmon fishing on the Pabos River, in Gaspe Peninsula, Que., during August. Mrs. Hawkins and her daughter have been visiting the Pacific Coast, including Alaska.

George Kidd, President, and W. G. Murrin, Vice President, British Columbia Electric Ry., were entertained at luncheon at the Vancouver Club, Vancouver, recently, by a number of local business men who congratulated them on their recent appointments.

Lt. Col. G. C. Royce, ex-General Manager, Toronto Suburban Ry., and Mrs. Royce, have been spending some time at the Royal Muskoka Hotel, Lake Rosseau, Ont.

J. E. Tanguay, Managing Director, Quebec Power Co., has also been appointed General Manager, Quebec Ry., Light, Heat & Power Co., vice W. J. Lynch, who has been appointed Assistant General Manager, Q. R. L. H. & P. Co., and also of Quebec Power Co. Mr. Lynch's duties have not as yet fully defined, but it is expected that he will be in charge of the Purchasing Department, and also of the Montmorency Division, as J. E. Everell, its Superintendent, is retiring.

J. B. Woodyatt, Montreal, Vice President and General Manager, Southern Canada Power Co., which controls the Sherbrooke, Que., street railway, is one of the directors of Ottawa and Hull Power Co., which has been formed to acquire the Ottawa and Hull Power and Manufacturing Co.

Track Construction, Etc., Hydro Electric Railways, Essex District.

The Hydro Electric Power Commission of Ontario gave contracts on Aug. 21 for track construction on the Hydro Electric Railways, Essex District, as follows: Cadwell Sand and Gravel Co., Windsor, 3,740 ft. of double track (7,480 single track feet), on Erie St. from Ouelette Ave. to Parent Ave., Windsor; 100 ft. of double track (4,200 single track feet) on Parent Ave. from Erie St. to Ottawa So., Windsor, and 2,540 ft. of double track (5,080 single track feet) on Ot-

tawa St. from Parent Ave. to Lincoln Road, Windsor, and a passing siding, 475 ft. long, on Ouelette Ave. near Maple Ave., in Windsor; to Merlo, Merlo & Ray, Ltd., Walkerville, 1,925 ft. of single track on Sandwich St. from the Canadian National Railways bridge to the city's eastern limits, in Walkerville, and 3,250 ft. of single track from the eastern limits of Walkerville to Strabane Ave., in Ford City. As stated in Canadian Railway and Marine World for June, pg. 290, the Commission had also called for tenders for the construction of 2,500 ft. of double track in Sandwich, from Bridge St. to Soper St., but we are officially advised that this work has been deferred indefinitely, on account of the municipality not being prepared to proceed with the paving which should go forward simultaneously with track construction.

The article in our June issue was accompanied by an illustration showing cross and longitudinal sections of the track to be built. The contracts mentioned above have been let on the basis of the contractors furnishing sand, gravel, cement and trap rock, the Commission to furnish rails, ties, track fastenings and all overhead line material. The Commission will do the joint welding. The rail to be used will be 80 lb. A.S.C.E. section, in 60 ft. lengths, and International steel twin ties will be used. No departure from existing overhead construction will be made, it being of the usual span support type.

In addition to the track construction for which contracts have been let the management will do the following work with railway forces: Completion of ballasting of Tecumseh Division; application of 2 miles of rock ballast on Amherstburg Division; erection of additional roadside shelters; and minor improvements. It is expected that the track construction will be begun immediately and be completed by Nov. 15, and that the work to be done by railway forces will also be completed this year.

Toronto Suburban Railway Diversion and Co-ordination Project.

In accordance with the Canadian National Rys. scheme for the provision of an electric radial railway service for the Toronto district, as stated in a letter from Sir Henry Thornton, President, to the chairman of a Toronto city council special transportation committee, which was published in full in a previous issue of Canadian Railway and Marine World, the Toronto Suburban Ry. applied on July 31 to the Board of Railway Commissioners for authority to build a diversion of its line to connect across the territory in York Township, north of Toronto, with the proposed electrified line to the east of the city, and to furnish it with a terminal at St. Clair Ave. and Keele St., Toronto. At present the T.S.R., where it draws close to the C.P.R. double track line west of Toronto, turns easterly and follows Dundas St. towards the city. The city is taking over all of the T.S.Ry. tracks within the city limits, which necessitates the diversion for which authority is asked. It is the intention to take up the T.S.R. line on Dundas St., from the commencement of the diversion to the westerly city limits, or sell it to York Township for operation by the Toronto Transportation Commission, after the diversion is built, and to bring passengers from Guelph, and points between there and Toronto, to

the new terminal at St. Clair Ave. and Keele St., where they would transfer to the T.T.C. lines to reach their destinations in the city. The right of way for the proposed diversion follows the Toronto & Niagara Power Co's power line from near the point of diversion from the present T.S.R. line to near Weston Road, and the land for it was secured some years ago. The diversion would cross the C.P.R. tracks near West Toronto by a subway, and it is proposed to cross Scarlett Road, Jane St., Castle Crescent Road and Symes Road, all in York Township, by level crossings; Weston Road, within Toronto city limits, by a subway, and Gunn's Road, also within the city, by a bridge.

On the railway's application being announced the Mayor of Toronto and various city officials, who have indicated by their attitude for some time that they are not enthusiastic over the Canadian National Rys. electrification projects, were reported to have stated that the granting of the application would create undesirable transportation conditions within the city, and that they would oppose it. Their objections appeared to be based on misapprehensions, and on the fact that they thought that new level crossings would be created within the city. E. W. Oliver, Manager T.S.R., then issued a statement, which was, in part, as follows: "There should be no opposition from the city on the score of level crossings, as we are to cross Gunn's Road by a bridge and Weston Road by a subway. The other crossings, in the township, are on roads that have not a great deal of traffic, and there would be no more danger there than on any road or street where an electric radial line runs. The location submitted is over the same right of way as approved for the Canadian Northern Ry. years ago. We are following a right of way that now exists and this is a part of the scheme of co-ordination of the Toronto Eastern and Toronto Suburban Rys. The co-ordination will be effected by taking the Toronto Eastern across the north of the city by the old belt line route, and connecting it with the Toronto Suburban near the proposed terminus at Keele St. and St. Clair Ave."

The Toronto Board of Control has asked for a report on the subject from Works Commissioner Harris and H. H. Couzens, General Manager, Toronto Transportation Commission. The attitude of the York Township authorities towards the proposed diversion has not been announced.

Proposed Purchase of London Street Railway.

The London, Ont., City Council has appointed Sir Adam Beck, Chairman of the London Railway Commission and of the Hydro Electric Power Commission of Ontario, to negotiate with the London St. Ry. Co. as to a price for the property which would be acceptable to the shareholders. The management is reported to have referred the council to the valuation of approximately \$1,250,000, placed on the property by the Hydro Electric Power Commission of Ontario engineers in 1920, and to have suggested that the council decide to take over the property at a value to be fixed by arbitrators. The mayor is reported to have expressed the view that the property is not worth \$600,000.

Electric Railway Passenger Fares.

Montreal Tramways Co.—The Montreal Tramways Commission's annual budget has been practically completed, and a press report states that it will announce that until certain overdue payments have been made to the city, it will not be possible to build up the reserve fund, which is provided for in the franchise contract. When this reserve fund reaches \$1,000,000 the Commission may reduce the fares, and when it reaches \$2,500,000 the Commission must reduce them. The Commission is reported as stating that there is no prospect of a fare reduction this financial year or the next one.

Ottawa Electric Ry.—Notice was recently given by the company to the city board of control that it did not consider itself obliged after Aug. 13 to sell Sunday tickets at 28 for \$1, or 7 for 25c. It was also stated that the company did not intend to discontinue the operation of Sunday cars or to make any immediate change in the Sunday rates of fares that have been in operation. The rates of Sunday fares were fixed July 29, 1899, to run during the unexpired portion of 30 years, which commenced Aug. 13, 1893. This agreement expired Aug. 12, and the notice was given so that the continuance of the Sunday fares beyond that date might not be interpreted as a waiver of the company's rights, either to discontinue the service or to refuse to issue tickets at the special rates awarded in the contract. The matter was referred by the board of control to the city solicitor to ascertain whether the special Sunday car agreement has not become part of, or embodied in, the regular city franchise agreement which was automatically extended for five years, owing to the city council's failure to give notice that it would take over the line on Aug. 13. The city solicitor's opinion, which was read at a board of control meeting on Aug. 14, reviewed the original franchise and the agreement as to the operation of Sunday cars and concluded as follows: "One of the company's privileges under the agreement as amended, and which is to continue after Aug. 13, 1923, until ownership is assumed by the corporation, is to operate its lines on Sundays, and one of the conditions which is attached to, forms part of, and determines the extent of that privilege, is that the company shall sell tickets on Sundays at the rates fixed by the agreement on July 29, 1899. The company can continue to exercise its privilege only according to the terms upon which it was granted. It cannot, therefore, in my opinion, so long as it continues to operate on Sundays, refuse to sell tickets at the rates provided for in the agreement of July 29, 1899."

Detroit, Mich., Municipal Ry. has advanced its cash fares from 5c. to 6c., with 9 tickets for 50c. Transfers are still charged for at 1c. each additional. The Board of Street Railway Commissioners, in making the announcement, stated that the average street railway fare in the U.S. is 7.08c. It also stated that the advance was necessitated by the increased wages granted employees, which will add \$600,000 a year to the expenses, and of \$250,000 a year extra for new power, which will wipe out the approximate net earnings of \$1,000,000, said to have been made in the year ended June 20.

Montreal Tramways and Power Co.—

An extraordinary general meeting of shareholders was held Aug. 9, on a shareholder's requisition for five purposes, the principal one being to amend the Articles of Association, sec. 86, by striking out the provision that members must be in possession of shares for 3 months before being entitled to vote on them, and the other being the appointment of a member of the investigation committee in place of C. H. Branchaud, who resigned a few days after his appointment on July 5. Scrutineers were appointed to take the votes, on the question of whether the period for the possession of shares be reduced from 3 months to 8 days, and as to whether N. S. Finberg or G. Gauthier be elected to succeed Mr. Branchaud, and the vote having been taken, the meeting was adjourned to Aug. 14, when the scrutineers reported that the motion to reduce the period of possession of shares was defeated by 79,184 against 44,356, and that G. Gauthier had been elected a member of the committee of investigation by 79,184 against 44,300 for Mr. Finberg. It was agreed that any other vacancy arising in the committee be filled by the directors. The next annual meeting was fixed for Dec. 20.

Niagara, Welland and Lake Erie Ry.—

There has been deposited with the Secretary of State at Ottawa a trust mortgage dated May 1, 1923, between the Niagara, Welland and Lake Erie Ry. Co. and the National Trust Co.

The Quebec Power Co's directors issued circulars to Quebec Ry., Light, Heat and Power Co. shareholders on July 26, stating the terms on which the several securities in these companies would be taken over. The Quebec Power Co. will purchase the Q.R.L.H. & P. Co's common stock of the aggregate par value of \$10,000,000 by giving in exchange stock in the power company to the extent of \$25 for each \$100 share of the Q. Ry., L., H. and P. Co., such shares forming part of an authorized issue of \$6,000,000, of which \$1,600,000 have been issued. Holders of Q. Ry., L., H. & P. Co. 5 per cent. 30-year income bonds are offered for each \$100 bond, \$30 in 7 per cent. preference shares of the power company, such shares forming part of an authorized issue of \$4,000,000, of which \$1,410,000 have been issued; or \$27 in cash for each \$100 bond. Shareholders and bondholders are given up to Sept. 28 to make the exchange, or, in the case of the bonds, to elect to take cash. The Q. Ry., L. H. and P. Co. directors issued a circular on July 26, advising the acceptance of the offer. A number of minority shareholders met in Montreal early in August, to discuss the matter with the result that a general meeting of shareholders was called to be held Aug. 9, but was postponed until Aug. 16. The

proceedings appear to have been private. It is stated that there are about 30,000 shares outside of those held or controlled by the Quebec Power Co. directors.

The Quebec Power Co. has moved its offices into the Quebec Ry., Light, Heat and Power Co's building, and it is reported that the former Public Service Corporation building on Crown St. will be sold.

Regina Municipal Ry.—A press report states that during the week of the annual exhibition at Regina, Sask., the municipal railway carried 143,097 passengers, against 149,234 during the exhibition week of 1922, the receipts being \$9,059.40 against \$9,931.55.

Waterloo-Wellington Ry.—Kitchener, Ont., ratepayers who, on May 12, by a majority of 12 votes, defeated a bylaw to issue debentures for \$70,000 to buy and rehabilitate the Waterloo-Wellington Ry., extending from Kitchener to Bridgeport, 3.45 miles, voted on the question again on Aug. 18, and carried the bylaw by 938 to 576, according to a press report. Details of the agreement as to the purchase, and particulars of the property to be acquired were given in Canadian Railway and Marine World for July, pg. 350.

Winnipeg Electric Railway.—

	June, 1923	June, 1922	6 mons. to June 30, 1923	6 mons. to June 30, 1922
Gross	\$403,759	\$417,754	\$2,745,433	\$2,753,487
Expenses 295,866		322,533	1,909,600	2,036,912
Net	107,893	95,221	835,833	716,575
Fixed charges 75,189		57,375	449,231	358,557
Surplus ..	32,704	37,846	386,602	358,018

The decrease in the surplus for June, compared with June, 1922, was due to an unusual decrease in gross earnings of the railway and gas utilities, the electric utility showed an increase of approximately \$15,000. The operating expenses of the railway increased \$721, due to extraordinary maintenance repair work; the operating expenses of the gas utility decreased \$10,366, and the operating expenses of the electric utility increased \$9,903, due to an increase in the cost of power and distribution, on account of the increase in the load.

Ottawa Electric Railway's Proposals to the City.

A press report states that Major F. D. Burpee, Manager, Ottawa Electric Ry., forwarded to the Mayor on Aug. 18 a proposal for the settlement of affairs between the company and the city. The proposition is said to be for the drawing up of an agreement for an exclusive franchise for carrying passengers within the city but not interfering with the interurban buses, to be renewed every 5 years; the company to build certain extensions of lines; limited and Sunday fares to be done away with, and a 5c. fare to be charged, the fare to be reviewed every 5 years. A special meeting of the board of control was held Aug. 20 to consider the proposal, and it is reported that it was decided to recommend the reconvening of last year's street railway committee, which handled the street railway question; approval of the company carrying out the extensions enumerated in its offer; that the valuation of \$4,500,000, arrived at last year, be adhered to as a basis of negotiation in any proposed purchase of the railway five

years hence, plus cost of extensions and minus depreciation; and, that steps be taken to see if war time legislation giving the company the right to appeal to the Board of Railway Commissioners regarding a revision of fares, has been renewed by the company. The city council on the same evening re-appointed the special street railway committee consisting of the Mayor, Controllers McGuire, Balharrie, Ellis and Cameron, and Aldermen Cunningham, Lowe, Bordeleau and Forward. The other recommendations were discussed but no decisions were arrived at.

Electric Railway Notes.

The Toronto Transportation Commission has received 36 motor cars from Canadian Car and Foundry Co.

The British Columbia Electric Ry. and the C.P.R. are reported to have arranged a schedule of shunting operations in Vancouver, which will confine such operations between 4 and 7 p.m. daily.

The Hamilton and Dundas St. Ry. did not, as was expected in Dundas, Ont., cease operating Aug. 1, upon the expiration of the special agreement as to fares entered into at the beginning of the year.

Ottawa Electric Ry. Co. adopted some time ago a new type of hand fare boxes. Conductors have complained that the handles chafe their hands, and the management is experimenting with a new handle.

The Windsor, Essex and Lake Shore Rapid Ry. Co. issued, effective Aug. 15, a standard mileage freight tariff between stations on its line: Tariff G. F. D. 357, cancelling G. F. D. 293; C. R. C. 307 cancelling C. R. C. 269.

A Sherbrooke Ry. and Power Co's motorman, operating a car on Ontario St., Sherbrooke, Que., on Aug. 1, encountered two young deer on the tracks. A similar incident occurred about a week previously near the exhibition grounds.

The British Columbia Electric Ry. Co. issued a map of its Vancouver city lines in two colors, 12 x 9 in., showing the car routes and the points of interest adjacent thereto. It is reported that within three days about 30,000 of them were distributed by conductors on the cars.

Ottawa Car Manufacturing Co. is, a press report states, considering the possibility of removing its entire plant from Ottawa, Ont., to Hull, Que. Questions of provincial legislative restrictions, and the incidence of taxation as between Ottawa and Hull, are said to be the reasons. The company employs about 500 men.

Calgary, Alta., Municipal Ry. has been suffering from what was believed to be the use of forged tickets, and offered \$25 reward for the detection of the offenders. The plan adopted is, it is stated, to buy children's tickets at 8 for 25c. and dye them the same color as the adult's tickets, which sell at 18 for \$1. A motorman-conductor believed he had caught an offender July 30, and called in the police, but after investigation the charge was withdrawn.

Canadian Electric Railway Association.—The standards committee appointed at the executive committee's meeting in Toronto on July 20, the personnel of which was given in Canadian Railway and Marine World for August, on page 399, has been added to by the appointment of M. C. Smith, Manager, Cape Breton Electric Co., Sydney, N.S.

Marine Department

Injurious Operation of Inland Water Freight Rates Act, 1923.

Canadian Railway and Marine World gave, in preceding issues, details of charges made concerning conditions in the shipping business on the Great Lakes, particularly with reference to western grain transportation, and of the investigation and report of a government commission appointed to investigate the charges, and our August issue contained the Inland Water Freight Rates Act, 1923 in full as passed at the Dominion Parliament's last session. The most important details of the act are summarized as follows: Section 3 provides that any carrier by water, operating between Port Arthur or Fort William and any other port in Canada or the U.S. must, within 30 days of the passing of the act, and before entering into any contract to carry grain, file with the Board of Grain Commissioners a tariff of the charges proposed to be made. If any existing tariff is to be changed, notice of the change, with all particulars, must be filed with the Board. Any ship owner neglecting to file tariffs or changes in tariffs, or who charges rates higher than those filed, is subject to a penalty of not more than \$2,000 and not less than \$500, or 6 months imprisonment. Sec. 4 provides that it shall be the Board's duty to tabulate all tariffs filed, to keep itself in intimate touch with rate and cargo space conditions, to watch for and detect discrimination, and to keep the Minister of Trade and Commerce informed concerning the situation. It empowers the Board to call on anyone connected with the grain trade for information, and provides that anyone neglecting or refusing to furnish it will be liable to a penalty of not more than \$1,000 and not less than \$200. Sec. 5 provides that when the Board thinks any rate too high, or discriminatory, it may prescribe a rate, either absolutely or conditionally, and that if any ship owner charges a rate higher than the prescribed maximum, he will be liable to a penalty not exceeding \$2,000 and not less than \$500, or 6 months imprisonment. Sec. 6 provides that vessel brokers and others engaged in chartering space shall post up daily, in the Winnipeg Grain Exchange and at the Board of Grain Commissioners' office at Fort William, statements showing the cargo space contracted for on the previous day, with time for shipment and destination. Sec. 7 prohibits brokers from handling insurance. Sec. 8 prescribes penalties for violation of clauses 6 and 7, in the case of an individual a penalty of not more than \$1,000 and not less than \$100, or 3 months imprisonment, and if a corporation, a penalty not exceeding \$3,000 and not less than \$500. Sec. 9 provides that the act applies only to the carriage of grain in interprovincial, foreign or export trade, and not to that of grain to be consumed or milled in Ontario, but it places on the carrier the burden of proof as to any shipment being provincial in nature.

The amendment to the Canada Shipping Act, also passed at the Dominion Parliament's recent session empowering the Government to suspend the coastal laws so as to allow foreign ships to trade between Canadian ports, without like privileges being accorded Canadian ships as concerns foreign ports, was also given

in Canadian Railway and Marine World for August, pg. 410.

As the time approached for the remarkable legislation contained in the "Inland Water Freight Rates Act, 1923", which can be repealed or suspended by Parliament only, to come into operation a curious situation began to develop, grain handling firms, including those who had most vociferously demanded legislation governing the lake grain traffic, strongly criticising the act, these criticisms increasing in number and intensity until, by Aug. 1, definite expression had been given by the grain trade generally to the opinion that the act was impractical, impossible and unworkable, and that if it remained in force it would be out of the question to be able to move the export crop to the seaboard. Canadian shipowners, to regulate the operations of

as reasonably undertake to regulate rates charged by the countless motor trucks carrying freight on the highways as they could to regulate rates charged by water carriers, for the simple reason that the inland waters are as free to all as are the public highways, and that the opportunity is open to all who may desire to place their ships in those waters and compete for traffic. Consequent on the U.S. shipowners stating their attitude, it at once became evident that the Government, by enacting legislation ostensibly to increase facilities and competition on the lakes, had really created a condition that would prevent U.S. ships from carrying grain from Port Arthur and Fort William to Buffalo and other U.S. ports and would thus prevent prompt movement of the crop. It was pointed out that the crop could not be moved efficiently and expeditiously without the assistance of U.S. ships, and by Aug. 1 the grain trade's demands that the tariff legislation be thrown out, or honored more in the breach than in the observance, were even more insistent than the former demands for legislation to "break up the shipping combine."

Another difficulty complained of has to do with demurrage. Immediately on the act coming into force, Canadian shipowners filed provisional tariffs of rates for carriage, and containing a demurrage clause. In 1922 and preceding years Canadian shipowners did not charge demurrage, and the large losses incidental to delays at unloading ports were borne by them and they had to recoup their losses as best they could by quoting higher rates. The shipowners' attitude this year is that they do not intend to gain ill favor by quoting rates which will be high enough to at least make up part of the loss incidental to delay in unloading, but on the contrary intend to name fair rates and charge the trade demurrage on a per bushel per diem basis. In 1922 U.S. shipowners charged demurrage at Buffalo; the rate ranging from \$500 to \$1,000 a day, according to the size of the ship, but in no case was the demurrage charged sufficient to recoup the loss the shipowner experienced through the delay. Canadian shipowners state that they have shouldered this risk long enough; they point to the fact that the railways charge demurrage to make up for the loss occasioned by their patrons using their cars as warehouses, and have declared their intention of dealing similarly with those who so use their ships. On the shipowners' intentions as to demurrage becoming known, the grain men immediately complained that they could not do business at all if they had to assume a demurrage risk. They stated that they did business on such a small margin that any large demurrage charge would wipe out all profit, and cause large loss, and that if they had to accept the demurrage clauses, and if the delay were as serious as last year, as they confidently expect will be the case, they would have to increase their margins to such an extent that it would react disastrously upon the producer.

Another complaint from the grain men is in regard to the requirement that brokers post up daily, in the Winnipeg Grain Exchange and at Fort William,

Dominion Marine Association.

which the legislation was largely designed, while expressing themselves as not favorable to it and as being of the opinion that it would interfere with efficient handling of the crop, stated that they could do business under it and were prepared to go ahead and obey its terms.

The grain trade's first objection to the act in regard to filing of tariffs. U.S. shipowners announced that under no circumstances would they file tariffs as required by the act; and stated that practically ever since the U.S. Interstate Commerce Commission was established it has been trying to secure control of the lake rate situation by having U.S. shipowners file their tariffs with it, but this they refused to do, and they claim that if they were to file tariffs in Canada it would materially weaken their position as concerns the I.C.C.'s desire to exercise control. U.S. shipowners deny that they are common carriers, in the commonly accepted sense of the term, and claim that the rate regulating authorities could

details of the previous day's business, as concerns space contracted for, time for shipment and destination of cargo. Although the act does not require the broker to show who contracted for the space, the practical application of this section would result in any exporting firm's transactions becoming common knowledge, and the shippers claim that sellers would be in a position to "hold out on" any firm desiring grain to fill a contract, and to increase its price.

As stated above, the act prohibits brokers from placing insurance. Formerly they derived all their revenue from their insurance business, but since the act came into force they have been charging $\frac{1}{4}$ c a bushel for chartering space, with the result that their earnings have been at about the same rate as when they depended on their percentage of the insurance premiums. The shippers, although they admit that the brokers' services are of the greatest value to them, in obtaining space, obtaining postponements of shipments when desired, matching up space and cargo, and keeping them informed of the situation, complain about the chartering charge and maintain that the brokers should be paid by the carriers.

The complaints as to the act's unworkability became so insistent, that the Government dispatched L. Boyd, Chairman, Board of Grain Commissioners, and G. S. Wrong, B.Sc., Chief of the Dominion Bureau of Statistics' Transportation Branch, who was appointed to supervise the act's operation, to Winnipeg, to enquire into the complaints and to try to arrange for such co-operation as would ensure that the crop would be efficiently handled. A meeting, held there on Aug. 7 was attended by L. Boyd, G. S. Wrong, Matthew Snow, member of the Board of Grain Commissioners, H. J. Symington, K.C., representing grain shippers, M. Cole, representing Canada Atlantic Grain Co., T. R. Enderby, Operating Manager, Canada Steamship Lines, Jas. Richardson, of Richardson Grain Co., L. H. Wolvin, Manager, Standard Shipping Co., A. M. Spendlove, of the Inland Shipping Co., R. Magill, Secretary, Winnipeg Grain Exchange, W. A. Prime, representing insurance firms in New York, and A. E. Hoskins, K.C., representing the Standard Shipping Co., and other brokers. The most noticeable feature of the attendance was that every branch of the grain trade was represented except the men who produce the grain—the farmers who were supposed to be benefitted by the act. The press was rigidly excluded, the excuse given being that it was thought all present would speak their minds more freely if they were in camera. It is reported that R. Magill stated that the act was holding up the making of contracts for the new crop and was affecting the price of October wheat considerably; that H. J. Symington, K.C., expressed his clients' views as concerns demurrage, as given above; that T. R. Enderby expressed the ship owners' opinions, viz., that the ships could be operated under the act, but that he did not want to place in effect the high rates of last year to offset losses caused by delays in unloading, and that Messrs. Cohen and Richardson emphasized the serious situation that would develop if U.S. boats would not enter the Canadian trade and carry grain to Buffalo. Nothing definite was accomplished. The meeting was continued on Aug. 8, and apparently resulted in a tacit approval of the Government evading its own law by allowing the ship owners to largely ignore

it, requiring them to file copies of contracts entered into, only, instead of tariffs. It was decided to have one of the Winnipeg brokers wire and ask the U.S. ship owners if such a decision would be satisfactory to them, to which the following reply was received from Cleveland:—"Your message conveys suggestion managers at Cleveland commit themselves to violation or evasion of a Canadian law. Cleveland owners will not knowingly violate or evade any law. You and other Winnipeg brokers are familiar with the fact that Cleveland managers do not care to discuss laws of Canada which have already been enacted. So far owners have shown no disposition to take Canadian grain when we have negotiated future charters." The end of the meeting on Aug. 8 found the differences of opinion as to demurrage still existing; the U.S. ship owners refusing to file tariffs or participate in any evasion of the law with the Canadian Government's consent; the shippers without any satisfaction in regard to the requirement that brokers' post up details of the previous day's business, and agreement that the question of brokers' payment should be settled privately among the shippers, brokers and ship owners. Messrs. Boyd and Wrong thereupon left for Ottawa to report to the Minister of Trade and Commerce, Mr. Robb.

An Ottawa press dispatch of Aug. 10 stated that the Minister had declined to comment on what had transpired at his conference with Messrs. Boyd and Wrong but credited him with the statement that the act was going to be enforced. A Fort William press dispatch about the same date stated that "Canadian bottoms could possibly move the 1923 crop in a little more than 13 months if no effort was made to move oats, barley, rye and flax, according to Fort William shipping men." An Ottawa press dispatch of Aug. 13 quoted the Minister of Trade and Commerce as saying that the act would be administered and that the Government did not expect any great difficulty in carrying out its provisions or moving the crop, adding: "The refusal of U.S. shipping companies to file their tariffs with the Canadian Board of Grain Commissioner as a necessary preliminary to entering the Canadian grain trade was not regarded by the Minister as an insurmountable difficulty, and he indicated that the U.S. companies would probably comply with the Canadian regulations. If they do not and the Government persists in its present attitude they will be automatically shut out from the trade. Mr. Robb pointed out that one of the western grain men's chief complaints was that the crop is thrown on the market practically all at once. A slowing down of the market, consequent upon the non-entry of U.S. vessels into the carrying trade would, he felt, provide an opportunity for feeding the crop to the market at a rate at which the market could digest it. This would test the foundation of the western complaint of too speedy marketing. Mr. Robb seemed optimistic that the crop would be moved in good order."

A Winnipeg dispatch of Aug. 12 stated that Canadian railways, on account of persistent reports of a coming lake blockade, were preparing to haul as much grain as possible all-rail to the Atlantic seaboard, and that it was believed they could haul 75,000,000 bush. eastbound during the autumn and winter, and 20,000,000 to Vancouver.

What little importance was to be attached to the reported statement by the

Minister of Trade and Commerce as to the lack of necessity for participation in the 1923 crop movement by U.S. ships, was shown by a Winnipeg press dispatch of Aug. 14, which stated that Chairman L. H. Boyd, of the Board of Grain Commissioners, was in Cleveland, Ohio, on that date, meeting privately a number of shipowners' representatives, and discussing with them the terms of the act, and the possibility of U.S. ships entering the Canadian grain trade under those terms. It also stated that the owners themselves were to hold a conference on the following day.

A Cleveland press dispatch of Aug. 15 stated that at a conference in Cleveland on that date, U.S. shipowners decided not to enter the Canadian grain trade under the terms of the act, and that a message was sent as follows to the Board of Grain Commissioners for Canada, Secretary Rathbone of which had telegraphed on Aug. 9 enquiring as to the availability of U.S. ships for the Canadian crop movement: "Mr. Rathbone's message of the 9th was duly received. Vessel offices were closed Friday, on account of funeral of the late President Harding, and Saturday was a short day and some managers were away over weekend, hence delay in replying. Informal meeting held today and for reason that our ships operate as private carriers, engaged in the competitive business of transporting ore, coal and stone, with occasional grain cargoes, the prevailing opinion is that the action of the Dominion Parliament has removed your grain from the class of competitive business subject to free and open competition, which is the only character of business in which the lake bulk freighters of U.S. registry have heretofore engaged. Under existing conditions the managers do not feel they can comply with the new law, and, of course, will not operate in violation of it."

A Winnipeg press dispatch of Aug. 16 stated that there had been no export buying of grain of any importance, whereas in most years the business contracted to that date amounted to about 50,000,000 bush., and added: "All hope of more than 50,000,000 bush. of the 1923 crop being shipped across the Great Lakes before the close of navigation has been abandoned by grain shippers on the Winnipeg Grain Exchange, as a result of the final decision of United States shipowners to refrain from entering the Canadian carrying trade this year." The dispatch quoted a leading member of the Grain Exchange as follows: "The situation is the most serious one ever experienced. What can we do to remedy it? Nothing. The Government enacted legislation without consulting a single representative of the trade as to its probable effect, and now we are absolutely helpless."

A Winnipeg press dispatch of Aug. 17 stated that brokers representing many U.S. shipowners had unofficially proposed that some 50,000,000 bush. of Canadian wheat be diverted through Duluth, so that the terms of the act could be avoided. It also said: "In view of the threatened blockade through the refusal of the U.S. fleet to comply with the new law, some exporting interests are turning in the direction of Duluth, while others have hurried agents to Vancouver, to see precisely what that port offers in the way of storage, bottoms and loading facilities."

An Ottawa press dispatch of Aug. 17 stated that the Minister of Trade and Commerce, Mr. Robb, had said, after a

conference with L. H. Boyd and G. S. Wrong, that the act would be administered, and that no trouble with the grain shipping situation was expected. He was reported to have intimated that, while the U.S. shipowners had said they would not come in, he anticipated no trouble from that source, and that when the U.S. ships were through with the coal and ore trade their owners would be anxious to get grain to keep them busy.

A Fort William press dispatch of Aug. 20 stated that Chairman L. H. Boyd had arrived there from Ottawa, where the Minister of Trade and Commerce, after a conference with him, had declared that the act would "be put into effect immediately." The dispatch said: "Mr. Boyd stated that, from information gathered during his stay in Cleveland, U.S. carriers will not, as a whole, abstain from carrying Canadian grain. In the course of his visit he found that the carriers were not all of one mind with regard to the act, and from several owners and agents whom he met, he gathered that when the ships had completed their coal and ore contracts they would be on hand to carry Canadian grain from the head of the lakes.

A Winnipeg press dispatch of Aug. 20 stated that the U.S. shipowners' attitude would be discussed there on Aug. 22 by the Board of Grain Commissioners, and that Chairman L. H. Boyd, who recently interviewed U.S. shipowners at Cleveland, would present a report to the Board at that meeting.

Welland Canal Retaining Wall Break.

Reference was made, in Canadian Railway and Marine World for August, to the break in the westerly retaining wall of the Welland Canal, near lock 23, at Thorold. We have since been supplied with the following further details by L.D. Hara, Superintendent Engineer. Several weeks ago there were evidences of a leak in the westerly retaining wall below lock 23, in Thorold and shortly after, it was noticed that the flow of water, which was not great, stopped practically entirely, of its own accord, after the reach above lock 22 had been unwatered as much as possible, and an examination made, which showed no indications where the water was getting through under the wall. On July 18 the flow of water increased materially through the leak and developed rapidly. This necessitated the unwatering of lock 22 level, and the place of entry of the water was blocked with wooden sheet piling and concrete in bags, which was thought to be sufficient to allow traffic to be resumed and carried on until the close of navigation, when permanent repairs would be made. This temporary stoppage of the leak caused traffic through the canal at that point to be suspended for 19 hours, about 12 or 15 ships being delayed for varying periods. On July 20, the leak again began to flow and developed quickly, it being apparent that the temporary repairs had not been ef-

fective, it was decided to suspend traffic, unwater lock 22, and make permanent repairs. Through traffic had to be completely suspended from noon July 20, until 11 a.m. July 23, about 60 or 70 ships being delayed for varying periods. No damage was done to the canal banks or structures.

Canadian Pacific Railway Ocean Steamship Services.

The s.s. Empress of Canada will start on a round the world cruise, from Vancouver, B.C., Jan. 4, and is expected to complete the trip by returning to Vancouver about May 24. From Vancouver she will proceed to San Francisco, San Pedro, Balboa, the Panama Canal, Havana and New York, where the main lot of passengers will join her.

The s.s. Empress of Britain will make two cruises next winter, to the West Indies, Panama and South America. The first will start from New York, Jan. 22, and the second Feb. 23, calling at Cuba, Jamaica, Panama, Venezuela, Trinidad, Barbados, Martinique, St. Thomas, Porto Rico, Nassau, Bahamas, Cartagena, Colombia, etc., and at Curacao, in the Dutch West Indies. Each cruise will occupy 29 days.

Steamboat Inspection Estimates, for the year ending March 31, 1924, submitted to the House of Commons recently, provide for a vote of \$119,210.

Ships Registered in Canada in April and May, 1923.

In compiling the following lists of ships registered, steamboats and motor boats, operated by engines of less than 10 n.h.p., are eliminated, as also are sailing ships of less than 100 tons.

Ship Building and Ship Repairing Throughout Canada and Newfoundland.

Canadian Vickers Ltd., Montreal, did the following repair work during July.—For Canadian Government Merchant Marine;—steamships Canadian Commander, 5,493 tons, Canadian Constructor, 7,178 tons, Canadian Explorer, 5,408 tons, Canadian Navigator, 3,099 tons, Canadian Squatter, 3,091 tons, and Canadian Victor, 5,454 tons, for underwriters' and owner's repairs and bottom painting. For Canada Steamship Lines,—s.s. Rapids Prince, 1,384 tons, docked July 26 for survey, and undocked same day. For Imperial Oil Ltd.—s.s. Iocomo, 1,669 tons, extensive general repairs, 66 shell plates removed for renewal, fairing, etc., repairs to framing, bulkheads, and tank top, 4 oil cargo tanks arranged for carriage of case goods or bulk oil, installation of cargo derricks and winches deck and engine room equipment reconditioned for seagoing service, crew's accommodation enlarged and improved and wireless operator's room equipment added, ventilating improvements and refrigerating plant with cold storage space for use in tropical climates, work completed and ship ready for service early in the month; s.s. Victrolite, 10,825 tons, general repairs and painting of topsides. For McLean Kennedy Ltd., agents, s.s. Paliki, 1,578 tons, docked July 2 for underwriters' and owner's repairs, undocked July 9. For United States Shipping Board,—s.s. St. Anthony, 4,839 tons, docked July 4 for underwriters' and owner's repairs and bottom painting, undocked July 11. For Knox Bros., motor boat repaired. For Thos. Harling and Sons, agents,—s.s. Lingfield, 4,065 tons; docked July 12 for underwriters' repairs, undocked July 15; s.s. Hartfield, 4,661 tons, searching tanks. For George Hall Coal and Shipping Corporation,—s.s. Edward L. Strong, 2,052 tons, docked July 13 for underwriters' and owner's repairs, undocked July 21. For Intercoast Steamship Co.,—s.s. E. C. Pope, 2,781 tons, and s.s. Maruba, 2,657 tons, docked July 30, for cutting and preparing for voyage through canals to the Great Lakes, work completed during August. For Eastern Steamship Co.,—s.s. John J. Rammacher, 1,723 tons, docked July 29 for repairs to shell and framing due to collision damage, work completed during August. The following repairs were done in the harbor. For Anchor-Donaldson Line,—steamships Coracero, Corinaldo, Gracia and Kastalia, voyage repairs; s.s. Parthenia, 4,753 tons, repairing crack in cylinder. For Van Nievelt Goudriaan, steamships Alcor, 3,527 tons, and Yildum, 3,234 tons, voyage repairs. For Westfal, Larsen and Co., s.s. Porsanger, 4,267 tons, new boat davit standard. For Canada Steamship Lines,—s.s. Edmonton, 2,214 tons, voyage repairs; s.s. Mapleboro, 1,141 tons, repairs to hatch coamings; s.s. Canadian, 2,214 tons, connecting new deck winch. For United States Shipping Board,—s.s. Sinasta, 6,052 tons, voyage repairs; s.s. West Kobar, 5,620 tons, supplying boiler tubes. For Navigazione Libera Triestina,—s.s. Marina, 5,400 tons, voyage repairs. For Clarke Steamship Co.,—s.s. Gaspesia, voyage repairs. For Kawasaki Dockyard Co.,—s.s. Tokufuku Maru, 5,859 tons, voyage repairs. For Mathews Steamship Co.,—s.s. India, 976 tons, voyage repairs. For Tyneside Line Ltd.,—s.s. Newton Hall, 3,930 tons, voyage repairs. For Dampskibs Selsk Dannebrog, s.s. Jelling, 1,909 tons, voyage repairs. For C. Stewart Co., s.s. Paliki,

1,578 tons, voyage repairs.

The company launched at the end of July the first seaplane built in Canada. It is one of 6 which the company is building for the Dominion Government for forest patrol work. The launching was done by Mrs. G. J. Desbarats, wife of the Acting Deputy Minister of National Defence. The machine is equipped with Rolls Royce engines of 375 h.p. and has a wing spread of 65 ft.

Cholberg Shipyard, Victoria, B.C.—The Victoria Chamber of Commerce appointed a committee recently to investigate the question of obtaining an early release of this property from litigation proceedings with the Dominion Government, with the view of establishing it again as one of the local industrial plants. The yard was leased some time ago to Victoria (B. C.) Shipowners Ltd., for building 4 wooden sailing ships under special aid from the Dominion Government, to relieve the unemployment situation resulting from demobilization. The failure of that company before completing its first ship, and the Government's action to preserve its rights under mortgages and liens, resulted in prolonged litigation, which is now practically terminated. The Chamber of Commerce is acting on the committee's report, and representations are being made to the Government.

Halifax Shipyards, Ltd., Halifax, N.S., did the following repair work during July. For Imperial Oil Ltd.,—s.s. Imperoyal, docked July 1 for extensive bottom damage repairs, including renewal of 22 plates, removing fairing, and replacing 20 plates, fairing in place 15 plates, and extensive repairs to keel plates, bulkheads, floors and intercostals, particularly in way of engine and boilers, damage caused by stranding in Strait of Canso in June, undocked July 29. For Royal Mail Steam Packet Co.,—s.s. Chignecto, docked July 29, for half yearly overhauling, including drawing of tailshaft for examination, opening up of sea valve for inspection, and scraping and painting, undocked July 31. The s.s. Amalienburg was docked July 17 for extensive boiler repairs and was undocked July 23.

Wallace Shipbuilding and Drydock Co., North Vancouver, B.C., has been given a contract by the Dominion Public Works Department, for docking and cleaning dredge 306 (Mastodon), for \$13,435; for unmooring and towing dredge, \$50; for machinist, \$1.15 an hour; for machinist helper, 85c an hour, and for supplying electric current, 10c a k.w. hour.

Yarrows Ltd., Victoria, B.C., did the following repair work during June and July. For Canadian Government Merchant Marine,—s.s. Canadian Highlander, 5,370 tons, docked, cleaned and painted, boiler and sea connections overhauled, and new zincs. For Canadian Pacific Ry.,—automobile ferry Motor Princess, docked, repairs to propeller and rudder, later removing damaged propeller and installing new tail shaft and 2 new manganese bronze propellers, under water repairs and painting; s.s. Princess Alice, 3,099 tons, docked, cleaned and painted, various repairs and renewing zincs; s.s. Princess Maquinna, 1,777 tons, 3 manganese bronze propeller blades. For Canadian Government,—s.s. Berens, docked, tail shaft drawn and new one installed, work on propeller, rudder, etc.; s.s. Malaspina, 392 tons, repairs to main steam pipe. For Cascade Freighting and Towing Co.,—s.s. Cascade, 119 tons, docked,

cleaned and painted, deck and hull repairs. For Commercial Cable Co.,—cable ship Restorer, 3,180 tons various alterations and repairs, later drydocked, general overhaul, cleaned and painted, tail shafts drawn, propellers removed and replaced. For Grand Trunk Pacific Coast Steamship Co.,—s.s. Prince Rupert, 3,379 tons, 2 new manganese bronze propeller blades. For Pacific Salvage Co.,—s.s. Algerine, 592 tons, docked, tail shafts drawn for inspection, new manganese bronze propellers of new design installed, ship washed down; for other companies, s.s. Golden Gate, 4,854 tons, drydocked, cleaned and painted, new propeller 18 ft. diam. cast and installed; s.s. Bervin, formerly Coquitlam, 256 tons, docked, tail shaft drawn, repairs to frames and deck beam; schooner Malahat, 1,550 tons, drydocked for survey. In addition to the foregoing, several scows, 2 dredges, and a tug were docked for cleaning and painting.

Sale of Steamship Mariska.

The s.s. Mariska was offered for sale recently by order of the Supreme Court of Ontario, under a deed of trust, made by the owner, Transatlantic Steamship Co., to secure an issue of \$300,000, 6 per cent. serial gold bonds, and was sold to the Chartered Trust and Executor Co., as trustee for bondholders, for \$100,000, and was later sold to Minto Trading Co., Montreal. We are advised that arrangements are in progress to have her cut in two at Montreal, to increase her length by 34 to 48 ft., the two parts to be towed through the canals to Buffalo, where they will be rejoined. It is stated that the operations are in charge of J. F. M. Stewart, Toronto. The Mariska was built at Cleveland, Ohio, in 1890, of steel, and has watertight double bottom for ballast, steel boiler house, 3 watertight and 2 non watertight bulkheads, hatches spaced 24 ft. centers. Her dimensions are,—length b.p. 291 ft., breadth moulded 40 ft., depth moulded 22 ft., tonnage 2,325 gross, 1,835 net. Her propelling machinery consists of triple expansion engines with cylinders 24½, 38 and 61 in. diam. by 42 in. stroke, 1,200 i.h.p., at 80 r.p.m., supplied with steam by 2 Scotch boilers, each 14 ft. diam. by 12½ ft. long, at 160 lb. It is reported that she was bought from the Pittsburgh Steamship Co., early in the war for \$40,000, and was sold again for ocean service for \$320,000, after which she was cut in two and taken to the seaboard.

Quebec Shipping Statistics.—During July, 50 ocean going ships, of 315,064 tons, and 35 coastwise ships of 26,954 tons, arrived at the port, compared with 49 ocean going and 35 coastwise ships in July 1922. Grain receipts for July were, by railway, 6,795 bush. by water, 951,993 bush.; grain exported, 136,751 bush. The total grain receipts for the season to July 31, were 2,477,012 bush., and the total exports, 1,762,993 bush. The general cargo landed at the port for July was 5,442 tons, and the amount shipped was 1,379 tons, in addition to 10,059 tons of coal and 17,978 tons of fuel oil. The lumber shipments for July were 2,243,911 ft. b.m., and the total for the season, to July 31, 7,070,457 ft. b.m. Two shipments of cattle to Great Britain were made during the month.

Atlantic and Pacific Oceans.

The Royal Mail Steam Packet Co. and Holland American Line joint steamship service, between Great Britain and Europe and North Pacific ports, was placed on a new schedule in August. Five ships are being operated, as follows,—s.s. Cardiganshire, and motorships Loch Goil and Loch Katrine, by Royal Mail Steam Packet Co., and motorships Moerdyk and Drecht dyk by Holland American Line. All the ships are equipped with refrigeration machinery, and have a limited passenger accommodation. Sailings are made every three weeks.

Various reports which state that the Union Steamship Co. of New Zealand, which operates the Canadian-Australasian Royal Mail Line, will place an additional passenger liner in service between Canada and Australasian ports, in the autumn of 1924, and that she will be built in Scotland, for delivery within 20 months, appear to indicate that the company has just given an order for such a ship. As a matter of fact, the order was given the Fairfield Shipbuilding and Engineering Co., Glasgow, Scotland, in Oct., 1922, for delivery within 20 months of the placing of the contract. Preliminary details were given in Canadian Railway and Marine World for March. Her dimensions will be—length 600 ft., breadth 73 ft., and about 20,000 net tons. She will be equipped with internal combustion engines for a speed of 18 knots. She will be practically a duplicate of the C.P.R. s.s. Empress of Canada, by the same builders, with the exception of her propelling machinery, which will be Diesel engines of the Sulzer type, of about 13,000 shaft h.p.

The inauguration of a Canadian steamship service between Atlantic and Pacific ports, via the Panama Canal, took place with the sailing of the s.s. Margaret Coughlan from Montreal, Aug. 9, for Vancouver, with a general cargo. She was built at Vancouver, B.C., in 1920, and is screw driven by engine of 267 h.p. Her dimensions are,—length 411.5 ft., breadth 54.1 ft., depth 27.5 ft.; tonnage, 5,704 gross, 3,531 net. She was owned formerly by Canadian Western Steamships, Ltd., Vancouver, a subsidiary of J. Coughlan and Sons, Ltd., and was sold recently under an order of the court, for the benefit of the bondholders, who bought her in. She has since passed under the control of the Atlantic Steamship Co., a Canadian incorporation of a New York company. She is under the local management of Thos. Harling and Son, and the experiment is being made to see if sufficient trade can be developed by this route to make the continuance of the service worth while. Under a previous management she carried a large shipment of lumber from Vancouver to Montreal, and on her next trip from Vancouver, will also carry lumber, as well as a large consignment of salmon.

Maritime Provinces and Newfoundland.

The Norwegian s.s. Woldingham, while outward bound from Newcastle, N.B., with a cargo of deals, struck the Morrissey bridge across the Miramichi River, Aug. 10, damaging the draw span.

The Italian s.s. San Giuseppe, with coal from Newport News, Va., for Three Rivers, Que., ran ashore at Sand Point, in the Strait of Canso, Aug. 10, and was

refloated three days later without apparent damage.

The Royal Mail Steam Packet Co's s.s. Teviot arrived at St. John, N.B., Aug. 7, to replace the s.s. Caraquet, wrecked at Bermuda. During the war the Teviot was used as a transport boat between Southampton, Eng., and France.

The s.s. Sable I, owned by Farquhar and Co., Halifax, N.S., struck a submerged rock, Aug. 13, shortly after leaving St. Pierre, and was beached at Lamaline, Nfld. Those on board were landed safely. It is stated that she will be refloated.

The Newfoundland Government has given G. W. H. Petheram, chief officer of the Dominion Line s.s. Welshman, a silver salver, in appreciation of his services in saving the crew of the Newfoundland ship Stanley Joseph, in the Atlantic Ocean, Nov. 26, 1921.

The British s.s. Newton, which stranded at the entrance to Lockport harbor, N.S., July 3, and which was released by the St. John Drydock and Shipbuilding Co's steam tug Margaret A. Hackett, and taken to Halifax, is being offered for sale by tender, by the underwriters.

Admiral Seymour arrived at St. John's, Nfld., at the end of July, on H.M.S. Calcutta and proceeded to Point Amour, Labrador, to examine H.M.S. Raleigh, which went ashore there Sept. 8, 1922. It is reported that the matter of salvage is dependent on his report to the Admiralty as to the ship's position and condition.

During dredging operations by the Public Works Department in the channel leading to Courtenay Bay in St. John harbor, N.B., the limits of the dredging near the main channel have been marked by piled dolphins, which are marked at night by lights, shown from lanterns. They will be removed as the dredging is completed.

The Intercolonial Navigation Co's s.s. Advance, which was wrecked on Shut In Island, near the entrance to Halifax harbor, July 2, and which was abandoned as a total constructive loss, is reported to have been sold to John Simon, Halifax, N.S., for \$2,400. The greater portion of the cargo was removed, and the balance remaining on board was sold to the same person for \$25.

The steam trawler Sir John French, owned in Halifax, N.S., bound from Port Hawkesbury, N.S., to Grand Bank, Nfld., struck on the rocks at Little Dantzic Point, recently, and became a total loss. The officers and crew were landed safely. She was built at Beverley, N.S., in 1915, her dimensions being, length 140 ft.,

breadth 24 ft., depth 13 ft., 351 gross tons. She was screw driven.

The Boston, Halifax and Newfoundland Steamship Co. is reported to have bought the s.s. Yankton at New York, by auction, for \$8,900, plus auctioneer's fee of \$250. She was later sent to Boston, Mass., for refitting for service between Boston, Halifax and St. John's. She is about 185 ft. long, and will have accommodation for about 50 passengers. She was built at Leith, Scotland in 1893, and was at one time used as a private yacht by the late Mme. Sara Bernhardt. In May 1898 she was bought by the U.S. Government for \$125,000, for a dispatch boat in the Spanish-American War. During the recent war she served in the Mediterranean, and after the armistice, she was condemned and sold for \$10,000. She was seized recently by U.S. prohibition authorities, confiscated and sold by auction.

Province of Quebec.

The steam tug Scionda, owned by National Dock and Dredging Co., Levis, Que., while on her maiden trip to Godbout, Que., towards the end of July, sank near Rimouski, and is a total loss. Those on board were saved in a small boat.

The Clarke Steamship Co. which operates a steamship service from Montreal, Quebec and along the north shore of the St. Lawrence, to Harrington, Labrador, has extended the service to Curling and Humbermouth, Nfld., and has appointed T. Basha and Sons as agents at Curling.

Bay Line Steamships' s.s. Birchbay, formerly Eric W. of the Webster Steamship Co., while en route to Quebec, from Lake Ontario, with coal, grounded in the Richelieu Rapids, Aug. 8. She was abandoned to the underwriters, and was offered for sale by tender up to Aug. 15. She was built at Cleveland, Ohio, in 1882, with oak hull of the following dimensions,—length 225 ft., breadth 35 ft., depth 19 ft.; tonnage, 1,183 gross, 810 net. She is equipped with a fore and aft compound engine, with cylinders 26 and 48 in. diar. by 42 in. stroke, 559 i.h.p. at 72 r.p.m., and is supplied with steam by a firebox boiler 8 ft. diar. by 15 ft. long at 95 lbs. She was originally named Harry E. Packer, and owned by Rogers Transportation Corporation, Cleveland.

The Marine Department is replacing the lightship at White Island reef, in the St. Lawrence River, below Quebec, with a new steel one, with two masts, the hull being painted red, with the name White Island Reef No. 5, in white letters on each topside. There is a red ball

between the masts, and if for any reason the lightship is off her station, the ball will be lowered. A cluster of white occulting lights encircle the foremast, visible all around the horizon, and elevated 35 ft. above high water, and should the electricity fail, there are 2 standby lanterns at the mast head to show fixed white lights. A steam whistle will sound two blasts of 5 seconds each every 90 seconds, and a submarine bell will strike 5 times every 18 seconds, with intervals of 2 seconds between strokes and 10 seconds between groups of strokes.

Ontario and the Great Lakes.

Press reports stated early in August that the St. Lawrence River was approximately 30 in. below the average August level.

The U.S. Government has given a contract for widening the section of the Livingstone Channel, in the Detroit River, west of the Detroit River lighthouse, to deep water in Lake Erie, dredging on which was commenced early in August.

The Rockport Navigation Co's s.s. Mississquoi ran ashore on Granite Island, at the end of July, while en route from Clayton, N.Y., to Gananoque, Ont., owing to the sudden illness and fainting of the captain, who was at the wheel. She was refloated and taken to Kingston, where she was drydocked for examination and repairs.

The United States Lake Survey reports the stages of the Great Lakes for July, in feet above the mean sea level, as follows—Superior 601.87; Michigan and Huron 570.89; St. Clair 574.87; Erie 572.04; Ontario 245.80. Compared with the average July levels for the past 10 years, Superior was 0.77 ft. below; Michigan and Huron 1.16 ft. below; Erie 0.93 ft. below, and Ontario 1.07 ft. below.

Glen Steamships' s.s. Glenealy, ran ashore about six miles below Farrans Point, in the St. Lawrence River, Aug. 8, when bound from Fort William to Montreal, with grain. The Sincennes-McNaughton Line's steam tug Muscalonge was dispatched and refloated her, after about 10,000 bush. had been lightered by the Montreal Harbor Commissioners' floating elevator 18. It is stated that the Glenealy suffered no damage.

The two motor ships which have been built at Ashtabula, Ohio, for the Great Lakes, Welland Canal and New York

State barge canal service, were built under the American Bureau of Shipping Great Lakes and coastwise classification, and have a d.w. capacity on canal draft, of 2,000 tons, and at sea, of 2,600 tons. Refrigerator space is provided for about 600 tons. The chief dimensions are,—length 258 ft., breadth 42 ft. They will be operated by Minnesota-Atlantic Transport Co., Duluth, Minn.

The Robert Hicks Coal and Towing Co's s.s. W. J. Carter, while running between Oswego, N.Y. and Cobourg, Ont., July 28, with coal, sprang a leak and sank. The captain and crew, a total of nine, escaped in a small boat, and were rescued by Keystone Transports' s.s. Keyport. The s.s. W. J. Carter, which had a wooden hull, was built at Milwaukee, Wis., in 1886 and was screw driven by engine of 36 h.p. Her dimensions were,—length 122 ft., breadth 27.8 ft., depth 9.6 ft.; tonnage, 317 gross, 170 net.

The U.S. s.s. E. C. Pope, which was engaged in Great Lakes service prior to the war, and which, with other ships, was placed in ocean service, having been cut in two to allow of passage through the canals, has returned to the Great Lakes, having again been cut in two at Montreal, by Canadian Vickers, Ltd. The two sections passed through the Welland canal Aug. 14, en route to Ashtabula, Ohio, where they will be reunited. The s.s. Maruba has also been cut in two by Canadian Vickers, Ltd., after having been similarly engaged.

Manitoba, Saskatchewan, Alberta and Northwest Territories.

The s.s. Winnipeg, owned by F. P. Weaver Co., Winnipeg, has had her name changed to Weavercoal.

The Hudson Bay Co's s.s. Athabasca River ran aground on a bar about 40 miles from Fort Norman, in the Mackenzie River, towards the end of July, and was reported to be high and dry, owing to the lowering of the water. It was stated that possibly special ways would have to be built to enable her to be refloated. This was expected to be done by the end of August, or early in September.

Of the \$195,000 appropriated for work on Manitoba, Saskatchewan and Alberta rivers and harbors, it is stated that approximately \$100,000 will be expended on dredging, and approximately \$95,000

on new works and repairs to wharves, buildings and equipment of the rivers and harbors, and that of the total, \$158,000 will be spent in Manitoba, of which \$80,000 will be for dredging, and \$78,000 for wharves, buildings and equipment. The Government wharf at Selkirk is to be repaired at a cost of \$13,665, and considerable dredging is to be done in the Red River and Lake Winnipeg.

British Columbia and Pacific Coast.

The motorboat Borealis, formerly a sailing ship owned by J. A. Lindsay, Vancouver, has had her name changed to Odeon.

The s.s. Coquitlam, owned formerly by Union Steamship Co. of British Columbia, and now owned by Capt. A. Berquist, Victoria, has had her name changed to Bervin.

The additional automobile ferry service between Anacortes, Wash. and Sidney, Vancouver Island, was commenced July 30, when a party of visitors were entertained by the Victoria Chamber of Commerce. The service is given by the Victoria-Anacortes Ferry Co., with two boats, the City of Angeles and the Mount Vernon, formerly Robert Bridges.

Furness Withy and Co's s.s. Siberian Prince, which went aground at Bentinck Island, near Race Rocks, B.C., recently, had a portion of her cargo lightered, to enable temporary repairs to be made, so that she might be refloated and towed to Esquimalt, to be drydocked for survey and permanent repairs. The salvage work was done by the Pacific Salvage Co.

The Puget Sound Navigation Co. is reported to have decided to have an additional automobile ferry built for next year's automobile traffic between Port Angeles and Victoria. It is stated that the boat will be equipped with a Diesel engine, will be capable of making three round trips a day, and that accommodation will be provided for 23 automobiles, without removing tops or tires.

The Coastwise Steamship and Barge Co., Seattle, Wash., with Canadian offices at Vancouver, which operates some ships in the Canadian coastwise trade, is stated to have taken the motor boat Caesar to Victoria, for transfer to the Canadian register, for operation between Anyox, Britannia Beach and Tacoma. The Marine Department has given notice that under the provisions of the Canada Shipping Act, sec. 27, her name has been changed to Mogul.

The U.S. s.s. Rainier, which was rammed by the Japanese s.s. Mandasan Maru, in a fog, near Victoria, B.C., July 28, and which was towed by the Pacific Salvage Co's s.s. Algerine to Esquimalt, where temporary work was done, was handed over to her Seattle, Wash., owners, Aug. 7. The Pacific Salvage Co. has libelled the Rainier for \$20,000, and the owner of the Rainier, the Atlas Steamship Co., has libelled the s.s. Mandasan Maru for \$200,000.

The Diesel engined tug Lucienne, which arrived at Vancouver recently, from Rotterdam, Holland, was bought by Wallace Shipbuilding and Drydock Co., North Vancouver. She was built at Rotterdam in 1920, is classed 100 A1 at Lloyd's, and is stated to be the most powerful tug of her type on the coast. Her dimensions are,—length over all 87 ft., length b.p. 80 ft. 5 in., breadth, moulded

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during July:

Articles	Eastbound	M. ft. B. M.	Canadian Canal	U.S. Canal	Total
Lumber	5,981		38,263	44,244	
Flour	722,830		496,190	1,219,020

19 ft. 8 in., depth, moulded 11 ft., draft, loaded 10 ft. She has a fuel tank capacity of 34 tons, and fresh water capacity of 13½ tons. She is equipped with a 420 b.h.p. 4-cylinder reversible 2-cycle Diesel engine, operating at 210 r.p.m., and has an ordinary cruising speed of 9½ knots, but on her trials reached 11¼ knots. She was 52 days on the voyage, via Las Palmas, Colon, the Panama Canal, Balboa and direct to Victoria and Vancouver.

Canal Traffic Statistics.

The Dominion Bureau of Statistics, Transportation Branch, has issued the following summary of canal statistics for June:—

Sault Ste. Marie.—Total traffic through the Canadian and U.S. canals for June increased 5,683,025 tons, or over 70% over June 1922. Wheat increased 13,050,590 bush., or 105%; iron ore increased 2,593,638 tons, or 39%; and coal shipments increased 2,776,328 tons. Coal shipments during June 1922 were very light, while for 1923 they were more or less normal. During June a total of 18,909,900 bush. of Canadian grain passed through the canals, destined to Canadian ports, and 6,944,406 bush. for U.S. ports. Of this total of 25,854,306, Canadian ships carried 19,228,657 and U.S. ships 6,625,647.

Welland.—Total traffic increased 115,444 tons over 1922, the principal increases being, wheat, 42,528 tons, or 1,417,600 bush.; soft coal, 63,357 tons; sand, 18,925 tons; and oats, 17,243 tons. Corn decreased 52,287 tons, or 1,867,390 bush. Canadian steamships increased 138,874 tons, and U.S. steamships decreased 8,855 tons.

St. Lawrence.—The net traffic was 167,295 tons. Grain shipment increased and decreased more or less similar to those on the Welland Canal. Pulpwood increased 8,850 tons, or 13.5%; anthracite coal increased 45,363 tons, and bituminous increased 65,484 tons, or 11%; petroleum and oils decreased 10,655 tons, and sugar decreased 4,060 tons.

Australian Shipping Losses.—The Premier of the Australian Commonwealth is reported to have stated in the House of Representatives, recently, that the net loss on the Government Merchant Marine, since its inauguration, had been £2,645,000. The capital cost was £12,766,538, which the government proposes to write down to £4,718,150, and to constitute a board of control. On behalf of the General Manager, who was in Australia recently, a complete denial has been sent to the English press of a statement which had been published to the effect that the Government intended to dispose of the bulk of its steamships at once, and to retain others for a year, when they would be sold if they had not earned their upkeep.

Welland Ship Canal Construction.—We are officially advised that plans and specifications are being prepared for sec. 8, Welland Ship Canal, which includes between Ramey's Bend, north of Humberstone, and deep water in Lake Erie. It is anticipated that tenders for this section will be called for in the autumn. Alex. J. Grant is Engineer in charge, at St. Catharines, Ont.

The French Government's Control of its merchant shipping, from what is termed an authoritative report, resulted in a loss, during and since the war, of at least 1,806,000,000 francs.

Enquiry Into Steamship Marvale's Wreck.

The official enquiry into the loss of the Canadian Pacific Steamships Ltd., s.s. Marvale, formerly Corsican, on Freels Rock, near Cape Pine, Nfld., May 21, was opened in London, Eng., Aug. 8, before J. A. R. Cairns, a police magistrate, with Capt. L. W. Bayldon, late R.N.R., and Jas. Garriock as nautical assessors. The Board of Trade was represented by John Aspinall; W. W. Higgs, instructed by the Imperial Merchant Service Guild, represented Capt. Harry Lewis, of the Marvale, and Dr. B. W. Ginsburg, instructed by the Navigators and General Insurance Co., held a watching brief for the officer on the bridge, Mr. Chambers. Sir Thomas Fisher, General Manager, Canadian Pacific Steamships Ltd., London, attended on behalf of the company.

Capt. Lewis stated in his evidence that there was a wireless installation and a Marconi direction finder on the ship, but the latter was of no use, as there was not any apparatus for it on Cape Pine. There were also two sets of Kelvin sounding apparatus and a Kelvin compass, as well as a Brown's gyro compass, which was out of order, but this had nothing to do with the casualty. The ship was icebound for 5 days. Twelve inches were broken off 2 blades of the propeller by the ice, and a Dominion Government icebreaking steamship accompanied the ship for some distance. The compasses had been adjusted in 1921, but all deviation books had been lost, the log only having been saved. The ice conditions had been abnormal during the year, and he thought he would be on the safe side by going more north. It was not possible to pass Cape Ray 10 miles away as usual, and he had to pass only 3 miles away. The ice was a month late in the spring this year, due to easterly winds. On May 21 at 2 p.m. he believed he was some 28 miles off Cape Pine, and he was sure it was Cape Pine and not Western Head or any other point. He then altered the course, and both he and the first officer were satisfied that the correct course was adopted. While going at about 13½ knots he heard 2 signals about 4 minutes before the ship struck, but sound was always difficult in a fog. He did not know whether they struck a rock, or a wreck. The damage was on the side high up, and not on the bottom. He realized that it was a mortal wound, and took the ship into shallow water, to beach her. The helm would not respond and she kept turning to the east and settled down forward and sank three-quarters of a mile from the shore in 9 fathoms of water. In answer to a question, he said that he attributed the stranding to the unusual atmospheric conditions and to the abnormal current running in to the land from that point. He was deceived as to the actual distance of the land when glimpses of it were seen through the fog. He considered that the abnormal current had set him in about 4½ miles. He stated that the Mayor of St. John's had advised him to try and have the investigation held there where the people understood the local conditions. Local fishermen had reported that the currents this year had been abnormally strong. Replying to a question as to why the lead was not used between 12.45 and 3.47 p.m., when she struck, he said he was confident the ship was on a clear course and did not think she was experiencing any set-in which could not be detected, and had no doubt

whatever that she was safe. He kept on a northern course because of the ice, which he feared was still about. If he had not been so sure of his position he would have taken more soundings and gone more to the south. The ordinary currents in the river at this point ran out to the south and east, but on this occasion there was a current taking them in to the shore, and there was an in-set tide. It was a most extraordinary current. He had been with the company since 1903, had commanded 16 of its ships, and had never had an accident. During the war he had carried horses, munitions and troops across the Atlantic to Europe, and also in the Mediterranean. After the ship struck, the whole of the crew and passengers were got into the boats without any discomfort, all within 20 minutes, and he had received letters of thanks from passengers. He considered that the speed of the ship had nothing to do with the casualty, the visibility was about a mile, and he considered full speed was justified, at half speed they would have struck in just the same way. A press report states that the court found that the casualty was due to a grave error of judgment by the captain, through being over confident of the position of his ship, but that no censure was passed.

During the hearing it transpired that several of the crew had deserted the ship, and that the company's efforts to secure their arrest had been fruitless. The court stated that it hoped the Board of Trade would keep watch on these men, who, sooner or later, would return to a British port, as the desertion was a serious matter.

Editor's Note.—The Captain is reported to have stated that the Marconi direction finder on the ship was of no use, as there was not any apparatus for it on Cape Pine. As pointed out in the article on Canadian Government Radio Direction Finding Stations, in Canadian Railway and Marine World for August, pg. 408, he was but 21 miles from Cape Race direction finding station when the ship struck, and it appears extraordinary that he had not asked that station for his location.

Green's Marine Directory of the Great Lakes for 1923, contains a complete alphabetical list of owners and managers of steamships, operating on the Great Lakes, both Canadian and U.S., as well as information concerning grain elevators, harbors, ore and coal docks, captains and chief engineers of the various ships, coastguard and radiotelegraph stations, and a number of historical facts and statistics relating to the various canals. It has numerous illustrations, including some of the various works under construction on the Welland ship canal. It is published by the Green's Marine Directory of the Great Lakes Co., Rockefeller Building, Cleveland, Ohio, at \$10, and can be obtained through Canadian Railway and Marine World.

Vancouver Grain Shipments.—During May and June, 2,157,100 Bush. of wheat were shipped from Vancouver, B.C., through the Dominion Government elevator, in 26 ocean ships, of which 8, with 1,162,082 bush., were for United Kingdom ports; 5 with 448,297 bush. for European ports; and 13 with 546,000 bush. for Japan.

Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties,—

Keynor-Bernon L. Collision.

Held at Montreal, July 31, before Capt. L. A. Demers, Dominion Wreck Commissioner, and Capts. C. Lapierre and D. M. Dickson, as nautical assessors, into the collision between Keystone Transports s.s. Keynor and the barge Bernon L. in tow of the tug Brant, in Welland Canal, June 30. Much contradictory evidence was given regarding the wind, the position of the s.s. Keynor, with respect to the bank, and her speed. She was bound from Montreal to Conneaut, Ohio, light, and while in the canal, about 400 yards from the air line bridge, heard a one blast signal from a tug with a barge in tow, and replied with the usual one blast. The captain of the Keynor stated that when about 500 ft. from the bridge, he brought the ship's bow close to the banks, her stern being 15 ft. clear, and the engine going very slowly ahead, pending the passing of the barge. He noticed that the tug's tow rope was slack, and the barge sheered, and struck his port bow with her port anchor, making a hole 10 ft. long in the bow. He immediately put full speed ahead and hard a starboard. No conversation on the subject took place, each ship proceeding on her way without comment. At the time of the casualty there was a light breeze from the southwest.

The captain of the tug Brant stated that at the time of the collision, a fresh breeze was blowing and his speed was about 2 to 3 miles an hour, with a current of from 1 to 2 miles. The barge's stern was about even with the bridge, and he ported his helm to check the sheer of the barge. The man in charge of the barge also stated that there was a fresh breeze and that before reaching the bridge he ported his helm and kept it so, until after the accident. The tug was for some time somewhat to his starboard, and the barge did not answer the helm.

The bridge tenders' evidence upset that of those on the Keynor, with respect to that ship's position at the bank, and placed the Keynor apparently on the right side of the middle line of the canal, and about 500 ft. from the bridge, which the court maintained was a safe position to await the passage of the tow. The full speed ahead order, with a starboard helm, was no doubt with a view to protect another part of the ship, when the collision became inevitable. The movement of the screw, and the influence of the rudder, would cause the head to swing towards the barge, and it was held that the Keynor's movements were practical and good seamanship. The injury was due to the fact that the impact took place when the barge began to swing back to her own side. The evidence showed that all those on the barge and the tug knew of the trend of the current, and the court was of the opinion that the tardy efforts made were due to an error of judgment and not to negligence. The court found that both the tug and the tow were responsible for the casualty, but the evidence did not disclose any negligence on the part of the tug's master, and therefore the certificate of Capt. Wm. Julian, of the tug Brant, was not dealt with, but he was cautioned, that, since it is known that ships will sheer in the vicinity of

bridges, to take timely action, to check such sheer. As no orders were issued from the tow to the barge, the barge must assume part of the responsibility. Capt. C. Ross of the s.s. Keynor, was exonerated.

Fanad Head-Kamouraska Collision.

Held at Montreal, July 4 and 5, by Capt. L. A. Demers, Dominion Wreck Commissioner, and Capts. H. E. Webb and D. M. Dickson, as nautical assessors, into the collision between the Head Line s.s. Fanad Head, and Kamouraska Shipping Co's s.s. Kamouraska, off Bicquette Island, in the St. Lawrence River, June 20. After hearing the evidence, the court found that the Kamouraska was alone to blame for the collision and suspended the certificate of Capt. David Morgan, no. 019,716, for two months from Aug. 2, and the license of pilot Hermenegilde Lachance for two months from July 13.

Loss of the s.s. Caraquet.

Held at Bermuda before a marine court of inquiry appointed by the Governor, consisting of W. A. V. Smith, President; N. H. Hutchings, and Capt. J. Davis, R.N.R., of the s.s. Fort George, to enquire into the loss of the Royal Mail Steam Packet Co's s.s. Caraquet, running between Halifax, N.S. and West Indies ports, which ran ashore about 12 miles from Hamilton, Bermuda, June 25. After hearing the evidence, the court decided that the error in the ship's position and her stranding, were due to a strong southwesterly current, and that the master, Capt. Hernandez, was not to blame, as he had taken every reasonable precaution. He was exonerated and his certificate returned to him.

Striking Sunken Wreck by s.s. Manoa.

Held at Quebec, Que., Aug. 8, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. A. Landry, harbor master, Quebec, and Capt. E. W. C. Beggs, of Manchester Liners' s.s. Manchester Producer, into the striking of the sunken wreck of Canadian Government Merchant Marine s.s. Canadian Recruit, by Canada Steamship Lines' s.s. Manoa, off Channel Patch, St. Lawrence River, July 22. Capt. J. P. Dufour, of the Manoa, stated that on July 22, the weather being fine, clear and calm, he left the bridge about noon for luncheon, advising the pilot he would relieve him later, and leaving the second officer on duty. While at luncheon he felt a roll of the ship, and immediately went to the bridge and put the telegraph standby, and found that the ship had veered over to southeast, and had struck the sunken wreck. He sounded the bells and about 20 minutes after found about 9 ft. of water, but the pumps being of sufficient power to control the inrush, the ship was not retarded on her trip to Charlottetown, where a survey was made. She then proceeded to St. John's, Nfld., where another survey was made and she was permitted to return to Quebec, where she was drydocked for repairs to her port bilges near hatch 1. His evidence was confirmed by the second officer. Louis Thivierge, pilot, who was ill and declined to assist in the investigation, but eventually attended the hearing, stated that he had no excuse to offer, and did not blame anyone else; that he knew of no reason why the court should not deal with his license, and asked it to accept his resignation. The court found that

the pilot was alone to blame for the casualty, and exonerated the captain and second officer. In view of the pilot's 35 years in the service, that his record has been far from good lately, he having had some very serious accidents during last year, and owing to the gravity of the offence in this instance, the court felt inclined to cancel his license as it did not consider it proper for the sake of the Pilots Association and in the general interests to have him retained in the ranks. As it had in mind the great hardship which would be experienced by the pilot, and owing to his state of health, which had deteriorated since his collisions last year, instead of cancelling his license, it accepted his resignation effective immediately, and in doing so showed great leniency, which, it stated, must not be taken as a precedent.

Public Works Marine Contracts Awarded.

The Dominion Public Works Department has awarded marine contracts as follows,—June 26, dredging mooring berths at Penetanguishene, Ont., to Light and Carson, Penetanguishene, class B at 35c a cub. yd. scow measure; June 27, docking and cleaning dredge no. 306 (Mastodon), to Wallace Shipbuilding and Drydock Co., North Vancouver, B.C., for \$13,435 and unit prices for sundry work; June 30, for dredging and cleaning up bed of St. Mary River, opposite Sault Ste. Marie, Ont., to Soo Dredging and Construction Co., Sault Ste. Marie, Ont., at \$130 day of 10 hr. for derrick, scow, diver, tug, etc.; July 3, dredging channel at Bowmanville, Ont., to Randolph Macdonald Co., Toronto, class A, \$5 a cub. yd., class B, 65c a cub. yd., place measure; July 4, dredging harbor and entrance piers at Port Hope, Ont., to Frontenac Dredging Co., Toronto, for class B, 65c a cub. yd., place measure; July 5, dredging channel at River St. Charles, Que., to Eastern Canada Stevedoring and General Contracting Co., Quebec, Que., class B 70c a cub. yd., place measure, and \$224.70 for pulling and cutting steel sheet piling; July 9, dredging channel and basin at St. Pierre les Becquets, Que., to E. Dufresne and A. Marchildon, Three Rivers, Que., class B, 40c a cub. yd., scow measure; July 9, dredging channel at Nicolet, Que., to E. Dufresne and A. Marchildon, Three Rivers, Que., at class B, 40c a cub. yd. scow measure; July 19, reconstruction of wharf at Haileybury, Ont., to T. P. Charleson, Ottawa, Ont., at unit prices; July 20, reconstruction of piers at Whitby, Ont., to T. P. Charleson, Ottawa, Ont., at unit prices.

British Steamships and Russia.—Moscow press dispatches state that disputes between the Soviet Volunteer Fleet and foreign shipping companies have been ended, and an agreement made which is decidedly in favor of the former. It is stated that a project has been approved for the formation of a mixed company to control shipping, with equality of control and participation of profits. The company will consist of the Soviet Volunteer Fleet and the White Star, Hamburg American, North German Lloyd, Red Star, Dominion, and Harriman Lines. It is stated that in the Russian steamship services, the C.P.R. and the Cunard Line have been eliminated.

Canadian Government Merchant Marine Operations, Etc.

Officers of Steamships.—The following chief engineers have been appointed since those mentioned in a previous issue: Canadian Adventurer, J. Stark; Canadian Forrester, W. Morrison; Canadian Sailor, J. M. Bowden; Sheba, T. Jones.

The s.s. Canadian Britisher loaded lumber during August, for India, following the plans for the extension of the British Columbia lumber trade to India. The cargo was taken on at Port Alberni and at Ogden pier, Victoria. Shipment at the latter point was made from barges, which had been loaded at the mills in the inner harbor.

British Columbia-Great Britain Service.—It is announced that commencing Oct. 20, a new steamship service will be inaugurated from Vancouver to Avonmouth, England. The s.s. Canadian Winner will be the first ship in the new service, and will be followed by Canadian Prospector, Canadian Seigneur, and three other ships not yet named. Two of the ships to be utilized will be transferred from the Atlantic service.

Sale of Ships.—As announced in previous issues, it was decided to dispose of 27 of the ships which it was considered inexpedient to continue to operate, and we have been advised that the steamships J. A. McKee and Thomas J. Drummond have been sold to N. M. Paterson and Co., Fort William, Ont., for use in the Great Lakes grain trade. The J. A. McKee was built at Newcastle-upon-Tyne, Eng., in 1908, for Western Steamship Co., and named after the President, since deceased. She was built to the highest classification of the British Corporation, and according to Board of Trade measurements was designed to carry 3,150 d.w. tons on 18½ ft. draft in salt water. Her chief dimensions are: Length b.p. 248 ft., breadth 43 ft. 1 in., depth 22 ft. 5 in. She has 7 cargo hatches, each 8 by 29 ft., and a large grain bin 14 x 34 x 7½ ft. The propelling machinery consists of triple expansion engines with cylinders 20½, 33 and 54 in. diam. by 36 in. stroke, supplied with steam by 2 cylindrical multi-tubular boilers 10½ ft. long by 13½ ft. diam., at 180 lb. working pressure. There are also 3 steam winches and 3 derricks, complete electric lighting installation and steam heating equipment. The Thomas J. Drummond was built at Dumbarton, Scotland, in 1910, for Algoma Central and Hudson Bay Ry., and named after the company's then President. Her dimensions are: length 248 ft., breadth 44 ft., depth 26 ft. She was built to British Corporation survey, with scantlings entitling her to trade in any waters, and was specially designed for carrying rails and bulk cargo. The hold space is divided into 3 compartments, and extra strength was introduced in the ship's construction where additional strains were likely to occur in her special trade. She has a cellular double bottom of extra depth over rule requirements, and fore and aft peak tanks are arranged to carry water ballast. The propelling machinery consists of triple expansion engines, with cylinders 20½, 33 and 54 in. diam. by 36 in. stroke, supplied with steam by 2 boilers 10½ by 14 ft., at a working pressure of 190 lb. The deck machinery includes winches, windlasses and capstan, and there is a complete electric lighting installation and steam heating equipment. These ships were bought by

the Dominion Government about seven years ago, and were operated by the Railways and Canals Department, and subsequently handed over to Canadian Government Merchant Marine. During the past year they have been operated under charter, by Great Lakes Transportation Co., Midland, Ont.

Mainly About Marine People.

Capt. G. C. Evans, O.B.E., formerly of the C.P.R. s.s. Metagama, was presented with a pair of binoculars at Liverpool, Eng., recently, by Capt. E. Elliott, of the Mercantile Marine Service Association, on behalf of the Newfoundland Government, in recognition of his rescue of the crew of the schooner Ida M. Cunningham, off the Nova Scotia coast, in February.

John Laxton, one of the Toronto Harbor Commissioners, died in Toronto, Aug. 15, aged 77.

Capt. Samuel McCaig, for many years captain of different upper lakes steamships, died at Toronto, Aug. 6, aged 74.

Stephen John Murphy, District Passenger Agent, Canada Steamship Lines, St. Louis, Mo., died suddenly, aged 60, from hemorrhage of the brain, at Toronto, Aug. 11, while on a visit to his doctor. He entered Niagara Navigation Co.'s service about 40 years ago at Toronto, and eventually became Travelling Passenger Agent there. On the taking over of the Niagara Navigation Co. by the Richelieu and Ontario Navigation Co., in Jan., 1913, he was appointed Travelling Passenger Agent and Excursion Agent, R. & O. N. Co., with jurisdiction over all Niagara Navigation Co.'s excursion business, and office at Toronto, and in Jan., 1914, on the formation of Canada Steamship Lines, Ltd., which took over all the R. & O. N. Co.'s properties, he was appointed Travelling and Excursion Agent, Toronto, which position he held until his appointment in 1921 as District Passenger Agent, C.S.L., St. Louis, Mo.

Senator L. C. Webster, President, Webster Steamship Co., has been elected a director of the Sun Life Assurance Co. of Canada.

Dominion Marine Association's Activities.

A meeting of the Dominion Marine Association's executive committee was held at Toronto, Aug. 15, when a full report regarding the Board of Grain Commissioners' meeting at Winnipeg on Aug. 7 was discussed. The difficulties caused by the new legislation in regard to grain freight rates on the Great Lakes were considered, also suggestions as how best to avoid the difficulties. The prepayment of freight, and demurrage requirements, rendered necessary by the new legislation were also discussed. The Association's members stated that they were complying with the law as best they could, and so far as is known, to the authorities' satisfaction. The action of U.S. shipowners, as mentioned on another page of this issue, has been confirmed by their representatives in Cleveland.

Upon a report that the Railways and Canals Department is considering alternative proposals for the improvement of the upper entrance of the Morrisburg Canal, one of which would move the lock farther down the canal, the other providing for excavation and alteration of the

northern bank of the entrance, it was resolved to recommend that, notwithstanding the probable heavy cost, the lock should be moved as the only certain improvement.

No action was taken regarding the new regulations published by order in council, June 19, regarding water systems on board ship, for drinking and culinary purposes.

It was decided to bring to the Board of Grain Commissioners' attention the Montreal Harbor Commissioners' refusal to make any reductions in the charge for unloading grain, in which there is a wide discrepancy between the cost to the Commissioners and the charge to the ship.

Among other subjects discussed were, aids to navigation, the recent meeting of the Lighthouse Board, casualties, and steamboat inspection.

Three Rivers Harbor Commissioners.—The incorporation of the Three Rivers Harbor Commissioners, with the limits of the district to be placed under their jurisdiction, was mentioned in our last issue. The commissioners appointed are: Robert F. Grant, President; Jos. L. Fortin and Norman Labelle.

It is strange that the sailors who proudly boast of having "a girl in every port" do not discover that the girl usually has "a lover on every ship."—Widow.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries, unless otherwise stated:—

American Association of Port Authorities—T. S. McChesney, New Orleans Port Commission, New Orleans, La.

Bureau of Explosives—A. H. McMullen, Inspector, lines east of Port Arthur, 354 New Union Station, Toronto.—D. W. McNabb, Inspector, lines west of Port Arthur, C.P.R. station, Winnipeg.

Canadian Car Demurrage Bureau, Eastern Lines—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal. Western Lines—F. W. Thompson, Chairman, 805 Boyd Bldg., Winnipeg.

Canadian Electric Railway Association—D. N. Gill, 248 Albert St., Ottawa, Ont.

Canadian Freight Association—Eastern Lines, G. C. Ransom, Chairman, 909 Shaughnessy Building, Montreal.—Western Lines, F. W. Thompson, Chairman, 805 Boyd Bldg., Winnipeg.

Canadian Industrial Traffic League—H. W. Blahout, 950 Woodbine Ave., Toronto.

Canadian Passenger Association—Eastern Lines, G. H. Webster, 54 Beaver Hall Hill, Montreal.—Western Lines, E. J. Stone, 306 Union Station, Winnipeg.

Canadian Railway Board of Adjustment No. 1—R. Chapple, 263 St. James Street, Montreal.

Canadian Railway Club—W. A. Booth, 53 Rushbrooke St., Montreal. Meetings at Montreal 2nd Tuesday, each month, except June, July and August, at 8.30 p.m.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Dominion Marine Association—F. King, K.C., Counsel, Kingston, Ont.

Engineers' Club of Montreal—C. M. Strange, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 84 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 176 Mansfield Street, Montreal.

Express Traffic Association of Canada—C. N. Ham, 137 McGill Street, Montreal.

Great Lakes and St. Lawrence River Rate Committee—A. E. Storey, 310 Canadian National Rys. General Office, Montreal.

Hydro Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

Niagara Frontier Summer Rate Committee—James Morrison, Canadian National Rys., Montreal.

Quebec Transportation Club—A. F. Dion, 131 Dalhousie Street, Quebec, Que.

Railway Association of Canada—C. P. Riddell, General Secretary, 263 St. James Street, Montreal.

Western Operating Committee, E. J. Stone, 306 Union Station, Winnipeg.

Shipping Federation of Canada—Thomas Robb, Manager, 42 St. Sacramento Street, Montreal.

Transportation Club of Toronto—W. J. Hotrum, 595 Runnymede Road, Toronto.

Transportation Club of Vancouver—C. A. Dorfner, 450 Hastings Street West, Vancouver, B.C.

Winnipeg Traffic Club—A. J. Barber, 114 Cadomin Bldg., Winnipeg, Man.

Transportation Meetings, Etc., in 1923.

The names of persons given below are those of the secretaries, unless stated otherwise:—

September.—Travelling Engineers' Association, Chicago, Ill. W. O. Thompson, 1177 East 98th Street, Cleveland, Ohio.

Sept. 4 to 6.—American Railway Association, Division 5—Mechanical, Equipment Painting Section, Hollenden Hotel, Cleveland, Ohio. V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill.

Sept. 4 to 7.—International Railway General Foreman's Association, Chicago, Ill. W. Hall, 1061 West Wabash Ave., Winona, Minn.

Sept. 17.—American Association of Passenger Traffic Officers, Montreal. W. C. Hope, Central Rd. of New Jersey, 143 Liberty Street, New York, N.Y.

Sept. 18 to 20.—Roadmasters' and Maintenance of Way Association, Chicago, Ill. P. J. McAndrews, Chicago & Northwestern Ry., Sterling, Ill.

Oct. 8 to 12.—American Electric Railway Association, Atlantic City, N.J. J. W. Welsh, 8 West 40th Street, New York, N.Y.

Oct. 16 to 18.—American Railway Bridge and Building Association, Seattle, Wash. C. A. Lichty, Chicago & Northwestern Ry., 319 North Waller Avenue, Chicago, Ill.

Dec. 10 to 12.—American Association of Port Authorities, New Orleans, La. T. S. McChesney, New Orleans.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Flannery Bolt Co., Pittsburgh, Pa., has appointed W. S. Murrian Co., Knoxville, Tennessee, as Southern Representative.

Robert W. Hunt & Co., Ltd., Montreal, —Charles Warnock has been elected President, to succeed Robert W. Hunt, who died at his home in Chicago, Ill., July 11, aged 84 and was buried at Troy, N.Y. Mr. Hunt was born in Fallsington, Bucks, Pa., Dec. 9, 1838. He spent several years learning the practical side of iron making in John Burnish & Co's rolling mills at Pottsville, Pa., and later took a course in analytic chemistry in Booth, Garrett & Blair's laboratory. Upon the completion of this he entered the Cambria Iron Co.'s employ at Johnstown, Pa., and on Aug. 1, 1860, established for them the first laboratory in America as a direct part of an iron and steel organization. In the autumn of 1861, he entered the United States military service and was in command of Camp Curtin, at Harrisburg, Pa., with the rank of captain. Upon being mustered out of service, he returned to Cambria Iron Co's employ, and was sent to the works at Wyandotte, Mich., where experiments with the new Bessemer process of making steel were being conduct-

ed. He was placed in charge of the experimental works in July, 1865, and so continued until May, 1866, when the company transferred him to Johnstown to take charge of its steel business. It was at this mill later, and largely under Mr. Hunt's direction, that the first commercial order for steel rails ever made in America was rolled. Later, he assisted in designing and building the Cambria's Bessemer works and in 1873 he moved to Troy, N.Y., to become Superintendent of the Albion & Rensselaer Iron & Steel Co. During his years of active connection with steel rail manufacture he almost completely rebuilt this company's various works and he patented many details of iron and steel metallurgical processes and machinery, including, in conjunction with others, the first automatic rail mill tables. He left Troy, in 1888, for Chicago, and established the bureau of inspection, tests and consultation now known as the Robert W. Hunt Co. He was a member of numerous technical societies among others, American

Institute of Mining and Metallurgical Engineers, (honorary member and twice President); American Society of Mechanical Engineers, (honorary member and past President); American Society of Civil Engineers; Western Society of Engineers, (honorary member and past President); Canadian Society of Civil Engineers; Institution of Mechanical Engineers; Iron and Steel Institute of England; American Iron and Steel Institute; and American Society of Testing Materials, (honorary member and past President). In 1912 he was awarded the John Fritz medal for his contributions to the early development of the Bessemer processes, and in June of this year he was given the Western Society of Engineers' Washington award, in recognition of his achievements. He was for many years a trustee of the Rensselaer Polytechnic Institute and in 1916 received from it the honorary degree of Doctor of Engineering. He was married in 1866 to Miss Eleanor Clark, of Ecorse, Mich., who survives him.

For Sale and Classified Advertising

Under this heading Canadian Railway and Marine World will place advertisements for Positions Wanted, Positions Vacant, Equipment for Sale, Tenders Wanted, Dividend, Annual Meetings, Legal Notices, etc.

ADVERTISING RATES:

Rates for advertisements set in uniform style in six point under
Positions Wanted and Positions Vacant, 3c per word.
Equipment for Sale advertisements, 4c per word.
Allow five words where replies are to be sent to a box number.
Minimum order—\$1.
Rates under other headings and for display advertisements on application.

For Sale

"We are now prepared and glad to furnish Stucki Side Bearings per Canadian Patents Nos. 187019 and 17080 upon request. Please call—The Holden Co., Ltd., Montreal, Canada."

Street Cars For Sale

The Commission offers for sale by tender complete street cars and trailers as listed below. Sealed tenders addressed to the Chairman, endorsed "Tender for Street Cars," will be received until noon of

September 21st, 1923

at the offices of the Commission, 35 Yonge St., Toronto, Ontario. A cheque for 5% of the amount of the offer, payable to "The Toronto Transportation Commission," drawn on and accepted by a Canadian chartered bank, must accompany each Tender. Tenders for the whole or a part of the lot offered will be received. The cars offered are now on the Commission's property in Toronto, and Tenders must be based on acceptance of the cars as and where they are at present located.

Rental of flat cars for the removal of the cars offered, from the Commission's property to steam railroad siding, may be arranged with the Commission by successful tenderers.

Payment shall be at par in Toronto, and full payment for cars bought shall be made to the Commission before the removal of any cars from the Commission's property.

Cars For Sale

- 53 Single-truck/cars complete with G.E.-67 motors;
- 8 Single-truck cars complete with G.E.-1000 motors;
- 9 Single-truck, double-end operation cars complete with G.E.-67 motors;
- 12 Double-truck (Brill Max.) cars complete with G.E.-67 motors;
- 47 Single-truck trailer cars complete.

A condition of the acceptance of any Tender is that the cars must be removed by the Tenderer from the property of the Commission within one calendar month from date of notification of acceptance by the Commission to the Tenderer by registered mail.

Copies of a detailed inventory may be secured and appointments to inspect may be arranged through the Executive Department, Public Utilities Building, 35 Yonge St., or the Rolling Stock Department, 4 Sherbourne St.

The highest or any tender not necessarily accepted.

H. H. COUZENS, General Manager.

WHEN DANGER LURKS IN SPASMODIC ADVERTISING

From Printer's Ink, New York.

The time is near at hand when general advertisers are going to recognize something about the scientific use of the principle of continuity in advertising that has been known for a considerable period by the retail mail-order people. By experiments, and also by experience that sometimes has been costly and bitter, the mail-order houses have established to their complete satisfaction the fact that it takes just about four years of continuous and cumulative effort to "make" an article in a selling way.

Through compiling and collating a long list of selling successes, they are able to demonstrate by average figures that an advertising campaign yields only about 40% of its selling power during the first year. In three more years, if the advertising has been kept up unabated, the cumulative effect is such that the additional 60% efficiency is brought about, thus getting the proposition fully under way.

And the interesting thing about it is that the principle works the other way also. If there is any lessening of effort it takes four years for the full effect to be felt. It used to be that the mail order people imagined they could safely shorten

advertising outlay here and there. They thought the momentum from past efforts would carry them over. Or, if it didn't, the resulting slackening of sales would be temporary. Conditions might be such that sales effort was not needed so far as present needs were concerned. There might be so much business that the effect of cutting the advertising down or out would not be noticed. It could be resumed when the need began to appear.

But they found this kind of business would not work at all for the reason that only about 40% of the result would be felt during the current year. For three more years the tearing down influence would continue, its maximum effect not appearing until the end of that time.

Advertising is not the magic thing some of its overly enthusiastic friends claim it is. If it were, then it could be turned on or shut off at will, just as steam is manipulated in a radiator, and the desired result gained each time. Advertising is an economic force that will yield proportionately to the correctness of its application. It has done wonderful things despite the abuse and mishandling it has received.

What A Dennisteel Cabinet Does for Your Office

THE Dennisteel Cabinet provides a place for stationery, supplies, books, etc., that keeps them from dust, vermin and fire danger.

It utilizes little space, yet provides plenty of room for the storing of the supplies required by most offices.

Above all, it promotes system. When you have your office books and supplies in a Dennisteel Cabinet, you know just where to lay hands on them.

Dennisteel Cabinets are a handsome article of office furniture. Shelving and pigeon-holing can be arranged for individual needs.

Standard finish of olive green. Can be furnished to harmonize with other furnishings if desired.

We also make Lockers.

G-R-S Model 5 Switch Machine

The Model 5 Switch Machine is simple in design, substantial in construction, comparatively light in weight, yet powerful and dependable in operation.

It is low and narrow and is therefore very desirable in congested yards and terminals where space is limited. This feature also makes less likely the chance of damage by dragging equipment, snow ploughs, etc.

The machine is easy to install and maintain; no special tie framing neces-

sary. The mechanism is enclosed in a dust and weather proof case.

Furnished for either high or low voltage direct-current or 110-volts, alternating-current, 25 or 60 cycles.

The excellent service secured from the many Model 5 Switch Machines now in use is evidence that it has exceptional merit.

Feed Water Heating

FOR

More Effective Manufacture of Steam

Just as the development of the use of steam has come to us by steps and stages—so also is it necessary that the manufacture of steam be greatly improved. Economical reasons demand it.

When feed water is heated by heat otherwise wasted, the first stage is accomplished and the steam generating plants made more effective.

In addition to the mere gain of heat otherwise lost, there is a gain in efficiency of the boiler fed with hot water, because a part of the duty of the boiler is reverted to evaporating the water otherwise spent in raising its temperature.

Elesco Feed Water Heaters

"STERLING"

HACK SAW BLADES

Webster's Dictionary interprets the word "STERLING" as meaning pure, unadulterated and genuine.

These words apply to the Hack Saw Blade represented on this page. They are good. Give them a trial; they may help you out of your Hack Saw troubles.

If you need assistance or advice in this line, write the manufacturer.

YOU can effect a **SAVING** in Lubrication costs by using **TULC** for it will give results not to be obtained by the use of any other Lubricant.

**T
U
L
C**

Will not splash over commutators.
Will not cause short circuit or burnt armatures.
Will not leak or rot fields.
Will so save in brass and babbitt to pay for itself.
Will only feed sufficient to lubricate properly.
Will save dripping losses.
Will make axles and journals last longer.
Will cut down a lot of pull-ins.
Will eliminate hot boxes and cut axles.
Will be sent for trial on request.

Dake Snub Line Winch for Canal Steamers

To handle the heavy wire snub line. Takes up very little deck space and drum holds 120 ft. 1 1/4 in. wire. For a safety and labor-saving device it has no equal. A money-saver for the vessel owner and a godsend for the master in canalling his vessel through the St. Lawrence and Welland Canals. Send for special booklet and price. We also make a full line of Marine Machinery. Complete Catalogue of Dake Machinery on request.

Above-Board Circulation

PROGRESSIVE publications belonging to the Audit Bureau of Circulations have adopted an open and "Above-Board" circulation policy. They lay before advertisers' circulation facts that have been verified by experienced auditors.

Advertisers, before the advent of the A. B. C., were forced to depend upon hearsay circulation information and unverified "sworn statements" of circulation. No detailed figures were available and no verification was possible except at great expense to the advertiser.

Nowadays advertisers look to the A. B. C. for dependable, unbiased circulation information and select their advertising mediums accordingly.

Today practically all the leading publications of the United States and Canada are members of the A. B. C. It should not be long before every publication goes on record with A. B. C. membership.

This will make it possible for every advertiser to use detailed circulation facts, covering the entire publishing field. This will permit a fair comparison and eliminate guesswork from the purchase of space.

The Canadian Railway and Marine World is a member of the A. B. C. and would be pleased to submit the latest circulation report.

A Drag On Earning Power

Railroad men realize that the big drag in a tonnage train is the Drag of Journal Resistance.

To overcome this resistance requires the use of large additional amounts of coal, and the consumption of countless gallons of oil, pounds of waste and other journal box materials.

Thus the Drag of Journal Friction produces a big drag on Earning Power.

Proof that Stafford Roller Bearings eliminate this big Drag was shown in the test conducted by the Michigan Central Railroad.

The Stafford-equipped car ran over 6 times as far on level track and started alone on the 1% grade, while the Friction Bearing car at the same point had to be given a starting push by the locomotive.

GALENA OILS

The Worlds Best Railway Lubricants

Not only better service
—but lower cost

Were every steam and electric railway in Canada to specify Galena Lubrication for its equipment, with the sole viewpoint of securing *maximum service efficiency*, each and every one would be displaying the soundest of business judgment, amply justified by the matchless performance records it has established, wherever used.

But *cost of lubrication* is also a factor of extreme importance. It is an entirely different quantity than *cost of oils*. Lubricants that are incapable of performing the functions required to produce efficient service cost too much at any price. Economy is often sought, but never realized, through the purchase of cheap oils.

The **ECONOMY** of Galena lubrication is not an intangible quantity—not a vague claim based on a “best is the cheapest” hypothesis. It shows plainly and clearly in the operating records kept by every railway using Galena Oils—in mileage accomplished, in reduction of repairs and time losses, in preservation and longer life of equipment. Whenever and wherever comparisons of service received from lubricants have been made on this most equitable basis, the actual economy of Galena Oils is evident.

*“More miles to the pint;
Better service to the mile!”*

Service shows the most successful car roof to be the

All Steel Dry Lading Roof

which made possible the following specifications:

No. 1. That should be weather-proof under all conditions, also rust-proof, fire-proof and burglar-proof.

No. 2. That should not require maintenance for at least ten years.

No. 3. That should be of low deadweight and give the car a low center of gravity.

No. 4. That should lessen strain on the superstructure of the car when the car is in motion.

No. 5. That should strengthen, rather than detract, from the strength of the car frame.

No. 6. That should give the greatest interior capacity and the lowest clearance limits.

No. 7. That should be flexible enough to conform to every service condition of the car.

No. 8. That should be possible to use again on the same or another car, even in case of partial or total destruction of the rest of the car by fire or wreck.

No. 9. That should not require roofing boards.

No. 10. That should be of low first cost.

No. 11. That should permit of inspection on the part of any shipper by merely closing the doors of the car and if no rays of light are seen through the roof, the shipper to consider it a weather-tight roof.

No. 12. That should be so constructed that the carlines, purlines and ridge, tie the sides and ends of the car together firmly, so that the weather-proof roof has only the one duty of protecting the contents of the car from the elements.

WHAT CANADA'S ELECTRIC RAILWAYS ARE BUYING

One might think, unthinkingly, that, when an electric railway line was built and the cars set on its tracks, there was little for the operating company to buy.

Yet here is a list of 100 things or groups of things that operating companies buy—

Then, add to these the still large list of things that railway contractors and car builders and power house engineers must buy when building and equipping new lines.

And remember, that more miles of new electric railway, more power houses and more cars are being built each year; and that Canada is really only in its infancy in urban and interurban development; with big things to come in the future.

And then make note of the fact that

Canadian Railway and Marine World

is the only publication in Canada appealing specifically to both the building and the operating electric railway interests.

Boost Earnings by Continuous Service

Can you afford to invest large sums of money in new locomotives, cars, and track and only secure a part of the service of which this improved equipment is capable of rendering?

No! You cannot.

The modern system of railroading requires a more continuous movement of traffic.

Have you thought of Automatic Block Signals, the Remote Control of Switches, and Interlocking as a means of making your traffic movement more continuous?

A number of railroads are boosting their earnings by reducing operating costs through the use of more signaling. They have found that the proper use of signaling eliminates train stops, reduces overtime and secures a greater use of locomotives, cars, track, labor, and, in fact, practically every item that is required to produce rail transportation.

G-R-S Automatic Block Signals and Interlocking, through more than 20 years of continuous service, have earned a reputation for dependability and low cost of maintenance. The maximum benefits that can be obtained by the use of signal equipment are insured when G-R-S apparatus is specified.

Investigate the possibilities of boosting your earnings by the use of more signaling. Investigate the performance of G-R-S signal equipment.

Brownhoist No. 4 Locomotive Crane on car repair work

KILL LAST AD How Brownhoists Serve the Railroads

Brownhoist Products

*Heavy Dock Machinery
Locomotive Cranes
Monorail Trolleys
Concrete Bunkers
Chain Conveyors
Belt Conveyors
Coal Crushers
Bridge Cranes
Buckets, etc.*

Literature on request

In the tremendous task of meeting the nation's constant need for more and better transportation facilities, Brownhoist cranes are indispensable helpers to most of the larger railroads.

For coaling locomotives, car repair work, and handling scrap with magnet—Brownhoists' prove their economy and reliability by ever-ready service.

On maintenance work a Brownhoist crane saves both time and labor in handling rails, cleaning ballast along the right of way, etc. On new construction a Brownhoist does the work of many men in excavating, handling material, driving piles and in other operations incidental to the building of new trackage.

Brownhoist locomotive cranes, designed for any of the above work, are built in a wide range of capacities to meet the need of every railroad. Catalog "K" briefly describes these various cranes. May we send it?

The Routes of Hipower
Lead to Economy

IN the great manufacturing districts and thickly populated areas, HIPOWER is adequately, economically and permanently maintaining the bolted security of railway track joints.

HIPOWER has won countrywide recognition for exceptional service under all known track and climatic conditions.

That's why HIPOWER is universally used.

Watch for your road
in this series.

Newark, N.J., U.S.A.

What C-G-E Arc Suppressor Plates Do

C-G-E Arc Suppressor Plates are installed opposite the fingers where there is the most arcing. They narrow the arc passages, which increase the resistance of the arc and the cooling effect of the plates.

NOTE the difference in time required to disrupt the arc in a K-35 controller as shown by actual test. This difference means there's considerably less burning of controller fingers, segments, and arcing plates when the equipment is protected with C-G-E Arc Suppressors.

Consider the value of these auxiliary plates in reducing maintenance costs. They reduce carbonization and eliminate much of the trouble from pitting of contacts. Modern controllers are equipped with them to give better, longer service.

Arc Suppressor Plates can be used to advantage in any C-G-E controller having individual finger blow-outs. Installation requires only a few minutes. They are inexpensive. Try them.

Scientific Treatment of Boiler Feed Water

Dearborn

On the Use of Water Softeners

When exceptionally bad waters of certain types are encountered, where analysis shows that treating plants would be the most effective method of handling, Dearborn recommends accordingly.

But if a road has failed to get results by adding various chemicals to the water supplies, without scientific analysis and understanding such as Dearborn provides, it does not follow that a treating plant is needed.

Don't Make This Mistake

There are many districts on which water softeners have been built in the belief that they would eliminate water troubles. In actual operation these plants are only partially effective, but representing an investment of thousands of dollars, they are kept in use, although inadequate, and the equipment and operating cost suffer accordingly.

We Will Investigate For You

We will make a survey of your water conditions, including complete mineral analysis, and submit recommendations looking to the greatest possible benefits for you. If we recommend Dearborn Treatment, we guarantee results. Dearborn Treatment costs less than the chemicals required in a treating plant, and calls for no investment in plant or equipment. There is no expense other than the cost of the treatment.

Roads using Dearborn Treatment have at their command at all times the services of the Dearborn Laboratory and expert engineers.

Operating executives who let Dearborn work with them never have to defend a bad purchase or an ineffective remedy.

Our Standing Offer

Let us make our laboratory analysis of your water supplies. Let us place our recommendations before you. Consider our methods, our laboratory control. Compare the expense and THEN decide. Write us direct, sending water samples.

NOTE: Dearborn Treatment is being used in a number of cases in conjunction with water softeners to give them increased effectiveness

"A.B.C." Audited Circulations

—a requirement for membership in the

BUSINESS NEWSPAPERS ASSOCIATION OF CANADA

ONE of the qualifications that the "B.N.A." of Canada demands of its members is that their circulations claims and methods be verified and audited by the Audit Bureau of Circulations—an organization whose stamp of approval is accepted by advertisers in Canada and the United States.

The A.B.C. in its audit sifts the dross from the gold of circulation. Its methods are scrupulous and it classifies those subscribers who have actually paid for the paper.

Bought and paid-for circulation implies reader interest and reader demand—something that can only be built on sound editorial service. All this means that the sterling mark of "B.N.A." not only confirms the correctness and honesty of circulation claims and methods but also indicates high editorial quality.

The publications below are "B.N.A." members and accept and conform to its rigid demands in business and editorial practice.

Electric Railway Car Equipment

Choice of car equipment involves a responsibility for electric railway officials that means either minimum maintenance and operating attention or unnecessary worry in keeping the cars running.

Standardization with O-B Car Equipment Specialties by many prominent electric railway properties has been reached after highly successful operating experience. Approval of O-B comes from the carmen and maintenance crew as well as the officials.

We can refer with pride to O-B car equipment friends—their experience might be helpful to you. Or you can institute trials of your own. Our service engineers are trained to help you.

The O-B Fittings shown here are representative types. To be fully posted you should have a copy of our general catalog on file. Complete listing of all O-B Car Equipment Fittings will be found in a 70-page section.

Tomlinson Automatic Radial Car Coupler with automatic air connection.

O-B Form 1 Trolley Base. All bearings bushed. Roller bearings on center stem.

O-B Trolley Catcher. Absolutely prevents stepping up of pole.

Imperial Incandescent Headlight. Just one of many Imperial designs for electric railways.

O-B Electric Coupler Unit. Fits on side of Tomlinson Coupler and provides automatic connection of electric circuits.

MAXI-TAPS!

MAXITAPS cut faster, take less driving power effort and last longer—

The **PILOT POINT** finds the hole and guides the tap, the **SHARP EDGE** of the lands shears the chips clear as the **REAMER SECTION** with its **CHIP BREAKER**, trues up for the threading section. Result: you get a clean cut thread in true alignment, with less work and power expended.

Distorting strains are eliminated and long life to the tap is assured.

Maxitaps are the result of our constant effort to produce better tools; tools absolutely fitted to the job they have to do.

One man behind a Maxitap can do more work and better work than two men could coax out of the old-fashioned staybolt tap.

TRY THEM!

When Time is a Vital Factor

A BROKEN COG in a gear or a crack in the fly-wheel may tie up your plant. Breaks in machinery cause costly delays. Oxy-Acetylene welding and cutting is saving thousands of dollars yearly in effecting quick repairs.

That is when Dominion Service proves up. The purity of Dominion Oxygen and Prest-O-Lite Acetylene, assures the hottest flame and the utmost economy in fuel. The easily-handled cylinders permit the placing of the welding and cutting equipment within working distance of the job, which alone saves valuable time.

Dominion Service is equally good for the small welding and cutting shop, manufacturing plants, and big shipyards or railroads. If you use welding and cutting in your business, or contemplate the use of the oxy-acetylene process, either in production or for general repair work, it will pay you to know about Dominion Service.

Our representative will welcome the opportunity of telling you how Dominion Service will benefit your business.

Doubling Rod Bushing Mileage

Franklin Automatic Adjustable Wedges protect every bearing on the engine.

"Franklin Automatic Adjustable Driving Box Wedges have given double the locomotive mileage without the necessity of removing rod bushings.

"There is no device at the present time that has proven to be as beneficial towards eliminating heavy repairs and renewals to various parts of the locomotive caused by driving boxes pounding."

This from a letter of a Superintendent of Motive Power to his Vice-President.

The comment resulted from the service given by the Franklin Wedges on his heavy freight engines. He used it in his request for more.

Increased Capacity Without Added Weight

—the Heart of the Locomotive

WHILE every railroad executive desires more power in his locomotives, he keeps his eye carefully on weight.

But weight can be quickly dismissed in considering Nicholson Thermic Syphons.

Syphons are equivalent to a slight increase in the firebox heating surface, while negligible from the weight standpoint.

But Syphons are so placed in the hottest part of the firebox and so designed to stimulate boiler circulation that they mean 10 to 20% more steaming power.

Here is increased capacity that is available in no other way and can be had at the next shopping period.

PRATT & WHITNEY

Reamers

With Eccentric Relief

THE cut below shows our patent eccentric relief which is an exclusive Pratt & Whitney feature. Eccentrically relieved Reamers, as made by us, have the distinguishing advantage that they can be sharpened by grinding on the face of each flute, thus retaining a true working size for a much longer period than is otherwise possible.

Pratt & Whitney Reamers are the only reamers having this eccentric relief, which should not be confused with the so-called "Eccentric tooth," which is nothing more than unequal spacing and adds nothing to the life of the tool.

—a stronger tooth—a smoother hole
—no chatter—maintained size

All P. & W. Adjustable Reamers have eccentric relief, can be set to size without regrinding and can be made to face the bottom of a hole.

In order to set these reamers, it is only necessary to loosen the shoes and run back the nuts. The blades can then be pushed back and the shoes tightened slightly. Then, upon coming up with the adjusting nut, the diameter will gradually decrease until the desired size is obtained. Lock-nut and shoes are now firmly tightened and the reamer is ready for use. Quick, positive and convenient.

These reamers are made with 12 different sizes of bodies, giving an adjustment from .020 to .060 in., according to the diameter. Shell, hand or chucking reamers with the same number of body have interchangeable nuts, shoes, screws and wrenches. Shell and chucking reamers with the same number of body have interchangeable blades also.

Canadian Railway and Marine World

October, 1923.

Railway Operating Revenues, Expenses and Other Statistics.

The table of figures on page 465 gives the operating revenues, expenses, net earnings or deficits, and other operating statistics for Canadian railways' Canadian lines as a whole, for the first six months of 1923, compared with the same period of 1922, and separately for the Canadian National and Canadian Pacific as reported to the Dominion Bureau of Statistics.

The table on page 464 gives the Canadian Pacific results for July, also the Canadian National Rys. result for July, for the whole system, including all their steam railway lines in Canada and the U.S., except Central Vermont Ry. and also including express and hotel departments, and a number of subsidiary companies, but not the car ferries and steamboats. The table on page 466 gives the Canadian National Rys. results for June and for the first six months of 1923 for their steam lines in Canada and the U.S., except Central Vermont Ry.

The most noticeable thing about the table on page 465, so far as all the railways are concerned, is that a much larger traffic was carried in the first six months of this year, than in the corresponding period of 1922, with the public paying lower freight rates, but with better net earnings for the railways. It is also noticeable that while the Canadian National Rys. experienced substantial improvement in net earnings, or rather in the way of reducing the operating deficit, as compared with the same period of 1922, the C.P.R. net earnings decreased.

For the railways as a whole, during the first six months of 1923, freight earnings, \$148,718,310, were \$13,991,816 more than for the first 6 months of 1922; passenger earnings, \$35,384,454, were \$1,885,062 more, and total earnings, \$205,830,528, were \$17,999,343 more. Operating expenses for the first 6 months of 1923 were \$14,875,793 more than in the same period of 1922. The result of the greater increase in gross earnings than in operating expenses was that the railways as a whole reduced their operating ratio from 94.53 to 93.49, not a very large reduction, but at least sufficient to establish the fact that the change was in the right direction, and to inspire hope for the future.

During the first 6 months of 1923, the railways, as a whole, carried 14,244,777,310 ton miles of revenue freight, an increase of 21% over the first 6 months of 1922. Freight train miles operated 29,696,715, were 12% more than in the first 6 months of 1922. Revenue passenger miles increased by 5.1%; the payroll increased by 8.8%, and the number of employees increased by 8.5%. The average car loading in the first 6 months of 1922 was but 24.1 tons; in the first 6 months of 1923 it was 25.2 tons. The average revenue trainload in the first 6 months of 1923 was 479.7 tons, or 19.6 tons heavier than in the first 6 months of 1922, and the average freight train make up in the 1923 period was 22 loads and 9.7 empties, compared with 21.1 loads, and 9.6 empties, in the 1922 period.

The average receipt per revenue ton mile and per revenue passenger mile in the first 6 months of 1923 were 1.044 and 2.885 respectively, while in the first 6 months of 1922, they were 1.144 and 2.918 respectively.

From these figures it will be seen that the Canadian railways furnished a lot more transportation service in the first half of 1923 than in that of 1922, and that they charged less per unit for it. Notwithstanding this, due to better train and car loading, and to efficient handling of the traffic offered, the railways secured much larger net earnings than in the first half of last year, furnished employment to a greater number, and paid out much more in wages. This is a practical demonstration of the almost axiomatic proposition that the movement of a large volume of traffic at lowered rates is far better for all concerned than the movement of a restricted volume at high rates.

The Canadian National Rys., in the first half of 1923, including the Canadian Northern, Intercolonial, Prince Edward Island, National Transcontinental and other Government Rys., the Hudson Bay Ry., the Grand Trunk Railway in Canada, the G.T. Pacific Ry., and 36.16 miles of the G.T.R. in the U.S., viz., Champlain & St. Lawrence Ry., 1.21 miles, United States & Canada Ry., 22.18 miles, Vermont & Province Line Ry., 9.77 miles, and the Black Rock Terminal, but not other U.S. Grand Trunk lines, or the Central Vermont Ry., had freight earnings \$7,946,693 greater than in the first 6 months of 1922; passenger earnings \$1,319,739 greater; total earnings \$9,328,105 greater, and total expenses \$7,437,283 greater. The result of this was that the operating ratio was reduced from 105.34 in the first half of 1922, to 102.85 in the first half of 1923, and the operating deficit was reduced by \$1,890,823. As shown by the table on page 466, if it had not been for the exceptionally good results obtained in the first 6 months of this year by the Grand Trunk Western, the Canadian National Rys. as a whole would have had a deficit instead of any net earnings for the first half of 1923.

Examination of the Canadian National operating statistics for the 6 months period in the two years shows that, while the number of ton miles of revenue freight handled in the first half of 1923 was 23% greater than in the first half of 1922, the number of freight train miles operated was but 13% greater. It is thus evident that the number of freight train miles operated was not increased by nearly so much, proportionately, as the number of ton miles of revenue freight handled—a desirable condition. This is explained by the train loading figures, which show an increase of 39.1 tons of revenue freight per average freight train, this train loading betterment arising from, first, the addition of one loaded freight car to each average freight train, and an increase of 1.7 tons in each average car load. It is thus seen that the Canadian National management took advantage of the opportunity offered to

handle freight more economically by reason of there being a greater volume of it to handle.

The Canadian Pacific Ry.'s gross earnings for the first 6 months of 1923 were \$2,882,162 greater than in the same period of 1922, but operating expenses were \$4,790,824 greater, which resulted in a decrease of \$1,907,662 in net earnings, and an increase in the operating ratio from 87.03 to 89.87. It would appear that the C.P.R. showing is not as satisfactory as it might be, because the 1922 showing to the end of June was not as good as in 1921; it may be though, that the road will repeat its performance of last year, when the 1922 net ran behind that of 1921 until near the end of the year and then suddenly forged ahead and allowed the company to finish the year with better net earnings than in 1921. The increase in revenue ton miles handled in the first 6 months of 1923, compared with the first 6 months of 1922, was 15%, as compared with 23% for the Canadian National, and freight train mileage increased 19%, compared with 13% for the Canadian National. The C.P.R.'s inability to prevent freight train mileage increasing in a greater measure, proportionately, than revenue ton mileage is due to the fact that the average revenue trainload decreased by 18.4 tons, due to there being 0.3 less loaded freight cars per average train in the first half of 1923 than in the first half of 1922, this more than counterbalancing the increased average car loading of 0.6 ton per car.

C.P.R. and C.N.R.—while the C.P.R. was unable to derive better net earnings in the first half of 1923 than in the first half of 1922, and while the Canadian National Rys. were able to bring about a moderate reduction in their operating deficit, it is evident that they have a long way to go yet before their earning capacity will begin to approach that of the C.P.R., as is shown by the fact that the Canadian National Rys. were experiencing a deficit while the C.P.R. was earning a substantial net. In making comparisons in the operating results secured by the two systems, prior conditions must be given due consideration, and it must be borne in mind that the national lines have had more latitude, or opportunity, to effect improvement, than the C.P.R., due to the latter road having been organized and operating on its present basis for a much longer period. In the same way, also, as the Canadian National Rys. approach the C.P.R. standard of earnings throughout future years, the latitude or opportunity for further improvement will decrease, and it will be logical to expect, therefore, that the nearer the C.P.R. standard of relationship as between earnings and expenses is approached, the slower will be the rate of accomplishment of still further improvement.

July Results.—The table on page 464 shows that for July the Canadian National operating revenues for all steam railways, except the Central Vermont, and for the express and hotel depart-

ments and a number of subsidiary companies, but not the car ferries and steamboats, were \$21,002,848, or \$1,467,907 more than in July, 1922, while operating expenses for the month, \$19,530,620, were \$718,683 more, which made the net earnings, \$1,472,229, \$749,224 more than those of July, 1922, and reduced the operating ratio from 96.30 to 92.99. For the first 7 months of 1923, the net earnings for the system as specified above, were \$2,984,460, compared with an operating deficit for the same lines of \$2,202,993, in the first 7 months of 1922, a betterment of \$5,187,453.

The C.P.R. July operating revenues were \$15,677,836, an increase of \$1,214,001 over July 1922; and operating expenses, \$13,607,802, were \$1,105,875 more, making the net \$2,070,034, or \$108,126 more. The increase in net earnings, however, was insufficient to bring the net for the first 7 months of 1923 up to that of the first 7 months of 1922, the difference being \$139,585.

Six and Seven Months Results.—Thorough examination of the figures contained in the various tables in this issue shows that, despite the improvement made by the whole Canadian National Rys. in the first 7 months of 1923, and the optimistic utterances concerning the situation, made by portions of the press, the Canadian railway industry is still in a bad way financially, and there is a long distance to go before it will be on a proper basis. As to the Canadian National Rys. results, the improvement effected in the first 6 months of 1923, over the corresponding period of 1922, is due to the Grand Trunk Western lines.

The table on page 466 of this issue giving separately the results secured by the Canadian National's Canadian lines, Duluth, Winnipeg and Pacific Rys., Grand Trunk Western lines and New England lines other than Central Vermont, when studied in conjunction with the table on page 465 showing the results secured by lines in Canada, and the 36.16 miles in the U.S. as specified, also shows that the greatest influence in the betterment shown by the C.N.R. as a whole for the first 7 months of this year, was due in great part to the G.T.R. Western lines in the U.S. All U.S. roads are securing results this year which are much better than for some years past, and while Canada has experienced a good traffic revival, and while operation is as efficient as conditions will allow, the rate reductions made have been so severe that the railways find themselves unable to make any headway of consequence. It may be that during the first 7 months of this year large expenditures were made on maintenance in preparation for the expected heavy autumn traffic, but this is a more or less usual procedure. The fact is that the railways are not getting paid enough, in relation to what they have to pay out, to allow them to derive a reasonable operating ratio. For example, take the C.P.R. net earnings for the first seven months of the year, \$11,636,394. Going back to 1912, net earnings for the first 7 months of each year have been as follows: 1922, \$11,775,979; 1921, \$15,004,482; 1920, \$13,047,672; 1919, \$15,183,182; 1918, \$16,876,996; 1917, \$24,757,455; 1916, \$23,618,825; 1915, \$16,701,453; 1914, \$18,892,937; 1913, \$23,231,516; 1912, \$23,276,171. It will thus be seen that the net earnings for the first 7 months of 1923 are the smallest for any similar period back to 1912. With the C.P.R. deriving net earnings as restricted as they are, and with the Canadian

National's Canadian lines showing no net earnings to apply on fixed charges during the first half of the year, it certainly seems that the rate reductions imposed on Canadian railways have been drastic and it is a fact that it is only because traffic is being offered in its present large volume that they are able to get results as good as they have been getting. It is certainly to be hoped that a still greater traffic in the final 5 months of the year will enable them to make a better showing than in the first 7 months.

American Association of Passenger Traffic Officers.

This Association held its 67th annual meeting in Canada this year. The Canadian National Rys. ran a special train from Chicago, for the members from southwestern points, to Montreal a stop of a few hours being made in Toronto, Sept. 15. Other members travelled to Montreal by special cars from New York, Buffalo, Cleveland, and New England points. The several parties were received in Montreal, by Canadian National and Canadian Pacific Rys. traffic officials on Sept. 17, were taken on a tour round the city. Charles Marcell, M.P., on behalf of the Dominion Government, and Mayor Martin on behalf of the city welcomed the Association, at a luncheon at which G. T. Bell, Executive Assistant to Vice President in charge of Traffic, C.N. Rys. presided. In the evening the party embarked on the Canada Steamship Lines s.s. Richelieu, for a trip to the Saguenay, and return, during which the association's business was dealt with. On the return to Montreal the Canadian National Rys. entertained the members at dinner at the Mount Royal Hotel.

The Canadian Ticket Agents' Association will hold its 37th annual meeting and outing on Oct. 9 and 10. The business meeting will be at the Mount Royal Hotel, Montreal, Oct. 9, at 10 a.m., and there will be a theatre party in the evening. On Oct. 10, a limited number of members will be given a trip around the harbor, by the Harbor Commissioners; the C.P.R. has given an invitation for an at home on the s.s. Melita, and there will probably be a mountain drive. Quebec may be visited, either by rail or Canada Steamship Lines route.

Steel Rails for Canadian National Rys.—A Chicago dispatch of Sept. 12 to a New York paper said: "The Canadian National Rys. have placed an informal order for 23,000 tons of standard steel rails with the Illinois Steel Co., a United States Steel Corporation subsidiary." Canadian Railway and Marine World was officially advised, Sept. 15, that the report was entirely erroneous, as the C.N.R. had ordered no rails from the Illinois Steel Co., and had not placed any orders for rails recently, either in Canada or the United States.

Sir George McLaren Brown, European General Manager, C.P.R., writing in the London Morning Post recently on Canada said that Canada land settlement, the agricultural salvation of western Canada lies in mixed farming, which calls for smaller and more numerous agricultural holdings than wheat growing does, and results in closer settlement and better communications. The bigger and more densely settled the rural population the more social amenities there are with greater advantages generally.

Railway Earnings and Expenses.

Canadian National Railways.

Canadian Railway and Marine World is now able, after three months interval, to resume publication of its monthly comparative table of C.N.R. earnings and expenses, which had to be omitted from its July, August and September issues owing to changes which had been made in the form in which they were furnished. We have now been supplied by the C.N.R. with comparative figures from January to June, both inclusive, for 1922 and 1923, which are given below. We are advised that they include the Canadian Northern Ry. system, including Duluth, Winnipeg & Pacific Ry.; Canadian Government Rys., including Intercolonial and Prince Edward Island Rys., and various local lines in the Maritime Provinces and Quebec which have been acquired by the Dominion Government; Grand Trunk Pacific Ry.; Grand Trunk Ry. lines both in Canada and the United States, but not Central Vermont Ry. or electric lines. They also include the express and hotel departments and a number of subsidiary companies, the names of which are not given, but not car ferries and steamboats, nor the telegraph department.

	Earnings	Expenses	Net	Increase or decrease
Jan.	\$18,765,458	\$19,362,197	\$*596,739	\$1,273,039

	\$137,781,522	\$134,797,061	\$2,984,461	\$5,187,453
Incr.	\$15,675,945	\$10,488,492	\$5,187,453	*****

*Deficit or decrease.

Operating ratios—	1923	1922
January	103.17	111.63
February	116.73	108.84
March	101.61	97.74
April	89.89	106.08
May	90.94	94.72
June	94.52	100.67
July	92.99	96.30
For 7 months ended July 31	97.83	101.80

The C.N.R. Publicity Department has issued the following statement: The gross earnings for July were up \$1,467,907, an increase of 7½% over July, 1922. After meeting operating expenses, \$19,530,620, there remains a net operating revenue for the month of \$1,472,228. In July, 1922, the net operating revenue from the same properties was \$723,004, so that the July, 1923, net increased \$749,224, or 103.6%. For the first seven months of 1923 the net earnings were \$2,984,460, compared with a deficit on the same properties of \$2,202,993 in the corresponding period of 1922. The improvement in net operating results in the first seven months of 1923 over those of 1922 was therefore \$5,187,453.

The C.N.R.'s Publicity Department has also issued the following statement: Approximate gross earnings for August were \$21,952,169, against \$20,053,375 for Aug., 1922; and for the 2 weeks ended Sept. 14, \$9,471,405, against \$9,193,584 for same period, 1922, and from Jan. 1 to Sept. 14, \$169,210,470.90, an increase of \$17,497,671.80 over the same period of 1922.

The C.N.R. official figures, as reported to the Dominion Bureau of Statistics, for six months to June 30, for practically Canadian lines only, are given on pg. 465 of this issue, and for the whole system on pg. 466.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1923, compared with those for 1922. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimalt & Nanaimo Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World:—

	Gross	Expenses	Net	Increase or decrease
Jan.	\$13,148,914	\$12,428,888	\$720,026	\$236,549
Feb.	11,159,865	10,664,371	495,494	*158,994
Mar.	13,585,763	11,606,049	1,979,714	*440,793
April	13,651,494	11,700,615	1,950,879	402,107
May	14,355,539	12,357,292	1,998,247	*346,266
June	14,943,919	12,521,918	2,422,001	59,687

	\$96,523,329	\$84,886,935	\$11,636,394	*\$139,585
Incr.	\$5,764,136	\$5,903,721	*****	*****
Decrease	*****	*****	\$139,585	*****

*Decrease.

Approximate gross earnings for August, \$15,946,000, against \$15,493,000 for Aug., 1922; for 2 weeks ended Sept. 14, \$6,739,000, against \$7,299,000 for same period 1922.

Railway Operating Revenues, Expenses and Other Statistics for Six Months Ended June 30, 1923.

The following comparative table for the six months ended June 30, 1922 and 1923, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There has been no change in the roads operating, but the 1922 figures, given in the reports this year, include certain revisions, and are not in all cases the same as reported in 1922.

The column headed "Canadian National" gives the figures for the combined steam railways in Canada, under the

Canadian National Ry. Co's directors' management, including the former Canadian Northern System; the Intercolonial, Prince Edward Island, National Transcontinental and other Canadian Government Rys., the Hudson Bay Ry. and the Grand Trunk Ry. of Canada and the Grand Trunk Pacific Ry. It includes all G.T.R. lines in Canada and 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Province Line Ry., 9.77 miles, and Black Rock terminal. It does not include the Central Vermont, other lines in New England, nor lines west of the Detroit and St. Clair Rivers.

The column headed "Canadian Pacific"

includes also the Montreal & Atlantic and Esquimalt & Nanaimo Rys.

The first six items under the heading "Operating revenues" include rail lines only and not water lines. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. Total train miles include freight; passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, baggage, parlor cars, etc.

Operating Revenues	All Railways.		Canadian National.		Canadian Pacific.	
	1923	1922	1923	1922	1923	1922

Transportation Day at Canadian National Exhibition.

The Canadian National Exhibition directors' luncheon on Transportation Day, Sept. 6, was attended by a number of transportation officials, in addition to other guests, among those present being:—Geo. Wright, member Toronto Transportation Commission; J. E. Dalrymple and W. D. Robb, Vice Presidents; G. C. Jones, Manager, Telegraph and Telephone Department; C. J. Smith, General Manager, Elevators and Warehouses; C. W. Johnston, Passenger Traffic Manager; C. K. Howard, General Tourist Agent; L. L. Grabill, General Baggage Agent, Central Region; C. E. Horning, District Passenger Agent; and W. J. Moffatt, General Agent, Passenger Department, Canadian National Rys.; W. Fulton, District Passenger Agent; W. Horder, Assistant District Passenger Agent; H. B. Beaumont, General Agent, Steamship Department; W. C. Underwood, City Passenger Agent; W. Corbett, Terminal Passenger Agent; W. Dockrill, J. B. Tinning, and J. A. Yorick, Travelling Passenger Agents, Canadian Pacific Rys.; G. H. Webster, Secretary, Canadian Passenger Association, Eastern Lines; R. A. Mitchell, General Agent, Canadian National Rys. Express Department; F. W. Branscombe, General Superintendent, Eastern Lines; and H. P. Sharpe, General Agent, Toronto, Dominion Ex. Co.; J. Foy, Canadian Passenger Agent, New York Central Rd.; and Acton Burrows, Proprietor, Canadian Railway and Marine World.

W. D. Robb, Vice President, in charge of insurance, lands, telegraph, colonization, development and general matters, Canadian National Rys., who spoke on behalf of the transportation interests, complimented the directors on setting

aside a special day for those interests, instead of in conjunction with some others, as in previous years, and congratulated them on the exhibition's continued and unrivalled success. After referring to other transportation matters, he said, "The Canadian National Rys., since the advent of the present management, have been planning an active and effective organization to deal with Canada's important need for greater population. There are those who approach this subject in the belief that it is a simple matter, and that all we have to do is to bring over the thousands from Europe desiring to emigrate and fill up the country. The C.N.R.'s policy must, of necessity, be regulated by that of the Dominion Government and Canada's ability to absorb and assimilate newcomers. Our policy is, therefore, to bring to Canada all the people we possibly can, subject to these conditions, and our organization is now being completed with this object in view. It is our intention to use every possible instrument in this country and the British Isles, not only to bring desirable people into this country, but to take care of them after they come here and to this end the Canadian railways, in co-operation with the Dominion Government, have taken over the direction of the Canada Colonization Association and the Canadian National Rys. are represented on its board of directors. Every effort will be made by the Association to induce suitable settlers to come to Canada and enable them to take up the many thousand acres of fertile lands that have been lying dormant and unproductive up to the present time. These lands are being offered

on long term payments and easy terms to attain this object. I am, however, firmly of the belief that it is not so much the endeavor to bring in people to this country that is going to solve our problem, as making the conditions in the country so attractive that people will desire to come of their own accord. Probably one of the most potent factors in accomplishing this result will be the introduction of necessary capital to develop our natural resources and the many industries that can be built upon them. I am glad to know that there are many forces at work to bring about this much desired result, and one of the most significant of these is the presence at this exhibition of a number of firms representing the great Federation of British Industries, the most important organized association of manufacturers in the world, representing more than twenty-five billion dollars of capital, which, in a recent pronouncement, took cognizance not only of the need of the overseas dominions for increased population, and the necessity for support of the Empire Settlement Act, but also the necessity for the migration of British capital to the overseas Dominions. While they realize that these dominions, as a result of such financial assistance, will, to the full extent of their power, endeavor to develop their own manufacturing industries, which, in many cases, will compete with the goods of the mother country, they take the broad view that, by so doing, these dominions will increase their internal prosperity and thus provide a wider market within the Empire for the mother country's goods. It is within the province of the Canadian National Railways Colonization and Development Department, over which I have the honor to preside, to co-operate with and assist in every way possible, the bringing about of this most desirable condition, and we welcome to this country the pioneer movement of the Federation of British Industries, which we believe will be a potent factor in the upbuilding of the overseas dominion." In concluding he spoke of the part which the transportation systems of the country have played in its development. He pointed out that the section of western Canada which is producing record crops this year, and in which crop failure has seldom been known, notably the Saskatchewan valley, and the northern part of the three prairie provinces owe their development largely to the Canadian National Rys. The development of these steady producers has had a most beneficial effect upon the whole of Canada and had stimulated the manufacturers of the east and provided valuable markets. He pointed out that the Canadian National Rys. serve every one of the nine provinces, and all the principal cities and towns, and, in addition, great areas of undeveloped country which show every indication of being immensely wealthy in mineral deposits. He added that it was necessary for the country to have a railway framework before there can be any density of settlement and the railways of this country were brought into existence to perform no less a task than the turning of our vast waste spaces into populated areas, and he said: "When these are filled with an industrious people yielding traffic, it will be time to apply to the railway

Canadian National Railways' Earnings and Expenses Detailed.

The Dominion Bureau of Statistics, Transportation Branch, has issued the figures given below, of the operations of the Canadian National Rys. steam lines, both in Canada and the United States, for June, 1922 and 1923, and for the six months ended June 30, 1922 and 1923. The Canadian lines include the combined steam railways in Canada, under the Canadian National Ry. Co.'s directors' management, including the former Canadian Northern System, the former Intercolonial, Prince Edward Island, National Transcontinental and other Canadian Government Rys., the Hudson Bay Ry. and the Grand Trunk Ry. of Canada and the Grand Trunk Pacific Ry. It includes all G.T.R. lines in Canada and 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States and

Canadian Ry., 22.18 miles; Vermont & Province Line Ry., 9.77 miles, and Black Rock Terminal. It does not include other lines in New England, or lines west of the Detroit and St. Clair Rivers. The New England lines include the portion of the Montreal-Portland, Me., line from Norton Mills, Que., on the Sherbrooke Subdivision, Portland Division, Montreal District, 132.11 miles from Montreal, to Portland, 165.15 miles, and the Lewiston and Norway Subdivisions, Portland Division, in Maine, 6.68 miles, a total of 172.01 miles. They do not include the Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles, and Vermont & Province Line Ry., 9.77 miles, a total of 33.16 miles, which are included under the C.N.R. Canadian lines.

some of the tests that reasonably apply to other business from the outset. The western country is only now coming into its own, and it is my prediction that, in the course of a few years, many hun-

dreds of thousands of settlers will be added to its population, and while the settlement of the wooded areas of northern Ontario and Quebec is, of necessity, of a slower character, most satisfactory

progress is being recorded there. It is also our intention to direct attention to the maritime provinces, which offer singular opportunities to the people of the British Isles."

Railway Rolling Stock Orders and Deliveries.

The Russian Soviet Government is reported to have ordered 1,500 locomotives to be paid for in gold.

The Toronto, Hamilton & Buffalo Ry. is in the market for some cars, probably 10 first class, 6 smoking and 6 baggage cars.

The Quebec Development Co. has received one 4-wheel switching locomotive, with cylinders 14 x 22 in., from Montreal Locomotive Works.

The C.P.R., between Aug. 19 and Sept. 14, received 1 steel baggage and express car from National Steel Car Corporation; 50 steel coal cars, 75 tons capacity, from Canadian Car and Foundry Co., and 114 steel underframe box cars 36 ft. long, from its Angus shops, Montreal.

The 1,000 automobile cars, which Canadian National Rys. have ordered from the Pressed Steel Car Co., as stated in our last issue, are being built to the same specifications as the 600 being built by Canadian Car and Foundry Co., and the 400 being built by National Steel

nos. 8650 to 8669, completed June 30; 35 first class, nos. 5020 to 5060, out of an order for 41; leaving 6 first class, 12 depressed flat, nos. 699950 to 699961, 30 sleeping, nos. 1559 to 1588, and 750 box, 60 tons capacity, nos. 500500 to 501249, still on order; from Eastern Car Co., 206 general service bodies only, nos. 131000 to 131271, out of an order for 272; 100 general service, nos. 131272 to 131371, completed July 5; 100 hopper, nos. 119550 to 119649, completed April 13; leaving 500 box, nos. 426500 to 426999, 66 general service, bodies only, and 8 snow ploughs, nos. 55262 to 55269, still on order; from National Steel Car Corporation, 717 box, 40 tons capacity, nos. 427000 to 427999, out of an order for 1,000; 50 express refrigerators, nos. 10050 to 10099, completed Aug. 31; leaving 283 box, 40 tons capacity, 400 automobile, nos. 580600 to 580999, 10 baggage, nos. 8670 to 8679, and 250 box, 60 tons capacity, nos. 501250 to 501499, still on order; from Pressed Steel Car Co., 100 general service, nos. 79700 to 79799, for Grand

Mikado Locomotive, Canadian National Railways.

This is one of 35 mikado locomotives being built for the C.N.R. by Montreal Locomotive Works, of which 25 have been delivered. The chief details are as follows: Weight on drivers, 227,600 lb.; weight of engine, working order, 314,800 lb.; weight of tender, 185,100 lb.; cylinders, 27 x 30 in.; boiler pressure, 185 lb.; driving wheel diameter, 63 in.; maximum tractive effort, 54,600 lb.; factor of adhesion, 4.16.

Car Corporation, details of which have already been given.

Canadian National Rys. have received the following additions to rolling stock recently,—22 mikado (2-8-2) locomotives, cylinders 27 x 30 in. out of an order for 25, from Montreal Locomotive Works, 1 mikado (2-8-2) locomotive from Canadian Locomotive Co., 18 first class and 10 mail and express cars from Canadian Car and Foundry Co., Montreal, and 35 cabooses converted from box cars, from Canadian Car and Foundry Co., Amherst, N.S.

The U.S. Commerce Department reports U.S. locomotive builders' operations as follows: Locomotives shipped from plants in Aug., 1923, 272, compared with 239 in July, 1923, and 151 in Aug., 1922. In the first 8 months of 1923, 1,916 locomotives were shipped, compared with 641 in the same period in 1922. Unfilled orders on hand at the end of August, 1923, totalled 1,497, compared with 1,738 at the end of July, 1923, and 1,035 at the end of Aug., 1922.

The Toronto, Hamilton & Buffalo Ry. has ordered 2 Pacific type (4-6-2) locomotives from Montreal Locomotive Works. Following are chief details:—

Weight on drivers	175,000 lb.
" engine truck	48,500 lb.

this year, up to Aug. 31, received the following rolling stock: Locomotives, from Montreal Locomotive Works, 23 mikados, out of an order for 35, nos. 3525 to 3559; from Canadian Locomotive Co., 16 mountain type, nos. 6000 to 6015, completed Aug. 18; leaving 10 mikados, nos. 2560 to 3569, 10 six-wheel switchers, nos. 7509 to 7518, and 7 eight-wheel switchers, nos. 8215 to 8221, still on order; from American Locomotive Co., Schenectady, N.Y., 8 mikados, nos. 3740 to 3747, for Grand Trunk Western, completed Aug. 11; leaving 10 mikados, nos. 5748 to 3757; 5 Pacifics, nos. 5627 to 5631; and 5 eight-wheel switchers, nos. 8300 to 8304, for Grand Trunk Western, and 16 consolidations, nos. 460 to 475, and 8 eight-wheel switchers, nos. 500 to 507, for Central Vermont Ry., still on order; from Lima Locomotive Co., Lima Ohio, 3 six-wheel switchers, nos. 7519 to 7521, completed June 12, and 5 eight-wheel switchers, nos. 8222 to 8226, completed June 30, for Grand Trunk Western. Cars, from Canadian Car & Foundry Co., 1,000 box, nos. 428000 to 428999, completed May 31; 100 Hart-Otis ballast, nos. 99500 to 99599, completed April 17; 600 automobile, nos. 580000 to 580599, completed July 26; 10 mail and express, nos. 9720 to 9729, completed Aug. 25; 20 baggage,

Trunk Western, completed June 21; leaving 1,000 automobile cars still on order.

U.S. Railways' Financial Results—U.S. class 1 railways in July had a net operating income of \$84,591,400, equivalent to an annual rate of return of 4.93% on their valuation. The eastern carriers earned at the equivalent annual rate of 5.6%, the western at 4.05%, and the southern at 5.26%. In July, 1922, the net operating income for all class 1 roads was \$69,321,000, equivalent to an annual rate of return of 4.12%. Operating revenues for July this year, \$535,577,300, were 20.7% more than in July, 1922, and operating expenses, \$414,333,300, were 21.5% more. For the first 7 months of 1923, net operating income was \$528,219,300, representative of an annual return of 5.51%, compared with net operating income of \$418,394,650 in the first 7 months of 1922, representative of an annual return of 4.46%.

Machinery Orders.—Canadian National Railways have ordered as follows: One 96 in. x 84 in. x 45 ft. Bertram frame planer complete with motor; one Bertram Bemont heavy 3-head locomotive frame slotting machine with motor and electrical equipment; one Morris standard type B 12½ ton fixed gantry crane.

Mainly About Railway People Throughout Canada.

A. H. Aishton, President, American Railway Association, was a guest at a luncheon given by Lady Frederick Williams-Taylor at Montreal, Sept. 7, for the Earl of Birkenhead. Other guests included Sir Henry Thornton and the Hon. Marguerite Shaughnessy, daughter of Lord Shaughnessy.

Stuart Armour, owner and manager of the Cadboro Beach Hotel, Victoria, B.C., who died here suddenly on Sept. 1, was Manager of the C.P.R. Hotel at Sicomous, B.C., from March 27, 1914, to April 1, 1915, after which he managed the Chateau Lake Louise, near Laggan, Alta., for a season, and in Feb., 1916, was appointed Manager of the Mount Staphen House in British Columbia, resigning from the service Oct. 31, 1917. He was a son of the late Hon. J. D. Armour, Chief Justice of Ontario, was born Nov. 16, 1865, and educated at Upper Canada College, Toronto, and the University of Oregon, graduating LL.B., after which he practised in Oregon and Washington, and eventually became interested in mining. He was a brother of Mrs. Hayter Reed, wife of the former Manager of Hotels, C.P.R.

Major Graham A. Bell, C.M.G., Deputy Minister of Railways and Canals, who left Ottawa, Aug. 9, for England, and joined the Minister at the League of Nations meeting at Geneva, Switzerland, later, returned to London, about the middle of September, and will remain there during the Imperial conference of premiers, to be available in regard to G.T.R. shareholders' claims.

David R. Bell, C.P.R. conductor, Toronto, who died at Guelph, Ont., Aug. 5, from pneumonia, left real estate valued at \$11,972, and personal estate \$10,309. His widow receives a life interest, and at her death the estate will be divided between the son and daughter.

William Edward Gladstone Bishop, who has been appointed Division Freight Agent, Canadian National Rys., North Bay, Ont., was born at Central Clarence, N.S., Dec. 4, 1888, and entered railway service, Aug. 5, 1908, since when he has been, to Oct., 1910, stenographer, District Freight Agent's office, Intercolonial Ry., Halifax, N.S.; Oct., 1910, to Oct., 1914, in General Freight Agent's office, Intercolonial Ry., Moncton, N.B.; Oct., 1914, to May 1, 1916, chief clerk, District Freight Agent's office, Canadian Government Rys., Halifax, N.S.; May 1, 1916, to Oct. 1, 1919, Travelling Freight Agent, Canadian Government Rys., Halifax, N.S.; Oct. 1, 1919, to June 16, 1923, District Freight and Passenger Agent, Canadian National Rys., Cochrane, Ont.

Sir George McLaren Brown, European General Manager, C.P.R., London, Eng., has been elected Honorary Vice President of the Canadian Chamber of Commerce, there, in appreciation of his valuable services to the organization, of which he was President for two years.

Allan Cameron, Oriental Manager, C.P.R., Hong Kong, China, who has been in Canada on a business trip, sailed from Vancouver, early in September, for Hong Kong, accompanied by Mrs. Cameron.

S. S. Clarke, relieving agent, Canadian National Rys., at St. Walburg, Sask., was found dead in a section house there recently, the circumstances indicating suicide.

C. H. N. Connell, District Engineer of Construction, Canadian National Rys.,

Toronto, Mrs. Connell and their infant daughter, spent the first half of September at Lac Echo, Que.

Senator N. Curry, Chairman of the Board, Canadian Car and Foundry Co., Montreal, is a director of the re-organized Riordon Co., Ltd.

J. E. Dalrymple, Vice President, Traffic Department, Canadian National Rys., went over the Atlantic Region lines in August, visiting New Brunswick, Nova Scotia and Prince Edward Island, accompanied by Mrs. Dalrymple, and by several traffic officials, including A. T. Weldon, Traffic Manager, Atlantic Region, and M. F. Tompkins, General Freight Agent, Moncton, N.B. The party drove from Mulgrave, N.S., to Guysboro, where they spent a week end fishing at Jost Camp, Moon Lake.

C. E. W. Dodwell, who has been appointed Superintending Engineer for the

F. A. Rutherford,
Superintendent of Transportation, Montreal
District, Central Region, Canadian
National Railways.

Maritime Provinces, Dominion Public Works Department, was engaged in railway construction in Nova Scotia from 1874 to 1877, and in 1881 entered C.P.R. service and was engaged on the preliminary surveys and estimates for the St. Lawrence bridge, and later was Resident Engineer in charge of construction of the C.P.R. from Montreal to Vaudreuil, resigning from the service in 1889 to engage in private practice. Prior to his present appointment he was Resident Engineer for the Public Works Department at Halifax, N.S.

Jas. Edward, District Freight Agent, Canadian National Rys., Montreal, and Mrs. Edward, returned to Montreal, Sept. 15, after a holiday at their summer cottage at Brule, N.B.

Mrs. Fairbairn, wife of J. M. R. Fairbairn, D.Sc., Chief Engineer, C.P.R., returned to Montreal, early in September, from Stony Lake, Ont.

Charles S. Fee, formerly Passenger Traffic Manager, Atchison, Topeka and Sante Fe Ry., died at San Francisco, Sept. 25, aged about 70.

W. P. Fitzsimons, who has been appointed Manager, Industrial Department, Atlantic and Central Regions, Canadian National Rys., Montreal, was born at Detroit, Mich., Oct. 27, 1868, and entered railway service as messenger in Assistant General Freight Agent's office, G.T.R., at Detroit, April 15, 1884, since when he has been consecutively to Feb. 10, 1896, in various positions general freight department, same road, at Detroit; Feb. 1896, to Jan. 1897, Travelling Freight Agent, same road; Jan. 1897 to Nov. 1898, secretary to General Freight Agent, same road, Montreal; Nov. 1898 to May 1900, chief clerk, General Freight Agent's office, same road, Montreal; May 1900 to April 1902, Division Freight Agent, same road, Detroit, Mich., and Manager, Grand Trunk Despatch Fast Freight Line; May 1902 to Sept. 1907, Manager, Lackawanna-Grand Trunk Line, Buffalo, N.Y.; Sept. 1907 to April 1909, Manager, Bureau of Transportation and Manufacturers, Detroit, Mich., Board of Commerce; April 1909 to March 9, 1923, Commissioner of Industries, G.T.R., Montreal; March 9 to Sept. 1, 1923, Commissioner of Industries, Atlantic and Central Regions, Canadian National Rys., Montreal.

D. E. Galloway, Assistant to President, Canadian National Rys., and Mrs. Galloway returned to Montreal, Sept. 10, on the s.s. Doric from Great Britain.

Hon. G. P. Graham, Minister of Railways and Canals, who is attending the League of Nations meetings at Geneva as one of the two Canadian representatives, was, according to a press cablegram, selected to present the transportation question to the assembly of the League. Following the admission of the Irish Free State to membership in the League on Sept. 10, Mr. Graham entertained President Cosgrave at dinner at Geneva.

Sir John S. Hendrie, K.C.M.G., C.V.O., of Hamilton, Ont., a former chairman of the Ontario Legislature's Railway Committee and a former Lieutenant-Governor of Ontario, who died at Baltimore, Md., July 17, left an estate valued at \$1,368,208.89. After providing an annuity of \$15,000 for the widow, and making several bequests, the residue is divided equally between a son and daughter.

C. R. Hosmer, one of the C.P.R. directors, returned to Montreal, Sept. 15, from his summer house at St. Andrews-by-the-Sea, N.B.

J. J. Howard, operator, Canadian National Rys., Superior Jct., Ont., was found dead in a well, near there, at the end of August, the circumstances pointing to suicide.

Miss Hungerford, daughter of S. J. Hungerford, Vice President, Operation and Construction Departments, Canadian National Rys., returned to Montreal, Sept. 9, on the C.P.R. s.s. Montclare, from Great Britain.

John R. Kent, who acted as agent, Michigan Central Ry., Niagara Falls, Ont., during the absence of J. Grant on his annual holiday, has been sentenced to two years in Kingston penitentiary, for stealing \$160 from the ticket office. He handed back \$87 and pleaded guilty.

J. W. Kneeshaw, Stationery Agent, Grand Trunk Western, Canadian National Rys., Detroit, Mich., retired on pension, Sept. 1, after 40½ years service with the G.T.R., latterly Canadian National Rys. He had been in the Stationery Department since 1885, and Stationery Agent since July 1, 1896.

L. F. Loree, President, Delaware and Hudson Co., arrived at Quebec, Que., Sept. 10, from Europe, on the s.s. City of Paris, which was chartered by the C.P.R., to relieve the s.s. Empress of Scotland, which met with an accident recently.

Sir Donald Mann, formerly Vice President, Canadian Northern Ry., returned to Toronto, early in September, after touring Russia, paying special attention to the condition and operation of the railways.

W. R. MacInnes, Vice President, Traffic, C.P.R., and **D. Forbes Angus**, Montreal, were the guests of **F. W. Peters**, General Superintendent, British Columbia District C.P.R., and **Mrs. Peters**, at Vancouver, B.C., at the end of August.

Mrs. W. R. MacInnes, wife of **W. R. MacInnes**, Vice President, Traffic, C.P.R., returned to Montreal, early in September, from England, where she had been visiting her daughter, **Mrs. Bruce Reford**.

Mrs. A. D. MacTier, wife of **A. D. MacTier**, Vice President, Eastern Lines, C.P.R., and **Miss Adeline MacTier**, returned to Montreal early in September, after spending the summer at Murray Bay, Que., and Smallcourt, Me.

T. W. McBeath, Assistant Master Mechanic, Moncton Division, Atlantic Region, Canadian National Rys., Moncton, N.B., was seriously injured in a rear end collision, Sept. 5, suffering severe cuts about the head, as well as a broken arm.

Donald McCormick, aged 15, son of **R. S. McCormick**, General Superintendent, Algoma Central & Hudson Bay Ry., was found dead in his bedroom, Sept. 28, having presumably been killed by the accidental discharge of a revolver, which he was apparently preparing for a shooting trip the next day.

H. H. Melanson, General Passenger Traffic Manager, Canadian National Rys., with **Mrs. Melanson** and family, returned to Montreal, Sept. 6, after spending the summer holidays at Cape Brule, N.B.

J. T. Monroe, General Passenger Agent, Louisiana Lines, Southern Pacific Ry., New Orleans, La., visited Victoria and Vancouver, B.C., recently.

Oscar Masse, who has been appointed Trainmaster, Cornwall Subdivision, St. Lawrence Division, Montreal District, Central Region, Canadian National Rys., Montreal, was born at Coteau, Que., Nov. 7, 1884, and entered G.T.R. service Nov. 1, 1901, since when he has been, to Feb. 25, 1903, freight clerk, Coteau, Que.; Feb. 25 to Dec. 1, 1903, operator, Coteau Jct., Que.; Dec. 1, 1903 to Aug. 10, 1905, operator, Montreal; Oct. 15, 1905 to Nov. 7, 1908, dispatcher, Montreal; Nov. 7, 1908 to April 25, 1910, dispatcher, Island Pond, Vt.; April 25, 1910 to Oct. 13, 1911, dispatcher, Montreal; Oct. 13, 1911 to Jan. 16, 1922, Night Chief Dispatcher, and Chief Dispatcher, Montreal; Jan. 16, 1922 to June 1, 1923, Terminal Inspector, Transportation Department, G.T.R., Montreal; June 1 to Aug. 1, 1923, Inspector of Terminals, Montreal District, Central Region, Canadian National Rys., Montreal.

L. E. Moore, Roadmaster, Division 3, Timiskaming & Northern Ontario Ry., Haileybury, Ont., died at the Wellesley Hospital, Toronto, Sept. 5, after a short illness, aged 40.

Sir Augustus Nanton, of Winnipeg, one of the C.P.R. directors, and President, Winnipeg Electric Ry., has accepted the honorary treasurership of the Crosby Hall fund in Canada, to provide \$5,000 to establish a Canadian room in the Crosby Hall International Club House for university women, to be built in London, Eng.

Hon. Frank Oliver, who has been appointed a member of the Board of Railway Commissioners, to succeed the late **J. G. Rutherford**, C.M.G., H.A.R.C.V.S., was born in Peel County, Ont., in 1853, a son of the late Allan Bowsfield, and he adopted his mother's maiden name when he went west, first to Winnipeg and later to Edmonton, Alta., where he founded the Edmonton Bulletin in 1880, of which he is still the principal owner. He represented Edmonton in the Northwest Council from 1883 to 1888, and in the Northwest Assembly from 1888 until his resignation in 1896. From 1886 to 1911, he represented the same constituency in the House of Commons, and from April 8, 1905 to the resignation of the Laurier Government in Oct. 1911, was Minister of the Interior and Superintendent-General of Indian affairs. He acted as a member of the Royal Conservation Commission in 1909, and travelled extensively in the Northwest Territories in 1910. He is a Methodist and a vice president of the Dominion Alliance.

Charles G. Orttenberger, who has been appointed General Western Passenger Agent, Canadian National Rys., Chicago, Ill., was born at Port Huron, Mich., Jan. 21, 1869, and entered G.T.R. service in Dec., 1884, since when he has been to May 1889 clerk, Port Huron, Mich.; May 1889 to Feb. 1896 in Audit Department, Detroit, Mich.; Feb. 1896 to April 1907, chief clerk, city ticket office, Chicago, Ill.; April 1909 to Oct. 1918, City Passenger and Ticket Agent, Chicago; Nov. 1919 to Mar. 1, 1920, General Agent, Passenger Department, Grand Trunk Western Lines Rd. (U.S.R.A.) Chicago; March 1, 1920 to June 16, 1923, General Agent, Passenger Department, Canadian National Rys., Chicago, Ill.

Alfred Price, formerly General Manager, Eastern Lines, accompanied by his daughters, sailed from Quebec, Sept. 12, by the s.s. Melita, for England, intending to spend the winter there, and in France. Since his retirement, on account of ill health, he has spent considerable time in the south of England and France, and he visited a number of friends in Canada during the past summer.

Stanley Jay Raymond, who has been appointed Commissioner of Industries, Napanee, Scotia Jct., North Bay, O'Brien, and west to and including Superior Jct., Current, Sarnia and Windsor, Central Region, Canadian National Rys., Toronto, was born at Trenton, Ont., March 10, 1895, and commenced railway work during school holidays in 1911 with an extra gang, and has been, from Feb. 1913 to March 1914, clerk, local freight office, Canadian Northern Ry., Trenton, Ont.; March 1914 to May 1915, same position, Port Hope, Ont.; May to August 1915, clerk in Superintendent's office, Canadian National Rys., Trenton, Ont.; from Aug. 1915 to Feb. 1917, was lieutenant in the Canadian Expeditionary Forces;

William Walkden, who has been appointed Bridge Engineer, Western Region, Canadian National Rys., Winnipeg, was born at Alderley Edge, Cheshire, Eng., June 11, 1885, and was educated at the public school, Wilmslow, the Technical School, Stockport, and School of Technology, Manchester, Eng. From 1902 to 1906, he served an apprenticeship with P. Pierce and Sons, architects, surveyors and engineers, Stockport, and remained with them as assistant until 1907. He entered Canadian railway service in Nov. 1907, since when he has been, to July 1909, draftsman, Chief Engineer's office; July 1909 to May 1912, draftsman and designer, bridge department; May 1912 to Feb. 1917, chief draftsman and assistant to bridge engineer; Feb. 1917 to April 1919, acting bridge engineer; April 1919 to Aug. 1920, bridge engineer, all with Canadian Northern Ry., latterly Canadian National Rys.; Aug. 1920 to July 1923, Assistant Bridge Engineer, Canadian National Rys., including Grand Trunk Pacific Ry., all at Winnipeg. He has qualified by examination as professional associate of the Surveyors Institute of England, and is a member of the American Railway Engineering Association, and of the Association of Professional Engineers of Manitoba, and associate member of the Engineering Institute of Canada.

Charles Marshall Walton, who has been appointed Superintendent, Montreal Terminals, Montreal District, Central Region, Canadian National Rys., Montreal, was born there, Jan. 24, 1884, and entered G.T.R. service Jan. 1, 1900 as assistant clerk, Stationery Department; Jan. 1 to May 3, 1900, clerk to Superintendent; May 3, 1900 to March 11, 1901,

clerk; March 11, 1901 to Oct. 25, 1905, clerk to Superintendent of Transportation; Oct. 25, 1905 to Oct. 20, 1906, out of service; Oct. 20, 1906 to Aug. 6, 1907, timekeeper, Transportation Department; Aug. 6, 1907 to May 1, 1911, clerk, Transportation Department; May 1 to Jan. 21, 1913, car distributor; Jan. 21, 1913 to Nov. 1, 1915, chief clerk, Transportation Department, all at Montreal; Nov. 1, 1915 to Nov. 18, 1917, Assistant Trainmaster, Island Pond, Vt.; Nov. 18, 1917 to Dec. 1, 1918, chief clerk to General Superintendent of Transportation, Montreal; Dec. 1, 1918 to Feb. 1, 1920, chief clerk to General Superintendent of Car Service, Montreal; Feb. 1, 1920 to July 19, 1921, Terminal Inspector, Transportation Department, Montreal; July 19, 1921 to Jan. 16, 1922, acting Superintendent of Terminals, Transportation Department, Montreal; Jan. 16, 1922 to June 1, 1923, Superintendent of Transportation, Eastern Lines, G.T.R., Montreal; June 1 to Aug. 1, 1923, Superintendent of Transportation, Montreal District, Central Region, Canadian National Rys., Montreal.

D. A. Wanklyn, son of F. L. Wanklyn, General Executive Assistant, C.P.R., Montreal, was married at Murray Bay, Que., recently to Miss Hazel Kennedy.

Howard H. Ward, who has been appointed Deputy Minister of Labor, Ottawa, Ont., was born at Arkona, Ont., Dec. 17, 1884. He entered railway service with the Grand Trunk Ry. May 4, 1903, since when he has been, to July 31, 1903, junior clerk, and stenographer, Superintendent's office, Stratford, Ont.; Aug. 1 to Nov. 30, 1903, clerk and stenographer to agent, Brantford, Ont.; Dec. 1, 1903 to March 20, 1905, stenographer, March 21, 1905 to Feb. 21, 1907, secretary; Feb. 22, 1907 to Jan. 31, 1911, chief clerk, Superintendent's office, Stratford, Ont.; Feb. 1, 1911 to Dec. 31, 1912, chief clerk, and from Jan. 1, 1913 to Aug. 31, 1923, chief clerk and assistant, Operating Department, Board of Railway Commissioners, Ottawa, Ont.

Richard Wright, who has been appointed Passenger Trainmaster, Southwestern Ontario District, Central Region, Canadian National Rys., Toronto, was born at London, Ont., March 15, 1885, and entered railway service, Nov. 21, 1902, since when he has been, to Oct. 1, 1909, in various positions in the Freight Department, G.T.R., London, Ont.; Oct. 1, 1909, to Feb. 1, 1913, chief clerk and accountant, G.T.R., London, Ont.; Feb. 1, 1913, to Feb. 1, 1916, General Agent, G.T.R., Brantford, Ont.; Feb. 1, 1916, to Aug. 1, 1923, Division Agent, Transportation Department, G.T.R., latterly Canadian National Rys., Toronto.

The C.P.R. and Greater Winnipeg Water District.—The C.P.R. is reported to have paid the City of Winnipeg recently \$100,000, the balance of the \$200,000 promised towards the installation of a water supply from Shoal Lake. The offer was made by Lord Shaughnessy, then President, in 1906, following which the Greater Winnipeg Water District was formed, and the Shoal Lake project entered upon.

Manitoba Sunday Trains.—The Winnipeg Presbytery is reported to have passed a resolution approving of the Lord's Day Alliance's action in appealing to the Imperial Pricy Council against the recent decision of a Manitoba court declaring the Manitoba Legislature's act authorizing the operation of trains on Sundays to be valid.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Board of Railway Commissioners.—An Ottawa press dispatch of Sept. 13, said that Hon. Frank Oliver, President and principal owner of the Bulletin Publishing Co., Edmonton, Alta., and a former Minister of the Interior, had been appointed a member of the Board of Railway Commissioners, to succeed the late J. G. Rutherford, but that he would not assume his duties for some time, pending the adjustment of private business matters. On Sept. 15, the Prime Minister's secretary advised Canadian Railway and Marine World that the announcement in the dispatch was unauthorized, and that Mr. Oliver had not been appointed up to that date. Another Ottawa press dispatch of Sept. 24, stated that Mr. Oliver had been appointed, and would assume his duties almost immediately.

Canadian National Rys.—W. E. G. BISHOP, heretofore District Freight and Passenger Agent, Cochrane, Ont., has been appointed Division Freight Agent, North Bay, Ont., vice W. M. Hood appointed General Agent, Windsor, Ont. The position at Cochrane has been abolished.

P. N. STEWART, heretofore Night Yardmaster, has been appointed Day Yardmaster, Medicine Hat, Alta., vice J. D. Callahan.

Newfoundland Government Ry.—Hon. W. W. Halfyard, Colonial Secretary, issued the following circular on Aug. 29: "As under the provisions of an act passed during the present session of the Legislature, the Newfoundland Government has acquired the railway, steamers, dry dock and express business of the Reid Newfoundland Co., notice is hereby given that the same shall be operated until

further notice under the name of the Newfoundland Government Railway, and the management of H. J. Russell, General Manager." Mr. Russell had previously been acting as General Manager, since R. C. Morgan, Superintendent, Winnipeg Terminals Division, C.P.R., who occupied that position temporarily, relinquished it and returned to Winnipeg. While Mr. Morgan was General Manager, Mr. Russell was Assistant to General Manager, as well as Superintendent, Eastern Division.

Canadian Railway and Marine World for September mentioned a press report stating that a commission to manage the railway had been appointed, consisting of the Colonial Secretary, the Auditor General and the Government Engineer. We have since been advised that the commission consists of Hon. W. W. Halfyard, Colonial Secretary; Hon. Geo. Shea, member of the executive council; and Tasker Cook, Mayor of St. John's. The commission's work is said to be to keep in touch with the management of the railway, etc., but to leave the operating entirely to the General Manager.

The General Manager has announced the following appointments:—

JOHN BAXTER, heretofore Assistant to General Passenger and Ticket Agent, to be Claims Agent, vice M. A. White, heretofore Claims Agent and Trainmaster, appointed Superintendent, Eastern Division.

P. J. CLEARY appointed Assistant to Comptroller, vice C. U. Henderson.

P. M. DUFF appointed Treasurer, vice C. O'Neill Conroy, heretofore General Counsel and Treasurer.

W. F. JOYCE, heretofore Resident Engineer, appointed Chief Engineer, Maintenance of Way.

W. J. KENT, appointed Purchasing Agent, vice H. Crawford.

W. J. MORRISSEY appointed Paymaster.

J. V. RYAN appointed chief clerk to General Manager.

J. A. TITFORD, heretofore Travelling Auditor, appointed Assistant to General Passenger and Ticket Agent, vice John Baxter, appointed Claims Agent.

E. D. WATSON, heretofore Assistant Treasurer, appointed Comptroller, vice H. McNiel.

M. A. WHITE, heretofore Claims Agent and Trainmaster, Eastern Division, appointed Superintendent, Eastern Division, vice H. J. Russell, appointed General Manager.

Railway Accidents Throughout Canada.

—The number of railway accidents throughout Canada, reported to the Board of Railway Commissioners during August, was 335, in which, 4 passengers, 17 employees and 17 others were killed, and 123 passengers, 229 employees and 418 others were injured. Included in "others" are 7 persons killed and 38 injured in 33 highway crossing accidents, in which the crossings were protected in 7 cases by bells, gates or watchmen. Automobiles, motor trucks and motor cycles were concerned in 24 of these accidents, other vehicles in 4, pedestrians in 4, and a steam roller in one.

Railways and Forest Fires.—C. Levitt, Chief of Fire Inspection, Board of Railway Commissioners, is reported to have stated at Winnipeg, Sept. 12, that the amount of damage to forests by fires starting from railways is now very small, owing to the safeguards adopted. The railways, he added, are entitled to a great deal of credit for the way in which they have handled fire protection.

The Canadian Pacific Railway's Peace River and Western Plans.

Considerable speculation was aroused in Alberta and British Columbia by a Winnipeg press dispatch of Aug. 21 stating that the C.P.R. had renewed its agreement with the Alberta Government for the operation of the Edmonton, Dunvegan and British Columbia Ry., and the Central Canada Ry., for 10 years, and had virtually completed negotiations with the British Columbia Government for taking over the Pacific Great Eastern Ry., under an operating lease. The C.P.R. did enter into an agreement with the Alberta Government to operate extensions now under construction of the two lines mentioned, under the existing operating agreement, but the agreement was not extended for 10 years. Following details of the reports in regard to the Pacific Great Eastern Ry. by the Premier and Minister of Railways for British Columbia, and by E. W. Beatty, President, C.P.R., we were officially advised, Sept. 12, that the B. C. Railways Department had no knowledge of any negotiations, such as suggested, taking place.

In connection with the general investigation into the country between Peace River and the Pacific coast being undertaken by the C.P.R., one survey party is reported to have returned to Winnipeg, and another is reported to be still out. Two routes are said to be under investigation, from west of the Spirit River, to the Portland Canal, south of Prince Rupert. This would appear to indicate that in addition to the suggested linking up of the Edmonton, Dunvegan and British Columbia Ry. with the Pacific Great Eastern Ry., so as to give a through route from the Peace River district to Vancouver, the C.P.R. is investigating the possibility of extending the Central Canada Ry., which crosses the Peace River, at a station of that name, and runs to Berwin, from which point a 13 mile extension westerly is under construction, through to the Pacific coast near Prince Rupert. Such a line would be carried through the Rocky Mountains probably by the Pine River Pass, or one of the other passes surveyed by Canadian Northern Ry. engineers, while investigating possible routes prior to 1905, and in many respects would follow a route surveyed by Dominion Government engineers for the C.P.R., before the adoption of Burrard Inlet as the coast terminus. What the result of these investigations may be, is a matter for the future, and at present is only the merest speculation.

Canadian Contractors' Equipment for Gold Coast.—A large quantity of contractors' equipment, consisting of locomotives, steam shovels, etc., owned by Foley, Welch & Stewart, and used by them on construction work in British Columbia, is being shipped from Vancouver to the Gold Coast Colony, West Africa, where Major General J. W. Stewart, C.B., and Colonel Hon. Angus McDonnell, C.B., C.M.G., are consulting constructional engineers for large harbor development and railway construction work for the Crown Agents for the Colonies.

The Swedish State Rys. management is said to have announced, after a long series of tests, that a fuel saving of 10% can be effected by the use of roller bearings for railway cars.

Algoma Central and Hudson Bay Railway Operations, Etc.

The Lake Superior Corporation's report for the year ended June 30, contains the following references to two of its subsidiaries:—

Algoma Central & Hudson Bay Ry.—The year's operations of the railway company and Algoma Central Terminals resulted in net earnings, before bond interest, of \$37,998.04, against net loss for last fiscal year, before bond interest, of \$95,403.48.

Algoma Eastern Ry.—As predicted in the last report, the International Nickel Co. of Canada resumed mining and smelting operations in Sept., 1922, but the tonnage to begin with was not very great. The present output of about 100,000 tons a month was not reached until March, 1923. This traffic, together with the betterment in business conditions generally, enabled the railway company to reduce a net loss of \$213,716.74 in 1922 to a loss of \$43,523.12 in 1923. Now that the nickel companies are working to capacity, the company's prospects for the fiscal year 1924 are much improved. The line is being adequately maintained.

During the year an agreement was entered into for the sale of 543,738 acres of Algoma Eastern land grant lands for \$1,300,000, a price which your directors consider extremely satisfactory. Of the acreage mentioned 182,291 acres were owned by Lake Superior Corporation, being bought by the Corporation some years ago. The price is payable over a period of years, the last instalment being due on Sept. 24, 1926. When the price is fully paid the Corporation will realize a profit of about \$198,417.

Importance of Using Street Addresses.

In order to secure prompt and correct delivery of letters, etc., it is most important that all letters should bear the street address, and not the names of buildings or street intersections, and the U. S. National Advertising Commission's Postal Committee has urged that all advertisements should contain the street address of the advertiser, which should also appear on letterheads and other printed matter. It is claimed that 50% of advertisements in newspapers omit the street address, and that letters in response to such advertisements which do not give street addresses, must have directory service in the post office, thereby delaying delivery from 8 to 24 hours. The U. S. Postmaster General claims that the directory service in post offices, due to insufficient addresses, involves a loss of about \$1,800,800 annually, and no doubt there is a similarly proportionate loss in Canada. It is stated that unless the burden can be lightened by public co-operation, the U. S. Postmaster General will ask Congress to impose a penalty of 1c on each piece of mail matter requiring directory service. He estimates that over 200,000,000 pieces were given directory service at U. S. post offices during the past fiscal year.

The American Railway Freight Claims Agents' Association opened its annual meeting in Vancouver, B.C., Sept. 14. E. Arnold, General Freight Claims Agent, Canadian National Rys., Montreal, is a member of its general committee.

The C.P.R. Co. has subscribed for \$2,000 of the Dominion Government's refunding loan 1923 5% bonds.

Canadian National Railways Construction, Betterments, Etc.

St. Peters Subdivision Diversion.—This subdivision of the Atlantic Region, on Cape Breton Island, N.S., formerly the Cape Breton Ry., which extends from Point Tupper to St. Peters, 31 miles, is being improved by the construction of a diversion, 2,712 ft. long, starting from the Sydney Subdivision at mile 3.70 from Point Tupper, and connecting with the St. Peters Subdivision at mile 5.65 from Point Tupper. The diversion is nearly all tangent, being connected with the Sydney Subdivision by a 3 degree curve, and coming off tangent for a 6 degree curve on the St. Peters Subdivision. The gradient is $1\frac{1}{2}\%$ to within 600 ft. of the Sydney Subdivision. There are only 2 small pipe culverts on the diversion. The track will be laid with 80 lb. rails, released from the main line. The work is being done by the railways' own forces, under direction of G. W. H. Perley, Division Engineer, New Glasgow Division, Atlantic Region. At the date of our advice, Sept. 10, it was expected to have the grading completed by Sept. 30, and the ballasting early in October. As soon as the diversion is ready for operation, the 5.65 miles of track on the St. Peters Subdivision, to be abandoned, will be taken up.

Halifax & Southwestern Ry. Bridges.—Following are particulars of the 5 bridges which are being rebuilt: Puddle River, mile 27.4, Chester Subdivision, of frame trestle, 256 ft. long, and 33 ft. high, over a tidal inlet, built in 1906 and now at end of its life, being replaced by a second hand 106 ft. deck truss span on reinforced concrete abutments, the remainder of the opening being filled in. Mush-a-Mush River, mile 65.9, Chester Subdivision, a frame trestle 532 ft. long and 51 ft. high, built in 1906 and now at end of its life, being replaced by a 106 ft. deck truss span, one 65 ft. and one 81 ft. deck plate girder spans, all second hand, on reinforced concrete piers and abutments, the remainder of the opening being filled. Annapolis River, mile 52.5, Middleton Subdivision, a 135 ft. through truss span on masonry abutments, old span built in 1888, now too light for traffic and abutments disintegrating, being replaced by a 135 ft. through truss span on the old abutments rebuilt above ground with concrete. Riversdale River, mile 9.6, Middleton Subdivision, and Shannon River, mile 83.6, each $83\frac{1}{2}$ ft. through truss span on masonry abutments, built in 1888 and too light for present traffic, being replaced by through plate girder spans on existing masonry abutments. The authorization for the reconstruction of the last two of these bridges was given by the Board of Railway Commissioners about three years ago. A contract has been given the Dominion Bridge Co. for the superstructures of the Annapolis River, Riversdale River and Shannon River bridges. All the substructure work and filling will be done by the railways' forces. (Sept., pg. 433.)

Hardwood Ridge to Minto.—A. S. Gunn is Assistant Engineer in charge of the construction of the 4.88 mile spur line being built from Hardwood Ridge, mile 58.84, Chester Subdivision, Atlantic Region, to Minto coal mines. (Sept., pg. 433.)

Quebec Station, Etc.—A meeting of the C.N.R. directors was reported on Sept. 7 to have been fixed to be held in Quebec, Sept. 24, at which it was stated

matters connected with the erection of a station and the extension of terminal facilities in the city would be considered. The report further stated that the present facilities are inadequate for the increasing passenger and freight business, and that plans were under consideration for the replacement of the present temporary station in Parent Square, with a new, permanent structure, and for the enlargement of the general terminal facilities. We were advised early in September that the management had no definite plans under consideration for the construction of a new station. The C.N.R. have an agreement with the C.P.R. for joint station facilities at Quebec, and that it appeared to be most unlikely that new separate facilities would be considered.

Donnacona Cutoff.—Tenders were received to Sept. 15, for building a cutoff between Donnacona, Grand Mere Subdivision and mile 16, La Tuque Subdivision, Quebec District, Central Region. Donnacona is at mile 32 from Quebec on a line built by the Canadian Northern Ry. and connecting with the old Quebec & St. John Ry. at Grand Mere; and mile 16, La Tuque Subdivision, is near St. Augustine, on the National Transcontinental Ry. The two lines run comparatively close together from Quebec, and near Donnacona are only about 2 miles apart. The old Canadian Northern line is reported to be subject to landslides, and to cost a good deal to keep open in winter, owing to snow. The reason for building the cutoff is to do away with the necessity of maintaining two lines serving practically the same area, and by diverting the traffic to the National Transcontinental Ry., to make use of the better of the two lines. The diversion will start about half a mile east of Donnacona, mile 30.92, Grand Mere Subdivision, and run to about a mile east of Domburg, mile 15.88, La Tuque Subdivision, and will be 6.30 miles long. The gradients will be 1% uncompensated, with a short stretch of 1.3% momentum; with a minimum of 2 degrees, and a maximum of 4 degrees of curvature. The structures will consist of four concrete box culverts and one overhead crossing of the Montreal highway. The contractor will be required to complete all the work necessary for a single track railway, except tracklaying, ballasting, train fill and buildings, which will be done by the railways' own forces. The construction of the diversion will permit the abandonment and save the maintaining of about 19 miles of track.

Victoria Jubilee Bridge.—Repairs to the highway section of this bridge across the St. Lawrence River, at Montreal, were started Aug. 23, and were expected to be completed by the end of September. Some improvements have been made at the approaches on the Montreal side, to permit the speeding up of vehicular and automobile traffic; the roadway has been resurfaced, and the lighting arrangements have been improved.

Napanee Signals.—Order 34,032, passed by the Board of Railway Commissioners Aug. 14, was summarized in Canadian Railway and Marine World for September as "Approving plan showing proposed lay-out of Canadian National Rys. station at Napanee, Ont." It should have read "Approving Canadian National Rys. plan dated April 21, 1923, showing pro-

posed lay-out of automatic signals at Napanee, replacing proposed interlocking system shown on plan dated Oct. 6, 1921, and approved by order 32,315, March 31, 1922."

Hamilton Improvements.—Following representations by Hamilton, Ont., business man, the C.N.R. Legal Department advised the Board of Railway Commissioners, Sept. 6, that it was willing to let the application for approval of plans for a new station at King St. and Ferguson Ave., remain in abeyance. The Hamilton City Council's railway committee is opposed to the erection of the station at that point, and favors the doing away of the line on Ferguson Ave., and the erection of a station at another point as a part of a general improvement plan, which is being discussed. (Sept., pg. 434.)

Brant County Subway.—Some years ago the Brant, Ont., County Council applied to the Board of Railway Commissioners for an order to compel the G.T.R. to rebuild "on a proper location and of proper dimensions" the subway carrying the Harrisburg branch line over the St. Georges Road, 5 miles north of Brantford. Judgment now has been given, the railway to reconstruct the subway on a line with the highway, and not on a slant, as at present, the width to be 20 ft., and the height to be 14 ft. The county is directed to pay 25% of the extra cost incurred by the change.

London Track Elevation, Etc.—The question of track elevation, etc., in London, Ont., was discussed recently by C. G. Bowker, General Manager, and Major F. L. C. Bond, Chief Engineer, Central Region, with the city council's special committee. The railway representatives are reported to have submitted an estimate of \$8,501,000 as the cost of track elevation. The committee reported subsequently that it had decided to ask the C.P.R. to supply information as to its attitude toward a union station project. The opinion of members of the council appears to be that track elevation is a question for the future, but that an improvement in the situation could be effected by building subways at two or three points.

Huron and Bruce Line.—The relaying of the section of the old Huron and Bruce Ry., between Denfield and Centralia, Ont., with 100 lb. rails, is reported to be in progress, and to be expected to be completed at an early date. This branch leaves the main line at Hyde Park Jct., 4 miles from London, and runs to Wingham, 70 miles. The track has been relaid with 100 lb. rails to Denfield, and the work in progress will take the heavier rail to mile 22 from Hyde Park Jct.

Longlac-Nakina Cutoff.—A press report of Sept. 6, stated that 2 miles of track had been laid from Nakina, Ont., on the cutoff under construction, to Longlac. This line is being built to shorten the distance between eastern points and Winnipeg, by connecting the National Transcontinental Ry. and the Canadian Northern Ontario Ry. It is expected to be completed early in October.

Neebing Terminal Yard.—A press report states that the new terminal yard in Neebing Tp., just outside West Fort William, Ont., was opened for service, Sept. 16. A full description, with plan, was given in Canadian Railway and Marine World for July, pg. 322.

Beaudette Station.—We are officially advised that a contract has been given J. McDermott & Co., Winnipeg, to erect a station building at Beaudette, Minn.

Manitoba and Saskatchewan Fencing.—We are officially advised that a contract has been given A. L. Campbell, Brandon, Man., for the erection of approximately 70 miles of fencing on lines in Manitoba and Saskatchewan.

Saskatchewan District Pipe Lines.—We are officially advised that a contract has been given R. J. McCray, Saskatoon, Sask., for the construction of a pipe line at Clarkboro, mile 484.8, Langham Subdivision, and that the water supply at Flaxcombe, mile 143, Oyen Subdivision, will be built up by the railways' forces.

Avonlea-Gravelbourg Extension.—We are officially advised, in connection with the press report mentioned in our last issue, that a further 14 miles of track was to be laid on this extension towards Swift Current, Sask., that there is no authority to lay track on this or any other branch in the west this year, the construction bill having been rejected by the Senate. (Sept., pg. 434.)

Alberta District Culverts.—We are officially advised that a contract has been given Jamieson Construction Co., Edmonton, Alta., for building culverts on the Smithers Division, Alberta District.

Edmonton Station Restaurant.—A press report states that foundations have been excavated and that material is on the ground, for the erection of a restaurant at the union station, 101st St., Edmonton, Alta.

Brazee Subdivision Bridge.—We are officially advised, in reference to bridge 59.2, that the existing bridge is an 80 ft. deck Howe truss timber span on framed timber piers, with trestle approaches 161 ft. and 443 ft. long, the greatest height of the structure being 98 ft. It was first built in 1911 as a standard frame trestle 1,560 ft. long, and the truss span was inserted in 1916, since when filling operations have reduced the length of the approaches to the figures mentioned above. This new bridge will consist of two 162 deck truss steel spans from a dismantled bridge over the McLeod River, on an abandoned line west of Edmonton, to be erected on concrete piers 70 ft. high with rebuilt trestle approaches of 120 ft. and 105 ft., respectively, the balance of the trestle to be filled.

Brule-Grande Prairie Surveys.—The surveys for a route for a line to serve the Grande Prairie country in northern Alberta, are being made by three parties, viz.: a location party under A. J. Still, Locating Engineer, working from Grande Prairie, southerly towards Brule; another location party in charge of A. J. Gayfer, started at Rock Lake, on the Hay River, to work northerly towards Grande Prairie, following the Sulphur and Muskeg Rivers; and a reconnaissance party under E. M. M. Hill. The latter party made a reconnaissance from Brule to Grande Prairie, via Simoneth River, and at the time of our advice, Sept. 11, had started on its return from Grande Prairie, working by way of Smoky River. The approximate distance between Brule and Grande Prairie is 210 miles, and whether the route to be adopted will follow the Smoky River or the Simoneth River has not been determined. The tapping of the large bituminous coal areas on the Hay River, and anthracite on the Muskeg River and Sheep Creek, will be kept in view in finally deciding the location between Brule and Grande Prairie. (Sept., pg. 424.)

Vancouver Station Grounds.—We were advised at the end of August in connection with the improvements being made in front of the station at Vancouver, B. C., which were described in Canadian Railway and Marine World for Aug., pg. 578, that the earth fill had been levelled and made ready for seeding, and the walks had been completed. The putting in of a sewer across the railway property was 60% completed, and a commencement had been made on the roadway approach from Main St.

Southern New England Ry.—A Providence, R.I., press dispatch of Sept. 6, stated that several gangs of men were at work upon the right of way of this partially built line, between Palmer, Mass., and Providence, work on which had been suspended for several years. The roadbed in Massachusetts is stated to be 85% completed, and that in Rhode Island about 45% completed. The laying of some rails, and the building of bridges and stations is the main work to be done in Massachusetts, and the largest single piece of construction to be done in Rhode Island is the boring of a tunnel under Smith Hill. It is said that the work will be completed in two years.

Marine Department Items.

The Canada Steamship Lines s.s. Manoa caught fire in St. John's, Nfld. harbor on Sept. 24, just prior to sailing for Charlottetown and Montreal. A press report says that the flames first appeared in the quartermaster's department, and for a time threatened to destroy the whole of the upper works.

The Dominion Government s.s. Arctic was reported on Sept. 25, as nearing Belle Isle, and as being expected to reach Quebec about Oct. 1. As stated in Canadian Railway and Marine World for August, she left Quebec on July 9, in command of Capt. J. A. Bernier, for the Arctic regions.

British Columbia Marine Matters.—Hon. E. Lapointe, Minister; Alex. Johnstone, Deputy Minister; and B. H. Fraser, Chief Engineers, Marine and Fisheries Department, left Ottawa at the end of September, for British Columbia, to deal with a number of matters affecting marine and fishery interests. It is stated that the Deputy Minister and the Chief Engineer will make a thorough tour of inspection of the B.C. coast and look into life saving stations, lights, etc.

St. John Dry Dock and Sphibuilding Co., St. John, N.B., advised us, Sept. 27, in regard to its harbor contract at Courtenay Bay, that the breakwater was completed, also the basin dredging, and that the channel dredging was about 80% completed, leaving about 400,000 yards of material still to be dredged. The dry dock and pumping station was practically finished, and will be officially opened Oct. 29, after which the company will be prepared to handle all kinds of ship repair work.

Pacific Salvage Co., Victoria, B.C. had several important salvage operations during the summer. The s.s. Rainier, which had been in collision with the s.s. Mandasan Maru, in Juan de Fuca Strait, was towed into Esquimalt harbor by the salvage ship Algerine, on July 28, patched, pumped and conveyed to Seattle, Wash. The Furness Withy s.s. Siberian Prince, which went ashore on Bentinck Island, on July 29, and received great bottom damage, was floated on Aug. 13, after discharging several thousand tons of cargo.

United States Shipping Board Ships.—A United States Shipping Board statement, as of Sept. 8, shows that the Board owns 1334 ships, the total value of which is \$226,733,315. Of these, 416 are in operation or ready for spot delivery, with 882 laid up, exclusive of 36 tugs, laid up and in operation. The value of the ships in operation or ready for spot delivery is \$137,311,940; the value of the laid up ships is \$87,906,375; the value of the tugs is \$1,515,000. The total value of the fleet as of July 1, was \$227,732,615. Since July 1 the Board has sold 6 ships for \$999,300.

Lake Shippers' Clearance Association held its annual meeting at Winnipeg, Sept. 24, when it was reported to be in a very favorable financial position, with approximately \$350,000 at credit of reserve account. Last year it loaded 306,500,000 bush. of grain at Fort William, which was 70,000,000 in excess of that handled during 1921, and approximately one quarter more than handled by Chicago, Duluth and Superior combined. The directors, who were re-elected, are as follows:—Capel Tilt, President; H. T. Swart Vice President; F. J. Anderson, C. C. Field and R. M. Wolvin, A. K. Godfrey is Treasurer and S. T. Smith, Secretary.

The Robert Dollar Steamship Co., San Francisco, Cal., is reported to have bought the steamships President Garfield, President Monroe, President Adams, President VanBuren, President Polk, President Hayes and President Harrison, from the U. S. Shipping Board. The first 5 of these are in operation by the Board between New York and London, and will not be transferred to the new owner until the close of the tourist season. The two last named ships are running between the east and west coasts of South America. It is stated that all the ships will be operated on a round-the-world service, under a guarantee, for five years.

The Canadian National Rys. directors met at the Quebec Harbor Commission's Building in Quebec, Que., Sept. 24, Sir Henry Thornton presiding. Among the directors from a distance who attended were F. G. Dawson, Prince Rupert, B.C.; and J. H. Sinclair, New Glasgow, N.S. The directors were entertained at luncheon at the Garrison Club, by Premier Taschereau, and at dinner by the Quebec Board of Trade.

Michigan Central Rd. Agent Sentenced.—John Kent, relieving agent, Michigan Central Rd. station, Niagara Falls, Ont., was, on Sept. 12, sentenced to two years imprisonment, after pleading guilty to breaking into the company's station there, and stealing from the safe \$159 in cash and about \$8,000 in cheques. He had been in the company's employ for about 8 years.

Prince Edward Island's Wants.—The Associated Boards of Trade, meeting at Montague, P.E.I., Sept. 3, passed a resolution urging the Island Government to make an annual grant towards the expense of a permanent secretary for the Maritime Board of Trade, who would also act as traffic expert; and another one urging that P.E.I. be represented on the Canadian National Rys. directorate.

Beatty Baseball Cup.—E. W. Beatty, President, C.P.R., presented a cup, recently, for competition among teams forming the C.P.R. Recreation Club's baseball section in Montreal. It was won by the dining car operating team, and was presented at the club's first annual dinner, Sept. 15.

Canadian Railway AND Marine World

Founded in 1896 by Acton Burrows.

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transportation
Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

AUBREY ACTON BURROWS, Business Manager.

Assistant Editors, John Keir, Donald F. Keir and
Edwin Winfield.

United States Business Representative,

A. Fenton Walker, 143 Liberty St., New York.

Member of

Associated Business Papers, Audit Bureau of Cir-
culation, Business Newspapers Association of
Canada, Canadian National Newspapers and
Periodicals Association, Canadian Press Associa-
tion.

Authorized by the Canadian Postmaster General
for transmission as second class matter.

SUBSCRIPTION PRICE, including postage,
Canada, United Kingdom, most other British Pos-
session, (except Australia), and to Mexico, \$2 a
year. Extra postage to United States, 50c a year;
to other foreign countries, except Mexico, \$1.50
a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or
post office money order. If remittance is made
by cheque, 15 cents should be added to cover cost
of collection, unless cheque is payable at par in
Toronto or Montreal.

ADVERTISING RATES furnished on application.

ADVERTISING COPY must reach the publishers
by the 10th of the month preceding the date of
the issue in which it is to appear.

TORONTO, CANADA. OCTOBER, 1923.

National Exhibition.....	466

The Inland Water Freight Rates Act's Injurious Effects.

The Marine Department of this issue contains, on pgs. 503 and 504, full particulars of the manner in which the Inland Water Freight Rates Act, 1923, continues—despite the Dominion Government's attempt to get the U.S. ship owners, who have refused to file tariffs, to violate the law by filing details of individual rate agreements made, after entering into contracts for carriage, instead of filing tariffs prior to entering into such contracts, as the law specifies—to threaten a grain blockade of unprecedented proportions, and great loss to not only the Canadian grain trade, from the farmers on, but to the country at large. The Government's attempt to get U.S. ship owners to conspire with it in evading the law was plainly shown in the communication sent by the Board of Grain Commissioners to U.S. ship owners at Cleveland, on Sept. 11, which said in part: "The Inland Water Freight Rates Act, 1923, sec. 3, provides that any shipping company or any ship owner or person . . . who . . . carries grain . . . between Fort William or Port Arthur and any other port or place in Canada or the U.S. by lake or river navigation shall, before entering into any contract for such carriage, file with the Board of Grain Commissioners for Canada a tariff of the rates which such company proposes to charge. . . . In connection with this provision you are hereby advised that after going thoroughly into the matter in the light of present trading conditions, the Board realizes it is not always possible for a shipping company to file a copy of the tariff before entering into a contract for the carriage of grain. All shipping companies will, however, be required to file tariff or copy of the charter covering the cargo of each individual vessel, unless a tariff has already been filed covering the vessels of any particular company for the season or portion thereof."

We do not suppose that the Board of Grain Commissioners would, on its own authority, authorize this proposed evasion of the law, and the only conclusion to be logically arrived at is that the Government, having finally awakened to the fact that it made a mistake in trying to apply rate regulations to the purely competitive business of carrying grain on the Great Lakes, rather than admit it and say frankly that penalties would not be imposed for disregard of the law, resorted to transparent camouflage and adopted this undesirable method of trying to nullify the act's consequences.

We are strongly of the opinion that in doing this the Government committed a serious error. It certainly bungled badly in the first place by attempting, by getting the act passed, to regulate lake grain rates, to radically change the basis on which the business of lake transportation has been conducted since its very commencement, viz.: free and open competition and opportunity for the exercise of unrestricted individual initiative and enterprise. But, having seen what were to be the effects of its first mistake, it should not have committed the second one of trying to ward them off in the underhand manner which it has adopted, which is a mistake from its own viewpoint, because it is not going to help its political fortunes any, and a mistake from the country's viewpoint, because it had not had the effect the removing the existing uncertainties and threat of a

grain blockade. The mistake is the more evident because, with Mr. Robb's transfer from the Ministry of Trade and Commerce and Mr. Low's appointment in his place, the Government had a good opportunity to gracefully admit that its legislation was a mistake, and to cease the interference which has placed both the Government and the country in a most humiliating position, by reason of the visits to Cleveland, hat in hand, of the Chairman of the Board of Grain Commissioners, which put him in a most undesirable and embarrassing position, and has caused untold uncertainty and trouble in the grain trade at large and in western Canada generally.

It was probably supposed that permission to evade the law by filing merely a historical record of past transactions, instead of tariffs, would smooth the way for participation in the handling of the Canadian crop by U.S. ship owners, and, when it was seen that this was likely to attract only a few of the smaller ones, it was apparently believed that some other brand of camouflage, exemplified by the suggestion that the shippers file the tariffs instead of the ship owners, would bring in the remainder. But those in touch with the situation—who realize that the ship owners, from time immemorial, have been doing business with only the law of supply and demand, and full and free competition, as the basis, and with freedom from interfering and unnecessary regulatory legislation—thought otherwise, and it therefore is no surprise to them that the owners of only a very few U.S. boats will be party to the underhand procedure proposed.

And in the meantime, while the Government has been persisting in its attempts to have the law obeyed by evasion, the grain has begun to move, and is pouring into Fort William and Port Arthur in vast volume. The situation daily grows more threatening—how threatening it is is best told by a Winnipeg press dispatch of Sept. 20, which said: "There will be a serious grain blockade at Fort William and Port Arthur by the end of October, if the present situation regarding carrying grain across the great lakes continues, it was stated today by Robert Magill, Secretary of the Winnipeg Grain Exchange, in addressing the members of the Canadian Credit Men's Association at a luncheon meeting. He said the action of U.S. ship owners in refusing to carry Canadian grain across the lake had developed a very serious situation, and the outlook is becoming increasingly bad. There does not appear to be any solution of the difficulty in sight, and it is having a very bad effect on the price of wheat."

It is heard on all sides that the whole undesirable and serious situation is due to the Government's desire to curry political favor with western farmers. Canadian Railway and Marine World is not concerned with political matters, but it is concerned with the desirability of free, uninterrupted and efficient transportation by land and water route, and with the economic welfare of the country, and it most unhesitatingly endorses the demand that the Government stop its camouflaging and methods of petty evasion, that it frankly admit its attempts to regulate the grain traffic on the Great Lakes are a mistake, and that, basing its action upon the precedent established by itself last autumn when it told U.S. ship owners to disobey Canadian coastal laws

without fear of penalty, it now tell all concerned to disobey the freight rate regulation law, so that the impending blow to Canada's commerce and prosperity be not translated from a potentiality into a reality. And as for the future, we suggest without hesitation that the Government take no longer than until the opening of the next parliamentary session to realize that while regulation applied to railway rates is desirable, and has been demonstrated as such, because a railway is a quasi-monopolistic institution, regulation applied to inland water carriage is impractical, because a ship owner's business is not a monopoly, nor does it partake of the nature of one, and because the natural competition among ship owners, which has existed, and will continue to exist, has produced, and will continue to produce, a system of transportation service for the public than which there can be none cheaper nor more efficient.

Railway Employees' Attitude Toward Their Employers.

The President of the Canadian Brotherhood of Railroad Employees, A. R. Mosher, was reported to have stated at Ottawa, prior to the recent general meeting of the brotherhood at Calgary, that the question of public ownership of railways would be fully discussed at the meeting, and that railway "employees have a far different attitude when working for the public, and getting treatment which they recognize as reasonably just, than when working for the profit of investors." So as not to do Mr. Mosher any injustice, by commenting on an unverified press report, Canadian Railway and Marine World wrote, asking him if he had been correctly quoted, and he replied that he had been.

Mr. Mosher evidently wished to convey the impression that men employed by a publicly owned enterprise are more satisfied, more loyal, more enthusiastic and more likely to be in a continuing frame of mind suitable for putting forth their every effort for the success of the enterprise, than they would be if they were employed by an individual, or an association of individuals—a company. In Canadian Railway and Marine World's opinion, employees have just as much reason to be loyal and diligent when working for a privately owned enterprise as when working for a publicly owned one, and we believe that they are so. Mr. Mosher does not say: "The employees should have a far different attitude," thus conveying the inference that he thinks public employees should be more loyal and diligent, and we certainly would be sorry to think that any Canadian labor official should entertain any such idea.

We consider the obligation of a privately owned utility's employee to his employers to be exactly the same as that of a publicly owned one's employee. In both cases the obligation is a contractual one to others; in the case of the privately owned utility, to the people whose savings, or capital, have made the existence of the business possible, and in the case of the publicly owned one to the public at large, whose combined savings, or capital, or borrowings, have made the enterprise possible. Of course, it may be thought that there would be some incentive to employees working for publicly owned enterprises to be more diligent and loyal on account of thinking that they are, in a measure, working for themselves, and that the harder they

work, the better off they will be, while a man working for a privately owned concern might reason that he was working for private investors, and that the less he could do for them, and get away with it, the better it would be for him. Men who base their lives on that kind of reasoning never get very far.

If our inference from Mr. Mosher's statement that he thinks employees of public owned enterprises are more loyal and diligent than those of privately owned ones, is correct, he is undoubtedly wrong. Our opinion is that the employees of the Canadian Pacific Ry. and numerous other privately owned concerns are in every way as loyal and diligent as can be found in the employ of public owned enterprises anywhere, and they have every reason to be so. Mr. Mosher's advice to Canadian National Railways employees, members of the C. B. R. E., to strive for the enterprise's success and to earn their wages, is good advice, but his statement that employees of publicly owned enterprises are more loyal, sincere, enthusiastic and faithful than those of privately owned ones, and have reason to be so, was entirely uncalled for.

His statement about employees working for the public "getting treatment which they recognize as reasonably just" rather than when working for investors, is apparently a veiled attack on the Canadian Pacific and other privately owned railways. We say without hesitation that, particularly as far as the C.P.R. is concerned, it was absolutely uncalled for. That company's forty-two years' record shows that its employees have always been treated justly, and we are confident that no railway in the world has a more satisfied and loyal body of men in its employ.

Sir Adam Beck on the Rampage.

In speaking at the Canadian National Exhibition directors' luncheon, on Hydro and Press Day, in Toronto recently, Sir Adam Beck, M.L.A., Chairman, Hydro-Electric Power Commission of Ontario, and a member, without portfolio, of the Ontario Government, made an unprovoked and rabid attack on companies operating public owned utilities.

The Toronto Globe reported him as saying:—"Corporations will not keep their obligations. They will not follow the laws and statutes under which they have been constituted. They create monopolies and in the end do not give what the people expect, service."

The Toronto Mail and Empire reported him as follows: "Sir Adam Beck stated that privately owned public utility companies never obeyed the laws which permitted them to come into existence. Communities would draw up conditions, and, in return for having them accepted, would alienate important franchises, expecting that service would be their lot. The corporations, however, would never keep to their side of the agreements executed, and the communities were in consequence forced to take over their plants and to operate them with a view of securing public service and more favorable rates."

The reports quoted above are, of course, not verbatim ones. The present writer was among Sir Adam's hearers, and has no hesitation in saying that Sir Adam went much further than the daily papers credited him with doing, and practically charged all companies operating private utilities with being dishonest in their dealings with the public. Outside altogether of the bad taste of in-

roducing a highly controversial subject at what was a social function, and knowing, as he did, that no speaker was to follow him, and that no matter how reckless his statements were they would not be contradicted on the spot, Sir Adam's charges were not based on facts, and are incapable of substantiation. That there have been isolated cases where companies have been in the wrong in their dealings with the public is undoubtedly true, just as there have been cases where municipal and other public bodies have not treated companies fairly and honestly, but to brand public utility companies as a whole with dishonesty was an outrage.

Were Sir Adam still merely Chairman of the Hydro-Electric Power Commission of Ontario, such ravings might pass unnoticed, but now that he is a non-portfolio member of the Ontario Government it is a serious matter, and Canadian Railway and Marine World cannot believe that the Prime Minister, Mr. Ferguson, and other portfolio holding members of the Government share Sir Adam's jaundiced views. Were it otherwise, public utility companies, no matter how honestly managed, could not expect any fair play from the Government.

Twaddle About Passenger Rates.

The Toronto Mail and Empire said in a recent issue, "Can it be that the man who swam across Lake Erie did it for the purpose of calling attention to outrageous passenger rates?" That sort of editorial comment is not only silly, but does harm, by creating a false impression. Passenger rates are not outrageous in any sense of the word. If they were, the Board of Railway Commissioners would have been appealed to for a reduction—at least in the railway ones—long ere this.

General Electrification of Railways.

The Orillia, Ont., Packet said in a recent issue: "The half million dollar fire at Penetanguishene last week is supposed to have been started by a locomotive. Why not electrify the railways?" The answer is that general electrification of steam railways is not practical economically, but only where there may be great density of traffic.

Alberta Domestic Coal Transportation.

Canadian Railway and Marine World has given in preceding issues and elsewhere in this issue particulars of the efforts made by Alberta coal producers, and Ontario coal consumers, to have the railways, particularly the Canadian National, carry Alberta domestic coal to Ontario at much less than cost.

D. Crombie, Chief of Transportation, and E. P. Mallory, Director, Bureau of Statistics, Canadian National Rys., stated to the Senate committee enquiring into the fuel situation last season, that it would cost the C.N.R. \$8.91 a ton to carry Alberta coal to Toronto in train-load lots. W. B. Lanigan, General Freight Traffic Manager, C.P.R., stated to the committee that it would cost the C.P.R. \$9.94 a ton to carry the coal in ordinary carload shipments.

We presume that the reason the two principal railways do not wish to meet the numerous demands for a \$6 or \$7 rate is that their managements, after having given due consideration to the possibilities of increased traffic in other

directions, due to increase in the western coal mining industry, consider that the transportation movement involved would be a money losing one for their roads, and an uneconomic one for the country.

The Canadian National Rys. should not be expected to carry goods at less than cost any more than should the C.P.R. While the Canadian National Rys. are government owned, they should be regarded as being in every way a strictly commercial undertaking. The only way they can be made successful financially is by regarding and treating them as a purely commercial undertaking; they will never be successful financially if they are used to furnish less-than-cost transportation to any interests that desire it.

Canadian National Railways' Deposit in Home Bank.

The Detroit, Mich., Free Press of Sept. 22, published the following Ottawa dispatch: "People are anxiously awaiting the Curator's report on the Home Bank. In the meantime there are alarming rumors that Canadian National Rys. money was deposited in that bank just previous to the monthly statement to the Government and withdrawn a few days after the first of the succeeding month. The amount mentioned is \$1,000,000, which would be quite an assistance to a small bank like the Home in producing a passable statement for the Finance Department. If this is true, and responsible men declare it to be, then there will have to be a definite explanation from the Canadian National management. R. P. Gough, Toronto, is Vice President of the Home Bank, and also a director of the Canadian National Rys. Why a deposit, and of such magnitude, should have been made by the Government railways in the Home Bank is a mystery, as that institution had no Canadian National Rys. account, nor was it supposed to be financially associated in any way. Each bank makes a statement to the Government about the 22nd of each month of its loans, deposits, etc., on the last day of the preceding month. It is by this statement that the Finance Department judges of its prosperity and solvency. If it is found (and apparently there is some foundation for the persistent rumor) that the Government railways made this remarkable deposit at the time mentioned, only to withdraw it after the statement had gone forth, then there is trouble ahead for some people in the bank and in the railway."

Official Explanation: Sir Henry Thornton, President, and D. E. Brown, First Assistant to the Financial Vice President, issued the following statement in Montreal, Sept. 25: "It is the custom of the Canadian National Rys. Financial Department to distribute its funds by depositing them in banks which best suit its purposes. The railway uses 14 banks at present. About the latter part of May, 1923, the Financial Department of the system deposited in the Home Bank at Montreal \$1,000,000 of surplus funds. Shortly after depositing these funds with the Home Bank, it came to our notice that R. P. Gough, one of the C.N.R. directors, was also Vice President of the Home Bank, and to avoid any possibility of criticism the funds were promptly withdrawn. This deposit had no unusual features, and it was effected in the

ordinary course of the affairs of this department."

[Editor's Note.—Two C.N.R. directors are also bank directors, viz.: E. R. Decary, of La Banque Nationale, and Jas. Stewart, of the Bank of Montreal.]

The Brotherhood of Locomotive Engineers not an Illegal Organization.

Canadian Railway and Marine World for April gave the decision of Mr. Justice Galt, of the Manitoba Court of King's Bench, which declared, in effect, that the Brotherhood of Locomotive Engineers was an illegal organization, operating in restraint of trade, the decision being based on the fact that the brotherhood had not registered as a trade union, as required by the Trades Union Act. The matter was brought up in the first place by the brotherhood suing to recover \$3,743.63 alleged to have been misappropriated by S. Starr, formerly Secretary-Treasurer of the organization. Justice Galt's decision granted the motion for a non-suit made by Starr's counsel, and prevented the brotherhood from proceeding with its action. The brotherhood took an appeal to the Manitoba Court of Appeals, which on Sept. 24, unanimously reversed Justice Galt's decision. The Appeal Court decided that it should not be held, in the present condition of the law, that the brotherhood is "an organization so tainted with illegality that the court will not lend its assistance to recover trust moneys unjustifiably withheld by its ex treasurer".

Canadian National Railways Divisional Changes.

A Halifax, N.S. press report of Sept. 19, stated that effective Sept. 30, Halifax would be made headquarters for the C.N.R. lines between Truro and Halifax, and Halifax and Yarmouth, under control of J. T. Hallisey, Superintendent, who would be moved from Truro to Halifax. At present Superintendent Hallisey has charge of the Halifax Division, including Bedford Subdivision, from Halifax to Truro, 64.07 miles; and the Dartmouth Subdivision, from Windsor Jet. to Stewart, 81.80 miles, a total of 145.87 miles. Superintendent J. Bain, with office at Bridgewater, N.S., has jurisdiction over the Bridgewater Division, from Southwestern Jet., 4.39 miles from Halifax, to Yarmouth, 246.1 miles, also the Middleton Subdivision, from Bridgewater Jet. to Port Wade, 92.3 miles; the Caledonia Subdivision, from Caledonia Jet. to Caledonia, 21.9 miles; and the Lunenburg Subdivision from Mahone Bay to Lunenburg, 7 miles, a total of 372.4 miles. Truro town council is reported to have sent a press dispatch on Sept. 21 to the C.N.R. management in Montreal, protesting against the transfer of the Superintendent and staff to Halifax. Canadian Railway and Marine World was officially advised Sept. 25 that the Halifax and Bridgewater Divisions would be consolidated on Sept. 30, under one Superintendent, with office at Halifax, and that the consolidated territory would be designated the Halifax Division.

The following circular was issued on Sept. 24 by W. U. Appleton, General Superintendent, Atlantic Region, and approved by L. S. Brown, General Man-

ager: "Effective Sunday, Sept. 30, 1923, the position of Superintendent at Bridgewater, N.S., will be abolished, and the Bridgewater Division will become a part of the Halifax Division, under the jurisdiction of J. T. Hallisey, Superintendent, with headquarters at Halifax, N.S." A Halifax press dispatch of Sept. 27, stated that H. Putnam, M.P. for Colchester, N.S., and W. Duff, M.P. for Lunenburg, N.S., had received telegrams from Hon. E. M. Macdonald, Minister of National Defence, identically as follows: "Orders suspended until Sir Henry Thornton visits Nova Scotia about middle October, when he will receive representations."

On Sept. 28, General Superintendent Appleton issued a circular cancelling his circular of Sept. 24, as given above.

[Editor's Note.—"Yes, we have no—" politics.]

Extravagant Wages.—The Dearborn Independent, owned by Henry Ford, said, in a recent issue, "Translated into food, at the prices the farmer gets, it takes, in New York City, 63½ dozen, or 762, eggs to pay a plasterer for one day of 8 hours work; it takes 17½ bush. of corn, or a year's receipts from half an acre, to pay a bricklayer one day; it takes 23 chickens, weighing 3 lb. each, to pay a painter for one day's work; it requires 42 lb. of butter, or the output from 14 cows, fed and milked for 24 hours, to pay a plumber \$14 a day; to pay a carpenter for one day's work, it takes a pig weighing 175 lb. representing 8 months feeding and care."

C.P.R. Scholarships.—The C.P.R. scholarships at McGill University, Montreal, covering 4 years tuition in certain branches of engineering, offered for competition to the company's apprentices and other employes under 21 years of age, and to minor sons of employes, have been awarded to Thos. S. Moffatt, Victoria, B.C., son of a foreman, and to A. J. Wise, son of an employe in the Angus shops, Montreal. A scholarship, under the same conditions, tenable for three years in L'Ecole des Hautes Etudes Commerciales de Montreal, has also been offered.

The Canadian Railway Club's opening meeting for discussion was held in Montreal, Sept. 11, when E. T. Spidy, Assistant Superintendent, Dominion Engineering Works, read a paper on "What is your material handling problem?" It was illustrated by moving pictures showing different methods of handling material from place in place in connection with industrial plants.

The Toronto Suburban Ry. management on Sept. 24 called for tenders to be sent in by Oct. 1 for grading the approach to the subway to enable the line which is to be diverted to cross under the C.P.R. double track line near Lambton, just west of Toronto. Full details of the diversions are given farther on in this issue.

Canadian Northern Town Properties Co., Ltd., and Canadian Northern Realities Ltd., have given notice that there has been deposited with the Secretary of State at Ottawa, certified copy of the by-law of each company changing the head offices from Toronto to Montreal.

Swiss Journalists in Canada.—At the invitation of E. W. Beatty, President, C.P.R., five editors of Swiss newspapers arrived in Canada, Sept. 10, to study the resources and conditions in the Dominion, and possibilities of Swiss immigration.

The Canadian Pacific Railway President's Western Inspection Trip.

E. W. Beatty, K.C., President, C.P.R., left Montreal, Sept. 6, at 8.55 a.m., by special train, on his annual inspection trip of the company's properties to the Pacific coast, accompanied by three other directors, Sir Herbert Holt, F. W. Molson, and J. K. L. Ross, also by A. D. MacTier, Vice President, Eastern Lines, who went as far as Fort William. The train, as it left Montreal, consisted of Mr. Beatty's business car, Thorold; compartment car Glen Bow, Mr. MacTier's business car, St. Andrews; and a baggage car. At Toronto, which was reached late in the afternoon, the party was joined by another director, W. N. Tilley, K.C., and dined with Sir Edmund Osler, one of the oldest members of the Board.

Toronto was left on the morning of Sept. 7, an overnight stop was made at Chapeau, and Port Arthur was reached on the evening of Sept. 8, a 10 minutes stop being made, during which Mr. Beatty received the mayor and a number of other citizens. D. C. Coleman, Vice President, Western Lines, and C. Murphy, General Manager, Western Lines, met the party at Port Arthur and accompanied them west. The special proceeded from Port Arthur to Fort William, where a stop was made for the night, Mr. Coleman's business car Assiniboine, being substituted for Mr. MacTier's car. During the evening the mayor and a number of other citizens were received. Winnipeg was reached on Sept. 29 at 6.50 p.m., the party remaining there Sept. 10 and 11, during which a meeting of the C.P.R. directors, the first in Winnipeg, was held, which Sir Augustus Nanton of Winnipeg, attended, afterwards accompanying the party for the rest of the western trip. Leaving Winnipeg, Sept. 12, at 8 a.m., an hour's stop was made at Brandon, a few minutes' one at Broadview, Regina being reached at 5.30 p.m., and after a two hours stay there, Moose Jaw was proceeded to for the night. Moose Jaw was left Sept. 13, at 6 a.m., a few minutes stop was made at Swift Current, an hour was spent at Medicine Hat, Brooks being reached at 3.40 p.m., where the train was left for a short motor trip to the irrigation development, Calgary being reached at 8.45 p.m., and the night being spent there. Calgary was left on Sept. 14, at 8 a.m., Banff being reached at 10.50 a.m., where the party left the train, and, after an hour stay, motored to Lake Louise, where they stayed another hour, and then motored to Lake Windermere, a total drive of about 140 miles. The train had been sent on to meet them at Lake Windermere. Golden was reached at 11.15 p.m., and a stop made for the night. On Sept. 15, Golden was left at 8.30 a.m., five minutes stops were made at Revelstoke, Kamloops and North Bend, and Vancouver was reached at 1.55 p.m. Vancouver was left on Sept. 16, at noon, by the C.P.R. s.s. Princess Louise, for Skagway, Alaska, and was returned to on Sept. 23. Two days were spent there, the party leaving Sept. 25 by night steamboat for Victoria, spending a day there, going to Seattle and returning to Vancouver on the morning of Sept. 28.

At the time of writing (Sept. 29) the schedule for the balance of the trip over the Western Lines is as follows: Leave Vancouver, Sept. 29 at 6 a.m., via Petain on the main transcontinental line, then via Hope and the Kettle Valley Ry., stopping an hour and a half at Princeton,

half an hour at Penticton, and arriving at Farron, Sept. 30, at 1.45 a.m., leaving there at 8.30 a.m., stopping two hours at Tadanac and half an hour at Nelson, arriving at Proctor at 3.15 p.m., thence by car ferry to Kootenay Landing, stopping there 40 minutes, at Cranbrook 10 minutes, arriving at Kimberley, Oct. 1, at 1.30 a.m., leaving there at noon and reaching Lethbridge at 8.15 p.m. Leaving Lethbridge, Oct. 2, at 7.30 a.m., arriving at High River at 11 a.m., visiting Lord Renfrew's E.P. ranch, leaving High River at 2 p.m., arriving at Calgary at 3.15 p.m. Leaving Calgary, Oct. 3, at 12.05 a.m., reaching Edmonton at 6.30 a.m., leaving there at 2.30 p.m., via Wetaskiwin, arriving at Saskatoon Oct. 4, at 1.30 a.m., leaving there at noon via Yorkton, reaching Winnipeg Oct. 5, at 6.30 a.m.

In addition to the Vice Presidents of the Eastern and Western Lines, and the General Manager of the Western Lines, who travelled with the party over their respective territories, the various General Superintendents, and some local officials, travelled over their respective jurisdictions.

Speech at Vancouver.

Speaking at a dinner tendered him by the Vancouver Board of Trade, Mr. Beatty announced that the company would add two large steamships immediately to its B.C. coast fleet, to accommodate its increasing tourist traffic, and would proceed at once to complete its additional pier in Vancouver harbor. He also said in part:—

Two questions which perhaps merit the gravest consideration are those which have to do with the realization of Canada's latent wealth and the reduction of the national liabilities. The methods to be adopted to accomplish both of these, which primarily concern us most, and on the sufficiency or otherwise of these methods, it will be determined whether Canada will reach within a reasonable period a fair measure of its own destiny or whether it will drag along with unlightened burdens and a discouraged people. I do not believe that uncured optimism ever, in the last analysis, brought prosperity. Neither do I believe that despondency and gloomy forebodings ever helped to lighten the burdens of the people of any country. Even if I were so constituted, I could not afford to be a pessimist, but I see nothing in our situation, heavy as our national burdens are, to warrant anyone having any doubt as to the future of this country, but when I say this, and, I think it is the judgment of most business men, it does not mean that vigorous and courageous steps to correct the evils of which we are conscious should not be taken by Canadian business communities.

We are confronted with a few important and unescapable facts. The first is that the area of the country is large and its population inadequate. The second is that its natural wealth has scarcely been touched, and its agricultural lands, its forests, its mines, its fisheries, and its industries have not contributed to the people of the country the wealth to which they are entitled, or have not eased the burdens of its small population, bearing as they do a heavy burden of taxation. That taxation is, of course, dependent upon the size of the national obligations in the extent of the national expendi-

tures. How can our expenditures and revenues be balanced most quickly in order that our future may be realized? These are the problems which confront every citizen of the country, and are the problems which confront and will always confront every enterprise whose success depends upon its ability to secure revenues greater than its expenses. Even a cursory examination must convince the sceptical that greater business caution and prudence in national and provincial expenditures are the first steps in the easing of the situation, which, when all is said and done, we have not improved since the closing of the war. How can the situation best be readjusted in the interests of the whole country? I do not pretend that my opinion on the subject is any more valuable than yours, but it does seem that we are reduced to face certain essential considerations of a very simple character and that the appreciation of them by governments will go a long way to improving our situation.

It has been said by men much better informed and wiser than I that Canada needs more people and more capital. It is a hopeful sign that the necessity for both is receiving widespread recognition in governmental and business circles, and that the continuous and insistent clamor of the last year or 18 months is bearing fruit in a more vigorous immigration policy for this country. I can appreciate the reasons which influenced the slowness of action in this respect. We were not in a condition of prosperity, agriculturally or otherwise. We had considerable surplus of labor. Some of us were depressed by the temporary conditions which existed and we framed or failed to frame our policies because of them, and not because of what we knew the future had for this country. It was thought, and improperly thought, that we should mark time and not over exert ourselves in inducing others to come to Canada. This policy was based upon the theory that the tide of immigration could be turned on or off like a tap, and that it would be sufficient for us to start the stream when the conditions in this country were substantially improved. We forgot, in our consideration of the subject, under the after-war conditions which then existed, two important factors. We forgot that it took considerable work, the expenditure of much money and a highly efficient campaign to direct emigration to Canada and that this organization and this work should be commenced long in advance of the expected flow of people. We also forgot that what we were not doing other countries were doing, with the result that the pick of the available material, especially in England and Scotland, and in northern Europe, from which excellent settlers to our knowledge could be secured, were being diverted to countries which, if they do not, in our opinion, offer the same advantages as Canada, offered distinct advantages over the conditions in which the emigrants were living in their own countries. Canada has not, in recent years, secured its proper proportion of this very desirable material. It is true that immigrants are coming forward in larger numbers than heretofore, but they are not coming forward in such large numbers as we can secure if our organization at home and abroad is perfected. In fact, I am safe in saying that where we have secured hundreds we can readily secure thous-

ands of the kind of men who will be productive in this country. But, of course, it cannot be done in any haphazard way. The men must be induced by proper representations to take advantage of the opportunity offered now beyond their reach in their own countries. They should not be misled by immigration agencies, steamship companies or others. They should be informed of the climatic conditions existing in Canada, in all parts of it, of the form of government under which they will be expected to live and of the absolute necessity of industry if they are to succeed. They should be instructed that they will be expected to take an active interest in Canadian affairs, to see that their children are educated as Canadians, and that they themselves become Canadianized in the truest sense of the word. They should not be allowed to simply land in Canada and shift for themselves. Through the establishment of bureaus and other government departments, they should be taken in hand and advised and guided until they are firmly established and their success is in sight. The people who are willing to risk their future in a country like Canada can be found in great profusion in Great Britain, the United States, Norway, Sweden, Belgium, Denmark, and other countries. If we say we do not want them we are expressing in the most damning way our lack of confidence in our own country. We either believe in the country and its future or we do not. If we do believe in it, we must know that the population is insufficient; either we carry the burden of the country or ensure the development of its undeveloped or almost undeveloped natural resources. It is estimated that there are 25,000,000 acres of fertile soil in the western provinces, within 15 miles of existing railways, still unproductive. It needs no elaboration on my part to indicate to you just how stultifying is the non-use of this main asset of this country. But you may say to me that agriculture has not been prosperous, because market conditions have not been right and you cannot expect to induce the immigration of capital unless the prospects for capital are good. All of that is true, and it leads me to mention what I think is probably the first consideration to the establishment of the country on a basis not only fair to those living in it, but one which will make it more inviting to those whose presence we desire to attract.

As you know, our taxes are heavy; they perhaps seem heavier than they are, due to the fact that directly imposed taxes such as income taxes are always the most irritating of any form of taxation. There is nothing about it which enables a man to forget it. It is not hidden or covered by indirect imposts which the ordinary citizen does not see and consequently does not feel. It is a direct taxation from him every year with the consequent psychological effect of making him feel poorer, poorer even than the difference between his wealth before he paid it and that which he purchases afterwards, due to his inability to mentally establish the realization of annual exactions from his exchequer. What is the cure for this? Obviously by the adoption of the strictest national, provincial and municipal economy. Economy is not an attractive word nor an exhilarating slogan. The people are never disposed to cheer the speaker who advocates retrenchment. Spending is always more attractive, and, therefore, more popular. We will never,

perhaps, escape the necessity, for large expenditures and such as are reasonable, must, I think, for the next few years be of a productive character. We should spend for the purpose of development or for the purpose of securing greater economy. We should not, however, embark on any capital expenditures of doubtful value or those which might be termed luxuries. If, in the course of two or three years of rigorous scrutiny of national, provincial and municipal budgets, our total expenditures are reduced even from 25 to 30%, we will have reduced our annual financial necessities to a point which would permit us to consider a reasonable reduction in the country's tax imposts. When that time arrives we will be able to say to ourselves that by our own effort and sanity we have not only lightened our own burdens, but made further inducements to those who appreciate living in a country which exacts a moderate amount from its citizens, who will, therefore, be in a position to assist in its further advancement.

But, you may say that taxation is not the cause in many cases of the failure to obtain proper results in many of the country's enterprises, and you would be quite correct. I agree with your Premier, though in some instances we seem willing to disagree, that in respect of agriculture, the failure to secure an adequate return must be explained by other causes than the taxes which exist in this country. In fact, the figures which he discloses give ample proof of the correctness of his statement. Agriculture is not enjoying the profitability it should by reason of high costs of production and unsatisfactory prices; prices, I may add, determined in foreign markets and quite beyond the control of the Canadian producers. The combination of high costs on the one hand and prices on the other hand resulted in an insufficient margin for some time past, indeed in some cases there was no margin at all. The cause of this condition obviously lies in the lack of purchasing power in the countries to which our exportable surplus of grain was, under normal conditions, sold. To say that England first and Canada in a lesser degree are not concerned with the stabilization, and, we hope, approaching solvency, of European countries, is to say that we are not concerned with the buying power of our customers. Many close students of international affairs, however, who are in a position to gauge with reasonable accuracy the trend of events there, see many signs of hope of an end of conflict and a real effort towards rehabilitation in sight. With improved conditions in Great Britain in consequence, and on the continent, the prospect of a normal demand for Canadian products at fair prices is materially increased.

I have spoken generally, but very frankly, on some of these general problems which seem to me to be occupying the attention of most Canadians, especially those in active business. I have felt for some time that we were neglectful of our duty towards our own country, that we were not sufficiently impressing our judgment as men of business upon those in control of our affairs, that we should first induce and then support an effort to improve the existing situation as we see it, and that we should do so in no spirit of hostility and with no feeling of despondency, that we should simply express our belief and confidence in this country by bringing to bear upon its problems the confidence, the courage and the caution that our experience

in our own affairs have proved most valuable. Because we counsel to ourselves wisdom and care we surely cannot be accused of discrediting or belittling our own country. Our sole purpose should be to make Canada a desirable place to live in, a credit to itself, to the great Empire of which it forms a part, and a blessing to all mankind.

Under the present car interchange rules, when a car is destroyed in interchange, and the settlement value has to be figured, depreciation is reckoned from the time the car was built. At one time the rules provided for depreciation on rebuilt cars being figured from the time they were rebuilt, and considerable agitation has sprung up for the restoration of such a rule, it being evident that roads which rebuild cars at large expense and then have one or more of them destroyed in interchange service must suffer an unmerited loss. The American Railway Association Mechanical Division's general committee has appointed a special committee, of which G. E. Smart, Chief of Car Equipment, Canadian National Rys., and L. K. Silcox, General Superintendent of Motive Power, Chicago, Milwaukee & St. Paul Ry., are members, to make a thorough enquiry into the matter and report to the general committee.

Canadian Trade Index, 1923-24.—The Canadian Manufacturers' Association has issued a new edition of the Canadian Trade Index, which contains a complete alphabetical list of Canadian manufacturers, with miscellaneous information, and French and Spanish translation sections with parallel English; a list of producers and exporters of a wide variety of agricultural products; a condensation of numerous similar headings into main headings, with descriptive sub-headings, making the book easier of access for general lists than formerly; the marking of all exporters with an asterisk throughout the classified section; and the inclusion of information regarding the Governmental Commercial Intelligence Service, as well as other material of interest to importers and exporters. Approximately 1,200 new headings have been added to this edition, many representing new developments in manufacturing firms, the total reaching 10,500.

Canadian National Rys. Employees' Excursion.—Some 4,000 C.N.R. employees went on a holiday excursion from Toronto to Buffalo on Sept. 20 on five special trains made up of 13 passenger cars and a baggage car each. The first train left Toronto at 5.30 a.m., and was followed at half hour intervals by the others. The first train to return reached Toronto at 11.30 p.m. and the last at 1.30 a.m. A pilgrimage to Buffalo was an annual affair during the Grand Trunk regime, but was suspended during the war, the excursion this year marking its revival. It is stated that the excursion was the largest single passenger movement handled out of Toronto this year.

Algoma Eastern Ry. net earnings for half year ended June 30, are \$194,397. After meeting bond interest and other charges, the deficit was \$43,523, increasing the debit balance brought forward, to \$579,167.

"A jay-walker," remarked Mr. Chuggins, "has in him the making of the flivverist who tries to beat a locomotive to a grade crossing."—Washington Star.

The C.P.R. British Columbia Employees' Medical Association held its annual meeting at Penticton, Sept. 3.

The Japanese Earthquake and the Transportation Interests.

When the first news of the earthquake in Japan, on Sept. 1, was received, great anxiety was felt at the C.P.R. head offices in Montreal in regard to the company's staff in Japan. The company's chief office for the Orient is at Hong Kong, China, where Allan Cameron, who was in Canada at the time, is Oriental Manager, and P. D. Sutherland is General Passenger Agent. The chief offices in Japan were at 14 Bund, Yokohama, an illustration of the entrance of which is given herewith, another office being at Kobe. The principal officials at the Yokohama office were J. Rankin, General Agent; G. E. Costello, General Agent, Passenger Department; M. Fitzgerald, Special Representative; and E. Hospes, Passenger Agent. Although the Yokohama offices were completely destroyed, all of these officials escaped. The principal officials at Kobe were H. E. Hayward, Agent, and A. M. Parker, Passenger Agent, who are also safe, Kobe having escaped the disaster. Mr. Costello was on the s.s. *Empress of Australia* when the earthquake occurred, and a press report says that he swam ashore, walking through burning debris, and found his wife surrounded by flames, but that she was rescued. John Spence, of the Passenger Department in Yokohama, who is a son of the late John Spence, principal of Kent School, Toronto, and who had been with the C.P.R. in Montreal until last spring, when he was transferred to Japan, was also on the *Empress of Australia*, and escaped. Messrs. Costello and Spence went subsequently on the *Empress of Canada* to Kobe. John Reed, of the Freight Department, at Yokohama, and F. J. Weville, the company's Auditor at Hong Kong, who were in Yokohama, were struck by a falling beam and killed instantly. Ray Lawrence, formerly of Ottawa, who was at one time in the C.P.R. service in Japan, but now employed by Sperry Gyroscope Co., has cabled from Kobe that he escaped. A cable dispatch stated that Capt. Swain, who was spoken of as an official in the C.P.R. service, despite two broken legs, directed rescue work at the Bluff Hotel. We are informed that he was not in the C.P.R. service, and the Montreal head office know nothing of him. We were advised Sept. 13, that the C.P.R. Yokohama offices having been destroyed, a temporary office had been established at Kobe, which is now the C.P.R. headquarters in Japan. Canadian National Ry. have no representatives stationed in Japan, their oriental officials being at Hong Kong and Shanghai, China. We were advised, Sept. 13, that the traffic executive in Montreal had no reason to believe that any of the officials were in Japan at the time of the catastrophe. The Canadian Robert Dollar Co., Vancouver, has an office at Kobe.

Canadian Pacific Steamships.—We are officially advised that the C.P.R.'s *Empress of Australia* was tied up at the wharf at Yokohama, ready to sail, when the earthquake occurred; that, due to the tidal wave, one of her propellers became entangled in the anchor chains of another ship, but that she was ultimately got clear, that no damage was done to her, and that when she was at the dock she was used as a headquarters for refugees, and subsequently took a number of them to Kobe, afterwards sailing for Canada, and reaching Victoria Sept. 23 and Vancouver Sept. 24. The C.P.R.'s s.s. *Em-*

press of Canada reached Yokohama two days after the earthquake, and was used to transport some 1,400 refugees, to Kobe, many of whom were severely injured. Messrs. Rankin, Costello, Fitzgerald, Hospes, and Spence, of the company's staff, went to Kobe on her. The *Empress of Canada* then proceeded to Shanghai, arriving there Sept. 10. A Kobe dispatch to the London, Eng., Daily Mail, says that refugees reaching there paid warm tribute to the C.P.R. officers' and men's splendid work at Yokohama, where they organized rescue parties immediately after the earthquake and saved women and children regardless of nationality. The C.P.R.'s s.s. *Empress of Asia* was at Hong Kong during the earthquake.

Rev. F. G. Gilbert, a Boston missionary, who was on the s.s. *Empress of Australia* during the earthquake, is reported to have said, on reaching Vancouver, on Sept. 16: "It threw the great ship 25 ft. out from the wharf, and the wire mooring ropes jerked out the heavy mooring pins, and piles of the wharf set in cement. Then about 15 barges, some of them oil ones, which had been torn

Entrance to Canadian Pacific Railway's Offices at Yokohama, Japan.

loose, jammed around the *Empress* and took fire, all burning at the same time. At one time the ship's bow was plunged right through a burning barge. Before she could work her way out of this some of the oil barges were burned down to the water's level. With burning oil 16 to 18 in. deep, the flames shot fully 300 ft. up in the air. The oil on the water burned for 6 or 7 hours."

Edgar Nobles, of Edmonton, Alta., who arrived at Victoria, B.C., on the s.s. *President Jefferson*, on Sept. 15, is reported to have said that the heroism and intelligence of the officers and men on the s.s. *Empress of Australia* saved not only the ship, which was in constant danger of fire, but also about 3,000 lives. Refugees who were driven into the water by the encroaching flames, or thrown overboard from the houseboats, were taken aboard, while the crew tried hour after hour to extinguish the flames in the immediate vicinity.

Captain S. Robinson, of the s.s. *Empress of Australia*, is reported to have given the following information in an interview, while between Victoria and Vancouver, on Sept. 23: The ship was just on the point of leaving pier 7 at Yokohama. Tugs abeam and astern were

ready to pull her off. The captain had turned to take a last look along the wharf line and was about to give the order, "Let go, forward," when the ship began to shake. The motion on board was exactly as if the ship were being shaken by giant hands. His first order was "Sound the bells." He then glanced along the line of the wharf and shore, and from his position high up on the bridge, distinctly saw the earth undulating in 8 ft. waves which traveled at tremendous speed from south to north like rollers in a smooth sea and in the direction of the ship. He saw people ride these earthy breakers as boats ride in a swell. Then great cracks opened in the earth and swallowed them up as they closed again like relentless jaws of a monster. By this time the sheds on the docks were swaying and the buildings of the city falling flat like a house of cards. Then a thick, black cloud rose up behind the city. Flame spouted out everywhere and the wind was blowing 70 miles an hour. The *Australia* heaved alongside, opened the gangways, and put down the rope ladders to struggling victims in the water. The ship by this time was in a serious situation. The towing tugs had disappeared. Sparks and flaming matter were blowing round her. It was impossible for her to go ahead or to go astern, having fouled two anchor chains of the s.s. *Steel Navigator*. Salt water from the 30 hoses played on the ship. Blinding smoke and cinders added to the difficulties of the situation. The gale was the deciding factor in the catastrophe, whipping the flames up everywhere. In three hours Yokohama was a mass of ruins from end to end. The intense heat from the burning sheds of the wharf was unbearable. Lumber lighters loading into ships at the time of the earthquake were floating all over the harbor, and a number of these jamming between the ship's stern and the wharf forced her almost clear of the *Steel Navigator*, along which the *Australia* slid, in spite of her one fouled propeller. At this point a Japanese steamship cut loose from her buoy, tried to turn round, and rammed into the Canadian liner, another intervening lighter preventing serious damage, as the former ship ranged alongside. At 4 o'clock the *Empress of Australia* hove back almost into her original berth, with the *Steel Navigator* nosing her stern. Hoses were now rushed on shore and the wharf fires extinguished.

Suddenly at dawn on Sept. 2, a most frightful sight appeared. Flames shot up 300 ft. into the air. Thick black swathes of fuel oil moved upon the face of the waters and the horrible truth was realized. The great blazing furnace moving up in three masses crept towards a corner of the Bund and began gradually to work out from the corner in the direction of the ship. Capt. Robinson realized that the time had come to work out from the wharf. He asked the officer commanding the *Steel Navigator* to lash his bow to the *Australia*'s stern and tow her out, and it was then that Capt. Kent, a Shanghai pilot, lent valuable aid in directing the manoeuvring from the bridge of the *Steel Navigator*, giving every assistance to the youthful commander of the U.S. freighter, who, taking the post of his dead captain, did wonderful work in towing the *Australia* from the wharf. The wind, passing obliquely across the desolate ruins of the docks,

fanned the onrushing flaming oil and the Empress of Australia, with 3,000 people aboard, refugees, crew and passengers, escaped its fiendish reach by a bare ship's length. Then, by a series of jigsaw manoeuvres, Capt. Robinson, who was able to steer his ship only in one direction on account of his crippled propeller, worked his way out into the outer harbor, which, by this time, was crowded with small steamers flying flags of all nations.

It was at this point that a Dutch tanker, the Iris, in command of a young Capt. Konnigs, performed a deed of heroism, which will go down in the annals of the sea. Fires over the entire surface of the harbor had been renewed by the ignited floating lighters which travelled hither and thither like torches among the dark, seething pools of fuel oil, of which thousands of tons floated upon the surface of the water. These came drifting out in the direction of the breakwater, and Staff Captain Holland was sent by Capt. Robinson to ask the Dutch skipper for a tow. Without a demur he agreed, and, handling his ship with conspicuous carefulness, he succeeded, after 6 hours of strenuous endeavor in the pitchy blackness of the night, to swing the Australia's bows into a position of comparative safety, about a mile from the breakwater and a mile and a half from pier 7. Later Capt. Robinson learned the reason of the brave Dutchman's extreme carefulness. His cargo consisted of 2,000 gals. of benzine and 2,000 of kerosene. She was a large single screw ship. So Sunday concluded. Meanwhile the great ship had been transformed into a floating hospital. To walk through her corridors was to witness scenes too horrible to describe. In the captain's own words, it was one sweltering mass of humanity, begrimed, bloody, covered with mortar and filthy ashes. Many of the victims were naked. Stewardesses and passengers working like trojans, bathed the wounds and bound them up with bandages torn from the ship's linen. Refugees who were unhurt turned their hands to any task, in spite of the fact that almost everyone of these had lost all or some of their immediate family in the awful disaster. The uncertainty of the fate of their loved ones was somewhat alleviated by the opportunity of service which demanded continuous action on the part of all. Monday, Sept. 3, brought the Empress of Canada, and the day was spent transferring the refugees to her. On Sept. 4 a Japanese battleship and a cruiser came in, the former responding to Capt. Robinson's request for a diver by sending one, who, after three hours heroic work, found a broken end in the 75 fathoms of 2½ in. chain cable which had become entangled in the Australia's propeller. After thanking the captain of the Japanese ship for his assistance, Capt. Robinson offered his ship to the acting British consul Bolter, who took upon himself the responsibility of commandeering the Canadian liner as a clearing station for refugees. He had arrived on the ship on the night of the disaster, and had played a gallant part in the work of subsequent days.

Capt. Robinson said the Empress of Australia continued to handle refugees until the following Saturday, when she sailed for Kobe, leaving that port for Vancouver on September 11, with 500 passengers. Before leaving Yokohama on Sept. 8, Capt. Robinson went ashore, and with James Rankin, General Agent for the C.P.R. at Yokohama, succeeded in locating the bodies of two of the com-

pany's officials there, Reed and Weville, whose charred and mutilated forms were removed from the ruins of the office and buried on the bluff overlooking the desolate city.

Capt. Robinson paid unqualified tribute to the unquestioning devotion of his staff and crew. The Chinese crew worked marvellously, a large number of them volunteering to go ashore to loosen the ship's lines when she was towed back from the flaming oil by the Steel Navigator. This heroic deed, which looked like certain death for the Chinese, was rewarded as this little handful of men, leaping into the water, were heaved aboard by their officers and mates.

Rev. E. J. D. Fraser, who was on the s.s. Empress of Canada, in writing a Toronto friend, says that when the ship was nearing Yokohama, Sept. 2, the following notice was posted up: "Wireless advices this morning state that Yokohama was destroyed at noon Saturday by earthquake and fire. There is no accommodation for passengers ashore, and the place is cut off from all the outside world. The ship will call there, but only to embark passengers and land mail. We are unable to get any further details, as the shore stations will not allow us to work, and the above message was one that was permitted from our Empress of Australia, at present alongside the wharf at Yokohama. From the like cause we are unable to get a message through."

Results on Railways.—Press dispatches state that the central railway station at Tokio was almost completely destroyed; that communications throughout Tokio and Japan were completely disorganized; that a train on the Tokio-Sendai Ry. was reported to have fallen into a river while crossing a damaged bridge; and that 500 lives had been lost. Another report stated that 600 persons perished when the Sacsago railway tunnel, the largest in Japan, collapsed. An Osaka dispatch of Sept. 7 stated that the greatest disorder prevailed at all exits from Tokio, that in the frenzied rush from the city the weaker were trampled under foot, that every train carried about 4,000 refugees, and that on the previous day nine trains left Akabane, some miles north of Tokio, with 40,000 persons. It was raining, and passengers on the car roofs turned their mouths skyward to catch the drops. Railway forces were reported to be working feverishly on the lines to restore shattered communications, so that the food and clothing piling up at Kobe and Osaka might be moved as soon as possible to the capital.

T. C. Maitland, Manager of the Manufacturers' Life Insurance Co's Japanese office, who arrived at Victoria, B.C., on the Empress of Asia, is reported to have said: "I was on the train between Tokio and Yokohama, and was within five miles of the latter place, when the shock came. The train was moving slowly, and the first crash was so severe that everyone thought another train had smashed into us at full speed, but it was instantly followed by violent bumping and swaying from side to side and up and down. The railway tracks at this point were very wide. In a flash I saw the rails twist and squirm like snakes, and saw houses fall sideways or collapse as if crushed by some irresistible weight. We saw a great temple crash in a few seconds. Jumping from the train, I ran a few yards to the middle of the tracks, but it was impossible to keep one's feet on the ground, as it was undulating like the waves of the sea. Great cracks appeared

in the earth, and the air was thick with dust from the plaster of the crashing roofs and walls of the native houses, and the cries of the terrified people rang in my ears."

E. W. Beatty, President, C.P.R., a few days after the disaster, before leaving for the Pacific coast, was reported to have said that Canadian shipping, Canadian railways, and Canadian manufacturers will be more or less seriously affected, as there may be an interruption in the flow of goods for a considerable time. There may be a recompense in the rehabilitation of the devastated cities. Japan will most likely look to Canada and the United States for building materials, but on the whole the Japanese catastrophe will have a retarding influence on Canadian trade with the Orient.

Marine Losses.—Suzuki & Co., Japanese merchants in London, Eng., have informed Lloyd's that, as far as they could ascertain, there was no great loss of shipping by the earthquake. An Osaka dispatch said that two capital ships had sunk at the Yokosuka naval base, owing to a tidal wave following the earthquake.

W. Evan Gray, Provincial Superintendent of Insurance, Toronto, is reported to have said: "The marine losses due to the catastrophe are likely to be very serious. This will be occasioned not only by the loss of ships in harbors, but more so by the destruction of merchandise in docks and warehouses covered by special marine policies. It was the practice of the companies to insure merchandise by marine policies under 'warehouse to warehouse' cover. Doubtless large quantities of merchandise shipped under this cover and not yet put in warehouse in Yokohama, have been destroyed, and also goods in warehouse still under 'shore and cover' provided by marine policies. These risks would be placed largely in London Lloyds and other marine underwriters. The extent of this loss is impossible to estimate at present, but the later particulars now arriving with regard to the disaster seem to be reducing the original estimates of property destroyed."

Navigation Difficulties.—Press dispatches state that the eastern breakwater at Yokohama has more than half disappeared; that the northern breakwater has sunk 7 ft.; that half of the Yokohama pier has sunk, and that all lighthouses have been destroyed. A Washington, D.C., press dispatch of Sept. 6, said that the U.S. Shipping Board's agent at Manila had reported that the earthquake had raised the floor of Yokohama harbor, trapping several ships inside the port, and that this might necessitate the use of Kobe as the principal receiving port for relief supplies. Another Washington press dispatch of Sept. 7, said it was expected that, as a result of the earthquake, all charts of the Pacific Ocean, between 130 and 140 degrees west longitude, and from the Equator to 150 degrees north latitude, would have to be revised.

Relief Work.—The C.P.R.'s s.s. Empress of Russia sailed from Vancouver, Sept. 6, after having had considerable cargo taken out to make room for relief supplies, carrying some 500 tons of flour, canned salmon, canned milk and other necessities for the stricken people, and was the first ship from this continent to reach Japan with relief supplies.

President Beatty, of the C.P.R., announced from Sicamous, B.C., Sept. 15, that the company would give \$25,000 to the relief fund, and would carry free, over the company's rails and steamship

lines, all Canadian clothing and food-stuffs given, or bought with money donated for relief work. The passengers on the s.s. Empress of Canada subscribed about \$8,500 for the sufferers. The Northern Pacific Ry. has given \$5,000, and has announced that food for human consumption, when given to and handled by responsible organizations, will be carried free of charge.

Toronto Viaduct and Union Station.

An Ottawa press report stated early in September that the acting Minister of Railways, Mr. Robb, had asked the Board of Railway Commissioners to enquire into the validity of a report that the railways were preparing to enter the new union station at Toronto, with rails on the present level, instead of on a viaduct, and also that he had requested Sir Henry Thornton, President, Canadian National Rys., to give him an explanation of the C.N.R.'s decision with respect to the viaduct. In answer to an enquiry, Mr. Robb informed Canadian Railway and Marine World, on Sept. 7, that having received telegrams intimating that the railways intended entering the station at the present rail level, he took the matter up with the Board of Railway Commissioners, and ascertained that no application had been made by the railways in that connection. He added that in so far as the decision of the C.N.R. President relative to the viaduct was concerned, he had no information.

When E. W. Beatty, President, C.P.R., was in Toronto, Sept. 6, en route to the Pacific coast, he was reported as having stated in an interview that on his return to Montreal, early in October, he would make a definite statement as to the company's attitude on the viaduct and union station question. Sir Henry Thornton, President, C.N.R., when in Toronto on Sept. 28, was reported to have said that he would be prepared to announce the C.N.R.'s attitude within a month thereafter, and added that he would consult with Mr. Beatty before doing so, and that he expected Mr. Beatty would consult him before making any announcement.

Air Mail Service for Prince Edward Island.—Major Shearer, Royal Canadian Air Force, is reported to have said, in addressing the Charlottetown Rotary Club, recently, that he was enquiring into the question of carrying mails by seaplane between Sackville, N.B., and Charlottetown; that he hoped that two machines could be put in commission, each to carry from 400 to 500 lb. of 1st and 2nd class mail; that one trip a day could be made, and that a landing could be made in the water in summer, and on the ice in winter. Post Office Department officials in Ottawa are reported to have stated that no such service is contemplated.

Railway Officials Speak at Sherbrooke.—The Sherbrooke, Que. Great Eastern Exhibition directors gave a luncheon recently, at which a number of railway officials were guests, including Grant Hall, Vice President, and W. B. Lanigan, General Freight Traffic Manager, C.P.R.; S. J. Hungerford, Vice President, Operation and Construction, and H. H. Melanson, General Passenger Traffic Manager, Canadian National Rys.; J. H. Walsh, General Manager, Quebec Central Ry.; J. W. Rimmer, Assistant to Vice President, Traffic Department, and F. E. Farrar, Assistant General Freight Agent, Boston and Maine Rd.

Lord Renfrew's Canadian Trip and Its Transportation Features.

The Canadian Pacific Ry's wide reaching water and land service have again been brought prominently before the people of Great Britain especially, and of the world generally, by the visit of the Prince of Wales, travelling incognito as Lord Renfrew, to his Alberta ranch, to reach which he crossed the Atlantic Ocean on a C.P.R. steamship, stayed at a C.P.R. hotel in Quebec, and travelled thence by a special C.P.R. train to High River, Alta., from which he made a week-end trip to the C.P.R. hotel at Banff.

On reaching Southampton, Eng., on Sept. 5, Lord Renfrew boarded the s.s. Empress of France, Capt. E. Griffiths, R.N.R., commanding, and before sailing, chatted on the bridge for some time with Capt. Kendall, C.P.R. Marine Superintendent. He was accompanied by several members of his staff and several servants, and he and his party occupied a suite of rooms on deck C, taking most of his meals in the dining saloon as a regular passenger. During the voyage he made a thorough inspection of the whole ship. The Empress of France docked at Quebec on Sept. 12, at 8.05 a.m., and was boarded almost immediately by Lord Shaughnessy, Chairman of the Board, C.P.R., who was accompanied by Capt. J. T. Walsh, Manager, Canadian Pacific Steamships, and R. G. Chamberlain, Chief of Investigation Department, C.P.R., who, as during the Prince's former visit to Canada, was specially detailed to look after his safety. Lord Shaughnessy went ashore again after a short time, and it was not until about 11 a.m. that Mr. Chamberlain appeared at the gangway opening, preceding Lord Renfrew, who went ashore and was driven to the Chateau Frontenac, where he stayed till the next day, during which Lord Shaughnessy had a long chat with him, and he played several games of golf, and attended an evening dance. He and his party left the Palais station, Quebec, Sept. 13, at 3.13 p.m., the special train consisting of Lord Shaughnessy's car, Killarney, compartment car Glen Atha, business car Champlain, and a baggage car. The party was accompanied throughout the journey by Mr. Chamberlain, and by W. B. Howard, Assistant General Passenger Agent, C.P.R., Montreal, the company's principal local officials travelling on the train over their respective territories. The train passed through Montreal's suburb, Outremont, where locomotives were changed, arriving at Ottawa at 10.50 p.m., where it stayed 10 minutes. Stops were made at the various division points, to change locomotives, and Fort William was reached on Sept. 15 at 2.45 a.m. At Ingolf, 94 miles east of Winnipeg, Lord Renfrew went forward and rode on the locomotive for some distance. The train reached Calgary on Sept. 16 at 12.35 p.m., where it stayed, at his request, until 4.45 p.m., during which he played a game of golf, and High River was reached at 5.58 p.m. The train was sharp on its schedule time at all stations and division points. On Sept. 22, he went to Banff for the week-end, staying at the C.P.R. hotel, and returned to his ranch on Sept. 25.

A Calgary press dispatch of Sept. 29 stated that Lord Renfrew would arrive there the following afternoon, would occupy a suite at the Palliser Hotel, and would leave on the evening of Oct. 2 for Winnipeg. A Montreal dispatch of Sept. 27 said that E. W. Beatty, President,

C.P.R., would entertain Lord Renfrew at dinner at the Mount Royal Club there on Oct. 11. He will sail from Quebec on the Empress of France on Oct. 13, occupying the same suite as before.

Oshawa Ry. and Toronto Eastern Ry.—Since the article under this heading on page 494 of this issue went to press, in which an Oshawa press report, stating that the Oshawa Ry. was to be merged with the Toronto Eastern Ry., was quoted, Canadian Railway and Marine World has been informed, both from C.N.R. headquarters in Montreal, and from Oshawa Ry. headquarters in Gananoque, that nothing is known of the matter, and that the report is not believed.

The C.P.R. and Hungarian Railways.—A London, Eng. press dispatch stated recently that the Schneider-Creusot interests were negotiating with Hungary for a concession covering Hungarian State Railways, and that the C.P.R. had rejected Hungary's preliminary offer in this connection.

FOR SALE

Car Ferry "Great Western"

The Canadian National Railways offer for sale Car Ferry "Great Western," now lying alongside slip at Windsor, Ont. Sealed tenders addressed to the undersigned will be received until noon of

October 15th, 1923

This boat can be used as a Car Ferry, Automobile Ferry, or can be dismantled and used as a lighter for wrecking purposes.

DESCRIPTION.

Length over all—237 ft.
Length B. P.—220 ft.
Beam—40 ft. 2 ins.
Beam over Guards—72 ft.
Depth—13 ft.
Gross tons—1080; Net tons—756.87.
Watertight Bulkheads—One.
Draught—Loaded—9 ft. mean.
Light—6 ft.
Boilers—4; Size: 9' 6" x 14'.
No. of Furnaces—8.
Heating Surface—1228.16 sq. ft. each.
Grate Area—96 sq. ft. each.
Pressure—65 lbs.
Engines—2.
Average Speed—10 miles light; 8 miles loaded.
Nominal H.P.—129.
Indicated H.P.—700.
Passenger Equipment for about 250 people.
Area of deck for automobile purposes—5500 sq. ft.

Arrangements may be made to inspect this boat on application to Captain C. H. Nicholson, Manager of Canada Atlantic Transit Company, Lake Michigan, Detroit River and Lake Ontario Car Ferries, Toronto.

The highest or any tender not necessarily accepted.

(Signed) **R. C. VAUGHAN,**

Director of Purchases and Stores,
Canadian National Railways,
Montreal.

Railway Wages and Working Conditions in Canada and the United States.

Maintenance Employees.—As stated in Canadian Railway and Marine World for September, consequent on the negotiations concerning wages between the Railway Association of Canada's operating committee's wage sub-committee and representatives of the maintenance of way employes having failed to produce an agreement, the employes applied to the Dominion Labor Department for a board of conciliation and investigation under the Industrial Disputes Investigation Act. The application, which was granted, indicated that it was made because of the railways' refusal to grant 5c an hour wage increase. The employes nominated David Campbell, Winnipeg, to represent them on the board, and the railways nominated R. T. Riley, Winnipeg, formerly a Canadian National Rys. director. The Minister appointed E. McG. Quirk, Montreal, as Chairman in the absence of a joint recommendation from other members of the board.

Shopmen.—At the time of writing (Sept. 21) no information additional to that contained in former issues of Canadian Railway and Marine World is available as to the progress of the wage negotiations between the Railway Association of Canada's operating committee's wage sub-committee and the shopmen. The railways refused to meet the employes' demands for wage increases. The names of the railways' and shopmen's representatives conducting the negotiations were given in our September issue.

C.P.R. Telegraphers.—A dispute concerning wages and working conditions having arisen between the C.P.R. and its telegraph department employes who are members of the Order of Railroad Telegraphers, a board of conciliation and investigation was applied for by the latter, and the application was granted. The employes nominated David Campbell, of Winnipeg, as their representative, and the railways nominated J. B. Coyne, Winnipeg. At the time of writing (Sept. 20) no chairman had been announced.

Algoma Steel Corporation Train Service Employees.—On Nov. 1, 1920, the Algoma Steel Corporation locomotive men, firemen, conductors and trainmen entered into an agreement with the management as to wages. In Jan., 1921, a reduction was made, followed by others in May and September of the same year. The employes, considering the cuts too drastic, obtained a board of conciliation and investigation under the Industrial Disputes Investigation Act, in Dec., 1922, but that board relegated the employes to the courts for relief. Since the reductions in pay were made, two increases were granted, the result being that while the total decreases amounted to 35%, the increases amounted to 25%. The employes asked recently for the standardization of their rates with those paid employes of steam railways, back pay claimed as due under the 1920 agreement, eight hours a day and time and a half for overtime after 8 hours. These being refused, the employes asked for another board, which was granted, the company being represented by F. H. McGuigan, Toronto, the employes by Senator G. D. Robertson, and J. G. O'Donoghue, Toronto, being appointed chairman by the Minister of Labor. The board met at Toronto on Aug. 21, 22

and 23, and at Montreal on Sept. 5 and 6, the company being represented by J. D. Jones, and the employes by H. H. Lynch, Vice President, Brotherhood of Locomotive Firemen and Enginemen; E. De Courcy, Chairman, Enginemen's and Firemen's Committee; W. J. Babe, Vice President, Brotherhood of Railroad Trainmen, and R. Kerr, Chairman, conductors' and brakemen's committee. The Board's majority report, issued Sept. 6 and signed by Messrs. O'Donoghue and Robertson, was as follows: "While considerable merit is behind the claim of the men re back pay, the board feels that it should not be pressed. The eight hour day now obtains and should not be changed. We are of opinion that time and one-half should be paid after 8 hours, where the overtime is caused by the company. It seems that an agreement was entered into between the company and its men in transportation service that they should receive the same pay as the Algoma Central Ry's yard employes at Sault Ste. Marie. This agreement was carried out for two months, when a new arrangement was arrived at. We consider that agreement reasonable and that it should be adhered to." Mr. McGuigan, in a minority report, held that the Steel Corporation should not be required to pay its men as much as the A.C.R. yardmen, as he considered it would be unwise and unjust to increase the Corporation's burdens under present financial, industrial and market conditions.

Canadian National Rys. Clerks, Freight Handlers, Etc.—A conference of Canadian Brotherhood of Railroad Employees' officers was held in Toronto late in August to formulate wage demands to be made to the C.N.R. management, on behalf of employes who are members of the brotherhood, and to consider applying for one schedule covering the whole system. The following attended the conference: A. R. Mosher, President; C. E. Cole, Moncton, Chairman; P. Larkin, Toronto, Vice Chairman, and R. H. Wilson, Moncton, Secretary, of the Eastern Lines employes' general committee; J. E. McGuire, Ottawa, Chairman; A. E. Chick, London, Vice Chairman, and A. E. Lawrence, Montreal, Secretary, of the Central Lines employes' general committee; R. Dykes, Winnipeg, Chairman, W. A. Hardacre, Edson, Alta., Vice Chairman, and C. H. Minchin, Calgary, Secretary, Western Lines employes' general committee. Although it was unofficially reported that restoration of the wage rates in effect prior to the reduction made in 1921, and one schedule covering all lines would be asked, the decisions arrived at were not made public officially.

C. B. R. E. Meeting.—The Canadian Brotherhood of Railroad Employees' biennial meeting began in Calgary on Sept. 17. A. R. Mosher, President, addressed the 185 delegates present, exhorting them to encourage all members of the organization to give good service to the railways and to educate themselves on economic matters. There has been some trouble in this organization lately on account of numerous members claiming that their President had exceeded his authority in bringing economic experts into Canada from the U.S. to prepare data on living costs, etc. These members are said to have threatened to try to displace Mr. Mosher from the Presi-

dency and to replace him with C. H. Minchin, a former member of the Calgary city council and now a member of the C.B.R.E. executive. In his address to the convention on Sept. 17 Mr. Mosher stated that a U.S. economic expert's services had been secured, but that this action had been taken only after the entire executive's approval was secured. A. R. Mosher was re-elected President by a majority of 8 votes only, polling 56, against 48 for C. H. Minchin of Calgary. M. McLeod, Charlottetown, P.E.I., was elected Vice President, and M. M. MacLean, Ottawa, was re-elected Secretary Treasurer. The executive board, consisting of the President as chairman, the Vice President, Secretary-Treasurer, C. H. Minchin, Calgary, and N. L. Preston, Winnipeg, were re-elected. W. Allen, Halifax; J. W. White, Toronto; and C. H. Minchin, Calgary, were elected vice presidents for the Atlantic, Central and Western Regions, respectively, and Messrs. McLeod, Preston, Minchin and J. O'Reilly, Hamilton, Ont., were elected trustees. The next Dominion meeting will be held in Toronto in 1925.

The One Big Union, the membership of which is now pretty well confined to radicals and Labor organization "outlaws" between the Great Lakes and the Pacific coast, was stated in a Winnipeg report of Aug. 25 to be advocating the causing of labor troubles on the railways during the crop moving period. The report said: "Urging general tie-up of Canadian railway lines during the height of the western grain rush as the only means of forcing the Railway Association of Canada to accede to the demands of the railway workers for increased wages and other conditions, a call to action will be sent out today by the One Big Union, to ascertain the prevailing sentiment of both organized and unorganized railway workers throughout the west." It added that a lot of dissatisfaction was felt with the slow progress being made by the shopmen's officers in their efforts to get higher wages.

Halifax Board of Trade Resolutions re Railway Wages.—Canadian Railway and Marine World for September stated that Halifax, N.S., Board of Trade's council had passed a resolution favoring a reduction in railway wages and salaries, and had sent a copy to the Winnipeg Board of Trade, evidently with the hope of getting that body to pass a similar resolution. The Winnipeg board, however, merely placed the copy of the resolution on file, and took no action on it. A Halifax paper states that the following resolution was passed by the Halifax Board of Trade's council on Aug. 28: "Whereas, it is stated that various railway labor organizations are about to demand increases of pay from Canadian railways; and whereas, in Canada in 1916, 140,158 railway employes handled 109,659,099 tons of freight and received \$100,362,391 in wages, while the public paid freight charges of \$184,236,331; and whereas, in Canada in 1922, 153,887 railway employes handled 102,192,026 tons of freight and received \$217,864,428 in wages, while the public paid freight charges of \$313,606,974; and whereas the wages of railway employes in Canada and the conditions of labor have followed the wages and conditions established in the U.S. by the McAdoo and Chicago awards; and whereas the U.S. has about the same area as Canada, with a population more

than twelve times as great, and the wealth of the producing classes is much greater per capita than the corresponding classes in Canada; and whereas in the last analysis the burden of sustaining the transportation systems of a country fall upon the producing classes, who are at the same time the largest consumers; and whereas the progress and development of our country is bound up with the efficiency and cheapness of our transportation system; and whereas the wages of Canadian railway employees following the wages of U.S. railway employees, have increased more than \$117,000,000 in 6 years, while the public were compelled to pay in 1922 nearly \$100,000,000 more for transporting over 7,000,000 tons less freight than in 1916; and whereas our transportation systems as a whole are now operating at a deficit, therefore be it resolved that the Halifax Board of Trade views with alarm the tremendous burdens imposed upon the public by high freight rates and the great deficits of the transportation systems; that all possible reductions be made in the staffs of Canadian railways of Canada compatible with their efficient operation; that steps be taken to reduce the wages of railway employees to a level with similar labor in other undertakings in Canada and to a point within the means of the public to pay; that working conditions on railways be revised, with a view of removing part at least of the loss and inconvenience to which the railways and the public are now subjected, and that copies of this resolution be sent to the Prime Minister, the Minister of Railways and Canals, the Minister of Labor, the Presidents of the Canadian National and Canadian Pacific Rys., federal members for Nova Scotia, and boards of trade and similar organizations."

United States—The decision arrived at by the conductors and trainmen to organize a movement for higher wages was mentioned in Canadian Railway and Marine World for September. The firemen and switchmen have now come to a similar decision. At a meeting in Chicago on Sept. 6 and 7, attended by general chairmen of the Brotherhood of Locomotive Firemen and Enginemen, and of the Switchmen's Union of North America, it was decided to apply for wage increases which would restore, and in the case of the switchmen more than restore, the peak wages in effect prior to July 1, 1921, on which date the U.S. Railroad Labor Board ordered decreases averaging about 12½%. T. C. Cashin, President, Switchmen's Union, is reported to have stated that increases would be asked for as follows: foremen, from \$6.32 to \$7.50 a day; helpers, from \$5.84 to \$7 a day, and switch tenders, from \$4.40 to \$7 a day—increases of 18, 19 and 59% respectively. It will thus be seen that all of the train service brotherhoods have declared their intention to inaugurate a campaign for higher wages to be effective on the termination of present contracts, with the exception of the Brotherhood of Locomotive Engineers.

The Pennsylvania Rd. has granted an increase of \$10 a month to track foremen and \$5 a month to bridge and building foremen, assistant foremen and inspectors of bridges and buildings. The increases are said to total \$550,000 annually, and affect 3,600 employees. Other U.S. roads have given slight wage increases to different classes of employees, notably clerical workers, shopmen, and maintenance of way and signal department employees.

The Pacific Export Route for Western Grain.

Canadian Railway and Marine World has published in recent issues several articles dealing with the Pacific export route for grain grown in the prairie provinces, and the subject has again been prominently brought to the fore by the British Columbia and Alberta rate appeal, the examination made into the feasibility of Vancouver as a grain export trade port by the commission appointed to investigate the grain trade, and the threat of a serious grain blockade on the eastern route because of bungling Dominion legislation in connection with the lake freight rates. British Columbia people are convinced that Vancouver should be the outlet for a large portion of western Canada's export grain, and are most enthusiastic regarding the port's future as such.

The commission enquiring into the grain trade, composed of Mr. Justice Turgeon, of the Saskatchewan Supreme Court; Dean Rutherford, of Saskatchewan University's Agriculture Faculty; Dr. McGibbon, Professor of Economics, at Alberta University, and J. G. Scott, of Quebec, sat at Vancouver on Sept. 10 and 11, and all witnesses examined expressed the opinion that that port should handle much more export wheat than it has been doing. Emphasis was placed on the fact that if a large proportion of wheat went through Vancouver, then via the Pacific to oriental markets, or via the Panama Canal and the Atlantic to British and European markets, not so much would go through U.S. eastern ports, with the result that the portion going to U.S. dealers and transportation agencies would remain in Canada. It was also claimed that rail transportation costs on wheat consigned to Vancouver should be lower, so as to secure a better return to the farmers, and that if the farmers could use the western route they would have the advantage of not being forced to dump their wheat on the market in the autumn, owing to the Pacific route being open all year round. As to the amount of shipping available on the Pacific coast, it was submitted that there are now more ships in the world than are necessary to carry the world's commerce, and that for that reason if traffic were offered at reasonable rates enough ships would soon appear to carry it. G. G. McGeer, K.C., who represented British Columbia in the recent rate appeal proceedings before the Dominion Cabinet (see Canadian Railway and Marine World for September, pg. 417) called many witnesses, who were unanimous in urging the necessity of reducing west-bound grain rates to a parity with those eastbound from prairie territory. The fewer handlings to which export grain would be subjected when going via Vancouver as compared to the eastern route, was also pointed out.

On Sept. 11 the members of the commission were taken by the Vancouver Board of Harbor Commissioners on a tour of the harbor. Col. J. F. Fitzpatrick, President of the Harbor Commissioners, presented a statement dealing with grain handling facility developments at Vancouver, and pointed out that plans are being carried out to augment the facilities at the existing Dominion Government elevator, which came under the harbor commissioners' control on Aug. 31, and that work on the second

government elevator is being proceeded with, with the expectation of having it ready for operation by April, 1924.

During the first 8 months of 1923, there were 10,261,598 bush. of wheat exported through the government elevator at Vancouver. Shipments were heavy during January, February, March and April, and then dropped off during the succeeding 4 months, but it is expected that export handling during the last 4 months of this year will be heavy, and that the amount of 11,512,698 bush. handled through the government elevator in 1922 will be greatly exceeded in 1923.

Self-Propelled Cars on Steam Railways.

The large gasoline motor car ordered by the G.T.R. management from the National Steel Car Corporation, before the co-ordination of the G.T.R. with the Canadian National Rys., was described fully in Canadian Railway and Marine World for February, when it was pointed out that this was the largest self propelled car ordered for operation on Canadian steam railways. The car was practically completed recently with the exception of the interior finishing, and a trial run was made between Hamilton and Niagara Falls, under the supervision of R. J. Needham, Mechanical and Electrical Engineer, Central Region, Toronto. It is reported that the trial was successful. Afterwards the car returned to the builder's plant at Hamilton, Ont., for completion of the interior fitting.

Particulars of the conversion of a gasoline-electric car which was operated formerly between Winnipeg and Transcona, Man., into a storage battery car, at the Niagara, St. Catharines and Toronto Ry. shops at St. Catharines, Ont., were given in a preceding issue of Canadian Railway and Marine World. As a gasoline-electric car, the power plant consisted of a G.E. gasoline engine, coupled with generator, the engine having 8 cylinders, and developing up to 175 h.p., the dynamo being rated at 80 k.w. There were only 2 motors, G.E. type 205B, the drive being to the leading truck axles. The car is now equipped with 250 Edison A-12-H storage batteries, and 4 G.E. type G-261 ball bearing motors of 25 h.p. each. At the time of writing (Sept. 15) the conversion is practically completed, and it is expected that the car will be restored to its former run very soon.

The Canadian National Rys. are having an additional storage battery car built at St. Catharines, and have plans for building 4 more. A standard frame for all battery cars to be acquired in future is being developed, and the frame of the car being built conforms more or less closely to the specifications that will be adopted as standard. The standard frame will be designed to be adaptable to three types of body construction, viz.: 1. A car body divided into a space with seating accommodation for 44 passengers, a 16-passenger smoking compartment and a small baggage compartment. 2. A body without baggage space, to provide total seating capacity for 70 passengers in a main compartment, and in a smoking compartment with accommodation for 20 or 24 passengers. 3. A body with accommodation approximately equally divided as between milk and passengers, with seating capacity for 34.

Railway Exhibits at Canadian National Exhibition.

The two largest Canadian railways had exhibits at the Canadian National Exhibition in Toronto, from Aug. 25 to Sept. 8, which brought home to the general public realistically the excellence of the railway equipment in use, the comforts and conveniences offered the travelling public, the desirable features of the various pleasure resorts conducted by the railways, and the extent to which Canadian railways have extended their transportation service to practically all parts of the world, and which doubtless it may be supposed, served to give the public an inkling of the vast amount of planning and effort that is required to make possible the high standards of transportation service which are accepted by it as a matter of course.

Near the western entrance to the exhibition grounds the C.P.R. had an all-steel passenger train, headed by Pacific type passenger locomotive 2324, of the type described and illustrated elsewhere in this issue; the cars being as follows: baggage 4384; tourist 6209; dining Wardou, standard sleeping Netley, and compartment sleeping Glenatha. The tables in the dining car were spread, and some of the berths in the sleeping cars were made up, showing in detail the excellence of the service provided.

On an adjacent track, the Canadian National had mountain type passenger locomotive 6015, of the same type as no. 6000, described fully in Canadian Railway and Marine World for July, and which are the largest locomotives employed in railway passenger service in Canada. In addition, the C.N.R. had, on an adjoining track, a mail and express car of the latest type, no. 9721. This equipment was in charge of D. Campbell, of the mechanical department at Mimico, Ont.

The exhibits in the railways building were arranged in an ideal manner, not only from the artistic point of view, but also from their advertising value to the railway, and were certainly of great educational value to the public. The Canadian National Rys. had a teletype installation, in charge of W. G. Barber, General Superintendent, Commercial Telegraphs, Toronto, and R. J. Foster, Supervisor, Commercial Telegraphs, Toronto, on which messages were transmitted. As a background for the installation was a large map, showing the principal points served by the railway telegraph system. In an adjoining room a large wall map was arranged electrically in such a way that the names of important towns and cities reached were illuminated to correspond with the run of a transcontinental train, and in the case of any city in which there is a C.N.R. hotel there was a special compartment containing the name of the hotel, which was also illuminated, including Chateau Laurier, Ottawa; Highland Inn, Algonquin Park; Nipigon Lodge, in the Nipigon River country; Prince Arthur Hotel, Port Arthur; Minaki Inn, Minaki, Ont.; Fort Garry, Winnipeg; Prince Edward, Brandon; the Macdonald, Edmonton; and Jasper Park Lodge, Jasper National Park. Depicting the lake and rail route from eastern points to the head of Lake Superior was a fine painting of the Northern Navigation Co's s.s. Noronic, and representative of the Niagara, St. Catharines & Toronto Navigation Co. were large pictures of the ships Dalhousie City and Northumberland, and also one of Niagara Falls. A map was arranged to show the route tak-

en by travellers making the "Triangle Tour" trip in British Columbia. The exhibit was completed by pictures showing Canadian Government Merchant Marine operations, and by illuminated colored transparencies showing scenes to be met with in a trans-Canada trip, including the Maritime Provinces, the St. Lawrence River area, the Ontario summer resorts, Minaki Inn, Jasper National Park, Mt. Robson, and the north Pacific coast. A. S. Davis, Travelling Passenger Agent, Toronto, was in charge of this portion of the exhibit.

The C.P.R.'s exhibit, in charge of E. R. Bruce, Director of Exhibits, showed the manner in which C.P.R. service encircles the globe, and contained scenes in all parts of the world. In the middle of the large room was a great globe, on which the company's steamship routes were shown, and in the large recesses in the walls were panoramas, in which ships were moved by electric power, showing scenes to be met with in different parts of the world visited on C.P.R. cruises. Another panoramic arrangement showed Dufferin Terrace, in front of the Chateau Frontenac, Quebec, and the winter sports held there. Paintings and colored transparent views included the following subjects: bungalow camps at different points, some of these being mounted on three pyramids, revolving simultaneously; Banff Springs Hotel; Lake Louise, and scenes in Madeira, Gibraltar, Algiers, Monte Carlo, Egypt, India, Rangoon, Ceylon, Java, China, Japan and Honolulu. The paintings were done by J. B. Crockett and A. S. Scott, Montreal artists. Always characterized by ingenious novelty, artistic skill and educational value, the C.P.R. 1923 exhibit was one in which all previous efforts were surpassed.

The Canadian National Rys. had, in another building, an exhibit from Stratford shops, which was of intense interest, not only to railway mechanical men, but to the public generally, and which not only emphasized the mechanical skill, accuracy and thoroughness for which they have long been noted, but revealed in a convincing way the excellence of the apprentice training system there. The exhibit, in charge of L. Bexon, Instructor of Apprentices, Stratford, contained numerous drawing by apprentices, many of which had taken prizes in various competitions, and a great many samples of work done at the shops by both apprentices and mechanics. Prominent among the drawings was one, by an apprentice, of a 5-feed hydrostatic lubricator, which took first prize in 1922, and another, also by an apprentice, of a 4-arc welding set, which took first prize in 1921, in the apprentice drawing competition. Among the samples of work from the shops were section of locomotive back tube sheet, showing tubes and flues beaded and welded; section of firebox sheets, showing method of installation of Tate flexible staybolts; taps, dies and reamers; model of front end of 5300 class Pacific type locomotive, with saddle "castings" made of wood, steam pipes, smoke box, etc., of 1/4 in. steel plate, and all fittings standard; inspection gauges, gears, screws, sockets, pins, valves and numerous other fittings. Completing the exhibit were photographs of some of the shops, and of winning teams of employees and apprentices in various athletic events; a wooden model of a class S 1 d

mikado locomotive, made at the shops; a Young valve gear model; a complete Ragonnet power reverse gear installation; a chime whistle; pop valves; steam and air gauges; Okadee blow off cock; Hancock sprinkler fittings; inspirator and boiler feed check valves; various Westinghouse air brake fittings; and a photograph of the large driving wheel lathe in the locomotive shop.

Sir Henry Thornton's Winnipeg Office.

Canadian Railway and Marine World for September stated briefly that it had been announced at Winnipeg that Sir Henry Thornton, President, Canadian National Rys., had established a personal office in Fort Garry station, and that he would be there at regular intervals of five weeks. The official announcement which he issued at Winnipeg, Aug. 22, was as follows: "It has been decided that the President of the Canadian National Rys. shall establish a personal office in the C.N.R. station at Winnipeg for the following reasons: The growing importance of western Canada and its future development require that the executive should establish and retain that personal contact and accessibility which is essential for the efficient and economical direction of the company's business in the west. The present executive offices are located in Montreal in the east, and are reasonably easy of access to those in that part of the Dominion who desire to discuss matters of mutual importance to themselves and the company. This is not the case with respect to the west, and long journeys to persons having business to transact with the company are thereby necessitated at the expense of much loss of time and delay. On the other hand, Winnipeg represents about the most westerly point at which the proposed office can be located without the consumption of excessive time spent by the President in travelling, with consequent absence from headquarters. The office proposed can be established without additional expense, as suitable space already exists, and the work can be absorbed by the present clerical staff. In general it is hoped that what is proposed will secure a more speedy and satisfactory decision on important matters, permit a better understanding of problems affecting the company and the public, and materially improve the usefulness of the national system as an instrument for the promotion of public welfare. In pursuance of the above it is the intention that the President of the company will spend a certain time in each five weeks in Winnipeg, of which due notice will be given in advance through the press. As far as possible the time selected will be at regular intervals, in order to ensure to the public a reasonable degree of dependence."

Damages for Grade Crossing Accident. A Kingston, Ont. press dispatch says that L. J. Jewell, a commercial traveller there, who was severely injured on Nov. 20, 1922, when a Canadian National Rys. train struck his automobile on the railway crossing at Cataragui, has been given a verdict of \$1,500 against the C.N.R. The jury found that proper signals had not been given as the train approached the crossing. The case will probably be appealed.

Alberta Coal Rates and Shipments to Ontario.

Particulars of a \$7 rate made by the Canadian National Rys. on an experimental shipment of Alberta domestic coal to Ontario were given in Canadian Railway and Marine World for August. The temporary concession was the cause of rate reductions being sought elsewhere, and on Aug. 27 Winnipeg City Council decided to ask for lower rates on coal from Alberta to Winnipeg, adopting the following motion: "That in view of the importance of developing western Canada's fuel resources to a greater extent, and the desirability of supplying the consumer with domestic coal at a reasonable cost, the council petition the Canadian National and Canadian Pacific Rys. for a reduction in the rate for transportation of coal from the fields of western Canada to Winnipeg." Copies of the resolution were forwarded to the Canadian National and Canadian Pacific's presidents.

A conference was held at Ottawa early in September between Sir Henry Thornton, President Canadian National Rys., and Premier Ferguson of Ontario, concerning coal rates, and another conference was held in Toronto on Sept. 14, between Attorney General Nickle of Ontario, and Canadian National Rys. traffic officers. A Montreal press report of Sept. 16 stated that J. E. Dalrymple, Vice President, Traffic Department, Canadian National Rys., had said "The tariff on coal from Alberta to Ontario points has been advanced to \$12.70 a ton. There has really been no other rate in existence, except that we agreed to handle a limited tonnage for experimental purposes. That contract has been carried out, with the rate it provided, \$7 a ton. The period of the experiment having passed, we have decided to put our rates on coal from the west back on a commercial basis."

On Sept. 13 Sir Henry Thornton, President, Canadian National Rys., telegraphed Premier Ferguson of Ontario as follows: "Referring to our discussion at Ottawa this week re Alberta coal. We are willing to extend application of \$7 rate on additional 10,000 tons, to be forwarded from mines before midnight, Oct. 31, such coal to be consigned to Ontario Government and distributed to dealers as your Government may consider advisable. This was condition attached to movements for Alberta Government. Regret our obligations in public interest to move heavy grain crop will not permit us to extend application of \$9 rate on coal moving after Oct. 31. Our Freight Traffic Manager, Mr. Watson, will be in Toronto tomorrow and will get in touch with you as to any further details." It would appear from the foregoing that Mr. Dalrymple's statement was based on the fact of the \$9 rate being discontinued, and was made to cover the rate situation as it exists, apart from the special concession made at the Ontario Government's request. The reduction in the rate to \$9 a ton was the first concession made, and, as stated in Canadian Railway and Marine World for June, pg. 271, Sir Henry Thornton, in announcing this rate, stated that it was to apply only during May, June and July to coal moving in trainload lots. As stated in our August issue, a \$7 rate was put in subsequently by agreement between Sir Henry and the Alberta Government, but only for a trial ship-

ment, so that this rate, like the \$7 rate granted to the Ontario Government, covering only a specified movement, could not be considered to have indicated any intention on the railways' part to permanently reduce coal rates.

Attorney General Nickle, of Ontario, issued the following statement on Sept. 21: "The Government is not purchasing or selling Alberta coal. Neither has it undertaken, nor does it propose to undertake, to enter into any arrangement with any firm or person for the shipment to Ontario of their particular coal. Those who desire to obtain Alberta coal under the \$7 freight rate must make their own purchases. When this has been arranged for, the following will be the procedure to be followed to secure the \$7 freight rate: The purchasers will notify the Fuel Controller for Ontario, Toronto, stating the quantity required, and from whom it is to be purchased. Purchaser will send a bank guarantee for the payment of the freight to the Fuel Controller. The Fuel Controller will forward a list of the purchasers, quantities and names of the companies from which the coal is to be purchased to H. Stutchbury, Trade Commissioner for Alberta. If the Alberta Government is satisfied that the persons offering the coal for sale can supply same, and that it is of a quality suitable for shipment to Ontario, he will then inform the persons selling the coal that they can ship same under the \$7 freight rate. The sellers of the coal must then forward to the Fuel Controller the bills of lading made out to the Ontario Government, and consigned to whatever place the purchaser desires. The Fuel Controller will then forward the bills of lading to each purchaser, and upon receipt of a certified cheque payable to the Provincial Treasurer for the exact amount of the freight shown by such bill of lading the bank guarantee will be returned to him. It must be understood by the sellers that the Government undertakes no responsibility for the payment for the coal itself, and it must also be understood by the purchasers that the Government undertakes no responsibility whatever for shortages or quality of the coal, these being matters which must be adjusted between the purchasers and the sellers. The \$7 freight rate is available only for coal consigned to places on the Canadian National Rys. An absolute condition upon which this rate is being given is that the coal must be forwarded from the mines before midnight Oct. 31 next. The Government has endeavored to have more than 10,000 tons of Alberta coal brought in at the \$7 freight rate, but the Canadian National Rys. decline to increase the amount which is to be shipped by Oct. 31 next. Requests have already been received by the Government for more than 10,000 tons."

A Calgary press dispatch of Sept. 18 quoted Jesse Gouge, Drumheller, Alta., Vice President, Western Canada Coal Operators' Association, as stating that efforts were being made by the association to have low rates established on the Canadian National Rys. after Jan. 1, 1924, and that operators had no intention of abandoning the fight to obtain the rates they want.

Mr. Dalrymple's statement as to the rates being put back on a commercial basis, however, confirms the opinion ex-

pressed by Canadian Railway and Marine World at the time the subject of Alberta coal from Ontario was first brought to public attention, viz., that at the present stage in the development of Canadian railway transportation, Alberta domestic coal could not be transported, on a strictly commercial basis, at a rate that would allow it to compete successfully in the Ontario market. That opinion was in line with the evidence given by D. Crombie, Chief of Transportation, Canadian National Rys. after Jan. 1, House of Commons Committee enquiring into the coal situation, that it would cost \$8.91 a ton to transport Alberta domestic coal to Toronto in trainload lots.

Canadian Pacific Railway Construction, Betterments, Etc.

McAdam Jct.—A steel water tank with 100,000 gall. capacity, is being built at McAdam Jct., N.B.

Milton Signals—The C.P.R. is reported to have ordered a two "searchlight" color light signals with relays, floor pushes, switch instruments, commutators, relay boxes and cable posts for installation at the interlocking plant at Milton, Ont.

Wilkie-Cutknife Branch—A branch line of 40 miles from Cutknife to Battle River is being graded by W. A. Dutton, of Winnipeg.

The Lanigan Northerly line is now in operation to Naicam, Sask., 60 miles, is being extended to Melfort, 32 miles farther. Stewart and Cameron, Winnipeg, have the grading contract.

Wymark-Archive Line—The Board of Railway Commissioners has approved revised location plan for the Wymark-Archive line between mile 50.69, Sec. 8, Tp. 14, Range 5, and mile 52.62, Sec. 13, Tp. 14, Range 6, west of 3rd Meridian. A press report states that D. Grant has a grading outfit at work. The contract for the second 25 miles of this line from Wymark was let to W. A. Dutton, Winnipeg, in May.

Leader Southerly Branch—The Board of Railway Commissioners has approved revised location plan for this extension from Leader, Sask., on the Swift Current-Bassano line, between mile 44.6, Sec. 3, Tp. 17, and mile 49.5, Sec. 9, Tp. 16, Range 1, west of 4th Meridian.

Pashler Northeastly Branch—The Board of Railway Commissioners has approved location plan for a portion of the projected branch from Pashler, Alta., 132 miles west of Swift Current, Sask., and 15 miles east of Medicine Hat, Alta., between mile 28.77, Sec. 36, Tp. 15, Range 2, to mile 33.34, Sec. 9, Tp. 16, Range 1, west of 4th Meridian, and has authorized the crossing of a number of highways between those points. The Sec. 9, Tp. 16, Range 1, referred to is the terminal point of the revised western plans of the Leader southwesterly branch.

Victoria Terminal Building—A press report states that a contract has been let to Luncy Bros., Victoria, B.C., for the erection of the terminal building on Belleville St., at an estimated cost of \$167,000. It was reported Aug. 30 that the ticket office, and waiting room in the old wooden structure on Belleville St. had been removed to their new location on the wharf, and that work was started immediately on tearing down the structure for the new terminal building.

Birthdays of Transportation Men in October.

Many happy returns of the day to:

A. Aitken, Assistant Superintendent, Toronto Terminals, C.P.R., Toronto, born at Decewsville, Ont., Oct. 12, 1872.

E. R. Battley, Superintendent of Motive Power, Montreal District, Central Region, Canadian National Rys., Montreal, born at Stratford, Ont., Oct. 21, 1886.

E. W. Beatty, K.C., President, C.P.R., Montreal, born at Thorold, Ont., Oct. 16, 1877.

L. S. Brown, General Manager, Atlantic Region, Canadian National Rys., Moncton, N.B., born at Nelson, N.B., Oct. 19, 1864.

J. W. Corbett, Assistant Purchasing Agent, Canadian National Rys., Toronto, born at Montreal, Oct. 4, 1887.

H. H. Couzens, General Manager, Toronto Transportation Commission, and President, Canadian Electric Railway Association, born at Totnes, Devonshire, Eng., Oct. 16, 1877.

John Deed, City Agent, Freight and Passenger Department, Canadian National Rys., London, Eng., born there, Oct. 12, 1887.

A. F. Dion, Traffic Manager, Quebec Harbor Commission, Quebec, born at L'Islet, Que., Oct. 1, 1871.

H. A. Dixon, Chief Engineer, Western Region, Canadian National Rys., Winnipeg, born at Sand Hill, Ont., Oct. 7, 1878.

D. Drummond, Agent, C.P.R. and Canadian Pacific Steamships Ltd., Southampton, Eng., born at Sheddens, Renfrewshire, Scotland, Oct. 12, 1884.

Frank W. Dubrule, Vice President, Prescott and Ogdensburg Ferry Co., and Secretary, Canadian Pacific Car and Passenger Transfer Co., Prescott, Ont., born there, Oct. 22, 1887.

J. H. Edwards, Freight Claims Agent, Canada Steamship Lines, Montreal, born at Birmingham, Eng., Oct. 4, 1890.

A. C. Egan, Comptroller, Western Region, Canadian National Rys., Winnipeg, born there, Oct. 6, 1883.

C. E. Friend, Assistant General Comptroller, Canadian National Rys., Montreal, born at Brighton, Eng., Oct. 12, 1871.

W. P. Fitzsimons, Manager, Industrial Department, Traffic Department, Atlantic and Central Regions, Canadian National Rys., Montreal, born at Detroit, Mich., Oct. 27, 1868.

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., Hull, Que., born at Quebec, Que., Oct. 9, 1882.

C. N. Ham, Secretary, Express Traffic Association of Canada, Montreal, born at Winnipeg, Oct. 21, 1884.

G. Hodge, Assistant General Manager, Eastern Lines, C.P.R., Montreal, born there, Oct. 2, 1874.

J. H. Hughes, Assistant Superintendent, Ottawa Division, Quebec District, C.P.R., Ottawa, Ont., born at Charlottetown, P.E.I., Oct. 7, 1865.

H. Irwin, Consulting Right of Way Agent, C.P.R., Montreal, born at Newgrove, County Down, Ireland, Oct. 27, 1847.

W. B. Johnson, Master Mechanic, Halifax Division, Maritime District, Canadian National Rys., Truro, N.S., born there, Oct. 8, 1872.

Major W. M. Kirkpatrick, M.C., Foreign Freight Traffic Manager, C.P.R., Montreal, born at Kingston, Ont., Oct. 8, 1874.

W. B. Lanigan, General Freight Traffic Manager, C.P.R., Montreal, born at

Three Rivers, Que., Oct. 12, 1861.

O. M. Lavoie, Superintendent, Laurentian Division, Quebec District, C.P.R., Montreal, born at St. Cyril de Wendover, Que., Oct. 16, 1884.

A. E. McMaster, formerly Division Freight Agent, Grand Trunk Pacific Ry., Edmonton, Alta., now Resident Manager, Powell River Co., Powell River, B.C., born at Perth, Ont., Oct. 22, 1885.

C. Malcolm, chief clerk, Auditor of Stores and Mechanical Accounts, Alberta District, C.P.R., Calgary, Alta., born at Tatamagouche, N.S., Oct. 18, 1881.

W. B. Mallon, Canadian Traffic Agent, Buffalo, Rochester and Pittsburgh Ry., Toronto, born at Rochester, N.Y., Oct. 9, 1894.

W. T. Marlow, Foreign Freight Agent, C.P.R., Montreal, born at Limerick, Ireland, Oct. 25, 1872.

C. R. Moore, General Superintendent of Transportation, Central Region, Canadian National Rys., Toronto, born at Hamilton, Ont., Oct. 12, 1867.

Hugh Paton, President, Shedden Forwarding Co., Montreal, born at Johnstone, Renfrewshire, Scotland, Oct. 5, 1852.

J. W. Porter, Special Engineer, Western Region, Canadian National Rys., Winnipeg, Man., born at Aberdeen, Scotland, Oct. 15, 1877.

H. G. Reid, Assistant General Superintendent of Motive Power, Western Region, Canadian National Rys., Winnipeg, born at Pembroke, Ont., Oct. 27, 1863.

O. J. Rowe, Assistant Superintendent, Drumheller, Mantario, Oyen, Rowley and Sheerness Subdivisions, Calgary Division, Alberta Division, Canadian National Rys., Hanna, Alta., born at Binghampton, N.Y., Oct. 11, 1879.

J. K. Savage, General Superintendent, Quebec District, C.P.R., Montreal, born at Forreton, Ill., Oct. 5, 1876.

The Lord Shaughnessy, K. C. V. O., Chairman, C.P.R., Montreal, born at Milwaukee, Wis., Oct. 6, 1853.

T. Duff Smith, Lake Forwarding Agent, Canadian National Rys., Cleveland, Ohio, born at Barking, Essex, Eng., Oct. 2, 1868.

Lieut.-Col. C. C. Stibbard, D. S. O., Trainmaster, Kettle Valley Ry., Penticton, B.C., born in Sussex, Eng., Oct. 19, 1885.

C. E. Stockdill, Assistant to Vice President, Western Lines, C.P.R., Winnipeg, born at London, Ont., Oct. 25, 1881.

D. A. Storey, ex-Freight Traffic Manager, Canadian Government Railways, Moncton, N.B., now of Montreal, born at Halifax, N.S., Oct. 26, 1853.

Walter S. Thompson, Director of Publicity, Canadian National Rys., Montreal, born at Newcastle-upon-Tyne, Eng., Oct. 22, 1886.

E. N. Todd, Freight Traffic Manager, Rail Lines, C.P.R., Montreal, born at Huntingdon, Que., Oct. 17, 1879.

J. H. Valteau, Secretary - Treasurer, Thousand Islands Ry. and Oshawa Ry., Gananoque, Ont., born at Selby, Ont., Oct. 14, 1889.

J. A. Vallerand, Superintendent and General Freight and Passenger Agent, Roberval-Saguenay Ry., Chicoutimi, Que., born at Quebec, Que., Oct. 21, 1878.

Algoma Steel Corporation, Sault Ste. Marie, Ont., rolled 146,238 tons of steel rails in the year ended June 30, against 155,764 tons in the previous year.

Transportation Events of Twenty-Five Years Ago.

From Railway and Shipping World, now Canadian Railway and Marine World, for Oct., 1898.

C.P.R. strung telegraph wire between Truro and Halifax, N. S.

A. E. Rosevear appointed Freight Claim Agent, G.T.R., Montreal.

Montreal St. Ry. sheds at Hochelaga burned. Estimated loss \$150,000.

White Pass & Yukon Ry. Co. invited subscription for \$750,000 debenture stock.

Navigation matters on Yukon River were active and several steamboats were added.

First telegraph message sent over C.P.R. new copper wire between Montreal and Vancouver.

W. H. Smith appointed General Auditor, Canada Atlantic and Ottawa, Arnprior & Parry Sound Rys.

Quebec Bridge Co. invited tenders for construction of combined railway and highway bridge across St. Lawrence River, near Quebec.

The C.P.R., on Sept. 5, restored transportation passenger rates to about ante bellum figures, but the war with the G.T.R. in local rates in Ontario was continued.

Minister of Marine gave contract to Glasgow shipbuilders for a steamship to replace the s.s. Stanley, on the winter run between Prince Edward Island and Pictou, N.S.

Intercolonial Ry. appointments made as follows: J. E. Price, General Superintendent at Moncton, at \$2,500 a year; L. S. Brown, Chief Dispatcher at New Glasgow; D. A. Storey, District Freight Agent at Halifax; J. B. Lambkin, District Passenger Agent at Halifax; H. A. Price, District Passenger Agent at Montreal.

Two out of three arbitrators at Chicago decided C.P.R. not entitled to differential under the rates made by U.S. lines on freight traffic interchanged with San Francisco by other points in the United States and Canada. Vice President Shaughnessy objected to the decision and said the question must be resubmitted.

Sir Wm. C. Van Horne, President, C. P.R., wrote Sir C. Rivers Wilson, President, G.T.R., expressing willingness, as between the C.P.R. and the G.T.R., to restore passenger rates to the ante bellum basis, if transcontinental passenger rates were restored similarly, and the question of differentials to the C.P.R. be submitted to arbitration, the C.P.R., pending such arbitration, to be allowed half the differential it enjoyed formerly. He refused to submit to arbitration whether the C.P.R. would use the G.T.R. North Bay line for its Ontario traffic, instead of its own longer line via Smiths Falls, or instead of building a shorter line.

Timiskaming & Northern Ontario Ry. Tickets Stolen.—A press report says that it was discovered on the morning of Sept. 9, that the Cobalt, Ont., station had been broken into, and about 4,800 tickets stolen. Two boys, each under 12 years of age, were arrested on the north-bound Continental Limited, having in their possession about 1,000 tickets, and were taken back to Cobalt. It appears that the robbery was committed by four boys, two of whom were still at large on Sept. 15.

Traffic Orders by Board of Railway Commissioners.

Express Rates on Freight Motor Truck Bodies.

33,901. July 16.—Re the Express Traffic Association of Canada application for approval of Supplement 6 to Express Classification for Canada 5. Upon the report and recommendation of its Assistant Chief Traffic Officer, the Board orders that the said Supplement, making a reduction on bodies of freight motor trucks, be approved.

Passenger Accommodation Between Transcona and Winnipeg.

33,953. July 30.—Re complaint of Ratepayers' Association of Transcona, Man., against passenger accommodation, train service and fare charged by Canadian National Rys. between Transcona and Winnipeg. Upon hearing the application at Winnipeg, July 16, in the presence of counsel for the complainants and the Canadian National Rys., the evidence offered and what was alleged, and upon the report and recommendation of an inspector of the Board, it is ordered that the application be dismissed.

Operation Over C.P.R. Spur at Fort William.

34,053. July 26.—Re application of Gillespie Terminal Grain Elevator Co., Fort William, Ont., under Sec. 193 of the Railway Act, 1919, for an order authorizing the Canadian National Rys. to operate over the C.P.R.'s existing spur to the applicant's elevator on Island 2 at Fort William. Upon hearing the application at Ottawa on June 20, in the presence of counsel for the applicant, the Canadian National Ry. Co. and the C.P.R. Co., the evidence offered and what was alleged, the Board orders that the application be dismissed.

Inspectors of Railway Appliances Wanted.

The Civil Service Commission, on Sept. 4, invited applications to be sent in by Sept. 27, for the positions of inspectors of railway safety appliances, Board of Railway Commissioners, at Ottawa and Winnipeg, both being new positions, at an initial salary of \$2,280 a year, which will be increased upon recommendations for efficient service at the rate of \$120 a year, until a maximum of \$3,000 has been reached. This salary will be supplemented by whatever bonus is provided by law. Duties—Under supervision, to inspect locomotives, cars, and other railway equipment for compliance with legal requirements for safety of operation; to inspect fire prevention appliances; to inspect protective conditions at highway and other public crossings; to investigate and report on accidents and complaints of violation of operating rules; and to perform other related work as assigned. Qualifications required—Education equivalent to high school graduation; at least three years of experience in the mechanical or motive power department of a railway; thorough knowledge of operating safety appliances; good judgment, tact and ability to meet the public. While a definite age limit has not been fixed for this competition age may be a determining factor when making a selection.

There are two vacancies to be filled, one at Ottawa and one at Winnipeg. For the position at Ottawa, the appointee must have a thorough knowledge of mo-

tive power, maintenance and operation. For the position at Winnipeg, the appointee must have a thorough knowledge of car specifications, construction and operations. Nature of examination—Subjects and weights as follows: Education and experience, weight 5; oral examination, weight 5. An eligible list may be established which will be valid for a period of one year.

Freight Car Conditions and Supply.

That Canadian railways have their freight equipment in good condition and ready for the heavy grain movement of the autumn is evidenced by the fact that at Sept. 1 only 5.6% of the total number of freight cars on lines were in bad order. A report issued by the Railway Association of Canada stated that at Sept. 1 the total number of cars on lines was 204,840, of which 11,475 were in bad order. On Aug. 1, 6.9% of all freight cars on Canadian lines were in bad order, as compared with 7.6% on July 1 and 7.7% on June 1, it thus being evident that the situation improved greatly as the autumn approached. A shortage of 553 cars was reported on Sept. 1, compared with 543 on Aug. 1, 750 on July 1 and 350 on June 1.

The American Railway Association's Car Service Division reports that in the U.S. on Aug. 15 there were 83,253 box cars out of 1,042,812 in bad order or 8%; 5,799 refrigerator cars out of 52,870, or 11%; 82,371 gondolas out of 966,729 or 8.5%; 7,540 stock cars out of 81,327, or 9.3% and 7,198 out of 92,893 flat cars, or 7.7%. Out of 2,280,440 freight cars of all classes, 188,635 or 8.2% were in bad order, compared with 8.3% on Aug. 1.

According to the transportation efficiency programme adopted by the U.S. railways, as represented by the American Railway Association and the Association of Railway Executives, on April 15, the number of bad order cars is to be reduced to 5% of the total by Oct. 1. From the figures given above it is evident that between Aug. 15 and Oct. 1, U.S. roads will have to repair 3.2% of all cars on lines, in addition to doing current maintenance, if the programme is to be carried out.

British Railway Visitors.—A party of Great Western Ry. of England officials, including J. H. Vickery, Chief Docks Manager; E. Lowther, Chief Goods Manager; G. Buckeley, Assistant Chief Freight Manager; J. Auld, Docks, Assistant to Chief Mechanical Engineer, and J. H. Mathews, Chief of the company's police, arrived in Canada, Sept. 10, on the s.s. City of Paris, which had been chartered by the C.P.R., as a relief steamship, following the accident to the s.s. Empress of Scotland. The object was to inspect the various Canadian ports on the Atlantic and the Great Lakes, as well as U.S. ones, with special attention to the mechanical and other appliances for handling general cargo, and the design of general railway rolling stock, and general railway police organization. During their visit, they are the guests of various railways in Canada and the U.S. Their itinerary, after leaving Quebec, included Montreal, Ottawa, Toronto, Niagara Falls, Sarnia, Port Arthur, Fort William, Duluth, Chicago, Cleveland, Philadelphia, Baltimore, Washington, Norfolk, New York, Albany, Schenectady, Boston and a second visit to Montreal. They will sail from Quebec by the s.s. Empress of France, Oct. 13.

Board of Grain Commissioners Refuses Increase in Elevator Charges.

The Board of Grain Commissioners sitting at Winnipeg on Aug. 22, received an application from Fort William and Port Arthur terminal elevator operators for an increase in the rate for handling mixed grain of from 2c per 100 lb. to 2½c, the change to be effective with the coming into effect of the new tariff, on Sept. 1. The Board also received an application on Aug. 30 from country elevator operators, for an amendment to the regulations to permit them to charge ½c a bushel extra for cleaning grain. The regulations provide that 1¼c a bushel may be charged by those elevators for storage and that grain specially cleaned will be subject to a charge of ½c a bushel for each cleaning. The Grain Act, however, provides a maximum charge of 1¼c for storing, whether the elevator has a cleaner or not, and the country elevator operators asked that the word "specially" be removed from the regulations so that they could charge for cleaning.

We are officially advised that the Board refused the terminal elevator operators' request for a higher charge for handling mixed grain. A Winnipeg press report states that the country elevator operators' request for a cleaning charge was also refused, but adds that the Board suggested that the elevator companies try to secure an amendment to the Canada Grain Act to accomplish their object. Examination of the regulations covering elevator operations between Sept. 1, 1923, and Sept. 1, 1924, shows only one change from those in force during the preceding year, that relating to the handling of screenings at terminal elevators.

Tie Creosoting Plants, Contracts, Etc.

Calders, Canada, Limited, has been incorporated under the Dominion Joint Stock Companies Act, with office at Ottawa, and an authorized capital of \$1,000,000, to manufacture creosote bricks, railway ties, telegraph poles, etc. The provisional directors named are, as usual, nominal, the principal persons interested being John J. Calder and Sir James Calder, of London, Eng., and Major General Alex. McDougall, C.B., who has returned to Ottawa after having been in Europe since early in the late war. He is a civil engineer, and was associated formerly with M. J. O'Brien, and his brother, Samuel McDougall, in railway contracting on the National Transcontinental Ry. For some little time past he has been negotiating with the Canadian National Rys. and the Timiskaming and Northern Ontario Ry., for contracts for creosoting ties at plants which it is proposed to erect at Quebec, Que., and Cochrane, Ont. In reference to the matter published in Canadian Railway and Marine World for September, on pg. 425, we were advised, Sept. 13, that no contracts had been given by either the Canadian National Rys. or the Timiskaming & Northern Ontario Ry. to Calders, Canada, Limited, but that negotiations were being continued. The Canada Creosoting Co. is negotiating with the Canadian National Rys. for contracts for tie treating at New Glasgow, N.S., Newcastle, N.B., and Edmonton, Alta.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a complete record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

34,032. Aug. 14.—This order was summarized in Canadian Railway and Marine World for September as "Approving plan showing proposed lay-out of Canadian National Rys. station at Napanee, Ont." It should have read "Approving Canadian National Rys. plan, dated April 21, 1923, showing proposed layout of automatic signals at Napanee, replacing proposed interlocking system shown on plan dated Oct. 6, 1921, and approved by order 32,315, March 31, 1922.

34,041. Aug. 10.—Approving revised location of C.P.R. Cutknife-Whitford Branch, from mile 5.5 to 16.38, Sask.

34,042. Aug. 13.—Approving plan of Canadian National Rys. spur for Ideal Coal Co., Wayne, Alta.

34,043. Aug. 9.—Authorizing Hydro Electric Power Commission of Ontario to erect high tension transmission line across Canadian National Telegraphs wires on Centre St., Elizabethtown Tp., Ont.

34,044. Aug. 10.—Authorizing Canadian National Rys. to open for traffic its second track from connection with main line at Burlington, Ont., to north end of swing bridge, Burlington Canal, 2.75 miles.

34,045. Aug. 10.—Amending order 25,440, Oct. 17, 1916, re protection at Riverdale Park crossing, Toronto, by C.P.R., Canadian Northern Ry. and G.T.R., by revising the apportionment of cost.

34,046 to 34,048. Aug. 16.—Approving Bell Telephone Co. agreements with Tipping Telephone System, Theodore Telephone Co., and Maberly Telephone Co.

34,048. Aug. 8.—Ordering Canadian National Rys. to rebuild bridge over Dumfries, or St. George, Road, in South Dumfries Tp., Ont.

34,050. Aug. 9.—Approving clearances at C.P.R. siding serving Goderich Elevator & Transit Co. chutes A and B, Goderich, Ont.

34,051. Aug. 9.—Ordering Canadian National Rys. to lay drainage system at subway carrying its tracks over Kingston Road, Hamilton Tp., Ont.

34,052. Aug. 10.—Approving clearances at Canadian National Rys. spur for Ford Motor Co. of Canada, at Danforth, Ont.

34,053. July 26.—Dismissing application of Gillespie Terminal Grain Elevator Co., Fort William, Ont., for order authorizing Canadian National Rys. to operate over C.P.R. spur to applicant's elevator on Island 2, Fort William.

34,054. Aug. 9.—Approving plan showing location of Canadian National Rys. station at Crabtree, Que.

34,055. Aug. 9.—Approving clearances at Canadian National Rys. siding of Goderich Elevator & Transit Co. loading tower, Goderich, Ont.

34,056. Aug. 20.—Approving plan showing location of Canadian National Rys. station at Barrows Jct., Man.

34,057. Aug. 20.—Authorizing Interprovincial & James Bay Ry. (C.P.R.) to build ballast pit spur at grade across road between Lots 4a and 5a, Range 6 south, Fabre Tp., Que.

34,058. Aug. 17.—Authorizing Brantford Municipal Ry. to lay industrial tracks on Murray St., Brantford, Ont.

34,059. Aug. 20.—Approving location of C.P.R. standard A-3 station at Whittemouth, Man.

34,060. Aug. 20.—Authorizing C.P.R. to build spur for Dominion Silk Dyeing and Finishing Co., in Grantham Tp., Que.

34,061. Aug. 17.—Dismissing application of J. A. Coolidge and others for order directing Canadian National Rys. to provide siding between mile-post 339 and 340, near Birch Hills and Fenton, Sask.

34,062. Aug. 20.—Approving location of Canadian National Rys. 4th class station at Vita, Man.

34,063. Aug. 20.—Authorizing Canadian National Rys. to build spur for Cameron Lumber Co. at mile 63.3 Cowichan Subdivision, B.C.

34,064. Aug. 20.—Authorizing C.P.R. to build spur for Albert Kerr Co., Toronto.

34,065. Aug. 18.—Authorizing C.P.R. to divert road allowance in n.e. ¼ sec. 31, Tp. 18, Range 29, West 3rd Meridian, Sask.

34,066. Aug. 21.—Approving Canadian National Rys. plan showing change in position of south home signal on Timiskaming & Northern Ontario Ry.

34,067. Aug. 23.—Approving location of Canadian National Rys. 4th class station at Ardill, Sask.

34,068. Aug. 23.—Authorizing Toronto Suburban Ry. to divert its line, as already built from the Humber River, York Tp., easterly to Keele St. and St. Clair Ave., Toronto, and to build across Scarlet Road, Jane St., Castle Crescent Road and Symes Road at grade, Gunns Road overhead, and Weston Road by undercrossing.

34,069. Aug. 21.—Authorizing C.P.R. to build

spur and extension to siding at Christie St. Hospital, Toronto.

34,070. Aug. 21.—Authorizing Edmonton, Dunvegan & British Columbia Ry. to build spur for Canadian Coal Co., in Sec. 24, Tp. 55, Range 25, West 4th Meridian, Alta.

34,071. Aug. 22.—Authorizing Canadian National Rys. to connect siding on west side of Dargenson St., Montreal, with Montreal Tramways Co.'s siding crossing Dargenson St., Montreal.

34,072 to 34,074. Aug. 22.—Approving Bell Telephone Co.'s agreements with Yarker Telephone Co.; Waterloo Municipal Telephone System, and Beeton Telephone Co., Limited.

34,075. Aug. 22.—Amending order 34,036, Aug. 13, authorizing C.P.R. to build spur in Alberta for Northwest Lumber Co., by substituting Edmonton, Dunvegan & British Columbia Ry. for C.P.R..

34,076. Aug. 23.—Declaring that for the present, Michigan Central Rd. crossing 2½ miles east of Welland, Ont., is protected to Board's satisfaction.

34,077 to 34,079. Aug. 20.—Declaring that for the present Canadian National Rys. crossings near Beachville station, near Cornwall station, and at Wanstead, Ont., are protected to Board's satisfaction.

34,080. Aug. 21.—Ordering Dominion Atlantic Ry. to extend platform at Deep Brook station, N.S., by 150 ft.

34,081. Aug. 23.—Authorizing Canadian National Rys. to build storage siding on and across King St., Peterborough, Ont.

34,082. Aug. 23.—Authorizing C.P.R. to build spur for McLennan, McFeely & Co., Vancouver, B.C.

34,083. Aug. 23.—Authorizing Canadian National Rys. to install automatic bell and wigwag signals at crossing of Frederica and Edward Sts., Fort William, Ont., in lieu of gates and watchmen.

34,084. Aug. 24.—Authorizing Canadian National Rys. and Essex Terminal Ry. to connect with Ford Motor Co.'s tracks at Ford, Ont.

34,085. Aug. 24.—Approving supplements 1 and 2 to connecting agreement between Bell Telephone Co. and Magnetawan Municipal Telephone System.

34,086. Aug. 24.—Declaring that for the present, Canadian National Rys. crossing near Beeton, Ont., is protected to Board's satisfaction.

34,087. Aug. 23.—Declaring that for the present, crossing of Missisquoi Road, Irberville, Que., is protected to Board's satisfaction.

34,088. Aug. 23.—Relieving for the present, Canadian National Rys. from providing further protection at first crossing west of Vineland station, Ont.

34,089. Aug. 23.—Authorizing City of Winnipeg to build highway across C.P.R. at Erin St.

34,090. Aug. 23.—Authorizing Canadian National Rys. to install double automatic bells and wigwag signals in lieu of watchman at crossing of Gore St., Fort William, Ont.

34,091. Aug. 23.—Relieving Canadian National Rys. from providing fencing between certain points on its Winnipeg Terminals Division.

34,092. Aug. 23.—Approving location of Nipissing Central Ry. through Lebel and Gauthier Tps. mile 9.0 to 19.57 from Swastika, Ont.

34,093. Aug. 23.—Authorizing C.P.R. to build spur for Canyon City Lumber Co., Creston, B.C.

34,094. Declaring that for the present, C.P.R. crossing near mile 15, St. Andrews Parish, Man., is protected to Board's satisfaction.

34,095. Aug. 23.—Approving supplement to connecting agreement between Bell Telephone Co. and Ernestown Rural Telephone Co.

34,096. Aug. 24.—Ordering C.P.R. within 60 days, to install wigwag signal in addition to electric bell at crossing of Wilson St., Perth, Ont.

34,097, 34,098. Aug. 24.—Approving Bell Telephone Co. agreements with Tuckersmith Tp., Ont., and Malahide & Bayham Telephone Association.

34,099. Aug. 18.—Dismissing application of Assiniboia rural municipality, for order directing C.P.R. to provide highway crossing over its tracks at Saskatchewan and Buchanan Sts.

34,100. Aug. 25.—Ordering Michigan Central Rd. to install improved type of automatic bell and wigwag signal at crossing, near Perry station, Ont.

34,101. Aug. 25.—Declaring that for the present, Canadian National Rys. crossing south of Elmvale station, Ont., is protected to Board's satisfaction.

34,102. Aug. 27.—Authorizing National Parks Branch, Interior Department, to make highway across Canadian National Rys. at Snaring Jct., Alta.

34,103. Aug. 25.—Approving connecting agreement between Bell Telephone Co. and Monck Municipal Telephone System.

34,104. Aug. 25.—Authorizing C.P.R. to build spur for William Davies Co., Toronto.

34,105, 34,106. Aug. 25.—Ordering Michigan Central Rd. to install wigwag signals on each side of its tracks at Elgin St., and on south side of its tracks at Moore St., St. Thomas, Ont.

34,107. Aug. 27.—Authorizing Canadian National Rys. to install automatic half-interlocking plant at crossing of Fort William Municipal Ry. on Frederica St., Fort William, Ont.

34,108. Aug. 24.—Ordering Esquimalt & Nanaimo Ry. to install semaphore at crossing on Lockner Road, Cassidy, Vancouver Island, B.C.

34,109. Aug. 22.—Approving revised location of portion of C.P.R. Leader Southeasterly Branch, from mile 44.6, Sec. 3, Tp. 17, to mile 49.5, Sec. 9, Tp. 16, Range 1, West 4th Meridian.

34,110. Aug. 28.—Authorizing C.P.R. to build passing track across road allowance at mile 75.4, Minnedosa Subdivision, Man.

34,111. Aug. 28.—Approving location of portion of C.P.R. Pashley-Northeasterly Branch, from mile 28.77, Sec. 36, Tp. 15, Range 2, to mile 33.34, Sec. 9, Tp. 16, Range 1, West 4th Meridian, and authorizing crossing of a number of highways.

34,112. Aug. 28.—Authorizing Canadian National Rys. to close and divert road allowance between Sec. 18, Tp. 20, Range 14 and Sec. 13, Tp. 20, Range 15, West 1st Meridian, Man.

34,113, 34,114. Aug. 27.—Approving supplements to connecting agreements between Bell Telephone Co., McKellar Municipal Telephone System, and Maidstone Municipal Telephone System.

34,115. Aug. 28.—Approving revised location of C.P.R. Archive-Wymark Branch, from mile 50.69, Sec. 8, Tp. 14, Range 5, to mile 52.62, Sec. 13, Tp. 14, Range 6, West 3rd Meridian.

34,116. Aug. 23.—Approving clearances at Canadian National Rys. spur for Ford Motor Co., Ford, Ont.

34,117. Aug. 27.—Authorizing City of Saskatoon, Sask., to close portion of Spadina Crescent, between First Ave. and Avenue A, and provide access from Avenue A, through subway and along First Ave. to footbridge by cinder path.

34,118. Aug. 30.—Declaring that for the present, Canadian National Rys. crossing, near Greenfield, Ont., is protected to Board's satisfaction.

34,119. Aug. 30.—Authorizing Hydro Electric Power Commission of Ontario to build permanent power development canal and construction railway under Canadian National Rys., in Lots 57, 59 and 60, Stamford Tp., Ont.

34,120. Aug. 30.—Authorizing C.P.R. to build spur for City of Swift Current, Sask.

34,121 to 34,123. Aug. 29.—Approving supplements to connecting agreements between Bell Telephone Co., Balmoral Telephone System, Glengarry Telephone Co., and Dunsford Telephone, Light & Power Co-operative Association.

34,124. Sept. 4.—Authorizing C.P.R. to build spur for Nelson Co-operative Fruit Growers' Association, Nelson, B.C.

34,125. Sept. 4.—Approving clearances at C.P.R. proposed wheel crane at its passenger car yards at Winnipeg.

34,126. Sept. 6.—Extending to Oct. 1, time within which Canadian National Rys. may complete station at Fort Fraser, B.C.

34,127. Sept. 4.—Authorizing C.P.R. to build two spurs for Howe Lumber Co., Three Rivers, Que.

34,128. Sept. 4.—Approving C.P.R. plan showing bell installed at crossing of Mechanic Street, Bath, N.B.

34,129. Sept. 4.—Authorizing C.P.R. to divert road allowance in n.e. ¼ Sec. 34, Tp. 30, Range 10, West 2nd Meridian, Sask.

34,130. Sept. 6.—Ordering Canadian National Rys. to trim and cut trees and lower ground elevation to improve view at crossing of Water St., Hope, B.C.

34,131 to 34,135. Sept. 5.—Approving Bell Telephone Co.'s agreements and contracts with Humphrey Tp. Telephone Commissioners, South Crosby Rural Telephone Co., Oakwood Telephone Co., Muskoka, Victoria & Haliburton Telephone Co., and Elgin-Chaffey's Locks Telephone Co.

34,136. Sept. 4.—Authorizing British Columbia Public Works Department to make highway across Canadian National Rys. near Shere.

34,137. Sept. 4.—Authorizing Michigan Central Rd. to remove detector bars on derails 15 and 19, at interlocking plant, Fargo, Ont.

34,138. Sept. 5.—Authorizing Nipissing Central Ry. to connect with Timiskaming & Northern Ontario Ry., south of Swastika station, Ont.

34,139. Sept. 7.—Authorizing Canadian National Rys. to remove station agent at St. Norbert, Man.

34,140. Sept. 6.—Authorizing Saskatchewan Highways Department to make crossing over Canadian National Rys. at Tadmore.

34,141. Sept. 6.—Authorizing Vancouver, Victoria & Eastern Ry. (G.N.R.) to change location of terminal facilities at Guichen, B.C.

34,142. Sept. 6.—Approving location of Canadian National Rys. no. 4 standard station at Tioneza, Ont.

34,143. Sept. 6.—Authorizing Canadian National Rys. to build spur for Candiac ballast pit in Tp. 14, Range 10, West 2nd Meridian, Sask.

34,144. Sept. 6.—Authorizing City of Port Arthur, Ont., to lay temporary roadway over C.P.R. to serve grain elevators at northerly end of city.

34,145. Sept. 7.—Approving service station agreement between Bell Telephone Co. and St. Norbert Telephone Co.

34,146. Sept. 6.—Authorizing Canadian National Rys. to build spur to ballast pit at Bield, Man., across certain road allowances.

Freight and Passenger Traffic Notes.

The C.P.R. is reported to have opened its Transcona, Man., freight yards on Sept. 16, for the grain shipping season.

The Canadian National Rys. resumed the cafe parlor car service on the evening express train 17, from Moncton to St. John, N.B., on Sept. 10.

The Canadian Pacific Ry., on Sept. 30, again put on a daily, except Sunday, train from Calgary via Aldersyde to Lethbridge, Alta.; and a service three times a week between Calgary and MacLeod, Alta.

The C.P.R. train 61, which has been leaving Winnipeg at 6 p.m. for Brandon, Man., during the summer, will leave an hour later, and its run will be extended to Moose Jaw, Sask., on the winter schedule.

The Canadian National Rys. divisional freight offices at Port Arthur, Ont., have, a press report says, been moved to offices in the Prince Arthur Hotel building, vacated by the Port Arthur Vessel Insurance Agency.

The Transcona, Man., Ratepayers' Association's complaint against the Canadian National Rys. passenger accommodation, train service, and fares between Transcona and Winnipeg, has been dismissed by the Board of Railway Commissioners.

The Board of Railway Commissioners passed an order, Sept. 15, authorizing the Canadian National Rys. to give free transportation, from Ottawa to Vancouver, to Lady Fuller, her son and daughter, the New South Wales Prime Minister's wife and children.

The C.P.R. is reported to have handled between Sept. 1 and Sept. 15, 4,991 cars of grain into Winnipeg, against 7,551 for the same period in 1922; and the Canadian National Rys. to have handled within the same period 3,897 cars, against 7,777 for the same period in 1922.

The C.P.R. is reported, during the first five days of the grain shipping season, commencing Sept. 1, to have loaded 1,201 cars, against 2,472 for the same period in 1922. The decrease in this season's figures is owing to harvesting having been about two weeks later than in 1922.

The Canadian National Rys. are reported to have moved 2,072 cars of grain, containing 1,426,425 bush., between Sept. 1 and Sept. 10, a decrease of 1,927,800 bush., compared with the movement between the same dates in 1922, which is accounted for by the late maturing of the crop.

The Canadian Passenger Association, Western Lines, is reported to have decided, at a meeting in Winnipeg on Sept. 4, to again place in effect winter round trip excursion rates to Vancouver, Victoria, B.C., etc., and excursion fares to certain destinations in the U.S. The fares will, it is said, correspond to those in effect in 1922-23.

The Canadian National Rys. management is reported to have advised the St. John, N.B., Board of Trade, Sept. 20, that traffic did not warrant the continuance of the daily, except Sunday, night train between St. John and Halifax, N.S., and that the best that could be done would be a train three times a week each way, the same as last winter.

A Montreal press dispatch says that, during twelve months, manifest fast freight trains operated over the Canadian National-Grand Trunk-Central Vermont route between Chicago and Boston through Canada, were operated every day

in one or more sections, and on 337 days during the 12 months they were on time or less than 5 minutes late.

Canadian National Railways Passenger Department has issued a pictorial poster outlining the route of the Continental Limited across Canada. Eight pictures, in attractive coloring, depict the various sections from the maritime provinces through the lower St. Lawrence and the highlands of Ontario on the east, to Jasper National Park, Mount Robson and the north Pacific coast.

Through standard sleeping cars are being continued in operation between Chicago and Vancouver over the Minneapolis, St. Paul & Sault Ste. Marie Ry. and the C.P.R., following the withdrawal for the season, on Sept. 15, of the Mountaineer, the through train between Chicago and the Pacific coast, which was in operation during the summer. The through sleeper is being handled in connection with M. St. P. & S. S. M. Ry train 3 from Chicago.

St. Thomas, Ont., advertises that it is one of the most active transportation centers in the Dominion, that 6 railways running through it furnish unsurpassed shipping facilities; that these lines include the Canadian National, Canadian Pacific, Michigan Central, Wabash, Pere Marquette, and London & Port Stanley (electric); that a car ferry runs from Port Stanley to Conneaut Harbor, Ohio; and that 45 passenger trains and about 87 freight trains stop at St. Thomas daily.

The Board of Railway Commissioners was reported, Sept. 15, to have assented to an agreement made between the Canadian Freight Association and the Milton Pressed Brick Co., respecting the latter's application to the Board for a minimum carload for its product. Under an order made previously, the carload was fixed at 40,000 lb., and the Canadian Freight Association desired to have a rehearing as it wanted a 50,000 lb. minimum. The agreement is said to provide for the varying of the order by inserting 50,000 lb. in place of 40,000 lb.

The number of passengers taken into Winnipeg by harvester excursion trains this year is reported to have been 45,842, of which the C.P.R. carried 25,000 and the Canadian National, 20,842. The Canadian National Rys. carried 7,155 men from the British Isles, and the C.P.R. 4,728. Up to Aug. 24 at Winnipeg 23,300 men took tickets by C.P.R., and 13,000 by the Canadian National Rys., to points west. In addition to the men from eastern points, there were taken into Alberta and Saskatchewan, 2,700 from British Columbia by the C.P.R.

The Timiskaming & Northern Ontario Ry's cafe parlor car service, which we are officially advised was started on Aug. 27, northbound, and on Aug. 28, southbound, is being operated daily, except Sunday, on trains 46 and 47 between North Bay and Timmins. The railway has 3 cafe parlor cars, Seseinkina, Wasaksima and Tetapaga, which have been out of service since 1917. The two first named were thoroughly overhauled in the railway's shops at North Bay, before being put into service. The Tetapaga is being overhauled, and will be held as a guard car for service as required. The service is being operated under A. J. Parr, General Freight and Passenger Agent, R. Wicks being acting Supervisor.

Dominion Government Asks Board of Railway Commissioners to Enquire into Export Grain Rates to Vancouver.

The following was approved by the Governor-General on Sept. 12 and passed as order in council 1848: The committee of the Privy Council having had under consideration a certain petition to the Governor in council by the Attorney General of British Columbia acting on behalf of that province and by the Attorney General of Alberta acting on behalf of that province by way of appeal from a general order of the Board of Railway Commissioners dated June 30, 1922, made as the result of a general investigation and enquiry as to railway rates in Canada, directed by Order 2434 of the Governor in council, dated Oct. 6, 1920, upon hearing counsel for the petitioners and for the railway companies interested; and it appearing that the question as to the rates on grain from points in Alberta, Saskatchewan and Manitoba to Vancouver and other British Columbia coast points for export was not specifically dealt with in the Board's said judgment; and it appearing further that on the hearing of the said appeal the petitioners asked for further reductions in the said rates on grain; the committee of the Privy Council considers that inasmuch as the movement of grain is of the utmost and pressing importance, an enquiry as to the said rates on grain should be made by the Board. The committee, therefore, recommends that the subject of the export grain rates from points in the said provinces to Vancouver and other British Columbia coast points be referred to the Board, for immediate consideration and such effective action as it may deem necessary.

G.T.R. Officials' Gratuities Enquiry.—As stated in Canadian Railway and Marine World for June, F. T. Congdon, K.C., who was appointed by the Dominion Government on April 20, as a commissioner to enquire into the bonuses or gratuities given certain G.T.R. officials, full particulars of which were published in Canadian Railway and Marine World for May, had resigned, the reason given being ill health, and F. H. Honeywell, barrister, Ottawa, had been appointed to make the inquiry instead. Mr. Honeywell advised us on Sept. 17 that he had held several sittings, and that the indications were that the enquiry would be pretty well completed by the end of September, unless further or unexpected developments arose.

New Zealand Tunnel.—A recent Wellington, N.Z., press dispatch announced the opening of the Otira tunnel, 5 1-3 miles long, through the Southern Alps, which connects both coastal railways, and has replaced a picturesque but dangerous coach route through Arthur's Pass. It has a gradient of 1 ft. in 33, is electrically operated, and is said to be the largest tunnel in the British Empire and the seventh longest in the world.

Railway Lands Patented.—Letters patent were issued during August, for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Canadian Northern Western Ry.....	11.00
Canadian Pacific Ry., grants.....	.74
Canadian Pacific Ry., roadbed and station grounds.....	22.38
Total.....	34.12

Regulation of Grain Shipments to Vancouver.

A Vancouver press dispatch of Aug. 30 said: "Grain exporters in this port are making preparations to oppose the recently announced embargo placed by railways on all wheat coming to Vancouver, domestic or export, after Sept. 1, unless permits for cars have been obtained and space on ships arranged. Exporters here claim that as there is space for 1,250,000 bush., it is too early to place an embargo on grain moving this way. R. E. Beattie, of the Vancouver Harbor Commission, says that he sees in the new regulation an effort on the part of Winnipeg Grain Exchange to discredit this port in the eyes of the shippers, by having the report circulated that there is an embargo on wheat moving this way. Fort William frequently has congestion, it is pointed out by the Commissioner, but no embargo is placed that way. The Vancouver Harbor Commissioners would be satisfied if the railways would fill up the local elevator before placing an embargo."

We are officially advised that any opposition which may have arisen to the Canadian Pacific and Canadian National Rys. action in undertaking to regulate grain shipments to Vancouver so as to prevent congestion, was based on a misapprehension, and it is entirely probable that by the time of writing (Sept. 15) the railways' motives are known, and the value of their regulation of the west-bound grain traffic, to shipper, port and exporter alike, recognized. All that the railways have done is to renew, for the handling of this year's crop, the regulations placed in effect last year, and no embargo, in the real sense of the term, has been declared against Vancouver. Last year, owing to the comparatively small amount of elevator space at Vancouver (approximately enough for 1,000 carloads of bulk grain) the railways found it necessary, in order to prevent accumulation of cars and congestion in the yards there, to restrict the movement of export grain to that port to that of shippers, who had obtained permits by declaring that their grain was to fill bona fide contracts and that ships' space at Vancouver was available. The railways have adopted the same procedure this year. There is no difference between the application of this permit system to grain exported via Vancouver and to that exported through Atlantic and St. Lawrence ports.

That the regulations governing the movement of grain to Vancouver meet with approval, is evidenced by the following resolution, adopted at a meeting of the Vancouver Merchants' Exchange, grain section, July 31: "That it is the sense of this meeting that the movement of grain through the port of Vancouver, with the present available facilities, should be regulated and controlled at the outset by the railways concerned, and that the railways' policy with respect to such regulation for the current season should be formulated and made known immediately. That a copy of the resolution be forwarded to the C.P.R., the C.N.R., and the Vancouver Harbor Commission with the recommendation that a plan of operation and permit system similar to that in vogue last year be adopted."

So far as known, there have been no complaints to the railways by grain exporters concerning the permit system

adopted. Until storage space at Vancouver is substantially increased the acceptance of grain consigned to that port other than under the permit system would speedily result in a condition of affairs which would be injurious to Vancouver as a grain handling port, and the system will, undoubtedly continue during the 1923-24 grain season. For obvious reasons domestic grain shipped to Vancouver is being handled by the railways only under the same regulations as apply to export grain. Under the arrangement in effect, shippers of grain to Vancouver secure from railway officials at Vancouver a permit covering grain which they desire to forward to that point. The permit number is furnished by the shipper to the agent at the shipping point, and endorsed on the shipping bill covering the shipment. In this way, the amount of grain forwarded from interior points is efficiently regulated to conform to the storage and shipping available at Vancouver.

Freight Car Location Statistics.

The Railway Association of Canada has issued a report on location of freight cars on Canadian railways on Sept. 1, based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Kettle Valley; Napierville Jct.; Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo, as follows: Number of cars owned, 210,861; home cars on Canadian foreign lines, 10,556; home cars on U.S. lines, 33,041; home cars on home roads, 167,264; Canadian owned foreign cars on home lines, 7,787; U.S. owned foreign cars on home lines, 29,789; total cars on lines, 204,840; per cent. on lines to total owned, 97.1; deficiency on lines to total owned, 6,021; home cars in bad order, 10,997; foreign cars in bad order, 478; total cars in bad order 11,475; per cent. in bad order, 5.6; privately owned U.S. cars on lines, 2,360; privately owned Canadian cars on lines, 1,590.

Collision on Timiskaming & Northern Ontario Ry.

We are officially advised that a serious accident occurred on the T.&N.O.Ry. on Aug. 28, at 10.20 a.m., at mileage 157.5 north of North Bay, when passenger car extra 146 south, consisting of 20 empty cars and a van, collided with no. 97, a northbound way freight; that brakeman Foulkes of train 97, and brakeman Kirkwood of extra 146 south, who were riding on the locomotives of their respective trains, were killed, and that locomotive man Woolings of extra 146 south succumbed to his injuries on the same day; that damage to equipment consisted of 3 passenger cars destroyed and 2 badly damaged, both locomotives badly damaged and 9 freight cars damaged; and that the accident was caused by operator Joseph Gilliece, of Englehart, failing to deliver 31 order no. 13 to the conductor of no. 97.

An Englehart press dispatch of Sept. 4 stated that a coroner's jury had found that the accident was due to Gilliece's negligence, as mentioned above, but had added a rider saying that if operators were properly checked from the head office, such errors as that made by Gil-

lice would be detected in time to prevent accidents.

A North Bay press dispatch of Sept. 18 stated that on a warrant issued on instructions from the Ontario Attorney General, provincial officers had arrested J. H. Dwyer, former T. & N. O. Ry. dispatcher, at his home there, that he was blamed jointly with Joseph Gilliece, former operator at Englehart, for the accident and that he was released immediately on \$1,000 bail.

From our official advice as to the accident's cause, as given above, it would appear that Gilliece was solely to blame, through neglecting to record the 31 order on the clearance and to deliver it to no. 97. The jury's suggestion that if he had been checked properly the accident would not have happened, and Dwyer's arrest, however, make it appear that the latter is also considered negligent.

Telegraph and Cable Matters.

Wm. Reading, a C.P.R. telegraph operator, who died in Toronto, April 4, left an estate valued at \$32,682, to his widow and two daughters.

Canadian National Telegraphs have opened offices at Nakina Camp, Ont., and Ridpath, Sask., and have closed offices at Sandy Beach, Que., and Rainy Lake, Ont.

Geo. C. Jones, General Manager, Telegraph and Telephone Department, Canadian National Rys., was referred to in Canadian Railway and Marine World for September as having been born Sept. 24, 1869, and as having entered railway service in June, 1874. He was born in 1860.

The Western Union Telegraph Co. is reported to be laying a cable of a new type, 100 miles long, for experimental purposes, in Devonshire Bay, Bermuda. It is expected that by this cable, transmission of from 1,500 to 2,000 letters a minute without an accompanying run-in of letters will be made possible. Present normal transmission provides for about 1,000 letters a minute.

Geo. D. Perry, who resigned recently as Vice President and General Manager, Canadian National Telegraphs, Ltd., was entertained at dinner by a number of the company's Toronto officials Aug. 31, and presented with a black walrus club bag, with tortoise shell fittings; a golf bag with complete equipment; and a purse containing \$500, with a bouquet of roses for Mrs. Perry, the gift of the employees of the whole system.

Canadian National Telegraphs had a complete demonstration of the teletype printer at the Canadian National Exhibition at Toronto, Aug. 25 to Sept. 8. The machine is the latest development in automatic printing telegraph apparatus. Two of them were exhibited connected for intercommunication. A panoramic sketch of the Dominion was also shown, with the telegraph lines connecting all important centers from coast to coast.

The Dominion Government finally selected Pachena on the west coast of Vancouver Island, as the site for the installation of its new radiotelegraph station for the Pacific coast. The Government had some buildings there, so that the work to be done comprised chiefly the erection of masts, and the installation of special direction finding apparatus. The station was expected to be in full operation by the end of September or early in October.

The Dominion Government has, an Ottawa press dispatch, states, decided to erect a wireless telegraph station for communication between Dawson City and Mayo, Yukon, and it is said that the service will be in operation by the end of the year. It is also stated that a chain of radiotelegraph stations will be erected during 1924 in the Mackenzie River Valley, connecting with the Dawson station, and giving communication from Yukon to Alberta, through McMurray, Alta. The northernmost station of this system will, it is said, be at Aklavik.

A special committee of the Dominion

Cabinet, consisting of the Ministers of Public Works, National Defence, Trade and Commerce and Marine and Fisheries, was stated in an Ottawa press despatch to be considering the feasibility of consolidating under one department, the administration of the Dominion Government wireless telegraphs, cables, land telegraphs, and other means of communication, this service being at present under different jurisdictions, resulting in some overlapping and unnecessary administration expense. It is believed that by a centralization of the staffs and service, a considerable economy can be secured.

it to establish a tariff which will permit the companies to earn what the Board has held the companies should receive, viz.: "sufficient to pay the cost of operation, maintenance, and depreciation and have sufficient to pay interest upon the actual investment and a small amount of money for reserve." (Judgment Feb. 2, 1921, pg. 659.) This I suggest can best be accomplished by a percentage increase in existing rates.

In the Chief Commissioner's judgment of Feb. 2, 1921, on the occasion of the last general express rate hearing, he said: "I am convinced that the whole express rate, including carriage by the railway and the express end of the traffic, such as pick-up, delivery, billing, messenger service, and general overhead should be based upon a multiple of the standard first class freight rate, and, once a fair multiple is arrived at, it then becomes purely a matter between the railway companies and their subsidiaries, the express companies, to agree among themselves as to what proportion of the whole rate should be credited to the railways for transporting the goods and what to the express companies for carrying on the express portion thereof. If the straight multiple principle were adopted, then, with the exception of goods moving under commodity rates, as freight rates advanced or decreased, express rates would automatically follow suit, and this Board would then only be called upon to adjust from time to time the proper rates to be charged on commodities as fish, fruit and cream. I find, however, that this principle was discussed in Sir Henry Drayton's judgment in the 1919 rate case, and, as it was not adopted, I do not feel like incorporating it as a part of this judgment, but have simply expressed my views in the hope that, when express rates are next under consideration by this Board, conditions may have been changed to such an extent that this principle may be adopted, without in any way attempting to reverse the well considered opinion hereinbefore referred to."

In view of the Chief Commissioner's suggestion, the companies have prepared figures showing the probable result of the adoption of a multiple of the standard first class freight rate, which they will submit to the Board for its information. As the present financial position of the companies is a most difficult one, I ask the Board to appoint an early date for the hearing of the application.

The application will be heard by the Board at Ottawa on October 4. A Montreal press dispatch says the wholesale fish and fruit dealers there will oppose it. Sault Ste. Marie, Ont. Board of Trade and several business firms there, will, it is said, endeavor to complain to the Board of Railway Commissioners that express rates there are made unduly high by the present express rate structure. They have maintained for some time that they are unfairly treated as compared with the district east of Sudbury. As stated in a previous issue of Canadian Railway and Marine World, the Board of Railway Commissioners, in the equalization of rates cases, placed Sault Ste. Marie in schedule A territory, as concerns freight rates, and consequent on that, the Board of Trade applied to the Express Traffic Association for similar treatment in respect of express rates, but failed to get it. The Toronto Board of Control has instructed the city's legal department to oppose the Express Traffic Association's application.

Among the Express Companies.

The Canadian National Railways Express Department has opened an office at Ridpath, Sask.

J. B. Barrett, heretofore agent, Dominion Ex. Co. at Oshawa, Ont., has been appointed agent at Guelph, Ont., vice J. N. Hennessey.

The Canadian National Rys. Express Department closed its summer offices at Grand Beach and Victoria Beach, Man., Sept 6 and 9, respectively.

N. R. Weir, heretofore route agent, Dominion Ex. Co., has been appointed agent at Oshawa, Ont., vice J. B. Barrett, transferred to Guelph, Ont.

The Dominion Ex. Co. has closed its offices at Severn Falls, French River and Christie Lake, Ont., these points being now treated as flag stations.

The Canadian National Rys. Express Department has closed its offices at Bear River, P.E.I., Norway Bay, Que., Bala Park, Lake Joseph and Sparrow Lake, Ont.

W. M. Johnstone, route agent, Dominion Ex. Co., North Bay, Ont., is now in charge of the territory heretofore under N. R. Weir, route agent, appointed agent at Oshawa, Ont.

C. E. Henderson, heretofore agent, has been appointed station agent, Canadian National Rys. Express Department, Charlottetown, P.E.I., reporting to the General Agent, M. Calder.

J. A. Humphrey, Chief Clerk, Canadian National Rys. Express Department, Moncton, N.B., was presented with an engraved fountain pen and pencil, by his associates, Sept. 5, on leaving the service to study osteopathy at Kirkville, Mo.

The Board of Railway Commissioners passed order 33,956 July 25, refusing the Express Traffic Association of Canada's application for an order approving form of release for empty cream cans left on station platforms. The order is given fully, under "Traffic orders by Board of Railway Commissioners," on another page of this issue.

West Coast Express Co., Ltd. has been incorporated under the British Columbia Companies Act, with \$10,000 authorized capital, and office at Vancouver, to carry on the business of general carrier, by land or sea, railway and forwarding agent, shipping agent, warehouse man, bonded and common car, and any other allied business, and to operate ships and vehicles.

A Jersey yearling bull which obtained third prize at the Canadian National Exhibition at Toronto, and which was sold to a cattle breeder in New Zealand, was shipped from Toronto by express to New Zealand early in September. This is stated to be the first time that

a prize animal bought at the Exhibition has been shipped overseas by express from Toronto.

The Board of Railway Commissioners passed order 34,178, Sept. 15, approving a bylaw passed by Canadian National Ry. Co.'s directors, Aug. 20, authorizing C. A. Hayes, General Manager, Express Department, and W. C. Muir, Assistant General Manager, Express Department, to prepare and issue tariffs of every description of the express tolls to be charged by the company, and to specify to whom, where, and the manner in which they shall be paid.

Application for Revision of Express Rates.

F. H. Phippen, K.C., Counsel, Express Traffic Association of Canada, sent the following application to the Board of Railway Commissioners recently:—

Dear Sirs: On behalf of the Express Traffic Association of Canada representing the express companies doing business in Canada and also the Canadian National Rys. Express Department, I beg to apply for such an adjustment of rates as will permit the companies to earn a fair return for their services. A detailed analysis shows that notwithstanding the most rigid economy the business of the express companies actually cost more than the total express receipts, without providing anything for remuneration or for the use of the necessary property and capital. This situation has been accentuated by the recent order of council reducing express rates on cream.

The Dominion Express Co., since first commencing business, has paid the C.P. R. Co. for its portion of the service on the basis of one and one-half times first class freight rates. This basis of payment has on several occasions received the Board's approval. On this division the company's revenues have at no time since the last revision of express rates been sufficient to meet the company's actual out of pocket expenses. Both the C.P.R. Co. and the Dominion Express Co. are performing their respective portions of the service at an actual loss.

The Canadian National Express Co. nominally has shown surplus earnings, due to the fact that the Canadian National Rys. has been paid much less than the actual cost to the railway of performing its share of the express service. If the cost to the railway of its portion of the service be taken into consideration, it will be found that the Canadian National Express Co.'s business is carried on at an actual loss to both companies.

As it is impossible for the companies to continue performing the services under present rates, I would ask the Board to make such investigation as will enable

Electric Railway Department

Hamilton and Dundas Street Railway Ceases Operation.

The Dominion Power and Transmission Co., which owns the Hamilton and Dundas St. Ry., notified the Hamilton City Council, and the Dundas Town Council, on Aug. 30, that it would cease operating its cars between Hamilton and Dundas, at midnight, Sept. 5. W. C. Hawkins, Managing Director is reported to have stated in an interview on Sept. 1 that the H. and D. Ry. had not made expenses for some time past, and even under the new arrangement for higher fares made at the beginning of the year the line could not support itself. While the operation of buses had some effect on the diminution of traffic, they did not affect the company's receipts as much as privately owned automobiles. Mr. Hawkins attended a meeting of the Hamilton Board of Control on Sept. 4, and is reported to have stated that the company was prepared to surrender its franchise and pay the penalties. The Board was anxious to arrange to have the company operate a service on the line within the city, but pointed out that the loss was at about \$2,500 a month, and the company could not find the money. A conference was held Sept. 5, between E. P. Coleman, General Manager, and the board of control with regard to a service on the H. and D. R. line within the city, following which Mr. Coleman issued the following statement:—"The legal situation in regard to the H. and D. R. tracks under the present conditions is very uncertain, and I am inclined to believe that officially I have no authority to interfere in any way, shape or fashion. We realize, however, that the people in the southwest section of the city need some form of service, and for the present the Hamilton St. Ry. will operate a 20-minute service as far as the Westinghouse works. This service will be given with the understanding that this arrangement is subject to the legal complications which may arise to stop it. The city authorities have agreed to put all legal claims aside temporarily and to co-operate with the Hamilton St. Ry. in providing temporary service for the district."

The operation of the cars over the line was stopped at midnight, Sept. 5, according to notice, and on the morning of Sept. 6, bus proprietors in Dundas put on a sufficient number of vehicles to carry all traffic offering. A bus service was also put on in the southwest Hamilton district, and another bus service was also operated by a private concern. The H. and D. St. Ry. employees are being taken care of by the other electric railways owned by the D. P. and T. Co. The H. and D. St. Ry. Co.'s affairs are reported to have been placed in charge of Gibson, Levy and Co., the company's solicitors with a view to their being wound up. The principal creditor is the Dominion Power and Transmission Co. which has been paying operating losses.

The Hamilton and Dundas St. Ry. Co. was incorporated by the Ontario Legislature in 1876 to build and operate a street railway between Hamilton and Dundas. A franchise agreement was entered into between the company and the Dundas Town Council on Nov. 5, 1877, which was confirmed and declared binding by the Ontario Legislature in 1879, in an amending act, which also authorized

the company to increase its capital stock to \$50,000, and to issue \$25,000 of bonds in addition to \$25,000 issued in Sept. 1878, the interest on them not to exceed 8%. A further act was passed in 1881 under which the capital was to consist of \$26,000 of shares then outstanding, and a further \$20,000 of preferred or deferred stock the interest on which was not to exceed 8%; the original \$25,000 of bonds, and the \$5,000 of the second issue, were to be called in, and the company was authorized to issue \$50,000 of 6% bonds. In 1884, the company was authorized to

same time at \$65,000. In 1890 the company was authorized to increase its bond issue to \$150,000, and in 1895, it was authorized to issue \$100,000 of 2nd mortgage bonds; to operate its line by electricity only in Hamilton, east of Queen St., and by electricity or steam, or both west of Queen St., Hamilton, to Dundas. The Dundas Town Council, with the rate-payers' approval passed a bylaw in May, 1897, for the electrification of the line, and for its extension, and on June 17, 1897, an agreement was entered into between the company and the Toronto, Hamilton and Buffalo Ry. Co. for the operation of that company's freight trains into Dundas, the bylaw and the agreement being ratified by the Ontario Legislature in 1898. The bylaw provided for the extension of track from the then terminus in Dundas to Fisher's Mills, for the construction of sidings, and for the connection of the line with the T. H. and B.R. in Ancaster Gore; for the electrification of the line, the work to be completed by Sept. 1897; local fares in Dundas to be 5c, or 6 tickets for 25c; children's 3c or 10 tickets for 25c; persons living in Dundas but employed in Hamilton to be sold 6 return tickets for 75c, available between certain hours, and to be used within 2 weeks; a motorman and conductor to be employed on each car; the agreement to run for 50 years, with the option of reviewing conditions at the end of 30 years. The agreement with the T. H. and B. Ry. provided for the payment of \$2,750 a year on the completion of the extension and the provision of the necessary terminal facilities in Dundas, and of \$1,750 additional a year subject to adjustment from time to time; the agreement to run for 21 years, and for a further term of 21 years if it were found to be legal, either party having power to apply to the Dominion Parliament for confirmation, which was subsequently done. There is also an agreement between the company and the City of Hamilton under which 6 tickets were to be sold for 25c. The other fares are subject to the Railway Act. The H. and D. St. Ry. passed from its original owners to the Hamilton Cataract Power, Light and Traction Co., which in turn was taken over by the Dominion Power and Transmission Co., which was incorporated Jan. 2, 1907, with authorized capital of \$25,000,000.

The H. and D. St. Ry. has a total length of 6.98 miles, of which 0.20 mile is double track, and 1.60 miles of turn outs and sidings. Of the main line 1.24 miles are east of Queen St., Hamilton, and the junction with the T. H. and B. Ry. is at mile 3.78, the terminus in Dundas being at King St. The schedule shows 36 cars were operated each way, of which four in the morning and two at night in either direction were run on week days only. In January it was reported that the D. P. & T. Co., which owns the line, is reported to have lost \$91,078 in its operation since 1916. The net loss from operation for 1921 was \$17,934.34, and the total corporate loss was \$24,707.59. During 1922, the revenue failed to meet the operating expenses by approximately \$25,000. The H. & D. St. Ry. Co.'s total capital is \$200,000, of which \$100,000 is common stock and the balance bonds.

Canadian Electric Railway Association.

Honorary President: Major General Sir John M. Gibson, K.C.M.G., M.A., LL.B., LL.D., K.C., director, Dominion Power & Transmission Co.

Honorary Vice President: Acton Burrows, Proprietor, Canadian Railway and Marine World.

Honorary Advisory Council: Thos. Ahearn, President, Ottawa Electric Ry.; F. A. Gaby, Chief Engineer, Hydro Electric Power Commission of Ontario; Lt. Col. J. E. Hutcheson, General Manager, Montreal Tramways Co.; Geo. Kidd, President, British Columbia Electric Ry.

President: H. H. Couzens, General Manager, Toronto Transportation Commission.

Vice President: D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.

Treasurer: E. P. Coleman, General Manager, Dominion Power & Transmission Co.

Executive Committee: The President, the Vice President, the immediate Past President (Major F. D. Burpee, Manager and director, Ottawa Electric Ry.), the Treasurer, and G. Gordon Gale, Vice President and General Manager, Hull Electric Co.; W. S. Hart, Treasurer, Quebec Railway, Light, Heat & Power Co., and Vice President, Three Rivers Traction Co.; D. W. Houston, Superintendent, Regina Municipal Ry.; C. B. King, Manager, London Street Ry.; M. W. Kirkwood, General Manager, Grand River Ry. and Lake Erie & Northern Ry.; H. K. McLean, Superintendent of Transportation, New Brunswick Power Co.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry.; W. R. Robertson, General Superintendent of Railways, Hydro Electric Power Commission of Ontario; H. E. Weyman, Manager, Levis County Ry.; C. L. Wilson, Superintendent, Hydro Electric Rys., Toronto & York District.

Auditor: Lt. Col. G. C. Royce.

Secretary: Eustace Smith, Jr., Executive Assistant, Toronto Transportation Commission, 35 Yonge St., Toronto.

Official Organ: Canadian Railway and Marine World, Toronto.

build extensions of track to Van Wagner Beach, and to Grimsby, with terminals etc., in Hamilton subject to the Hamilton St. Ry.'s rights and with a restriction as to the streets upon which tracks might be laid; the bonding powers were further amended, and the company was authorized to lease or sell its undertaking. No construction was apparently done under this act, and it was not until after the incorporation of the Hamilton, Grimsby and Beamsville Electric Ry. Co. in 1892, that construction in the direction of Grimsby was undertaken; and not until after the incorporation of the Hamilton Radial Ry. Co. in 1893 and 1894, that the line to Van Wagner Beach was built. The H. and D. St. Ry. Co. leased its undertaking to John Weatherstone on Nov. 21, 1885, the lease being confirmed by the Ontario Legislature in 1886; the bond issue of the company being fixed at the

Publicly Owned Utilities and the Industrial Disputes Investigation Act.

Canadian Railway and Marine World for September gave on p. 431 particulars of the dispute between the Toronto Hydro-Electric Commission and its employees, concerning wages, of the employees' refusal to submit it to voluntary arbitration, as proposed by the Commission; the employees' application for a board of conciliation and investigation under the Industrial Disputes Investigation Act; the granting of such a board; and the Commission's application for an injunction to declare the board to be unauthorized to deal with the dispute and to prevent it from doing so. The board appointed consisted of Judge Snyder, Hamilton, Ont., Chairman, F. H. McGuigan, appointed by the Dominion Minister of Labor to represent the Commission, and J. G. O'Donoghue, Toronto, representing the employees. As pointed out in our last issue, municipally owned electric railway managements are vitally interested in this matter, as, if the Minister of Labor could appoint a board in connection with a municipally owned hydro system, he would also be able to appoint one in connection with an electric railway owned by a municipality.

Mr. Justice Orde, sitting at Osgoode Hall, Toronto, on Aug. 29, granted the injunction applied for. While his judgment permitted the board to go ahead and accept voluntary statements at any hearing it might see fit to conduct, it was made clear that the board possessed no compulsory powers whatever. The Judge said in part: "The injunction, I think, ought not to go beyond this, that the defendants should be restrained from in any way interfering with the plaintiff's business, that they are not at liberty and are to have no power to enter upon the plaintiff's premises or to examine their works or to exercise any of the powers which the Industrial Disputes Investigation Act, Sec. 38, gives them, nor have they power to enforce attendance of witnesses or the production of books, papers, or other documents by the order of the board from anyone who chooses to withhold them."

As stated in our September issue, the Commission's contention, as submitted by G. H. Kilmer, K.C., was based upon its interpretation of the British North America Act, sec. 91, which defines the matters upon which the Dominion may legislate, and sec. 92, defining the matters concerning which provincial legislatures may legislate. The Dominion Labor Department's contention as to the board's legality was based on another interpretation of sec. 91. Not only did the decision granting the injunction declare the board to be without compulsory power, but Mr. Justice Orde stated that there was grave doubt in his mind as to whether the whole Industrial Disputes Investigation Act is *intra vires*, for he said in part: "The main question here . . . is whether or not the Act . . . was within the competence of Parliament to enact, having regard to the provisions of the British North America Act, which divides the power to legislate between the Dominion Parliament and the legislatures of the respective provinces. Counsel for the defendants had rested the constitutionality of the act upon sec. 91, which dealt generally with powers to make laws for the peace, order and good government of Canada, a power very often termed a residuary power, and counsel for defend-

ants had argued that the settlement of industrial disputes, and the appointment of a board, not being mentioned expressly in either of the enumerated heads under secs. 91 or 92, necessarily fell within the residuary power, and were consequently matters for the Dominion Parliament." He was inclined to think that the Industrial Disputes Investigation Act did not create a "law" in the proper sense of the term, and that therefore the Dominion Parliament was probably *ultra vires* in prescribing a course of action to be taken in settling a dispute, as a "law." He stated that he found it very difficult to believe that a piece of legislation appointing a committee or a board for the sole purpose of adjusting a dispute between people was a "law" at all in the sense in which that word was used in the British North America Act, and said further, "I do not attempt to give a comprehensive or exact definition of the word 'law', but I cannot help feeling that when this enactment was passed, what the British Parliament meant was some law which had some binding effect upon someone, a law in its proper sense that creates rights and imposes duties, perhaps defining wrongs and subjecting those who infringe to penalties."

A remarkable feature about this case is that in 1921 the Dominion Labor Department recognized that the Industrial Disputes Investigation Act is not applicable to municipally owned enterprises, for the Labor Gazette of April, 1921, in giving a list of applications received by the Department for the formation of boards of conciliation and investigation, included the following: "(7) From the employees of the City of Saskatoon, Sask., being street railway workers, members of Amalgamated Association of Street and Electric Railway Employees of America, Division 615. The employer in this case being a municipality, a board could be established only upon the joint consent of the disputants. This consent had not been received from the corporation at the close of the month." Again, the Labor Gazette for May 1921 giving other applications for boards, included the following: "From certain employees of the Greater Winnipeg Water District, being enginemen, conductors, trainmen, etc. This dispute was investigated by an officer of the Department, and it was explained to the parties concerned that as the railway was under municipal control a board could be established only upon the joint consent of the disputants. The consent of the employing body was declined and no further action could, therefore, be taken by the Department."

T. L. Church, M.P. for North Toronto, in a statement given to the press in connection with a message he sent to the Minister of Labor recently, said: "It protested against the appointment of the board because the Minister told the House of Commons plainly that the Industrial Disputes Investigation Act does not apply to a publicly owned municipal utility. In this case he was backed up by a legal opinion given by E. L. Newcombe, Deputy Minister of Justice, that the act is *ultra vires* of Parliament."

From these facts it would appear that there was not a great deal of doubt concerning the board's lack of power to act, and that a board appointed under the act to pass upon a dispute between a municipally owned electric railway and

its employees would be equally powerless to compel attendance, the giving of testimony and the production of records.

The Board met on Aug. 30, when the members expressed themselves as prepared to conduct an enquiry and hear voluntary statements, and listened to a long statement from J. T. Gunn, representing the employees, but the Commission declined to participate in the proceedings. The employees, at a meeting on Sept. 2, decided that they would not strike to enforce their demand for higher wages, but that they would accept the Commission's offer of voluntary arbitration, which they had declined to accept previous to applying for the board. A press report of Sept. 8 stated that the Commission was undecided as to whether it would allow the employees to take up its offer at such a late date, and stated that it had been advised by counsel that it should await whatever action the conciliation board might take before taking up the question of voluntary arbitration.

On Sept. 14 the Board of Conciliation and Investigation adjourned indefinitely, subject to call of the chairman. An Ottawa press dispatch of Sept. 16 stated that a notice of appeal had been filed at Osgoode Hall, Toronto, against Mr. Justice Orde's decision, that the Labor Department would defend the constitutionality of the Industrial Disputes Investigation Act as a matter affecting the peace, order and good government of the country, and that it would attempt to uphold the act's validity as affecting public utilities, regardless of ownership.

St. John's, Newfoundland, Street Railway and Power Development. — The Newfoundland Legislature passed an act in 1919 authorizing the Reid Newfoundland Co. to use the waters of Tor's Cove Brook, flowing into Tor's Cove, and of Pierre's Brook, flowing into Witless Bay, for power development purposes, the development to be made within five years from March 15, 1919. The Legislature last session confirmed an agreement, made June 9, 1923, between the Governor-in-Council and the Reid Newfoundland Co., authorizing the transfer of the grant to the St. John Light and Power Co. for a reserve supply, free of all royalty, until developed, and then to be subject to an annual royalty of 50c a horse-power, and to authorize the company to assign and mortgage its franchises under the St. John St. Ry. charter of 1896. The object is to secure the necessary capital for improvements.

Canadian Electric Railway Association. — The following have been appointed a committee on motor buses and trucks: Major F. D. Burpee, Manager, Ottawa Electric Ry., chairman; C. H. Dahl, Assistant to Vice President, Winnipeg Electric Ry.; G. Gordon Gale, Vice President and General Manager, Hull Electric Co.; W. G. Murrin, Vice President, British Columbia Electric Ry.; and W. R. Robertson, General Superintendent, Ontario Hydro Electric Rys. F. S. Livingstone, Traffic Manager, Hydro-Electric Rys., Toronto and York District, having asked to be excused from serving on the valuation, maintenance and depreciation of street railways' assets committee, W. S. Hart, Treasurer, Quebec Ry., Light, Heat and Power Co., and Vice President, Three Rivers Traction Co., has been appointed to succeed him.

Double Truck Safety Cars Ontario Hydro Electric Railways.

The 4 double truck 1-man, 2-man, safety cars ordered by the Hydro Electric Power Commission of Ontario for the Hydro Electric Railways, Essex District, were described in Canadian Railway and Marine World for May, pg. 235, and an elevation of one of them was given. The accompanying illustration shows one of the completed cars, 4 of which were delivered in Windsor on July 23, and are being operated in cross town service, using 2 men in rush hours and 1 man at other times. In 2-man operation both conductor and motorman collect fares, which provides 2 entrances and 2 exits. This arrangement, we are officially advised, results in speeding up the service to an appreciable extent. The car's principal dimensions are as follows:

Length over all	43 ft. 7½ in.
Length over end vestibules	42 ft. 6 in.
Length over end of car body	28 ft. 9 in.
Width over all	8 ft. 5 in.
Width over sheathing	8 ft. 3 in.
Height, top of rail to top of roof	10 ft. ¾ in.
Seat spacing	2 ft. 6 in.
Post spacing	2 ft. 6 in.
Truck centers	20 ft.

The multiple unit electrical control equipment and the air brake equipment, together with the National Pneumatic Co. door engines and the balance of the safety equipment, will be supplied by Canadian Westinghouse Co. The trucks will be equipped with 26-in. rolled steel wheels with standard A.E.R.E.A. inter-urban service flange. These cars will be much the same design as the 4 ordered last spring from the St. Louis Car Co., which were described fully in Canadian Railway and Marine World for May, and of which additional particulars are given above with accompany illustration. The chief differences are that the motors of the new cars will be 35 h.p. instead of 25, that the new cars will be equipped with multiple unit apparatus, to provide for train operation, instead of being suitable for only one-man operation, as are the original 4 cars, and that the new cars will have with automatic drawbars, which the others have not. Minor changes in frame and body design will be introduced. Eight of the

London Street Railway Situation.

Although the London, Ont., City Council appointed Sir Adam Beck recently to negotiate with the London Street Ry. Co. for terms upon which its property might be acquired by the city, in order that a bylaw may be submitted to the voters at the municipal elections in January, the Mayor announced Sept. 11, that he was approaching the company's President with a proposition for an extension of the present franchise on the basis of a reduction in fares. His suggestion is that the fare be 5c. cash, with 6 regular, or 8 limited, tickets for 25c. The President is reported to have suggested in an interview that two questions be submitted to the voters in January, the first as to whether the citizens desire to take over the line, and the second, as to whether by arbitration or by agreement. A number of the aldermen opposed any extension.

A London press dispatch of Sept. 22, stated that Sir Adam Beck feels that unless co-operation from Mayor Wenige and certain aldermen is forthcoming, it is useless for him to continue negot-

Double Truck Safety Car, Ontario Hydro Electric Railways.

Approximate weight—

Car body	20,000 lb.
Control equipment	1,200 lb.
Air brake equipment	1,060 lb.
Motors, gears and cases	4,000 lb.
Trucks	10,000 lb.
Total	36,260 lb.

The electrical equipment includes General Electric type K control apparatus, and four G. E. no. 264 motors of 25 h.p. each. The cars were built by the St. Louis Car Co., St. Louis, Mo.

The Hydro-Electric Power Commission of Ontario has ordered 12 double truck, double end, safety cars, designed to be operated by a one or two man crew, either singly or in trains of 2 or 3 cars. They will be equipped with complete safety appliances. There will be 4 pairs of double doors on each car; in one man operation, only one pair of doors will be used, but a feature of the safety equipment will be that in cases of emergency, when the car is in one-man operation, one of the rear pair of double doors may be opened by hand for the exit of passengers, after an emergency application of the brakes or if the motorman's hand is removed from the controller. The electrical equipment will include 4 G.E. 265-A motors of 35 h.p., per car.

cars are to be operated on the Essex District, and the remaining 4 on the Toronto and York District. The car bodies have been ordered from Ottawa Mfg. Co., Ottawa; the trucks from Taylor Electric Truck Co., and the motors, electrical apparatus and air brake equipment as stated above. Delivery is expected to be made beginning Dec. 1.

Toronto-Guelph Service—A Toronto press report of Sept. 6, stated that a much more frequent service would be provided by the T.S.R. between Toronto and Guelph in the near future. We are advised that this is incorrect, and that the situation is that studies are being made with a view to re-arranging the service and possibly adding more cars at a later date. To increase the frequency of service, additional equipment would have to be bought, at least to the extent of providing car bodies for the spare motors and trucks on hand.

The Kitchener, Ont., Light Commissioners, having taken over the Waterloo-Wellington Ry., propose to buy several new street cars, also material for a complete new system of overhead trolley and feeder wire.

iations with the company for the purchase of the system. He is reported to have said: "I cannot see any object in continuing, and in spending money on appraisal with the present rate of co-operation. I cannot make progress under such conditions, nor can I justify continuing negotiations. Encouragement of the railway in spending money on second hand equipment and inferior construction work is adding enormously to the cost of the railway to the city without compensating value. I have conducted friendly negotiations for the purchase of over 90 properties, and in every case have been able to come to a satisfactory settlement, but in these cases I have always had the best of co-operation."

Fort William and Port Arthur Street Railways.—A Fort William press dispatch of Sept. 19 stated that the city's utilities committee had passed a resolution asking for a meeting with Port Arthur Public Utilities Commission, to see if the street railway disagreement could be settled, so that cars might run through, instead of each city turning its cars at the boundary, as at present.

Electric Railway Wages, Working Conditions, Etc.

Brandon Municipal Ry.—The employes, together with other civic employes are reported to be negotiating with the city council with respect to certain complaints, said to be of a more or less minor character, as to working conditions.

British Columbia Electric Ry.—A board of conciliation and investigation in connection with differences as to wages, etc., between the company and its employes was appointed by the Labor Department recently, consisting of A. G. McCandless, Vancouver, nominated by the company; R. T. Pettipiece, Vancouver, by the men, and A. M. Pound, Vancouver, appointed by the department as chairman, in the absence of a recommendation from the two other members. The question at issue is, as stated in Canadian Railway and Marine World for September, the men's application for the reinstatement of the agreement in force prior to Jan. 5, 1922. The present rates of pay, which were fixed under the agreement of Jan. 5, 1922, are: Conductors and motormen, 1st 6 months, 48½c.; 2nd 6 months, 53c.; 3rd 6 months, 56c.; thereafter, 58½c. One-man car operators, 64½c. Conductors and motormen in work train service, 2c. an hour extra. On interurban lines, District 1, District 4, 16th St. yard and Carroll St. yard, the rates per hour are: Passenger conductors and motormen, 1st 6 months, 48½c.; 2nd 6 months, 54c.; 3rd 6 months, 57½c.; thereafter, 60½c. Freight conductors and motormen, 1st 6 months, 51½c.; 2nd 6 months, 56½c.; 3rd 6 months, 60½c.; thereafter, 63c. Passenger brakemen, 1st 6 months, 48½c.; 2nd 6 months, 52c.; 3rd 6 months, 55c.; thereafter, 57½c. Freight brakemen, 58½c. Trolley men, 56½c. Sunday work to be paid at rate of time and a quarter; holidays, time and a half. Extra men to be guaranteed minimum monthly earnings of \$87.50. These rates do not apply to conductors and motormen on the Lulu Island Branch; the Fraser Valley line, and the Saanich Division on Vancouver Island. These rates were fixed after a board of conciliation had recommended a reduction of 10% on the then existing rates, which the men are now desirous of having restored. That schedule was put in operation October, 1920, and provided for the following rates per hour: City motormen and conductors, 65c.; interurban motormen and conductors, 67c.; car repairers, 70c.; mechanics' helpers, 65c.; car cleaners, 58c.; carpenters, 77c.; blacksmiths and machinists, 80c.; trackmen, 60c.

Calgary Municipal Ry.—Discussion of whether all day work on the railway be given to the most senior men on the staff, or whether the day and night work be split upon a 50-50 basis among the motormen, has been brought forward again. The question was dealt with in July, 1922, but the settlement then made has apparently been looked upon by the men as only a temporary one, and they desire to have the matter settled permanently, and therefore made certain representations recently to the city council.

London St. Ry.—A revision of the car schedule put in effect Sept. 1, is reported to have transferred 15 regular men to the spare list. The local union's executive committee discussed the matter on Aug. 30, and agreed with the arrangement to try the new schedule for some weeks to see how it would operate.

The Montreal and Southern Countries Ry. management issued a notice in Sept., 1922, desiring its employes to live as near to their work as possible, and advising those living in Montreal that it would be more convenient if they could find homes on the south shore, when their leases expired in the following May. The Longueuil Town Council took up the matter and passed a resolution Sept. 12 asking for the withdrawal of the notice. W. B. Powell, general manager, is reported to have stated that there is no reason why employes should not live anywhere on the south shore, so long as they are within reasonable distance of their work, and that Longueuil is close enough to the company's carhouse and at St. Lambert.

Levis County Railway and Auto Bus Competition.

The Levis County Ry. made a public protest recently against the illegitimate competition of motor buses in Levis and the rest of the area served by its lines. The company takes the position that under its franchises, and the judgment given by the Quebec Public Service Commission in 1922, the municipalities are bound to protect it from such competition. If the protest is not sufficient to induce the municipalities to take action, the company will, we are officially advised, take the matter before the Commission. The buses are being operated out into the country, and in addition, are picking up and setting down passengers along the street car routes in Levis. It is this practice, in particular, which the company complains of and which it desires to have stopped.

Electric Railway Projects, Construction, Betterments, Etc.

Calgary Municipal Ry.—A press report states that about 250 ft. of the street railway track at the corner of Sixth St. East and Ninth Ave. has sagged considerably, and will be torn up and relaid. This will be the last large job to be done this year. (Sept., pg. 450.)

Fort William Municipal Ry.—A press report states that Fort William, Ont., City Council has authorized the construction of a turning loop at Northern Ave.

Montreal Tramways Co.—Verdun City Council is reported to have decided not to pave Wellington St., from St. Willibords St. to Woodlands, as it is proposed to build an extension of the Verdun-Wellington St. line early in 1924.

New Brunswick Power Co.—In connection with the projected relaying of tracks on Main St., between Douglas Ave. and Portland St., St. John, a press report states that the plans have been deposited with the City Engineer. It is proposed to use steel ties laid in asphalt. Tenders for the work are reported to have been invited. (Sept., pg. 450.)

Quebec Ry., Light and Power Co.—We are advised that the company's shops at Limoilu and Ste. Anne are to be combined with the shop at Montmorency Falls during 1924.

Toronto Suburban Ry.—Work is proceeding on moving three-quarters of a mile of track on Main St., Weston, which is just outside Toronto's northwest city limits, from the west side of the street to the center. This is in accordance with an agreement entered into by the railway with Weston Town Council some time ago. Paving of the street by the town is being done at the same time.

Waterloo-Wellington Ry.—We were officially advised recently that the Kitchener Light Commissioners expected to start work on the rehabilitation of the Waterloo-Wellington Ry., from Kitchener to Bridgeport, Ont., about the end of September. Some portions of the track will be rebuilt, with new ties and rails; and a complete new system of overhead trolley wire and feed wire will be installed. This railway has been taken over by the city of Kitchener, for \$25,000, as a result of a recent vote of the ratepayers. It is to be consolidated with the Kitchener & Waterloo St. Ry., and operated in conjunction with that line by the Kitchener Light Commission.

Electric Railway Passenger Fares.

London and Port Stanley Ry.—A press report of Sept. 17 stated that the London Railway Commission had extended the time for the use of commutation tickets from Sept. 15 to Oct. 15. These tickets are used largely by St. Thomas and London people for summer residence purposes at Port Stanley, Ont.

Waterloo-Wellington Ry.—We are officially advised that the Kitchener Light Commissioners will operate the Waterloo-Wellington Ry. between Kitchener and Bridgeport, Ont., which is being acquired by the Kitchener City Council, as well as the Kitchener and Waterloo Street Ry. A 5c. fare will be charged on the newly acquired line, with an additional charge of 1c. for transfers to the K. and W. S. Ry. The present fare charged on the Bridgeport line is 7c. cash, or 4 tickets for 25c., without transfer privileges. The K. and W. S. Ry. fare is 5c. cash, or 6 tickets for 25c., and limited tickets as follows: Between 6.30 and 8 a.m., noon and 1 p.m., and 5 and 6.40 p.m., eight tickets for 25c.; 100 tickets in book form, good until used, but not transferable, \$3.50; children's tickets, 10 for 25c.

United States.—The Detroit, Mich., Free Press admits that Detroit was able for a time to operate its car system with low fares only because "at the outset considerable items that should have been charged up to municipal ownership were diverted to other accounts, and because it has scrimped on service and has allowed the system to remain in a ramshackle condition."

Port Arthur and Fort William Electric Railway Differences.

About a year or so ago, owing to differences between the Port Arthur Public Utilities Commission and the Fort William City Council's public utilities committee, with respect to electric railway matters, each of the two bodies decided to operate their cars only to the boundary separating the two cities, instead of running a through service.

Since then there has been a continued agitation by the people of both cities favoring a through car service, the inconvenience of the transfer at the boundary being urged as a reason for a return to the old plan of operation. The Fort William public utilities committee passed a resolution, Sept. 18, asking the Port Arthur Public Utilities Commission to meet the committee and endeavor to arrive at an amicable settlement of the question. A copy of the resolution was reported to have been received by the Port Arthur Public Utilities Commissioner, Sept. 21, and it is said that a meeting will be arranged.

Judgment on Appeal Against Toronto Railway Award.

The First Divisional Court, of the Appellate Division, Ontario Supreme Court, gave judgment in Toronto on Sept. 24 on the city's appeal against the award made on Jan. 31 by Hume Cronyn, chairman, and Sir Thomas White, representing the Toronto Ry. Co., a majority of the arbitration board appointed to decide the amount to be paid to the company by the city for the properties taken over by the latter on Sept. 21, 1921, and from which the city's arbitrator, Sir Adam Beck, dissented. The majority award was that the city pay the company \$11,188,500 for real and personal property which they found to be necessary in connection with the working of the railway, together with interest at 5% per year from Aug. 31, 1921, to the date of the award.

The city, in appealing against the award, filed the following reasons: "It is excessive in amount; it is contrary to law and evidence and the weight of evidence; it includes matters not within the arbitrators' jurisdiction; it is erroneous for mistakes of fact appearing on the face of the award and in the reasons for award delivered therewith. It is erroneous for mistakes in the principles of valuation adopted by the arbitrators appearing on the face of the award and in the reason for award. It is erroneous on the ground of irregularity appearing in the evidence and proceedings and on the face of the award and in the reasons for award delivered therewith. It is erroneous because property is included which is not necessary to be used in connection with the working of the railway. It is erroneous because the arbitrators took into account evidence of certain elements of value which should not have been considered, particularly with regard to current prices of labor and material and government taxes and exchange."

The judgment given by the First Divisional Court on Sept. 24, was written by Mr. Justice Hodgins, concurred in by Chief Justice Sir Wm. Mulock, and Justices Ferguson and MacLaren, and dissented from by Justice Magee. The portion of the majority judgment on the arbitrators' jurisdiction was written by Chief Justice Sir Wm. Meredith, who sat at the appeal hearing, but died since, and his views were accepted. The city's appeal to quash the award was refused, but the amount was reduced by \$543,500 to \$10,645,000, the court holding that the city need not take properties valued by the arbitrators at that amount, and which were included in schedule B attached to the award as follows: "The portion of the power house property on Front St. East which the city claimed to be entitled to reject, consisting of land, building, plant, tools, equipment, and furniture; the storage battery properties, viz.: battery and garage property at Front and Frederick Sts., including land, buildings, structure, storage battery, and equipment, together with battery booster and equipment; Harrison St. storage battery property, including land, building, structures, storage battery and equipment, together with battery booster and equipment in Harrison St. substation; storage battery in Yonge St. substation with motor generator set and exciter motor generator set; Sherbourne St. storage yard and carpenter shop at northwest corner of Front and Frederick Sts." The judgment also varied the

award by striking out the clause requiring the city to pay the company interest on its amount from Aug. 31, 1921, to the date of the award, but made it clear that the company may sue the city for this. As each party succeeded in part the court did not allow costs to either.

As stated above, Mr. Justice Magee dissented, as he did not agree with the elimination of the \$543,500 worth of railway property from the award, and held that the arbitrators should have required the city also to take the company's head office at King and Church Sts., valued at \$170,000. In referring to Sir Adam Beck, he said: "The conclusions were not concurred in by the arbitrator selected by the city, but we were without the benefit of any figures which would have commended themselves to his judgment or the reasons which would have moved him thereto."

At the time of writing (Sept. 25) it appears probable that both the city and the company will further appeal to the Supreme Court of Canada and ultimately to the Imperial Privy Council's judicial committee.

Montreal Tramways Co's Annual Report and Meeting.

The Montreal Tramways Co's report for the year ended June 30, presented at the annual meeting on Sept. 4, which is given in full on pg. 512 of this issue, was received by the shareholders with general satisfaction, and also by the Montreal public generally, and by the press. The Montreal Star says: "It discloses that the company has worked into new high ground in the matter of earnings, and is a document from which the shareholders may derive considerable satisfaction. One point which seems to stand out clearly is that the company is one of the most successful of its kind in America. The figures show a marked improvement in every department, compared with previous years, the gross earnings creating a new high record, while the operating and maintenance expenses have been maintained at about the same ratio to gross earnings as for 1921-22, notwithstanding the heavy expenditures that have been made during the fiscal year for improvements to roadbed, plant and equipment, which have improved the service given to the public, and maintained the high standard of the equipment, for which the company is noted. A study of the report discloses several interesting facts which show the remarkable progress made by the company, among them being the addition of \$400,000 to the general reserve account, bringing it up to \$1,000,000. There is in the treasury first mortgage bonds for \$3,161,000 par value, available at any time to provide additional funds for future expansions. Other quick assets, under the heading of cash, stores, etc., amount to \$1,584,000, while the undivided surplus and reserve accounts total \$2,228,434. Apart from these items, the company has put aside \$500,000 as a guarantee fund provided for under the terms of the contract with the city. Another feature which emphasizes the company's strong financial position is the fact that all the underlying bonds, to the extent of \$3,273,000, have been redeemed and cancelled. The public will be interested to note that the company has, during the

past 12 months, reduced the amount due to the city by \$389,151, having also paid during the same period the amount due for this year, viz.: \$500,000."

The directors were all re-elected, and Hon. J. L. Perron, K.C., was elected to fill a vacancy on the board, which is now as follows: E. A. Robert, President and Managing Director; Senator G. G. Foster, K.C., and P. J. McIntosh, Vice Presidents; W. C. Finley, J. M. McIntyre, Hon. J. L. Perron, W. G. Ross, Senator L. C. Webster, Senator J. M. Wilson. Other officers are Lt. Col. J. E. Hutcheson, General Manager; Patrick Dubee, Secretary-Treasurer; H. R. Mallison, and A. E. Shaw, Assistant Secretary-Treasurer.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:—

	July, 1923	July, 1922
Gross	\$851,843	\$834,772
Expenses	599,348	612,113
Net	252,495	222,659

Cape Breton Electric Co.—

	June, 1923	June, 1922	6 mons. to June 30, 1923	6 mons. to June 30, 1922
Gross	\$56,851	\$46,053	\$338,051	\$287,623
Expenses	53,131	42,920	315,641	291,410
Net	3,720	3,133	22,410	*3,787
Interest	5,626	5,540	33,928	33,445
Balance	*1,906	*2,407	*11,518	*37,232

*Deficits.

Quebec Ry., Light, Heat and Power Co.—Julian C. Smith, President, Quebec Power Co., sent a letter to the shareholders of the Quebec Ry., Light, Heat and Power Co., recently advising them that the directors could not make any change in their offer of July 26, of one share in the Quebec Power Co. for every 4 shares of the Q. Ry. L. H. and P. Co., which offer expired Sept. 28. The Quebec Power Co., the letter stated, had secured support sufficient to guarantee the carrying out of its policy. A meeting of the Quebec Power Co. directors was called for Sept. 14, to discuss details of the taking over of the Quebec Ry., Light, Heat and Power Co.

St. Thomas Municipal Ry.—A press report states that there was a deficit of \$655 on the operations of the railway for August, which is stated to be owing to the expenditure of \$400 on track maintenance and \$113 on repairs to rolling stock. The number of passengers carried was 45,680, against 42,927 for Aug., 1922. The Sunday cars are reported to be receiving the average patronage.

Winnipeg Electric Ry.—

	July, 1923	July, 1922	7 mons. to July 31, 1923	7 mons. to July 31, 1922
Gross	\$383,413	\$397,685	\$3,128,846	\$3,151,172
Expenses	282,221	299,958	2,191,821	2,336,870
Net	101,192	97,727	937,025	814,302
Fixed charges	78,698	70,233	527,929	428,701
Surplus	22,494	27,494	409,096	385,601

The decrease in the surplus for July was not due to any increase of operating expenses, which, exclusive of taxes, decreased approximately \$18,000, but to a decrease in gross earnings of the railway and gas utilities, on account of the unusual prevailing business conditions. The gross earnings of the electric utilities increased \$7,674, which is considerably below the normal increase of the past months. There was also a decrease in large power consumers' accounts, due to unusual business conditions. The operating expenses of the electric utility increased \$8,295, due to an increase in the cost of power.

Mainly About Electric Railway People.

H. H. Couzens, General Manager, Toronto Transportation Commission, and President, Canadian Electric Railway Association, who sailed from Montreal on the s.s. Antonia, on Aug. 11, for England, is expected to return early in October.

Budleigh Faraday, heretofore with the Southern Power Co., Montreal, is reported to have been appointed Commercial Manager, New Brunswick Power Co., St. John, N.B.

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., Mrs. Gale, and their children, have returned to Ottawa, after spending the greater part of the summer at their summer house at Aylmer, Que., and visiting Tadoussac, Que., for a short time.

C. M. Shaw, Assistant Superintendent of Transportation, Montreal Tramways Co., is in charge of that department, no appointment having been made to succeed the late A. J. Gadoua, who was acting Superintendent of Transportation.

W. H. Swift, Jr., who has been appointed Radio Engineer, Canadian National Rys., Montreal, was with the Westinghouse Electric and Manufacturing Co. for 14 years, and for the past five years has been in radio work in the United States.

C. S. Way, heretofore secretary to Manager and Treasurer, London and Port Stanley Ry., London, Ont., has been appointed Auditor, vice H. A. Cromwell, whose resignation to enter insurance business was announced in our last issue.

Oshawa Railway and Toronto Eastern Railway.

An Oshawa press report of Sept. 20 and 21 stated that the Oshawa Ry., a Canadian National Rys. subsidiary will be merged into the Toronto Eastern Ry., another C.N.R. subsidiary, as part of the C.N.R. system of electrified lines centering on Toronto as headquarters, that it will be managed by E. W. Oliver, Manager Niagara, St. Catharines and Toronto, Toronto Eastern and Toronto Suburban Ry.; with J. J. Callaghan, now Superintendent Oshawa Ry., in charge locally, and that Oshawa will be divisional headquarters. The Oshawa Ry.'s office on Simcoe St. South will be made the Toronto Eastern's main station in Oshawa. Another Oshawa dispatch stated that the Oshawa Ry.'s express and freight buildings will be moved back to Celina St. and the site used for the Toronto Eastern station, also that a car house and repair shop would be built in Oshawa.

At the time of writing (Sept. 24), official confirmation of the above was unobtainable, but our information from a reliable source is that the part of it relating to the merging of the two roads is probably correct. The Toronto Eastern Ry., completion of which is proceeding, passes through Oshawa and establishes connection with the Oshawa Ry., and it is believed that the Canadian National Rys. management's intention is to make Oshawa the operating headquarters of the Toronto Eastern line extending from Cobourg to Toronto. As to additional car house accommodation and repair shop, our advice is that the management contemplates the provision of additional fac-

ilities, and it is expected that a new station building will be necessary.

An Oshawa press report of Sept. 23 stated that the mayor, reeve, deputy reeve, a councillor and the town engineer, had interviewed J. E. Dalrymple, President, Oshawa Ry. in Montreal and had secured a promise of a half mile extension of the track on Simcoe Street North and that work would be started at once.

The Oshawa Ry.'s latest official statistics, for the calendar year 1921, are as follows: Mileage, first main track 9; second main track, 4.72; total main track, 13.72; sidings and turnouts, 1; total computed as single track, 14.72. Passenger car mileage, 105,388; freight, mail and express car mileage, 48,550; total car mileage, 153,938; fare passengers carried, 674,740; tons of freight carried, 146,203. Total capital stock, \$40,000, owned by Grand Trunk Railway Co. Passenger revenue, \$35,025.02; baggage revenue, \$55.20; mail revenue, \$996; express revenue, \$17,185.31; freight revenue, \$144,409.58; switching revenue, \$870.56; gross earnings from operation \$198,541.67; other receipts, \$7,587.36; total gross earnings, \$206,129.03; operating expenses, \$142,704.31; net income, \$64,586.94; surplus for year after reserves, special charges, and dividends, \$25,800.06. The rolling stock consists of 8 combination passenger cars, 3 freight cars, 1 mail, express and baggage car, 1 work car, 1 sweeper, and 5 electric locomotives. It has three parks, Alexandria, Lakeview and Oshawa on the Lake. The company's officials are J. E. Dalrymple, Vice President, Traffic Department, Canadian National Rys., Montreal, President; H. W. Cooper, General Manager, Purchasing and Claims Agent, Gananoque, Ont.; J. H. Valteau, Secretary-Treasurer, Gananoque; J. J. Callaghan, Superintendent, Oshawa.

The American Electric Railway Association will hold its annual meetings at Atlantic City, N.J., Oct. 8 to 12. Among the main subjects to be discussed are, the co-ordination of electric railway and bus transportation, essential operating costs, relation of management and employees, and customer ownership of public utilities. The committee reports will be of exceptional interest and value, and the General Electric Co.'s prize for the greatest accomplishments by any street railway during the year, will be awarded. Joint meetings will be held with the Engineering and Accountants, Claims and Accountants, Transportation and Traffic and Claims Associations. Special rates to Atlantic City have been arranged, and the entertainment committee has arranged a full programme, including a ball and evening theater party. The meetings will be held at the Million Dollar Pier, the exhibits being placed under the hippodrome on the north side of the pier. J. W. Welsh, 8 West 40th St., New York, is Secretary.

The Detroit, Mich., Street Railways, which are owned and operated by the city, had a decrease of \$106,861 in net earnings for August, compared with Aug. 1922, operating expenses per car mile having increased 3.45c for Aug., 1922. Officials state that increased power charges, and increased wages for platform and electrical employees which were in effect the last half of the month, are responsible for the slump. On Sept. 2, the fare was advanced from 5c to 6c, with 1c additional for transfers.

Winnipeg Electric Ry. has repainted 90 of its street cars, this year.

Electric Railway Notes.

The New Brunswick Power Co. has on its payroll 250 men and women, who were paid \$300,000 in salaries and wages during 1922.

Toronto Street Railwaymen's Union have a deposit of about \$12,000 in the Home Bank of Canada, which suspended payment recently.

Harry Edelberg, a passenger on a Montreal Tramways Co.'s car on St. Louis Boulevard, struck the motorman, F. Brisebois, recently, causing him to momentarily lose control of the car. He was fined \$20 and costs or two months imprisonment.

The London, Ont., St. Ry. is reported to have made some reduction in the number of cars on the Normal and Ridout lines, it being claimed that too many cars were being operated on single line stretches. It is also reported that there will be a cutting out of some stops on other lines.

London, Ont., St. Ry. put in effect, on Sept. 3, a new system of stops, which has eliminated a number of points in the outlying parts of the city where the cars stopped formerly, and has changed the position of other stops. The posts indicating the stopping points have been painted white.

Brandon Municipal Ry. officials are reported to have taken stock, recently, and to have found steel rails worth \$12,000, which have been in stock almost since the lines were built. As they are not likely to be required for years to come, the city council is reported to have given instructions for their sale.

The Montreal Tramways Co. is reported to be placing on its cars the fittings for the new plan of showing route numbers. The number, sufficiently large so that it can be made out a considerable distance away, and certainly double the distance at which the names of the routes can now be deciphered, will be placed in the front of the car, on the side, facing the sidewalk, and at the rear. These numbers will be illuminated at night. The route names will be kept in the same places as at present. The company is getting out maps showing the routes, with the numbers which are to be used on the cars.

The New Brunswick Power Co.'s application for a permanent injunction to restrain the City of St. John from erecting its hydro electric distribution system as at present planned and being carried out, was argued in the Chancery Court at St. John, Aug. 22. The company's applications for interim injunctions had been dismissed previously. Considerable evidence was given on the opening and several following days. On Aug. 25, Mr. Justice White refused to grant an interim injunction to restrain the city proceeding with the work until the present case was concluded; and on Aug. 30, it was stated that the further hearing would be put off for some time.

The Ontario Hydro Electric Railways will build a terminal station at the Toronto terminus of its Toronto and York District, Mimico Division line, which extends from Toronto to Port Credit, 8.36 miles. It will be built on land leased from the Toronto Harbor Commission at the nominal rental of \$1 a year, and will be located between the loop at the western terminus of the Commission's Lake Shore Road line and the present radial railway tracks, near Jane St.

Toronto's Acquisition of Toronto Suburban Ry's City Lines.

Details of negotiations between the City of Toronto and the Toronto Suburban Ry. management for the taking over by the former of the T.S.R. lines within the city have been given in preceding issues of Canadian Railway and Marine World. After long delay, the acquisition of these lines by the city now seems to be much nearer than heretofore, as a draft of the final agreement for sale has been presented by the Canadian National Rys.' Legal Department to the City's Legal Department. The T.S.R., an electric road with a line to Guelph, a line in York Township to Weston and Woodbridge, and lines in the northwest portion of Toronto, is owned by the Dominion Government, and under C.N.R. management.

The preamble to the draft agreement states that the parties thereto are the Toronto Suburban Ry., the City of Toronto, York Township and the Toronto Transportation Commission, and recites that the railway was incorporated by Ontario legislation in 1894 as the Toronto Suburban St. Ry. Co., that its name was changed by the same authority in 1900 to its present one, that its franchise agreement with the Town of Toronto Junction, now included in Toronto, expired in 1921, that the one with York Tp. does not expire until 1929, but that, notwithstanding the latter fact, and in the presence of enabling legislation secured from both the Dominion and Ontario Governments, the lines operated under the York Tp. franchise will be included in the proposal. The agreement states that the sections of the line covered by the Toronto Junction franchise, viz., the Dundas, Fairview, Keele St. and Davenport sections, the value of which, according to the franchise, was to be decided by arbitration in event of them being acquired by the municipality, are valued at \$87,628.67 for the proposed sale. The Lambton and Davenport East sections are valued, for purposes of the sale, at \$51,671.33. An accompanying schedule defines the sections of line mentioned as follows: Lambton section, on Dundas St., from city limits at west side of Runnymede Road, west to and including the loop at Lambton, 1.34 miles; Dundas section, on Dundas St., from the east side of Keele St. to the city limit at the west side of Runnymede Road, 0.906 mile; Fairview section, on Gilmore Ave., St. Johns Road and Fairview Ave., from a junction on Dundas St. to Evelyn Crescent, 0.64 mile; Keele St. section, on Keele St. and Weston Road, north from the north side of Keele and Dundas Sts. diamond to the city limit at Northlands Ave., 1.079 miles; Davenport west section, on St. Clair Ave., Ford St., and Davenport Road, from a junction on Keele St. to the old limits of the Town of Toronto Junction on the west side of the G.T.R. Northern Division line, 1.24 miles; Davenport West section, on Davenport Road and Bathurst St. from the old limits of the Town of Toronto Junction on west side of G.T.R. Northern Division, to the north side of the C.P.R., 2.073 miles. Total mileage, 7.278.

The draft agreement provides that the Toronto Suburban Ry. obtain a partial discharge from the trustees for the railway bondholders, covering the properties to be vested in the city of Toronto. The T.S.R. to cancel all its rights, powers and privileges in respect of

property on city streets sold to city, subject to certain specified temporary privileges. The T.S.R. to operate the lines to be sold to the city, for 6 months from the signing of the agreement, under the following conditions: the T.S.R. to supply cars, crews and power; fares to be collected by Toronto Transportation Commission conductors who will sell T.T.C. tickets; the T.S.R. will furnish 6 cars with which to operate the lines for \$250 a month; the T.S.R. to be paid by the city for the entire cost of operation, plus 15% of the gross earnings, and the city to indemnify the railway against loss due to accidents, etc. The T.S.R. to assist the city in grade separation at Weston Road, by furnishing the city material from cuttings on the T.S.R. new line, with which the city will raise the level of Weston Road, at the point where the T.S.R.'s new line will cross it, 14 ft. above the present level. The T.S.R. to provide an adequate subway for itself at that point. The T.S.R. to procure from the Canadian National Rys. a waiver of any claim against the city for damage to C.N.R. property due to the grade separation mentioned. The T.S.R. and the city to agree to drop pending legal action concerning Lansdowne Ave. signal system, each party to pay its own costs. The city to allow the T.S.R. to maintain, free of charge, certain facilities, such as transmission lines, telephone dispatching circuits, etc., within the city, for two years from signing of agreement. The T.S.R. to maintain these facilities in good condition and to assume any loss incidental to their presence or operation. The city to allow the T.S.R. to move its cars over the tracks specified in the agreement, free of cost until their gauge is changed from standard to city gauge. The city to buy the T.S.R.'s light and power system for \$12,000. The city to supply the T.S.R. with direct current power from the Toronto Transportation Commission trolley system to an amount and under conditions specified. The city to allow the T.S.R. to connect its proposed new line, from its proposed terminus at Keele St. and St. Clair Ave., to a point on St. Clair Ave., approximately 100 ft. east thereof, and across the steam railway tracks therefrom, and to operate cars, not containing passengers, over the connection, until grade separation with the steam railway tracks is accomplished, or until the Toronto Transportation Commission requires that portion of St. Clair Ave. for its tracks. The sale of the portions of the T.S.R. affected by the franchise agreement with York Tp. in 1899 shall not prejudice the railway's rights, under that agreement. Any adjustments necessary shall be settled by conference between E. B. Walker, Electrical Engineer, Bureau of Economics, C.N.R., and H. H. Couzens, General Manager, T.T.C.

From the draft agreement summarized above, which, at the time of writing, Sept. 15, is merely a proposal, it may be surmised that the parties are nearing the point where the sale of the T.S.R. city lines to the city of Toronto will be effected. Legal representatives of all parties are, at the time of writing, engaged on the matter, and our information, from a reliable source, is that it is expected that the sale will be made on terms which will coincide very closely with those above given.

Niagara, St. Catharines & Toronto Railway Franchises, Construction, Etc.

Details of the franchises, including new fares, which the Niagara, St. Catharines & Toronto Ry. is seeking from Port Dalhousie, St. Catharines, Merritton, Thorold and Niagara Falls, Ont., were given in Canadian Railway and Marine World for July, and it was pointed out that certain rehabilitation and construction work the management had provided for, would be done only if and when the desired franchises were granted, while certain other work incidental to improvement of the service would be gone ahead with independently of the franchise negotiations. The situation at the time of writing (Sept. 15) is that the franchise negotiations with the various municipalities are still proceeding with the result that the work dependent on the franchise being secured is held up, while active preparations to prosecute the other work are being made. Tenders were asked for the construction of a passenger terminal in St. Catharines, facing Geneva St., at Balfour and Welland Sts., to be in by Sept. 8, but the time was extended to Sept. 15. We are officially advised that the freight terminal to be built on Church St., St. Catharines, will also be gone ahead with in the near future.

Concerning interurban line improvements, we are advised that work on the St. Catharines-Port Dalhousie line will proceed at once, but that electrification of the G.T.R. branch line between Port Dalhousie and Merritton, to provide for its operation in conjunction with the present N. St. C. & T. system, will be postponed until next spring.

At the St. Catharines Chamber of Commerce luncheon on Aug. 27, E. W. Oliver, Manager, N. St. C. & T. Ry., explained the situation as concerns local line improvement in St. Catharines, stating that had the franchise terms been agreed to, a start on the track rehabilitation within St. Catharines could have been made by Sept. 1. While the mayor had expressed regret that the local lines could not be rehabilitated this year, his reported statement that the vote on the franchise question could not be taken before December indicates where the responsibility lies for the postponement of the work.

In Niagara Falls, the railway management has secured right-of-way for a line from a junction with Victoria Ave. to opposite the International Bridge, where a terminal will be built. New trackage is planned for Lundy's Lane and Stanley St., and Victoria St. will be double tracked. In addition to this, the existing lines will be rehabilitated. While this work is delayed because of no agreement having resulted from the franchise negotiations, it is expected that a vote will be taken in the near future resulting in the town's acceptance of the railway terms.

The Grand River Ry., a press report states, applied recently to Kitchener, Ont., City Council for an extension of running rights on certain streets to enable it to operate a passenger service to Waterloo. The company now operates a freight service to Kitchener. The Kitchener City Council instructed the mayor not to sign any agreement until after the proposals had been agreed to by the Town of Waterloo.

Toronto Suburban Railway Route Deviation.

Consequent on negotiations between the Toronto Suburban Ry. management and the City of Toronto, for the taking over by the latter of the T.S.R. city lines, indicating an agreement in the near future, the railway management, as stated in Canadian Railway and Marine World for Sept., applied to the Board of Railway Commissioners, on July 31, for an order approving a proposed deviation of the T.S.R. route into the city from the northwest. The proposed new line was shown on the plan submitted, to leave the original line near where it crosses Dundas St., to cross the C.P.R. tracks by a subway, to cross Scarlett Road, Jane St., Castle Crescent Road and Syme's Road, all in York Township, on the level, to cross Gunn's Road, in Toronto, by a bridge, and Weston Road, in Toronto, by a subway, and to enter a terminus at Keele St. and St. Clair Ave., Toronto. On the application being made public, the mayor of Toronto and some civic officials made statements to the effect that the new line would be dangerous, as when the city expanded it would find four additional level crossings within its boundaries, and that therefore the plan would be opposed. The Board notified the city and township authorities of the railway's application, in the usual manner, in compliance with the Railway Act, 1919, and received acknowledgement of the notifications. No objection being offered by either city or township, the Board, on Aug. 23, issued order 34,068, granting the railway's application.

On it becoming known that the order had been issued, the mayor and some city officials professed great surprise, and on Aug. 30, the Toronto Board of Control discussed the matter, following which it was stated that an application would likely be made to the Board for a modification of the order, or a rehearing. It was then discovered that Keele St., at the point where the projected line would cross it before turning south to follow it to St. Clair Ave., is still a public thoroughfare, which caused the railway management to apply to the city to pass a bylaw closing that portion of the street. We are advised that the Town of West Toronto Junction, now a part of the City of Toronto, passed bylaw No. 552, on Nov. 17, 1903, in accordance with an agreement entered into with the G.T.R., providing for the closing of the portion of Keele St. referred to and the railway management's argument now is that the city, having assumed the obligations of the town which it absorbed, should carry out the agreement with the G.T.R., now a part of the Canadian National Railways in the same way as the Toronto Suburban Ry. is doing. The mayor of Toronto and various aldermen stated that they did not propose to allow the street to be closed if it could be prevented, although at the point in question it is not used to any extent, and leads into an area of low lying waste land. On Sept. 11 a conference was held between the Toronto Board of Control and York Township Council, and it was decided that, after township engineers had reported upon the cost of trestles to replace the level crossings proposed for the township, the Board of Railway Commissioners would be asked by both city and township for a rehearing of the railway's application. It would seem, there-

fore, that there is going to be opposition to the line deviation plans, which will cause much delay in getting the work under way. We are advised that work would be gone ahead with at once but for the city and township authorities' obstruction tactics.

The railway management's intention is to proceed, when the way is cleared of these obstacles, to extend the line to a terminus at St. Clair Ave. and Keele St., and to use the present car house and freight shed on St. Clair Ave., east of Keele St. and across the steam railway tracks therefrom, until construction is completed of a line on the old Toronto and Niagara Power Co. power line right-of-way to Davenport station, on the G.T.R. Toronto-North Bay line. The line will then follow the G.T.R. where the old belt line makes a junction with it; and the belt line will then be used north of the city to a connection with the electrified line to the east, the Toronto Eastern Ry.

British Columbia Electric Railway's Victoria-Saanich Line.

In connection with the possibility of the closing down of the Victoria-Saanich line, which was referred to in Canadian Railway and Marine World for September, we are officially advised that there is nothing very definite to state at present. The line has been doing badly for many years, the company would be loth to close it, and is making every effort to keep it going. The matter has been before the local bodies with a view to getting any help possible to increase the traffic. It is said that the municipal authorities are at one in being most anxious that it be kept going. The company hopes that with the putting in operation of one-man cars and with increased traffic that may be developed through closer co-operation by the municipalities, it will be possible to keep the line in operation.

Toronto Eastern Railway Construction.

Details of the Canadian National Ry. management's plans for the completion of the Toronto Eastern Ry. as an electric line, and its inclusion in the electrified system in the Toronto district, have been given in preceding issues of Canadian Railway and Marine World. The trouble with the town of Oshawa over paving matters, and its settlement by the town council agreeing to meet the management's views as concerns paving on the track allowance, were dealt with in our September issue.

We were officially advised on Sept. 12 that, consequent on the Oshawa Council agreeing to do the track allowance paving, the rehabilitating of the completed portion of the line between Oshawa and Bowmanville was being proceeded with, about 40 men being put on. The work now proceeding consists of putting in new ties, surfacing track, repairing grade, bridges, culverts, etc. Previous to this a spur line from North Oshawa station, to connect with the T.E.R. line in the town, on which the rails had been taken up some time ago, was relaid. On completion of the rehabilitation work between Oshawa and Bowmanville, the laying of steel between Whitby and Pickering will be proceeded with. The work is being done under direction of of S. B. Wass, Resident Engineer, T.E.R.

We were also advised on Sept. 12 that a decision as to the route for the connection between Pickering, the present western end of the T.E.R., and the C.N.R. Orono Subdivision line over which the electric cars will operate into the Don River terminal in Toronto, had not been made, and that no decision had been made as to the connection with the Orono Subdivision line north of Bowmanville. Surveys were made some time ago, resulting in two or more alternative plans being considered. No decision had been announced as to the disposition of the Orono Subdivision line between the east and west T.E.R. connecting points, although it is expected that this portion of line will be taken up. A decision as to the route into Toronto, and the connecting link between the T.E.R. at Bowmanville, and the Orono Subdivision line, is expected to be arrived at in the near future.

One-Man Safety Cars, Quebec Railway, Light & Power Co.

The Quebec Ry., Light and Power Co. ordered 10 one-man cars recently from Ottawa Car Manufacturing Co. Their principal dimensions, etc., will be as follows: Length over all, 31 ft. 9 1/4 in.; length of platform, 6 ft.; length over sheathing, 7 ft. 8 in.; seating capacity, 32; height from rail to top of roof boards, with 26 in. wheel, 9 ft. 10 11/16 in.; weight, complete, 16,500 lb. They are designed for heavier traffic than the standard safety car, which has been recognized for some time as the standard one-man car. Their construction will be practically an adoption of the one-man car, but they will have two doors at each end, instead of one. They are to be of steel construction, side sills 3 x 3 x 1/4 angle, girder plates no. 13 gauge patent levelled, 1 1/2 x 1 1/2 x 3/16 T section, side post letter boards to be of no. 16 gauge, steel underframe to be constructed of standard steel sections as light as possible, consistent with rigidity and strength. The vestibule knees are to be 7 in. channel. Following are particulars of the special equipment, etc.: Seats, wood slat, reversible type; seat metal fittings, Ottawa Car Manufacturing Co.'s standard pressed steel; trucks Canadian Car & Foundry Co.'s safety type; seven windows on each side of body and 2 in vestibule, all standard size, glass being commercial sizes; curtains, double-faced Pantasote, with spring plug rollers; buzzer system control from 500-volt trolley; heaters, Cutler-Hammer type; window guards, wire mesh, specially designed for Quebec conditions; six exhaust ventilators in roof; Crouse-Hinds headlights at each end; grab handles and dividing rails of aluminum tubing, containing 1 3/4% manganese; trolley retrievers at each end; one illuminated destination sign in each vestibule; four Ohio air sand traps in each car; H. B. life guards at each end of car; hand brakes, Ackley no-staff, one on each platform; marker lamps over center vestibule window; Westinghouse motors and air brakes, standard safety car, with all safety features of improved type; interior finish, cherry, naturally finished; headlining and wainscoting 1/4 Agasote.

From the Toronto Globe: "Amid the general congratulations to the managers and directors of the Canadian National Exhibition, the men behind the Toronto Transportation Commission should not be forgotten."

Ottawa Electric Railway Co's Offer to the City.

Canadian Railway and Marine World for September referred briefly to a proposal made by Ottawa Electric Ry. Co. to the city council, for a settlement of affairs between the company and the city. We have since received a copy of the letter sent by Major F. D. Burpee, the company's Manager, to the mayor, which on account of its importance and undoubted interest to other companies is given in full as follows: "I beg to acknowledge receipt of your letter of Aug. 10th in which you ask under what franchise agreement, other than a flexible fare contract, would this company be willing to undertake the extensions and improvements of the street railway system, recommended by Mr. Fuestel in his report last year; what would be the longest period of time the company would obligate itself to operate under fixed fares; and what fixed fares would it agree to operate under over that period.

"To undertake to provide a good car service at a fixed price for a long term of years involves many risks which we would be foolish to accept unless the fares were fixed at a rate that would permit us to make provision to meet circumstances which cannot be foreseen today. We assume that what the citizens desire from the street railway is a good service and one that can be relied upon to be permanently good. If under such a contract conditions beyond our control at some future time were such as would make the fixed rates of fares not sufficient to pay the full costs of the service, bankruptcy must follow, and the continuation of good service become impossible. This contingency was evidently in the minds of those who drafted the act in 1920 under which your corporation is enabled to acquire and operate the street railway system in Ottawa, as clauses 6 and 7 of that act give you the right to regulate and fix fares, should the revenue derived from the operation of the railway fall short in any year of the amount required to provide for the cost of operating the railway, its maintenance and upkeep, renewals and replacements, and the full payment of the capital invested and interest thereon. In providing such a safeguard in the Ottawa Transportation Act the corporation wisely protected the city against the system having to be operated at a loss at some future time if the city purchased the railway. Should this company be any less careful in protecting its shareholders from loss or its patrons from poor service?

"It is evidently the desire of a majority of Ottawa citizens that the street railway system should continue to be operated by this company under a contract along the lines of the present franchise. To carry out their wishes, as expressed by the ballot in Jan., 1922, and at the same time give to this company some reasonable measure of protection for the future, I beg to lay before you the following proposal. That the agreement entered into in June, 1893, between this company and the city, under which the street railway now operates and which has automatically been renewed until Aug. 1928, continue in effect, with the following amendments to be embodied in a supplementary agreement: "That this company have the exclusive right to operate within the limits of the City of Ottawa, electric cars on metal tracks, or any other vehicle which might be used as a

public passenger carrier on which a fare is charged, except those chartered for special trips such as taxis or cabs. We do not object to motor busses doing an interurban passenger business between Ottawa and other towns, such as Kemptville, Prescott, Rockland, Morrisburg, etc. but such should not be permitted to handle local business within the limits of Ottawa. That clause 49 of the 1893 agreement, under which we sell 8 tickets for 25c, good during certain hours, be cancelled. That the special agreement entered into in 1899 under which we sell 7 tickets for 25c, good on Sundays only, be cancelled. That clause 18, granting us exemption from taxation, except the usual assessment on real estate, be made to apply as long as the contract exists. We are satisfied that this does so apply, but you evidently do not agree with this view. That clause 11 of the schedule to the 1893 contract, that there shall be a conductor as well as the driver on each car be cancelled, and the company permitted to use at its option one-man cars where these can be efficiently employed. We would have no desire to use such equipment on lines where the traffic is heavy, nor to instal them in such numbers as would cause any employe to lose his position on that account. In this connection I respectfully refer you to your street railway expert's report in which he points out the importance of using this effective means of keeping down the costs of operation and maintaining the five cent fare. Employees operating such cars would be paid at an increased rate of wages.

"That the following extensions recommended by Mr. Fuestel be undertaken by this company, the construction to be concluded before Aug. 1928: A double track line on Laurier Ave. between Elgin St. and Nicholas St., the corporation to provide the required width on Laurier Ave. for such tracks by moving the north sidewalk. The north track on Queen St. to be connected with the east track on Elgin St. by a curve at the junction of these streets. Double tracks in Ottawa East over the Pretoria Ave. bridge, on Hawthorne and Main Sts. to Clegg St., with a single track loop on Clegg, Glenora and Herridge Sts. Pending the removal of the crosstown tracks this extension could be connected with Bank St. by Pretoria Ave., which would save the great expense of deepening and widening the Elgin St. subway; the company to erect a suitable shelter and concrete stairway at the extreme end of its Elgin St. loop so that Ottawa East passengers could transfer from this extension to Elgin St. with little inconvenience. A double track line on Bronson Ave. from Gladstone south, with a single track loop on Findlay, Muriel and Center Sts., the corporation to extend Muriel St. from Center to Findlay for this purpose. As a level crossing with a steam railway is dangerous and undesirable and probably would be objected to by the Board of Railway Commissioners, we suggest that the tracks on Gladstone Ave. from Bronson west and on Bell St. to Powell Ave. remain in operation and that this line be extended south via Powell and Bronson to Findlay. Double tracks on Rideau St. from Charlotte to the city limits to connect with the proposed Eastview extension. Double tracks on Beechwood Ave. from Creighton St. to Springfield Road, with a single track loop on Beachwood Ave., Butternut

Terrace, Maple Lane and Springfield Road. A single track line on Ruskin from Holland Ave. past the new civic hospital to Fairmount and on Fairmount to Wellington. The city to extend Ruskin Ave. through to Fairmount and to make any changes necessary in the railway bridge over Fairmount Ave. which carries the Canadian National Rys. track. It is possible this structure might require no alterations whatever for single track operation. Double tracks on Wellington St. from Preston St. to the junction of Wellington and Somerset at Garland's corner, when the Wellington St. viaduct is rebuilt by the city. Any other extensions to be built by arrangement with the corporation as required, or failing an agreement, to be referred to arbitration.

"The company to provide a sufficient number of cars as are necessary from time to time for the efficient operation of the service.

"The city, under the agreement of 1893, would still possess the right to purchase the street railway property at the end of each 5 year period in accordance with the terms already set forth in sub-sections 4(a) and 4(b).

"The fares, which under the proposed supplementary agreement, would be as follows: Adults 5c, children 3c, school children 20 for 50c; after midnight, 10c, to be fixed until Aug., 1928. The company to have the right prior to Aug., 1928, to notify the city if it considers that these rates of fare are not sufficient to maintain a good service, when the rates of fare to prevail during the next 5-year period beginning in Aug., 1928, will be open for adjustment with the city. If no agreement can be arrived at satisfactory to both parties, the matter to be referred to the Board of Railway Commissioners, whose decision shall be accepted as final. May I call your attention to the fact that fares could only be changed at the end of each 5 year period, if the company could prove to an impartial referee that it was necessary; and at the same time the city, if it desired, would have the right to purchase.

"We will be prepared at any time desired to further discuss this matter with such committee as you may appoint to arrange the minor details. This proposal is not made as a preliminary step to bargaining for a future agreement, but represents the best we can do in order to get street railway matters in Ottawa on a permanent and satisfactory basis."

The city council's street railway committee met, Aug. 29, to consider Major Burpee's letter, and it was decided that each member of the committee be provided with a copy of it, that 300 copies of the Fuestel report be printed, and that the company be asked for a statement showing its earnings for the last year. The committee, after a general discussion, adjourned to meet again, when called by the mayor. No further meeting had been held at the time of writing (Sept. 14).

Winnipeg Electric Ry. is, a press report says, having two motor buses built, one at its shops at Fort Rouge, and the other by a Winnipeg builder. Is was stated at a meeting of the civic improvements committee, Sept. 6, that it was expected to begin the bus service on Cathedral, Scotia and Inkster Sts. on Sept. 20.

Toronto Transportation Commission's Activities.

Track Work.—The Commission has now completed all the heavy track repairs incidental to the rehabilitation of the street railway system, and in future track work will be restricted to current maintenance and extensions. At the time of writing (Sept. 20) maintenance work is being done on Lappin Ave., between Lansdowne Ave. and Dufferin St., on Gerrard St., between Greenwood and Coxwell Aves., and on St. Clair Ave., for 1,000 ft. west of Avenue Road.

Toronto Suburban Ry. City Line Rehabilitation.—Details of the draft agreement providing for the taking-over by the city, for operation by the Transportation Commission, of the T.S.R. city lines are given elsewhere in this issue. We were officially advised recently that if the agreement is signed in time to put these lines under the Commission's control before Oct. 1, they will be rehabilitated this year, but if not, their rehabilitation cannot be gone ahead with until next spring.

Parliament St. Track Extension.—A deputation waited on the Commission on Sept. 5 and asked that the double track line on Parliament St. be extended north to Bloor St. viaduct. The commissioners stated that if the deputation would get a petition asking them to abandon the Winchester St. line, and provided the Commission could get the appropriation, it would extend the Parliament St. line. The petition was obtained, and it is expected that funds will be forthcoming for the Parliament St. extension, in which case work will be gone ahead with at once. The Winchester St. line is merely a spur extending for some three blocks east of Parliament St.

Hillcrest Yard Fencing.—The Commission invited tenders, to Sept. 24, for construction of wooden fencing around its large repair shops and stores buildings at Davenport Road and Bathurst St. The fencing will be of the same type as that built around the Eglinton car house property by Lundy & Co., Toronto, and that now being built around the Roncesvalles car house property by the same firm.

Repair Shops Auxiliary Buildings.—The Commission has given a contract to Sullivan and Fried, Toronto, for the construction, for \$145,000, for 4 buildings auxiliary to the repair shops now being built at Bathurst St. and Davenport Road. The buildings will be as follows: 1. Two story office building, 82 x 51 ft. It will have a steel frame, and will face Bathurst St., being north of the main entrance to the yard. It will provide accommodation for the superintendent of rolling stock and his staff, and time-keepers, and also contain the employment office and the first aid room for the shops. 2. A garage, west of the office building. It will be one story, 140 x 51 ft., and will have steel frame and brick walls. 3. A building for storage of sand, salt and charcoal, 113 x 45 ft., with a wing 62 x 18 ft., to contain apparatus for sand blasting. 4. A frog shop, of steel frame and galvanized iron sheathing construction, 62 x 40 ft., with a 22 x 40 ft. brick office addition, for the track maintenance staff.

Russell Car House Office Building.—The Commission has given a contract to Witchall & Son, Toronto, for building a one-story office building at the Russell car house, Queen St. East., for \$35,000.

Equipment Deliveries.—All passenger

rolling stock ordered by the Commission has been delivered, the last cars to be received from the Canadian Car and Foundry Co. arriving late in August, and the last from the Ottawa Car Manufacturing Co. arriving Sept. 17. The Commission now has passenger equipment in operation as follows: new motor cars, front entrance, side exit, 350; new trailers, side entrance and exit, 225; p.a.y.e. double truck cars taken over from Toronto Ry., and now being remodelled, 351; Birney safety cars taken over with Toronto Civic Ry., 25; one-man two-man double truck cars from same source, 13; single truck two-man cars from same source, 8; double truck two-man cars from same source, 24; single truck cars taken over from Toronto Ry., 66; total, 1,062. It is planned to equip the King St. route with new cars in the near future.

Royalties on Cars.—As stated in Canadian Railway and Marine World for August, a writ was issued at Osgoode Hall on June 22 by Peter Witt, Cleveland, Ohio, and C. S. Wright, Toronto, against the Commission, to recover \$2,500 and \$150 costs, claimed for royalties of \$50 each on 50 motor cars being built by the Ottawa Car Manufacturing Co. for the Commission. The Commission was protected by the Ottawa Car Manufacturing Co., having agreed to indemnify it for all claims paid in respect of royalties, patents, etc., and we are now advised that the company has paid Messrs. Witt and Wright the royalties claimed, and that legal proceedings have been dropped.

Cars for Sale.—The Commission invited tenders recently to Sept. 21, for another lot of street cars, taken over from the Toronto Ry., for which it has no use. The cars are as follows: 52 single truck cars complete with G.E.-67 motors; 8 single truck cars complete with G.E.-1,000 motors; 9 single truck, double end operation cars complete with G.E.-67 motors; 12 double truck cars complete with G.E.-67 motors; 47 single truck trailers. These cars have been in storage at the Commission's Eglinton car house yard. The Commission will still have some Toronto Ry. cars on its hands after these have been sold. None of the cars now offered for sale, or of the Toronto Ry. cars remaining on hand, have been taken into consideration in the statement elsewhere in this article showing that the Commission has 1,062 cars in operation.

Uniforms for Platform Men.—The Commission has given a contract for about 2,500 uniform suits, for conductors and motormen, to Beauchamp & How, Toronto. The cloth will be supplied by R. Forbes & Son, Hespeler, Ont.

Canadian National Exhibition Service.—Particulars of the service arranged to provide efficient transportation service to and from the Canadian National Exhibition were given in Canadian Railway and Marine World for September. Figures now available show that in the 13 days the special cars for exhibition service made a car mileage totalling 325,000, and that 1,926,621 passengers were handled as follows: inbound to western entrance, 473,280; outbound from western entrance, 486,459; total for western entrance, 959,739; inbound to eastern entrance, 478,422; outbound from eastern entrance, 448,440; total for eastern entrance, 966,882. Comparison with exhibition attendance figures shows

that 62% of the people who attended the exhibition travelled on the Commission's special cars. The efficiency of the transportation service was universally remarked upon, and the exhibition association's appreciation of the service was expressed by J. G. Kent, Managing Director, in a letter to P. W. Ellis, Chairman, Toronto Transportation Commission.

Extensions into York Township.—Canadian Railway and Marine World for September gave particulars of the Commission's report to York Township Council on the feasibility of extending city lines into the township, construction to be paid for by the township and operation to be conducted by the Commission. We are advised that there is not much likelihood of the Pape Ave. and Coxwell Ave. extensions being built in the immediate future, because of the great probability of the secession of the eastern part of the township, into which these two lines would extend, from the remainder of it, and because the Commission's Danforth Ave. line serves the area to some extent. Bus routes north from Danforth Ave. would, it is considered, be a satisfactory arrangement. We are advised that the St. Clair, Oakwood and Runnymede extensions, which would enter the part of the township lying northwest of the city, will be voted on by township ratepayers in Jan., 1924. Details of costs of these extensions were given in our September issue.

Bus Competition Prohibited.—The Lake Shore Motor Bus Co., operating buses between Toronto, Hamilton and intermediate points, was refused a license to operate in Toronto by the police department, which has authority to issue licenses for vehicles operating for hire within the city. The company proceeded to operate on the Lake Shore Road within the city, without a license, and in competition with the Toronto Transportation Commission and the Hydro-Electric Railways' line to Port Credit. In the Toronto police courts, the company's counsel claimed that, eastbound, no passengers were picked up within the city, and that westbound, none were discharged, and that to prevent the company operating would be gross discrimination, because buses are allowed to operate on other routes within the city where there are no rail lines to compete. I. S. Fairty, solicitor, Transportation Commission, stated that the buses are fair weather conveyances, skimming the cream off the traffic, while the rail lines have heavy maintenance charges and have to give service at all times. The magistrate fined the bus company for operating without a license. It is reported that the company will appeal, and will seek to have the police department compelled to license it to operate within the city.

Motor Bus Competition.—A Detroit press dispatch of Sept. 21, says the Michigan Public Utilities Commission has ruled that it has not the power to prohibit motor bus competition with steam or electric railway service where the latter is furnishing all the service needed. The decision is the result of complaint of Grand Trunk and Detroit United lines, who will carry the case to the Supreme Court. It is a direct reversal of a decision by the Maine Public Utility Commission.

Marine Department

St. Lawrence River Winter Navigation Proposal Criticized.

By John L. Read, Captain, Car Ferry Steamship Prince Edward Island, Canadian National Railways.

[Editor's Note.—As Dimitrie Joanwici, a Roumanian, is attempting to get the Dominion Government to adopt a scheme to provide for winter navigation up the St. Lawrence River at least to Quebec, and as he is stated in an Ottawa dispatch to have asked for \$2,000,000 in connection therewith, the following article is of exceptional interest. Capt. Read has had great experience in winter navigation, and his opinions are worthy of the most careful consideration.]

Wide publicity has been given to a statement by the Roumanian engineer, Dimitrie Joanwici, that he has a secret method of keeping the River St. Lawrence open all the year round, and asking the shipping companies and the Dominion Government to co-operate in carrying out his plans. As this would cost a lot of money if undertaken, it might be well to get all the information possible on the subject, before the country is put to the expense of untold millions in an effort to upset the laws of nature, unless we are reasonably sure of success, and it is my desire to throw some light on this matter and not to be a knocker, for no one knows better than I do what it would mean to Canada as a whole, and Montreal in particular, to have an ice free port so far inland. Mr. Joanwici's statement proves that he has no hopes of success, for it says; "The ice on the shore is from 3 to 5 ft. thick" and "I am confident that by preventing the ice from forming on the bank of the river, the channel will be kept open all the winter." Naturally if he could keep the ice from forming, he would have solved the problem, but can he?

He says the channel can be made any width required, for instance, if 300 or 350 ft. are required in the spring, there would be 300 or 350 ft. less ice. This is true and only natural, but what about the ice?

He says he feels "confident" he could "prevent ice from forming along the bank of the river." If this was done, where would he get the stationary ice through which to make the 300 or 350 ft. channel he mentions?

He quotes Capt. Bernier as agreeing with him, and adds; "I may have to get both him and Steffanson, the explorer, to come to my assistance." I am not a Bernier, Steffanson or a Joanwici, but I know more about actual ice conditions in the River and Gulf of St. Lawrence than the three of them put together, and I do not hesitate to go on record as opposing the latter's scheme as being impracticable. My personal views may not carry any more weight than Mr. Joanwici's, but I propose to back mine up with facts that cannot be overlooked.

It appears strange that he proposes to demonstrate his "great secret" in the Quebec harbor, after stating; "The river is always open from Batiscan to Quebec." Rainmaker Hatfield undertook to make rain fall in the west, but he demonstrated it at a point where rain had always fallen before at times, which was lucky for him.

The suggestion to use a powerful electric cable running along the bottom of the channel, with cross bars at intervals to light it, is also open to criticism, for in my experience in the St. Lawrence

River, I have often gone up and down, when the water was so discolored that no light could possibly be seen, even with clear weather. When it is remembered that during the winter we are troubled with snow, and snow means lolly, covering the surface of the river, from an inch to a foot or more, one can readily see the difficulty of navigating with lights 35 or 40 ft. below the surface.

A serious handicap to winter navigation in the St. Lawrence, has evidently been overlooked by Mr. Joanwici, viz: the fact that if the river could be kept open by artificial means, the navigator would be troubled with conditions worse than fog, viz: vapor, so black that the eye

from Quebec to Sydney, N.S., through the Gulf of St. Lawrence, and I doubt if he ever heard of the effort to make a winter port of Gaspé, and the fact that the s.s. Gaspesia spent the winter in the Gulf where she drifted at the mercy of the winds and currents for months in a futile attempt to reach that port. Only last spring the liners could not get through the Cabot Straits for weeks after the river was open from Montreal to the Gulf, and hundreds of them had to work through the Gut of Canso and up the Northumberland Straits to get into the river. An icebreaker could go down from Quebec herself during the winter, but taking freight boats along at the same time is another matter, as I know from experience in the White Sea.

Another thing that must not be forgotten is that the ice is forming here and there all over the river, especially in the shoal water, and even if by some secret it could be kept from forming along the bank, there is no power on earth, that will stop it from collecting there under certain conditions. Take a heavy snow storm for instance, with 8 or 10 in. falling on the level, with a high wind. This would mean, with the drift from the fields along the river, at least 2 or 3 ft. of lolly over the whole surface of the water, for once it gets damp it remains, as it cannot blow away, at the same time with zero weather the damage would be done, for the lolly, running along with the current would bring up along the shore at some point or bend in the river, where it would immediately thicken up, and freeze at the same time.

I do not know where Mr. Joanwici got his information about the ice forming on the shore from 3 to 5 ft. thick, for in my 15 years experience in ice breakers I have always found it much thicker, and in the early part of the winter of 1916-17, when I left Quebec City, with the s.s. Mikula Selianinovitch (J. D. Hazen) for Archangel, Russia, I tried to land the river pilot at three different places along the river, but could not do so as the ice was over 5 ft. above the water, and when I got to Father Point I had to break into the edge of the board ice with the ship, and it was over 20 ft. thick and this was over a mile from the shore.

In 1920 at Borden, P.E.I., when we went to bed one night, the shore was clear of ice, but when we got up in the morning there was an ice barrier formed all along the shore 70 ft. thick, and if this can happen there, there is nothing to stop it doing likewise in a hundred different places along the River St. Lawrence.

Mr. Joanwici after holding out the prospects of an open river, proposes to build an immense armor dam across Belle Isle Straits and in connection with this proposition he makes two astounding statements, the first being; "This dam would be of great commercial importance, for it would furnish a direct road from Canada to Great Britain and Europe during seven months of the year, since navigation is possible only for July, August, September, October and November, and closed for seven months." The foregoing is hardly correct, for he does not

could not penetrate it at all. We have this to contend with during cold days on the run between Borden, P.E.I. and Tormentine, N.B., where as master of the Canadian National Rys. car ferry steamship Prince Edward Island, I have ample time and opportunity to find out considerable about winter navigation. I had the same trouble when making the coast of northern Russia in the winters of 1915-16 and 1916-17. In the open ocean we do not meet with these conditions, for the whole body of water being above the freezing point tempers the atmosphere to such an extent that there is very little difference between the two, but in the river or on the coast conditions are different and the cold air off the land, meeting the warmer water, causes a vapor so thick it is impossible to see your hand before you, until the water skims over with ice, which of course stops the vapor.

But even if, as Mr. Joanwici says, he could keep the river open from Montreal to Quebec, what good would that do Canada, or even Montreal? He has evidently forgotten about the part of the route

even allow the month of June. But what is most astonishing is that in his enthusiasm over the dam, he forgot he had already promised an open river to Montreal if the Government would allow him to go ahead.

Mr. Joanwici's second statement is even worse. He says: "I studied a book written by Bill Dawson, a Canadian Government Engineer, on the survey which he made of Belle Isle Straits, extending over a few summer months, and the fall, and I observed that as regards the Straits, very little attention has been paid to the currents, under currents, field ice, icebergs and temperature, and very little study has been given to winter navigation at a temperature of from 40 to 50 degrees (whatever is meant by that), which temperature forms solid condensed ice in the Gulf of St. Lawrence and River, preventing winter navigation."

Notwithstanding the above, in which he attempted to show that Mr. Dawson's report was of little, or no value, he says: "Therefore I came to the conclusion that the remedy is to build a great armor dam across the Belle Isle Straits, 14½ miles long and 3½ miles wide, with two locks in it, 120 ft. wide." With the dam he proposed to alter the climate in Great Britain, the whole coast of Europe to be colder, and with the manipulation of these two puny locks he proposed to remedy conditions for them. This statement alone is enough to cause one to ponder.

I am not going to insinuate that Mr. Joanwici is not truthful, for he himself has admitted ignorance of the subject of the Belle Isle Straits, but I am going to say there is no truth in his contention that the Arctic current, or any part of it, goes through the Strait, and to prove my contention I am going to take the very work he says he studied, as well as such eminent authorities as Lieut. M. F. Maury, U.S.N., and Capt. D. N. Ingraham, Chief of the Bureau of Hydrography at Washington, and my own personal experience, which after all is perhaps the best thing in the world for a man to stake his reputation on.

Had Mr. Joanwici studied the reports of W. Bell Dawson, M.A., D.Sc., M. Inst. C.E., F.R.C.S., not "Bill Dawson," as he termed him, he would have learned that the currents in the Straits of Belle Isle are tidal in character. The tide tables of Canada, Eastern Coast, says: "The current in the Belle Isle Strait is primarily tidal in character. While under the control of the tide alone, it will turn regularly, and run with equal strength in each direction; the flood setting westward and the ebb eastward. But in addition to this tidal fluctuation, the water has almost always a tendency to make through the Straits in one direction more than the other. While the tidal fluctuation goes on uninterruptedly, the water is thus making a continuous gain to the westward, or to the eastward, as the case may be."

The above clearly indicates that the Arctic Current does not run through the Strait of Belle Isle, otherwise there would be a dominant current one way all the time, and that to the westward, which is not the case, for in 1894 from July 16 to 21, both inclusive, the current flowed to the eastward through the Strait, or exactly opposite to the way it would flow if the Arctic Current ran through the Strait into the Gulf. See "Temperatures and Densities of the Waters of Eastern Canada," issued by

the Naval Service Department, on pg. 23. If more proof is needed that the Arctic Current does not run through the Strait of Belle Isle, I would point out that icebergs do not come into the Gulf and pass out through the Cabot Strait as would be the case if the current did come in that way, and if there have been any, it is the exception and not the rule, and therefore does not prove anything. In the same book it is stated, on pg. 15, that the temperature taken on Aug. 13, off Bantam Bank, on the east side of Newfoundland, and quite close to Cape Race, showed 51 degrees at the surface, 45½ at 10 fathoms, and 30½ at 30 fathoms, all below the freezing point and certainly the Arctic Current making its way south, submerged, on account of its low temperature. To further prove it is this current, I refer to pg. 21, where it says: "The temperature at 30 fathoms is practically at the freezing point in all parts of this region, from the mouth of Placentia Bay to St. John's. It varied only from 30½ to 34 Fahr., and there was no change from one month to another from May to September."

To further clinch my argument that the Arctic Current does not come into the Gulf, I refer to pg. 39, where there is this reference to Bonne Bay, Nfld.: "The deep water in this bay is isolated from the open Gulf." The temperature ran from 54 degrees at the surface down to 30½, which is colder than the Gulf itself by nearly 10 degrees. When we get back to the site of the proposed dam, we find more damaging evidence against the advisability of building it, for on pg. 23, we find that on July 20 the temperature at the surface was 50 degrees; at 10 fathoms, 45; and at 30 fathoms, 40; and on July 21 it was 49 degrees at the surface, 47 at 10 fathoms and 41 degrees at 30 fathoms, or 10 degrees warmer than the water on the east coast of Newfoundland, and warmer than the water in the Cabot Straits by 3 to 5 degrees.

But altogether apart from Mr. Dawson's figures, I am satisfied there is no Arctic Current within 10 or 15 miles of the Labrador coast, for as mate and master of high powered ice breakers, I have logged it up and down the coast, on eight different occasions, without finding any current setting to the southward or in the direction that the Arctic Current flows, and as there is a cause for every effect, I will endeavor to show the cause of the Arctic Current in the first place, and then the reason why it is a physical impossibility for it to run through Belle Isle Strait. All ocean currents, of which the Gulf Stream is the best known, are nothing more or less than great rivers in the ocean, and they are due to one of two things, push and pull. It is also recognized as a fact, that when there is a current running out of any place there must be a return current of the same volume flowing in to take its place; this is true of the air as it is of water. Another fact which has a great bearing on the whole question under discussion is that hot air or water works its way up, while cold water will sink to the bottom, as can be easily proved by taking a little notice of the hot air and water systems in our houses. Another thing which cannot be disputed is, that an automobile, or ship, travelling at a high rate of speed on a calm day will make its own wind opposite to the way it is travelling. This is equally true of the earth. With the above facts well estab-

lished, we will begin at the beginning and trace the Arctic Current from its source, which lies in the Atlantic Ocean about the Equator—a funny place for the Arctic Current to originate, but it is true nevertheless. Why? Because the sun is always nearly overhead at the Equator, and it stands to reason, the air being heated by the direct rays of the sun, will rise, and colder air must come in to take its place, with the result that if the earth was not revolving we would always have a north and south wind blowing toward the Equator, to take the place of the heated air, and as there is no other place that it can come from, it must come from the north on that side of the Equator, and from the south on the south side.

On the other hand the earth is revolving at a high rate of speed from west to east, and if there was no sun overhead, this would give us a constant east wind over this part of the globe, so if we cut out the ifs, which are useless, for the earth does revolve, and the sun hovers over the Equator, we will find that the two combined, give us the northeast trades north of the Equator and the southeast trades to the south of it. The result of these two winds, blowing on the surface of the Atlantic, gives us the Equatorial Drift, which is a very wide slow moving current on both sides of the Equator, moving to the westward until it brings up against the east coast of South America, where it is deflected, the greater part of it going northward, owing to the fact that Cape St. Roque juts out into the Atlantic in 5 degrees and 29 minutes south latitude, and everything north of it follows along the northeast coast of South America, picking up the mighty Amazon on its way. Then as the current moves along on its way, due to the push from behind, it is pushed against the coast of Central America by the northeast trade wind, till it is headed up in the Gulf of Mexico, and as it cannot remain there, it seeks an outlet along the line of least resistance, which is the Florida Pass, between Key West and the Island of Cuba, but there again it meets a snag in the shape of the Great Bahama Banks, with numerous sand banks and small islands, which again throws the current, which is now known as the Gulf Stream, owing to the fact that it has just come out of the Gulf of Mexico, laden with gulf weed, moving at the rate of about 4 knots, against the east coast of Florida, causing a large bay to form between Palm Beach and Florida, and Cape Hatteras, in North Carolina, and it is the trend of the land in this bay from Savannah, Georgia, to Hatteras that forever makes it impossible for us to enjoy the comforts of a milder climate, for once an ocean river takes its direction along the arc of a great circle, nothing will divert it, excepting land, or another current flowing into it of the same density and temperature. This is where I come to the point taken by Mr. Joanwici, that the Arctic Current flows down inside of the Gulf Stream and deflects it to the southward and farther from Nova Scotia.

In this I do not agree with him for a minute, for two good reasons, backed up by facts presented by W. Bell Dawson. In the first place, for argument sake, we will admit the Arctic Current meets with the north side of the Gulf Stream at any angle you like. Every boy who has noticed a brook running into the river will have noticed that, while the brook water runs into the river water a little way, it

always turns and flows with the river, and the two waters mingle together, and never does it turn and run against the other and stronger current. To help to illustrate the action of the two streams meeting I made an admission, viz.: that the two currents were the same temperature, but as an actual fact this is not so, and here the law of nature steps in and makes it an impossibility for the Arctic Current to deflect the Gulf Stream, for there is a difference of about 60 degrees between them, the Arctic Current being the colder of the two, and therefore it must and does dive under the warm waters of the Gulf Stream. Any heating engineer will bear me out in this. Besides, we know that at Cape Race the Arctic Current is already submerged to a distance of 30 fathoms. To prove my contention that the Arctic Current does not pass down the coast of Nova Scotia, inside the Gulf Stream, I may mention that the water in the Bay of Fundy is from 2 to 4 degrees colder than the water along the Nova Scotia coast, where the Arctic Current would first have to pass, so if the Arctic Current passes down inside, then we must look elsewhere and discover the source of the much colder water we have in our bays.

But as the Arctic Current has not deflected the Gulf Stream, we will follow it along to the British Isles, where the formation of the land again splits a slice off the south side of the stream, and sends it down along the coasts of Portugal, Spain and Africa, as the Reynolds Connecting Current, and it again enters the Equatorial Current, but by far the greater portion of the Gulf Stream passes north, warming up the whole west coast of Europe, and flows into the Arctic Ocean by way of the north of Norway and along the Lapland coast, which it keeps free of ice the whole year round. It does not go down into the White Sea for the reason that there is no outlet to it, so it keeps right on into the Arctic, following the north coast of Asia, passing around the north end of Greenland, and returning through the only available channels, which happen to lie to the north of Canada, for it cannot possibly remain in the Arctic Ocean and freeze into ice, or it would soon upset the equilibrium of the earth, with dire results, and it cannot remain there, as water, as the place is already full, so there is nothing left for it but to return south again to take its place in the circulation of our sea water, and after getting properly cooled off by its sojourn in the Arctic, we find it coming out through the only outlets to that part of the ocean, for the Behring Strait has a part of the Aleutian Current flowing north through it all the time, which current also must come out with the rest.

For further proof that the Arctic Current cannot come in through the Strait of Belle Isle, we will now study the globe, and here is what we find. The Davis Strait is by far the larger of the two, and the current must get its direction from the direction of the west coast of Greenland and the east coast of Baffin Land, north of Cape Washington just south of the Arctic Circle. If we follow this direction it will be seen that the current will not hit the coast of Labrador, but that is only a part of the Arctic Current, for we also have the Hudson Strait, which opens to the eastward, or nearly at right angles to the Davis Strait, and through this strait the Arctic Current,

together with the ebb tide, runs at the rate of 10 knots, for over 50 miles in an easterly direction, till it meets with the main body of the Gulf Stream, after being in cold storage, and together they make the main current, which now carries the name of the Arctic Current, and continues to the south well off the coast of Labrador, passing to the east of Cape Race at a depth of 30 fathoms, and on over the Grand Banks, which, by the way, is a child of its own, due to the fact that the Arctic Current brings down and holds in position the icebergs till the Gulf Stream melts them down, causing a deposit of everything that will sink, such as stones and dirt carried down from the valleys of the north, where the bergs are made by the glaciers sliding down into the sea and breaking off. By this time the Arctic Current is so submerged that it has little difficulty in passing under that part of itself called the Gulf Stream, and so on south till it gradually warms up and mixes with the surface water and starts all over again.

Still another reason why it is a physical impossibility for the Arctic Current to pass through the Strait to the westward, is the same that I gave in relation to the water, only this time in connection with the winds, for the same conditions exist, namely, that if there is a constant flow of air in any direction, there must be a counter current to make good, and as we have easterly winds between the Tropic of Cancer and the Equator, it follows that our prevailing winds north of the Tropic of Cancer will be westerly, and that is the case, with the result that this also helps to keep the Arctic Current off the coast.

The reason I am so positive in my statements in regard to the Arctic Current is because I have made a personal study of the matter on the spot, while waiting to get into Hudson Strait on account of the ice. I have followed the line of icebergs from the mouth of the Strait due east almost, for over 50 miles before they started to move south. I not only studied it, but have had occasion to put my knowledge to the test, and found what I said was correct, when I got a wireless call for help, while lying in Port Burwell, waiting for the ice to clear out of the Hudson Strait, from a ship that reported she was leaking badly, from being squeezed in the ice near the Button Islands. The captain said it was hazy, but he thought he was about 40 miles south of Chidley, although he could see nothing. We figured he would be about that distance east of the Button Islands, and not south of them, and we were correct. After comparing notes he said he always thought the Arctic Current set south close along the Labrador coast. I pointed out to him that he was still in the Hudson Strait current, and he said: "I might have known that if I had only looked at the matter for myself, instead of taking the regular theory for granted as being correct."

Mr. Joanwici is correct when he says: "By closing the Strait, the entire currents of the Gulf of St. Lawrence will be changed." But in my opinion that is as far as he is right. In everything else I think he is wrong, for instead of shortening the winter, I cannot see why it would not have the very opposite effect, thereby giving us a later season in the spring by several weeks, for everyone knows ice will break up and clear out of a place where there is a strong current much quicker than it will out of a harbor or bay where there is no current.

As the Gulf is at present, we have three openings out of it. One, the Gut of Canso, opens out of the southwest corner of the Gulf. It is about a mile wide, but does not carry off very much of the ice on account of the prevailing winds being from that direction in the spring. The largest opening of the three is the Cabot Strait, opening out of the east side of the Gulf, and it carries off considerable of the ice in the southern part of the Gulf, for there is a constant outward current running out on the south side of it, owing to the Rivers St. Lawrence, Restigouche and Miramichi all draining into the west side of the Gulf, but in my humble opinion Belle Isle Strait is the safety valve of the whole Gulf, for it is 14½ miles wide and opens out to the northeast from the bottom of a very deep bay, something like a funnel, with the mouth of it open to the south, southwest and west, which are the prevailing winds at this time of year, and with a couple of days of any wind, between south and west, the amount of ice that would pass out of the Gulf through the strait would be beyond compute, but close the strait and all that part of the Gulf, lying north of a line drawn from Cape Bay, in Newfoundland, to Anticosti Island, would become one large deep bay, with very little current in it, and that running in past Cape Ray. This bay would form a pocket, and the narrow part of it would become one solid mass of ice during the winter, which would not break up till long after the river was free of ice. Then when it did break up it would be held there by the southerly winds, and be a menace to shipping passing through the Cabot Strait for weeks after it would otherwise be clear.

The Arctic Current has little or nothing to do with our long cold winters in eastern Canada, rather a bold thing to say, but true nevertheless, as I can show. I will mention a few facts that prove my conclusion is the only correct one. My contention is that our climate is due to our geographical position, and is not made colder by the presence of the Arctic Current, but on the other hand it is made warmer, owing to the fact that our shores are bathed with water above the freezing point. I claim the cold is natural to the country, the same as it is to northern Europe, the only difference being that we do not get the warming influence of the Gulf Stream and the Aleutian Current. In Canada it is much colder inland in winter, and warmer in summer, than it is on the coast, also that our extreme cold weather comes to us overland from the west and north, direct from the Arctic, partly by induction, and partly by the prevailing north and northwest winds in winter. The Weather Bureau always forecasts very cold weather in the west before it reaches us in the east, and never do we get very cold weather off the Atlantic Ocean, or at sea, unless the wind is off shore, for the water always being above the freezing point keeps the weather much milder than it otherwise would be. Fishermen tell one that if the wind is off shore and cold, all they have to do is to dip their hands in the water to warm them, which is true, because of the contrast. In this case the water is much warmer than the air.

It may be claimed that the Arctic Current causes the spring to be backward, but I cannot concede this, for as I pointed out before, the current is submerged under 30 fathoms of warmer water,

which is much warmer than the water in Lake Superior. There is no question the Atlantic Ocean has a tendency to make our spring later than in western Canada, but it also makes our autumn later, so it is as broad as it is long. The reason for both is the natural consequences due to two facts such as earth being a good conductor of heat while water is not.

At a certain period in the autumn both the land and the water are the same temperature, then the heat from the sun gets less every day, with the result that the earth cools off more quickly than the water, and the cold winds from the north soon freeze up the lakes far inland, and stops the work on the land, whereas we on the seaboard are enjoying mild weather, and for the same reason it is much colder inland, but in the spring the very opposite takes place. When the days begin to get longer and the sun stronger, the land heats up much quicker than the water. Then we get the warm southerly winds blowing over the land to the south of us, the snow melts as if by magic and the weather gets hot and dry, whereas we get our winds off the Atlantic Ocean, where the water keeps it much cooler than on land and of necessity our snow takes longer to clear away and our spring is a little later and our summer not so hot. But the best proof I know of that the Arctic Current has nothing to do with our long cold winters is the following: In the last week of Dec., 1915, and again in the first week of Jan., 1917, I left Sydney, N.S., for Archangel, Russia. We passed through Belle Isle Strait, although navigation had been closed and the lights discontinued along the coast for some time. From there we set a course for the south end of Greenland, which took us directly through the whole length of the Arctic Current, and this in January, when the Great Lakes and the River St. Lawrence were covered with ice. In all that time we never had to wear a mitt, or an overcoat, and the ship did not ice up like she would in the Bay of Fundy at the same time of year. From there we passed north of Iceland, and on to the White Sea, with mild weather all the way till we reached the Lapland coast, notwithstanding that from the time we passed Iceland we were north of the Arctic Circle, where the sun never rises for six months during our winter. Now if we had this kind of weather all through the Arctic Current from Belle Isle Strait to Greenland, how in the name of goodness can it be held responsible for the temperature in Canada, and when we consider that good thermometers will not detect any difference in the temperature of the water at a half a mile or less from a berg, how is the berg going to affect the Gulf of St. Lawrence from 300 to 500 miles away?

Canadian Watercraft Ltd. has been incorporated under the Dominion Companies Act, with \$1,000,000 authorized capital, and office at Peterborough, Ont., to build boats, ships, scows, barges, etc. The incorporators are,—J. E. Grivell, B. M. Rogers, H. G. MacKiel and F. R. Muggeridge, Montreal.

The C.P.R. s.s. *Empress of Scotland*, which as mentioned in our last issue, struck an obstruction, when running between Hamburg, Germany, and Southampton, Eng., during August, being dry-docked subsequently at Southampton, was taken to Liverpool, later in the month, owing to a boiler makers' strike at Southampton.

Great Lakes Transportation Company's Bonds.

Murray & Co., and McLeod, Young & Weir Co., Toronto, bought recently \$500,000 6½% first mortgage sinking fund gold bonds of Great Lakes Transportation Co. Ltd., to mature Sept. 1, 1933, and offered them to the public at 99 and accrued interest, yielding about 6.65%. The following information is taken from a letter from James Playfair, President, Great Lakes Transportation Co.: The company was incorporated in 1914 under Dominion charter. It started with three steel steamships and has added the steamships *Glenshee*, *Glenisle*, *Glenorchy*, *Glenbrae*, *Glencairn*, *Glenlivet*, *Glenstriven*, *Glenlyon*, *Glenfinnan* and *Glenclava*. This year the *Glenelg*, *Glensannox* and *Glenrig* were added to the fleet, which now consists of 14 up-to-date lake bulk and package steel freight steamships, having a total tonnage of 66,000 tons. While increasing its tonnage on the upper lakes the company realized the importance of having a canal-size fleet to be operated from Port Colborne to the seaboard, and controls and operates *Glen Steamships, Limited*, owning a fleet of canal-size steamships. To operate this large fleet economically demands ample coaling and elevator facilities. The company, therefore, acquired in 1917 the *Midland Elevator Co.*, owning an elevator having a capacity of 3,000,000 bush. During 1922 this elevator handled a large proportion of the grain consigned to Georgian Bay ports. The company owns a large coal dock at Midland, with a storage capacity of 75,000 tons, equipped with up-to-date loading and unloading equipment. During 1922 the company handled over 1,750,000 tons of grain, coal, pulpwood, etc.

The present issue of bonds is secured by a direct and specific first mortgage on the three ships mentioned below, and, in addition, the trust deed provides that this issue will be a floating charge on all the company's assets, subject only to the authorized issue of \$1,500,000 first mortgage 7% 10-year serial bonds, of which \$1,250,000 have been issued and mature \$125,000 annually July 1, 1923-1932 inclusive. The \$125,000 which matured July 1, 1923, have been retired. The company further covenants not to place on its present fixed assets during the life of the issue now offered any mortgage other than the aforesaid serial first mortgage. The outstanding bonds of this issue will all be redeemed prior to the maturity of the bonds now offered. Following is a description of the three ships. The *Glensannox* has a deadweight tonnage of 5,300 tons and a carrying capacity of 180,000 bush. a trip. Its length is 352 ft., beam 44 ft. and depth 27 ft. The *Glenrig* has a deadweight tonnage of 4,500 tons and a carrying capacity of 170,000 bush. a trip. Its length is 326 ft., beam 40 ft. and depth 25 ft. The *Glenrig* has a deadweight tonnage of 3,700 tons. Its length is 259 ft., breadth 43 ft. and depth 25½ ft. This ship is a steel self-unloading one, built by *Midland Shipbuilding Co.* this year. It is suitable for the carriage of either coal, or crushed stone, and can unload at any port without the use of dock appliances. It can also unload part cargo to any small plant along a canal or lake front, or load direct into railway cars. The unloading apparatus will discharge 400 tons of coal an hour. This type of ship has been operated by some of the larger U.S. coal companies and has proved a great success, and

it is expected that this ship will be one of the most profitable of the fleet. These three ships have been appraised by the American Bureau of Shipping representative at \$935,000 and \$1,000,000 insurance payable to the bondholders in case of loss is carried. The classification by the American Bureau of Shipping entitles these three ships to the lowest possible insurance rates.

The company's average net earnings for the past six years derived from all its operations, after deducting depreciation, available for bond interest have been at the rate of over three and a half times the interest charges on all bonds outstanding, including this issue. Net earnings should be materially increased by the addition of the three new ships, and, in addition, interest charges decrease annually with the retirement of the serial issue. The ships owned by the company have been appraised at \$4,000,000, after allowing for depreciation, which is at the rate of \$60 a ton. This is most conservative, when compared with values either at the present time or on a pre-war basis. The combined value of the company's fixed assets on a strict appraisal basis amounts to \$4,947,493, and, in addition, the company has upwards of \$700,000 book value of other investments in ship and coal companies, which yield it a very considerable freight. The company carries \$5,100,000 insurance on its ships, payable to the bondholders in case of total loss, and \$683,000 on its other fixed assets. Total insurance carried is therefore over three and a half times all bonds outstanding. A sinking fund has been provided sufficient to redeem by maturity the entire amount of this issue, the first payment under which must be made not later than one year from the date of issue. The bonds will be acquired for the sinking fund at or under call prices, failing which they will be called as follows:—at 103 and accrued interest to Sept. 1, 1926; at 102 and accrued interest to Sept. 1, 1929, and 101 and accrued interest thereafter to the maturity of the bonds. The bonds are callable either for sinking fund purposes or as a whole at the above mentioned prices. The purpose of the present financing is to provide a portion of the funds required for the purchase of the ships *Glensannox*, *Glenrig* and *Glenelg*.

The company's executive and operating staff are composed of men who have had many years experience in transportation on the Great Lakes. The complete facilities which the company possesses for the efficient handling of grain, coal and other commodities place it in a very advantageous position for obtaining a large proportion of the lake carrying traffic.

West Coast Towing and Salvage Co. Ltd., an extra provincial company, has been licensed to carry on business in British Columbia, with office at Vancouver. It has an authorized capital of \$250,000, and a paid up capital of \$100,000, and is authorized to carry on a general transportation business by land and water, and to operate ships in inland, coastal and ocean business.

Welland Canal Navigation. — L. D. Hara, Superintending Engineer, gave notice Sept. 1, that from that date, until further notice, no ships would be allowed to enter and pass through the canal, drawing more than 14 ft.

Inland Water Freight Rates Act to be Evaded with Government Connivance.

Details of the serious situation created for the grain trade and for the country at large by the operation of the Inland Water Freight Rates Act, 1923, were given in Canadian Railway and Marine World for September. When that issue went to press, U.S. ship owners had just repeated that they would not participate in the Canadian crop movement under the act, and L. J. Boyd, Chairman of the Board of Grain Commissioners, had been reported as stating that he felt sure that a number of U.S. ships would come in. No further developments were reported until Sept. 10, when Hon. T. A. Low, who had succeeded Hon. J. A. Robb as Minister of Trade and Commerce, was reported to have stated, in answer to an enquiry, that no change had been made in the government's attitude; that Canadian ship owners were filing tariffs, but that U.S. ship owners had refused to comply with the act, and were, therefore, not carrying any grain from Canadian ports.

An Ottawa press dispatch of Sept. 11 stated that Mr. Low was in conference there on that date with the Chairman of the Board of Grain Commissioners, and Commissioner Jas. Robertson, in connection with difficulties which had arisen owing to the enforcement of the act. A Winnipeg dispatch of the same date said that anxiety concerning the transportation of the crop was increasing throughout the west, and that an endeavor was being made to get the government to modify the act, so that U.S. vessels would participate in the crop movement. Another Winnipeg newspaper of the same date stated that practically all available Canadian boats had been chartered for carrying grain from Fort William and Port Arthur, and the next day practically all daily newspapers published a dispatch dated Winnipeg, Sept. 11, stating that all Canadian boats had been "ordered"—presumably by the Government—to Fort William and Port Arthur to load grain. Another Winnipeg press report of Sept.

11 stated that Messrs. Boyd and Robertson had gone to Ottawa "because of the seriousness of the situation, and to try to get the Government to consent to a modification of the act which would allow U.S. vessels to come in."

On Sept. 11 the Board of Grain Commissioners issued a statement to the effect that ship owners need not file copies of tariffs prior to entering into contracts for the carriage of grain, as the act requires, but that they could evade the law by filing merely a record of the terms on which cargoes had been contracted for. Accompanying the notice was a specimen copy of a carriage contract record arranged to give the information desired; the most noticeable thing about it being that it provided for the charging of demurrage by ship owners.

An Ottawa press dispatch of Sept. 12 stated that Messrs. Low and Boyd had conferred at length over the situation caused by the U.S. ship owners' stand, and quoted Mr. Low as having stated that the Government and the Grain Board would not relax the regulations on any consideration. It would be noted that this was on the day after the Board of Grain Commissioners had issued its statement as to there being no necessity for filing tariffs prior to making contracts for carriage, as the act requires. Another Ottawa press dispatch of the same date, which said that the threatened disaster to the grain trade arose through the Government's interference in the lake shipping trade, stated that Mr. Boyd had warned the Government that there would be a serious blockade at Fort William by November, and this year there should be 175,000,000 bush. of grain move through Fort William before the close of navigation, while the total carrying capacity of Canadian boats in that period would not be more than 60,000,000 bush.

A Fort William press dispatch of Sept. 12 stated that the Great Lakes Transportation Co. had arranged to transfer

several of its larger boats from Fort William to Duluth immediately, anticipating the diversion to U.S. channels of fully half the amount of grain that usually passes through Fort William. The report quoted John Bell, Manager for the company at Fort William, as saying: "There is no bluff on the part of U.S. vessel owners. They have said they will stay out, and stay out they will. The only way out is for the Government to modify the act while yet there is time. As far as Canadian steamship men are concerned they are not one whit affected. As the Duluth trade develops they can carry out of there to Georgian Bay and Port Colborne, which is into their regular channel. But the U.S. will benefit enormously, for its ships can carry from Duluth to Georgian Bay and Port Colborne, without restraint from our coasting laws. Then they can carry our Canadian grain down to Buffalo and other U.S. ports. Our Canadian route suffers because if the grain starts to move through Duluth we may have a hard time getting it back again."

A Toronto press report of Sept. 13, quoted A. E. Mathews, of the Mathews Steamship Co., as saying: "My opinion is that the Government has made a mistake, and that, having made a mistake and discovered it, they should be big enough to deal with it in any way that may be necessary to bring U.S. ships in to help move the crop. Canadian ship owners are doing all that is humanly possible, but more ships must be engaged in the work if the crop is to be moved this year."

An Ottawa press dispatch of Sept. 13, the day following that on which Mr. Low was reported to have said that the regulations would not be relaxed, stated as follows: "Misconstruction of the provisions of the new lake shipping act is believed to be responsible for the reluctance of U.S. ship owners to bid for the carriage of this year's Canadian grain crop from the head of the lakes. A generous reading of the measure, enacted

Ships Registered in Canada in June, 1923.

In compiling the following lists of ships registered, steamboats and motor boats operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons.

STEAM.

No.	Name	Port of Registry	Where and when built	Length	Breadth	Depth	Gross Tons	Reg. Tons	Engines, h.p. etc.	Owner or Managing Owner

last session, is expected to smooth the way for U.S. competition, and yesterday a U.S. carrier filed a 4c rate from Fort William to Buffalo on a ship with capacity of 365,000 bush. It has been assumed by U.S. ship owners that all lines must post their rates for each shipment on the Winnipeg Grain Exchange, whereas the new measure provides that such rates must be filed with the Canadian Grain Board. As interpreted by the latter, a telegram to the Board stating that a contract has been made, and quoting the rate, suffices to comply with the regulations. It is stated that this will be treated confidentially, while the tabulation of such rates is for the Minister of Trade and Commerce, and not for public use." Another Ottawa press dispatch of the same date said: "The liberal construction placed upon the new lake shipping act by the Grain Commission, and confirmed by the Justice Department, is expected to overcome the objection of the U.S. shipping interests and permit them taking part in the wheat crop movement down the lakes."

The general feeling in grain and shipping circles by Sept. 14 was that the Government's consent to allow the act to be evaded, as specified in the statement issued by the Board of Grain Commissioners, would induce U.S. ship owners to participate in the Canadian grain trade. A Fort William press dispatch of Sept. 14 stated that one U.S. boat, the A.E.R. Schneider, owned by the Cleveland Cliff Iron Co., Cleveland, Ohio, had been booked through J. H. Rodgers, Winnipeg, to load grain for Buffalo, and that additional cargo space for 1,500,000 bush. in U.S. ships had been contracted for, for October sailing.

Notwithstanding the feeling prevailing around Sept. 14 that U.S. ship owners would come in, members of the ship owners association at a conference in Cleveland on Sept. 17, decided that they would not participate in the Canadian crop movement, despite the Dominion Government having authorized them to evade the act to the extent indicated above. One of the owners attending this conference is reported to have said: "We are willing and anxious to carry any of the grain for which we have available capacity, but we do not feel we should be asked to put our ships in a different character of employment under conditions utterly subversive of the free, unobstructed, competitive system which has been established by ship owner, shipper and all concerned, and which has endured because it has shown itself to be the best, fairest and most convenient."

We are advised that several U.S. ship owners, non-members of the Ship Owners' Association, who did not attend this conference, will participate in the Canadian crop movement, however, and our information, from a reliable source, is at the time of writing (Sept. 20), that about 20 U.S. ships may be expected to handle grain out of Fort William and Port Arthur this autumn, under the provisions of the act as they have been anticipated up to this date.

A Winnipeg press dispatch of Sept. 13 reported A. E. Spendlove, Agent Great Lakes Transportation Co. there, as having said, in reference to the Fort William press dispatch of Sept. 12, quoted above, that there was no intention of transferring the registry of any of the Great Lakes Transportation Co.'s ships to the U.S.

A Fort William press dispatch of Sept. 17 stated that a second U.S. ship to

carry grain from Fort William had been chartered, viz., C. O. Jenkins, owned by Jenkins Steamship Co., of Cleveland, and that it was expected that two more of that company's ships would soon enter the Canadian grain trade.

A Cleveland press dispatch of Sept. 19 stated that L. J. Boyd, Chairman of the Board of Grain Commissioners, was there on that date and had an informal conference with some U.S. ship owners, and added "Nothing definite resulted, however, and there developed no change of opinion on the subject on the part of the different managers. It was suggested that the shippers file the tariffs when the charters are made, instead of the ship owners, but no action was taken along that line." The dispatch also stated that, in order to get tonnage, shippers at Fort William and Port Arthur were reported to have paid better rates than have been paid by Duluth shippers.

Canadian Government Merchant Marine Operations, Etc.

Officers of Steamships.—The following captains and chief engineers have been appointed in addition to those mentioned in previous issues.—Canadian Adventurer chief engineer, J. Hoey; Canadian Britisher, captain, W. E. Spring; Canadian Fisher, chief engineer, G. DeCotret (temporary); Canadian Otter, captain, D. M. Dickson; Canadian Runner, captain, W. E. Baker; Canadian Scottish, captain, W. H. Millar; Canadian Signaller, chief engineer, N. Farthing; Canadian Skirmisher, captain, H. S. Hilton; Canadian Trader, captain, J. B. Hickey, chief engineer, A. Brown; Canadian Warrior, chief engineer, W. P. Edwards.

The s.s. Canadian Constructor, which left Panama, Aug. 14, arrived at Auckland, New Zealand, Sept. 8, taking 24½ days, at an average speed of 11.1 knots. This is regarded as very satisfactory for a ship of this type. She and her sister, Canadian Cruiser, are the two largest C.G.M.M. ships, both having been built by Halifax Shipyards, Ltd., Halifax, N.S.

The S. F. Tolmie, the only sailing ship operated by Canadian Government Merchant Marine, and which has been on sale for some time, is reported to have been sold to The Hastings Mills, Ltd., Vancouver, B.C., for operation in the off shore trade. She was built by Victoria (B.C.) Shipowners Ltd., at the Cholberg yard, Victoria, and was taken over by the government on that company's bankruptcy, on a lien against all the company's property covering loans by the government for the building of four ships, of which the S. F. Tolmie is the only one completed.

Vancouver-Avonmouth Service.—Announcement has been made of sailings of ships between Vancouver and Avonmouth, England, as follows,—from Vancouver, Canadian Winner, Oct. 20, Canadian Prospector, Nov. 20, Canadian Seigneur, Dec. 20; from Avonmouth,—Canadian Winner, Dec. 14, Canadian Prospector, Jan. 14, 1924, Canadian Seigneur, Feb. 14, 1924.

Montreal Sailings.

London and Antwerp service.—Canadian Conqueror, Oct. 10; Canadian Planter, Oct. 24.

Cardiff and Swansea service.—Canadian Leader, Oct. 5; Canadian Victor, Oct. 19.

St. Kitts, Antigua, Barbados, Trinidad and Demerara service.—Canadian Otter, Oct. 3; Canadian Runner, Oct. 17.

Hamilton, Bermuda; Nassau, Bahamas; Kingston, Jamaica; Belize, British Honduras, service.—Canadian Forester, Oct. 19.

St. John's, Nfld., via Charlottetown, P. E.I., service.—Canadian Sapper, Oct. 4.

Australia and New Zealand service.—Canadian Miller, Oct. 26.

Vancouver, B.C., Sailings.

Australasian service.—Canadian Traveller, Oct. 15, for Melbourne and Adelaide.

United Kingdom service.—Canadian Prospector, Nov. 20; Canadian Seigneur, Dec. 20, both for Avonmouth.

The Panama Canal completed 9 years of operation Aug. 14, and during that time, 20,474 commercial ships passed through, carrying 84,284,474 tons of cargo. The opening of the canal synchronized with the commencement of the great war, and its normal use was considerably interfered with on account of the war and interruptions due to landslides, etc., until April 1916. Following this, there was a period of scarcity of tonnage, high freight rates and general financial and business uncertainties, which affected traffic considerably. The smallest traffic in any year was in 1915-16, when 729 ships passed through, paying \$2,251,433.60 in tolls and since then, there has been a consistent increase until for the year 1922-23, 4,272 ships passed through, paying \$18,975,189.06 in tolls.

Vancouver Grain Shipments.—Between May 1 and Aug. 31, 2,878,131 bush. of wheat were shipped from Vancouver, B. C., through the Dominion Government elevator, in 36 ocean ships, of which, 14, with 1,804,662 bush., were for United Kingdom ports; 5, with 448,297 bush., for European ports; 16, with 605,989 bush., for Japanese ports, and 1, with 18,462 bush., for Peru.

Canadian Navigation Claims Against Germany.

Hon. William Pugsley, K.C., formerly Lieutenant-Governor of New Brunswick, and now commissioner under the Inquiries Act, appointed to investigate all claims for reparation, under the treaty of peace between the associated powers and Germany, following on the great war, continued hearings through September. Canada Steamship Lines Ltd. claims for the loss of 11 steamships, as follows:—

Names	Date lost	Value	Insurance received
Midland Queen	Aug. 4, 1915	\$ 168,000	\$ 162,546
Empress of Fort William	Feb. 27, 1916	494,000	194,666.65
Empress of Midland	Mar. 27, 1916	494,000	194,666.65
Dundee	Jan. 31, 1917	464,000	305,955.57
Strathcona	Apr. 13, 1917	472,000	294,433.33
Neepawah	Apr. 22, 1917	378,000	321,200
C. A. Jaques	May 1, 1917	551,000	364,999.99
D. A. Gordon	Dec. 1, 1917	577,000	255,350.50
Armonia	Mar. 15, 1918	1,378,000	1,010,681.33
Takona	May 16, 1918	508,000	485,900
Acadian	Sept. 16, 1918	635,000	388,960
Totals.....		\$6,119,000	\$3,979,360.02

In support of the claim, the company was represented by W. F. Chipman, K.C., legal representative; R. B. Thompson, Secretary; F. C. Cuttle, Manager, Insurance Department, and F. A. Martin, consulting marine engineer and appraiser, New York. It was agreed that the amount received for insurance be deducted from the total claim, but the company desires to add to the net claim \$1,827,708.14 covering war risk premiums paid on all the company's ships, thus making the total claim \$3,967,348.12. The commissioner pointed out that he would have difficulty in allowing for the war premiums paid on all of the company's ships, as the premiums paid on ships not damaged or destroyed by Germany's illegal acts could hardly be considered as a direct liability against that country. The company claimed that had it not been for the German submarine warfare, of which the world was warned by proclamation, the war risk insurance would not have been taken out, and consequently the company would not have been out of pocket with respect to the ships not damaged. As an alternative, however, the company would present an auxiliary claim for the war risk premiums paid on the ships which were destroyed. The commissioner stated that, under the law, the company is entitled to claim the total damage for the destruction of the ships. If it were deemed equitable to deduct the insurance received, this should only be the amount of insurance, less the amount of the premiums paid out for such insurance on the destroyed ships. The section of the peace treaty concerned reads "..... Damage in respect of all property wherever situated, belonging to any of the allied or associated states or their nationals, with the exception of naval and military works or materials, which has been carried off, seized, injured or destroyed, by the acts of Germany and her allies on land or sea, or from the air, or damage directly in consequence of hostilities or of any operations of war."

Other claims are as follows: Nova Scotia Steel & Coal Co., \$7,416,680, for ships under charter torpedoed. Dominion Coal Co., \$6,014,261, as follows,—chartered steamships requisitioned, \$1,133,667; for substitution of other ships for those requisitioned, \$1,791,213; for loss on New England coal and coke contract, \$1,398,365; for loss of steamships Kendal Castle and Stigstad, torpedoed,

\$1,691,016. Dominion Iron & Steel Co., \$1,310,247, as follows,—for being deprived of the use of the s.s. Sandefjord and substituting s.s. Fram, \$203,607, for chartered s.s. Storstad, torpedoed, \$1,106,640. Dominion Steel Corporation, \$825,079, for general risk premium. Hero Steamship Co., for s.s. Scottish Hero, torpedoed, \$760,000. St. Lawrence Steamship Co., for s.s. Morwenna, torpedoed, \$201,500. Turret Steamship Co., \$89,334, for s.s. Turret Court taken over by British Ministry of Shipping. Overseas Shipping Co., Halifax, N.S., \$1,000,000.

On the Dominion Coal Co's claim for \$1,133,667 for chartered steamships requisitioned by the Admiralty, Hector McInnes, K.C., explained that specially built ships had been found necessary for the trade, and nearly all of the steamships were built for the company under long time charters. The British Government had requisitioned them, owing to their outstanding ability as carriers, and very serious results happened to the company on account of the loss of their services. The company had to go into the market and obtain substitute ships of an inferior type, and, as a result, its business in the St. Lawrence fell off. In 1914, the company carried 1,863,000 tons of coal to Montreal, which traffic dropped to 47,000 tons in 1918, with a rise in the following year to 203,000 tons. The commissioner again called attention to the section of the treaty under which compensation could be claimed only with respect to damage directly in consequence of hostilities, or of any operation of war, and he questioned whether it was a direct damage when Great Britain exercised her discretion in requisitioning the ships. It was contended on the company's behalf that the ships were of necessity taken by the Admiralty to carry on the war operations, and that if Great Britain had reimbursed the company when it made a claim, that claim would have been included in the British claim against Germany. Great Britain had not, as a matter of fact, paid the company anything. The owners of the ships had been paid, but the ships were under charter to the company, and had been taken by Great Britain without compensation to the charterers, who were powerless to resist the action, and therefore the loss sustained by the company was a direct consequence of the war. In reply the commissioner stated that the loss sustained by the company was not direct damages, but had two causes, first, the war, and, secondly, the exercise of Great Britain's discretion in selecting the company's ships, and he felt that the losses were changed from direct to indirect. He would, however, see that the claim was represented properly to the government.

Several other claims are being dealt with, including the C.P.R.'s, for losses suffered when the company's Antwerp offices were seized by Germany, and also by relatives of several victims of the Lusitania tragedy, including one from Lady Montagu Allan, who was a passenger on that ship, when two of her daughters were drowned. The last-mentioned claim was postponed until the spring, as members of the family are abroad.

Australian Government Ships.—A Sydney press dispatch says that 25 ships of the Commonwealth Line are being sold, and that only the best tonnage is being retained by the Government system.

Additional Grain Elevator Capacity at Vancouver.

The Vancouver Harbor Commissioners are having an extension built to the no. 1 elevator, which has been handed over to them by the Dominion Government, for operation, and are also going on with the erection of no. 2 elevator. The extension to no. 1 elevator will add 750,000 bush. to the capacity, making a total capacity of 2,000,000 bush. It is being built immediately east of the existing elevator, on the south side of Burrard Inlet. The principal material is reinforced concrete, and complete elevating, cleaning and weighing machinery will be installed. The plans were prepared by John S. Metcalf Co., Montreal and Vancouver, and the contractor is the Pacific Construction Co., Vancouver B.C. No. 2 elevator is being erected on the north side of the C.P.R. tracks, on the south side of Burrard Inlet, between the Ballantyne pier and the Great Northern Ry. wharf. It will have a capacity of 1,500,000 bush., and be of reinforced concrete, fully equipped with car unloading, elevating, cleaning and weighing machinery, as well as other shipping facilities, including the installation of special cargo cranes on the Ballantyne pier, with grain conveyors. Plans were prepared by John S. Metcalf Co., Montreal and Vancouver, and the contractors are the Northern Construction Co. and J. W. Stewart, Vancouver, construction is proceeding.

The Woodward Elevator Co., which was building an elevator at Burrard Inlet, under an agreement with the Vancouver Harbor Commissioners, suspended operations at the end of August, on the ground that the assistance to be provided by the commissioners under the agreement, was not forthcoming. It appeared that the commissioners had agreed to buy the site for the elevator, and to lease it to the elevator company, the amount required being \$200,000. It was stated that the purchase could not be completed until the transaction had been confirmed by the Dominion Government. This, it is reported, has now been done, and construction is proceeding.

The O. J. Klein Transportation Co., Montreal, has bought through the Anderson Company of Canada, from H. A. Foster & Co., the steam screw driven tug Gwennith. She had been lying at Belleville, Ont., for some time, and after the sale left for the lower St. Lawrence Gulf. The same company has also bought the schooner Leon L. from Lachance Ltd., Quebec, Que., and we are advised that these two ships, as well as other equipment which the company is buying, will be used in the pulpwood trade. The Gwennith was built in Holland in 1910, and has a steel hull of the following dimensions: Length 85½ ft., breadth 18½ ft., depth 9½ ft. She has a flush deck, and has fresh water tank and salt water equipment. The propelling machinery consists of triple expansion engines with cylinders 11, 18 and 30 in. diam. by 14 in. stroke, supplied with steam by a Scotch marine boiler, 10 x 10 ft., fitted with 2 furnaces, surface condensing, etc. The deck machinery includes winches and windlass, and there is also steam steering gear, and a full equipment of life boats, etc., according to the Marine Department's rules. The company has been incorporated under the Dominion Companies Act, with \$50,000 capital and office at Campbellton, N.B.

Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties:

Drowning of a Deck Hand from s.s. Kingston.

Held at Toronto, Aug. 16 and 18, by Capt. L. A. Demers, Dominion Wreck Commissioner, into the drowning of W. J. Price, a deck hand on s.s. Kingston, Aug. 4, in Lake Ontario, about 6 miles from Toronto. Francis King, K.C., represented Canada Steamship Lines, Ltd., and J. R. Robinson, Jr., appeared for the man's relatives. The court's report stated that the evidence was, in many respects, contradictory, indicating that confusion existed among the passengers and spread to the crew. The second officer, who was on the side of the ship from which the man fell, though he did not see him fall, on hearing the cry of man overboard, omitted to throw a lifebuoy, but gathered his men and started immediately to launch a boat, which last action was commendable. The captain, on rushing to the bridge, with the knowledge that a man was overboard, instead of immediately ringing full speed astern, hard astarboarded the helm, thinking the ship could be brought quicker to where the man would be, not knowing that the engines had been stopped. In the circumstances which existed, the proper course was full speed astern with a hard to port helm, thus bringing the ship into a position for a clear view, and offering a lee for the launching of the boat. The evidence did not show that there was any delay in getting the boat from her chocks, but some delay did occur in leaving the ship's side, owing to the slight leeway. Life belts were thrown by passengers. The throwing of a lifebuoy by the second officer would have been a matter of form, but in this case, ineffective. In view of the speed of the ship, the time taken to have the boat clear and under way, shows that action was taken promptly after the casualty became known, and that both the Kingston and her lifeboat cruised in the supposed vicinity of the man, for 50 minutes, indicates that proper action was taken. On the question of boat drill, which is an important routine on a passenger ship, it was not clearly proved that it was done on every trip, or once a week. The court realized the difficulties which shipowners, agents and superintendents are under in view of the frequent changes of crew, which renders a system of discipline impossible. No blame can be attached to the owners for the existence of a situation hitherto unheard of, and for which, for the present, no remedy can be applied. All deck hands were warned not to stand on the outside of the ship, and anyone taking a perilous position on his own initiative does so at his own peril. The occurrence was unfortunate, but the evidence was clear that there was no necessity for him to take an unsafe position to perform his work. The captain and officers were, therefore, relieved from any responsibility in the matter. While the court was of the opinion that there was confusion, and that some bad judgment was shown by the captain, momentarily, at the outset, it expressed the opinion that it did not retard operations for the launching of the boat, and that there was no carelessness or indifference, nor

undue delay shown in attempting to rescue the man, and that the fatality, in view of the evidence, was accidental. It found that the captain erred in judgment at the outset, but rectified his error promptly, and he was cautioned as to the necessity for an ever existing presence of mind; that the drowning was accidental, due to the man's daring and disobedience to a warning he had received previously, or otherwise in choosing a position which was deemed unwarranted. The court did not impeach anyone for indifference or neglect. The ship was well equipped with lifebuoys and belts, and in view of existing conditions, was as well manned as possible.

Edward L. Strong—Glendochart Collision.

Held at Montreal, Sept. 11 and 12, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. J. O. Grey and C. Lapierre, as nautical assessors, into the collision between the George Hall Coal & Shipping Corporation's s.s. Edward L. Strong, and Glen Steamship's s.s. Glendochart, in the Cornwall Canal, between locks 17 and 18, July 8, when the former ship sustained some damage. Capt. W. J. Mills, of the Edward L. Strong, stated that when about a quarter of a mile from a barge, which was tied to the Government wharf, he sounded a one blast signal to a steamship which had been passing the bridge, but received no response. Later, when about 100 ft. from the Glendochart, he sounded the alarm signal and went full speed astern. The current, which was estimated at a mile, was with him, and his speed was 3 miles. The danger signal was given when about a ship's length above the barge. At that time he gave full speed ahead, then full speed astern, his ship's bow coming into contact with the Glendochart's port bow. Capt. W. J. Hawman, of the Glendochart, stated that he took the wheel after leaving the bridge and heard the Edward L. Strong's signals, but did not reply, owing to certain regulations, which, he stated, exist, prohibiting the sounding of whistles in the vicinity of the hospital. His ship was going about 1½ miles at dead slow, the collision happening about 150 ft. above the barge Valencia. There was ample room for the Edward L. Strong to pass, and the Glendochart's engines had been stopped for 4 or 5 minutes. He stated that the Edward L. Strong collided with his ship, whereas his log reads: "We collided with s.s. Edward L. Strong." The Glendochart's wheelsman stated that the master, being uncertain as to the safety of passing the barge, took the wheel from him, and that had he been in charge, he could not have done worse. He also stated that the engines were going, whereas the captain stated that they had been stopped 4 or 5 minutes. The engines' movements could not be confirmed by the engineer. The court held, that by not answering the Edward L. Strong's signals, which he was expected to do, notwithstanding that they were in the vicinity of a hospital—the promulgation of rules to the contrary not having been proved—and proceeding, and in view of the barge Valencia being moored to the Government wharf, limiting the space, and attempting to head off the descending ship, Edward L. Strong, the captain of the Glendochart showed a wilful disregard of ordinary prudence. The Edward L. Strong, on account of the cur-

rent, had the right of way, and indicated that by the one blast signal, which the court stated it rightly presumed, was intentionally disregarded by the captain of the Glendochart, this being proved by the fact that he took the wheel from an experienced man. The court, therefore, in view of the unjustified action, found Capt. W. J. Hawman, of the Glendochart, in default, and suspended his certificate, no. 864, for one month, from Sept. 12 to Oct. 12. The certificate of Capt. W. J. Mills, of the Edward L. Strong, was returned to him, and he was advised that in future, though he may have the right of way, it may depend on the evidence, whether he is justified in availing himself of that privilege when by so doing his ship may be placed in a position of danger.

Mainly About Marine People.

Joseph Battle, who was mayor of Thorold, Ont., at different times for 8 terms, and as a railway and canal contractor, owned and operated a number of tugboats on the Welland Canal, died at Thorold, Sept. 18, aged 62. A few years ago he had both legs amputated.

Hon. L. P. Brodeur, Minister of Marine and Fisheries in the last Laurier Government, and since then a justice of the Supreme Court of Canada, is reported to have resigned from the bench, and it is stated that he will be appointed Lieutenant Governor of Quebec, succeeding Sir Charles Fitzpatrick, whose appointment expires October 1.

Capt. Walter Campbell, President and General Manager, Detroit and Windsor Ferry Co., Detroit, Mich., died at his summer home, on Peche Island, in the Detroit River, Sept. 9, aged 72, after a long illness.

F. W. Cowie, formerly Chief Engineer, and latterly Consulting Engineer, Montreal Harbor Commissioners, has been appointed an expert adviser of the Hampton Roads Commission, Virginia, to aid in preparing a report and recommendation for the expansion and development of the port.

Capt. Walter Hose, C.B.E., R.C.N. Director of the Naval Service, has been promoted to Commodore, and has left Ottawa for England to act as an adviser to the Prime Minister and other members of the Dominion Government at the Imperial Conference.

Frederick W. Hyndman, Lloyd's Agent at Charlottetown, P.E.I., who died there, Sept. 9, aged 82, entered the Royal Navy in 1856 and served in 1867 on the Victory, Nelson's old flagship. He was for a time in hydrographic survey work in different parts, including Alexandria, Egypt, and the Mediterranean. He was present at the opening of the Suez Canal in 1869. He retired from the navy in 1870, and returned to Prince Edward Island, when he founded the fire and marine insurance firm of F. W. Hyndman & Co.

Capt. John A. Willett, who had been in the Dominion Coal Co's service for over 20 years, latterly as master of the s.s. Corunna, died in the Montreal General Hospital, Sept. 4, aged 57.

Ogilvie Flour Mills Co., Montreal, is going to apply for an extension of its powers, to include, among other things, the operation of ships.

General Ship Building Matters Throughout Canada and Newfoundland.

Canadian Vickers Ltd., Montreal, did the following repair work during August,—at the Maisonneuve plant, for Canadian Government Merchant Marine,—Canadian Runner, 3,091 tons, docked Aug. 10, for owner's and underwriters' repairs, including damage due to grounding, and bottom painting, undocked, Aug. 19; s.s. Canadian Seigneur, 5,758 tons, docked Aug. 14, for owner's and underwriters' repairs and bottom painting, undocked Aug. 16; s.s. Canadian Spinner, 5,758 tons, docked Aug. 24, for owner's and underwriters' repairs and bottom painting, undocked Aug. 30. For Mathews Steamship Co., Toronto, s.s. Yorkton, 1,772 tons, docked Aug. 2, for owner's and underwriters' repairs, including extensive bottom damage requiring 42 new shell plates, 20 shell plates treated and over 100 floors, frames and webs faired, renewed and otherwise treated, undocked Aug. 22. For Canada Steamship Lines Ltd., s.s. Oatland, 1,854 tons, minor repairs. For W. A. Phillips, s.s. John Shaw, 1,487 tons, sundry repairs. For Montreal Harbor Commissioners, s.s. Sir Hugh Allan, 354 tons, new propellers. For U.S. Shipping Board, s.s. Aledo, 4,768 tons, docked Aug. 20, for owner's and underwriters' repairs and bottom painting, undocked Aug. 24. For Glen Line Ltd., s.s. Glenlinnie, 1,930 tons, docked Aug. 22, for owner's and underwriters' repairs, including bow and bottom damage, requiring 2 new shell plates, 7 shell plates treated, repairs to stem, fender and internals, also bottom painting and withdrawing tail shaft for inspection, undocked Aug. 30. For Furness, Withy & Co., s.s. Wyncote, 4,937 tons, temporary repairs. In addition, the following repairs were done in the company's harbor department,—for Canada Steamship Lines Ltd., s.s. Edmonton, 2,214 tons, voyage repairs; s.s. Hamilton, voyage repairs; s.s. Oatland, 1,854 tons, two new smoke stacks; s.s. Thunder Bay, testing dynamo; s.s. Mapleboro, 1,141 tons, repairs to wire compressor on deck; s.s. Mapleheath, 1,692 tons, voyage repairs. For U.S. Shipping Board, s.s. West Campgaw, 5,565 tons, voyage repairs; s.s. West Kebar, 5,620 tons, repairs to dynamo. For Norwegian American Line, s.s. Idefjord, 4,250 tons, and s.s. Tanafjord, 5,640 tons, voyage repairs. For Anchor-Donaldson Line, s.s. Argalia, 5,214 tons, installing exhaust fans in ventilators; s.s. Concordia, 5,388 tons, s.s. Corinaldo, 6,900 tons, and s.s. Cassandra, 8,135 tons, voyage repairs. For Clark Steamship Co., s.s. Gaspesia, voyage repairs. For Saguenay Securities Ltd., s.s. Thomas B., 199 tons, voyage repairs. For Globe Transportation Co., s.s. Pabjune, supplying oak hatch beams and repairing hatch coamings. For John K. Haaland, s.s. Thomas Haaland, 3,127 tons, repairs to hull. For C. H. Jagels, s.s. Spindrift, voyage repairs.

The steel motor car ferry boat which has been built by Canadian Vickers Ltd. for the Norway Bay Ferry Co. has the following dimensions: length 61½ ft., breadth 19 ft. 8 in., depth 6¾ ft. The steel hull and bulwarks and engine seating, suitable for a semi-Diesel oil engine, oil fuel tank and certain parts of the hull equipment only, were made by the builders, the remainder of the work including machinery installation, and launching is to be completed at North Bay, Ont., under a separate contract. An interesting feature of the builder's contract, was

that the boat was only partly rivetted, and then dismantled and shipped in three sections on railway flat cars to North Bay. She was designed by Walter Lambert, Naval Architect, Montreal, who supervised the construction.

Cholberg Shipyard, Victoria, B.C.—C. Cholberg, owner of the shipyard, at which Victoria (B.C.) Shipowners Ltd. was to build sailing ships under special aid from the Dominion Government, of which only one was partially built when the company failed, has been in Ottawa negotiating with the Government for the purchase of its material lying at the yard. A press report states that the Government has received an offer of practically double the amount offered by him, and that he is stated to have refused permission to anyone to use the yard for the removal of the material. The Justice Department is reported to have advised that the only action for the Government to take would be to foreclose the mortgage against the plant. It was stated later that the Government was willing to negotiate any reasonable settlement which would provide a reasonable value for its material and reimburse it for the additional expense it had been forced into on account of Mr. Cholberg's action. It is reported that a proposition had been received from some persons in Victoria, for carrying on a boat building business at the plant during the winter.

Meteghan, N.S.—The keel of a steamship to be named D. J. Purdy, was laid at Meteghan, N.S., early in September. It is stated that she will be equipped for burning oil, and will be completed for operation on the St. John River, next spring.

Newfoundland Dockyards Ltd., St. John's, Nfld., has completed repairs on the s.s. Prospero, which ran on the rocks near Green Pond in Dec., 1922. The repairs included a new stem, 40 ft. of new keel, over 20 new plates at the bow, and the renewal of the forepeak and no. 1 tank and a new deck. The general repairs are reported to have cost about \$25,000 and the new deck an additional \$8,000. The Navigazione Generale Italiana's s.s. Vesuvio arrived at St. John's, Sept. 9, with her steering gear out of order, and, after having repairs made, resumed her journey, from Gaston to Montreal, with coal.

Port Arthur Shipbuilding Co., Port Arthur, Ont., has obtained a contract for building some steel towers for the hydro electric power line between Port Arthur and Cameron Falls, some 80 miles. It has also a large order for pulp mill machinery for Great Lakes Pulp & Paper Co.

The Algoma Central Steamship Line's s.s. J. Frater Taylor was docked during September, for survey and repairs, consisting chiefly of the removal and replacing of about 30 plates. She will be followed in the dock by the Northern Navigation Co.'s s.s. Noronic, for a general survey.

Prince Rupert Drydock and Shipyard, Prince Rupert, B.C., did the following repair work during August,—for Canadian Government Merchant Marine, s.s. Canadian Farmer, docked for cleaning, painting and general overhaul, in connection with annual inspection. For Grand Trunk Pacific Coast Steamship Co., s.s. Prince George, docked for changing 2 propeller blades. It also overhauled 25 fishing ships. Work was com-

menced on building two 60 ft. cruisers, with wooden hulls, for the Marine and Fisheries Department. They are to be equipped with semi-Diesel engines, and are to be ready for operation by Jan. 1, 1924.

Victoria Machinery Depot Co., Victoria, B.C., has completed reconditioning the Union Steamship Co. of British Columbia's s.s. Chilliwack, and she has returned to service. The repairs included re-tubing and recovering the boilers, new furnaces, general overhauling, and a number of improvements, as well as cleaning and painting.

A self discharging barge, of a somewhat novel type has been built in England recently, and shipped to Takoradi, Gold Coast, West Africa, for use in building the breakwater there, for which Stewart and MacDonnell of Canada, are consulting constructional engineers, for the Crown Agents for the Colonies. Three more are to be built. They are arranged with trimming tanks along each side, and the hull is divided into 4 compartments by 3 transverse bulkheads. The tanks are arranged so that the bottoms are higher than the flotation level of the barge when light. When the deck cargo is loaded, the barge is taken to the dumping site, and sluice valves are opened to admit water to the tanks on the side it is desired to discharge from, thus automatically tipping the barge to such an angle as is necessary to shoot the cargo overboard. The barge, thus being lightened, rises, and the tanks are emptied automatically.

Detroit & Cleveland Navigation Co's New Ships.—The first of the two sister steamships being built for the D. & C. N. Co., work on which started last autumn, was launched at Lorain, Ohio, Sept. 15, by American Shipbuilding Co. The hull will be towed to Detroit, Mich. where superstructure will be built, interior decorations finished, engines installed and the ship made ready for service on the Detroit-Buffalo line next summer. The sister ship is expected to be launched before the end of the year. Each ship will be nearly 550 ft. long, and about 100 ft. wide amidships, will carry a crew of 300, and have cabin accommodation for about 1,200, also space for automobiles and express freight weighing over 1,000 lb. The total cost of each ship will, it is reported, be about \$3,500,000.

The Belchers Steamship Co. Ltd., Montreal, has been granted supplementary letters patent increasing its capital stock from 2,000 shares without nominal or par value, to 2,000 shares without nominal or par value, and 1,400 shares of preferred stock of the par value of \$100 each, provided that the capital with which it carries on business shall be \$150,000. The company owns the s.s. Belchers, formerly War Hamilton, which was built at Toronto in 1919. She is screw driven by engine of 148 h.p. Her dimensions are,—length 251 ft., breadth 43.6 ft., depth 20.7 ft.; tonnage, 2,251 gross, 1,353 net.

Esquimalt Drydock.—We are officially advised that the contract for supplying pumping and other machinery for this drydock, which is being built for the Dominion Government, has been awarded to Hodgson, King & Marble, Vancouver, B.C.

Atlantic and Pacific Oceans.

The s.s. *Empress of India*, owned formerly by the C.P.R., and operated in its trans-Pacific service, which was sold to the Gaekwar of Baroda, during the war, for use as a hospital ship, and renamed *Loyalty*, is reported to have been sold for about \$32,000 to Scindia Steam Navigation Co. for breaking up.

Manchester Liners Ltd. is reported to be about to establish a direct steamship line between Manchester, Eng., and British Columbia ports, in addition to its present service to Atlantic ports. C. A. Harrison, Manager, Manchester Consignments Ltd. was stated to be visiting Vancouver recently to open direct trading on a proposition to make advances against first class products.

The s.s. *Empress of Japan* which the C.P.R. has been offering for sale, subsequent to her recent withdrawal from the trans-Pacific service, is reported to have been sold for use as a Canadian Oriental Exhibition ship. It is stated that the interior will be remodelled to make room for booths displaying Canadian merchandise, and that she will visit various oriental ports for exhibition purposes.

A press report from Southampton, Eng., states that the *White Star* and *Cunard Lines* have entered into an agreement for a joint trans-Atlantic steamship service during the winter, with the steamships *Majestic*, *Berengaria* and *Aquitania*. The *Mauretania*, *Olympic* and *Homer* will be overhauled during the winter, and some attempts made to increase the speed of the *Cunard* steamships, over the present 26 knots. It is stated that the s.s. *Homer* will be equipped for burning oil.

As a result of the disastrous earthquake along the Japanese coast early in September, steamship companies have been compelled to cease landing cargo at Yokohama and Tokio, on account of the conditions prevailing there. The C.P.R. s.s. *Empress of Australia* which was in Yokohama harbor at the time, lost her propeller in the tidal wave, which followed the earthquake, but otherwise did not suffer any material damage. The s.s. *Empress of Canada*, which was en route to Yokohama, and with which it was at first reported impossible to communicate, was unharmed, and both ships engaged immediately in relief work, chiefly in transferring victims to hospitals at Hong Kong, etc. The Japanese steamship companies were advised not to accept freight or passengers destined for either Yokohama or Tokio until further notice and shipments already on the way to those ports, were discharged at Kobe at shippers' risks and expense.

Maritime Provinces and Newfoundland.

The s.s. *Sable I*, owned by Farquhar and Co., Halifax, N.S., which ran ashore at La Maline, Nfld., about the middle of August, and which was refloated Aug. 23, ran ashore again the same day, during a heavy gale, was refloated Aug. 24, and proceeded to St. Pierre under her own steam.

The Portuguese cruiser *Carvalho* Arago ran on the rocks at La Manche, Nfld., Aug. 31, and sustained considerable damage to her bow below the water line, and also to her keel, several plates being also damaged. She was drydocked at

St. John's, Sept. 3, for examination and repairs.

The Lurcher Shoal lightship, off Yarmouth, N.S., was removed from the station during the latter half of September for necessary repairs, and is expected to be replaced during the latter part of October. In the meantime her station is marked by a gas buoy painted red and showing an occulting light.

The Dominion Marine Department has established an automatic radio fog alarm at Cape Ray, Nfld., which will prove a valuable aid to navigation for ships entering Cabot Strait, during foggy weather. The signal is a series of 3 flashes, transmitted for 1 minute, followed by 4 minutes silence. The wave length is 1,000 meters, and tests indicate that the signal has a maximum range of 100 miles.

Beazley Bros., marine contractors, Halifax, N.S., are reported to have bought the s.s. *Strandhill*, recently laid up in Bedford Basin, Halifax, and it is stated that they have fit her out for salvaging the guns from the H.M.S. *Raleigh*, which was wrecked on the Labrador Coast last year. It is stated that they have a contract with the British Government for salvaging the guns and delivering them in England, at \$20,000 each. There was 5 large guns aboard the *Raleigh*, and several smaller ones, and with good weather prevailing, the contractors do not anticipate any difficulty in doing the salvage work.

Province of Quebec.

The Railways and Canals Department has given a contract for improving the upper entrance to the *Rapide Plat* Canal, to A. W. Robertson Ltd., Montreal.

The British s.s. *Twickenham*, while bound from Sydney, N.S., to Quebec, with coal, Sept. 4, collided with the pier and shed 25, in the St. Charles River, Que., damaging her bow, and also some plates under the water line. The casualty was caused by the breaking of the lines between the ship and her tug.

The new channel leading to St. Helen Island wharf, in the Montreal harbor, is marked by a series of black and red spar buoys, and mariners using the main ship channel are cautioned to keep well to the westward, or outside of the outer black spar buoys, as they are placed in shoal water, and do not mark the east edge of the ship channel. These buoys are placed expressly for the use of the St. Helen Island ferry.

The Bay Line Steamships' s.s. *Birchbay*, which ran ashore in the Richelieu Rapids, Aug. 8, abandoned to the underwriters, and later offered for sale by them, has been sold, together with her cargo of coal, to St. Lawrence Transportation Co. It is said that the ship is to be salvaged for further operation. She was built at Cleveland, Ohio, in 1882, and was originally named *Harry E. Packer*, and was later bought by the Webster Steamship Co., Quebec, Que., and renamed *Eric W.*

Canadian American Bureau of Trade has been incorporated with \$20,000 authorized capital, and office at New York, N.Y., to carry on business as shipping agents, with S. Graham, 31 Nassau St., New York, as its attorney. E. B. Bechan, B. W. Harris and T. R. Fleming are its incorporators.

Ontario and the Great Lakes.

The St. Lawrence River at Prescott was reported, on Sept. 4, to have reached its lowest level for many years, having dropped 2 ft. below normal.

The Public Works Department received tenders to Sept. 20, for the building of a storage annex to the Dominion Government's grain elevator at Port Colborne.

The Dominion Marine Department received tenders to Sept. 10 for breaking ice in Port Arthur and Fort William harbors, Thunder Bay, and Lake Superior, for five years.

The Dominion Public Works Department will receive tenders to October 4, for the construction of 478 ft. of the superstructure of the east pier of the eastern channel, Toronto harbor.

The Dominion Public Works Department had given O'Brien and Martin, Port Arthur, a contract for dredging berths at wharves at Fort William, class B, at 46c a cub. yd. place measure.

The first Welland Canal's first sod was turned Nov. 30, 1824. It is proposed to take steps to erect a cairn in commemoration of the event on the celebration of the centennial next year.

The shipbuilding yard at Bridgeburg, Ont., operated formerly by Canadian Allis-Chalmers Ltd., is reported to have been sold to the Dupont interests for manufacturing pulp on a large scale.

The s.s. *Robert L. Fryer*, owned by Henderson Transfer & Lighterage Co., Fort William, has been leased to M. Sellers & Son, grain merchants, there, for transferring grain to and from the elevators at the head of the lakes.

Traffic on the Welland Canal was interfered with, Sept. 20, when the s.s. *Weybar*, downbound, grounded on the aqueduct at Welland, owing to low water. She was released in about 3 hours, 8 ships being held up before she could be refloated.

Glen Steamships' s.s. *Glenarm* struck an uncharted object and sank near Port Dalhousie, Lake Ontario, Sept. 14, but was refloated the next day, after a quantity of her cargo of grain had been lightered. She then proceeded to Kingston.

The Toronto Harbor Commission's bill against the city, for \$70,000, for the preparation of the rapid transit report in 1914, has been referred by the board of control to the City Solicitor, Finance Commissioner and Works Commissioner, for a report.

The U.S. barge *James Cahill* ran ashore near Dunkirk, while en route from New York to Cleveland, via the State Barge Canal, early in September, and was refloated by John E. Russell's steam tug, J. L. Russell, after her cargo of nitrate was jettisoned.

The schooner *Maple Leaf*, which has been used in the Bay of Quinte trade, has been bought by B. Grimshaw, Kingston, for carrying grain between Kingston and Bay of Quinte ports. She was built at Bronte, Ont., in 1886, her dimensions being: length 70 ft., breadth 18.5 ft., depth 5.4 ft., 59 tons net.

The National Sand & Gravel Co's s.s. *Charles Dick*, struck an obstruction in the Welland Canal, about 2 miles from Welland, when down bound, Sept. 20, and damaged some plates, causing a leak which necessitated her tying up and shifting cargo, before proceeding to Thorold, where an examination of the damage was made.

The United States Lake Survey reports the mean stages of the Great Lakes in feet above mean sea level for August as follows: Superior, 602.06; Michigan and Huron, 579.76; St. Clair, 574.61; Erie, 571.70; Ontario 245.41. Compared with the average August levels for the past 10 years, Superior was 0.67 ft. below; Michigan and Huron, 1.20 ft. below; Erie, 1.08 ft. below; and Ontario, 1.15 ft. below.

The Northern Navigation Co's s.s. Noronic was held at Port Arthur, Sept. 19, owing to a broken propeller. The passengers were transferred to the company's s.s. Hamonic, Sept. 20, en route to Sarnia. A Port Arthur press dispatch of Aug. 21 said that the Noronic would be towed to Superior, Wis., for repairs, as soon as her flour cargo of 2,100 tons was unloaded, as the Port Arthur Shipbuilding Co. had not a vacant berth.

Press reports state that the Public Works Department's District Engineer at London has been instructed to prepare plans for building a pier at the east end of Port Stanley harbor, at an approximate cost of \$50,000, that an entrance is to be left from the east between the pier and the breakwater, and in addition to this, work on a portion of the west pier is to be removed for deepening and widening the harbor channel.

The George Hall Coal and Shipping Corporation's s.s. John B. Ketchum II., when passing through the Lachine Canal at the end of August, was caught in a wave caused by the collapse of the two upper gates of lock 1, and was washed through the lower gates into the harbor. Repairs were made and traffic resumed Sept. 1. A preliminary enquiry indicates that the gates were not properly closed, and that the ship was in no way to blame.

The Spanish River Pulp & Paper Mills Ltd. is reported to have prepared plans for a new slip and wharves at the mouth of Fort Creek, Sault Ste. Marie. It is said that the new way will be 600 ft. long and 200 ft. wide, and will run inland to about 100 ft. from the Algoma Central & Hudson Bay Ry. tracks; that the estimated cost is between \$300,000 and \$400,000, and that in addition there will be considerable dredging, costing about \$100,000, which will be done by the Dominion Government.

The Dominion Public Works Depart-

ment received tenders to Sept. 27 for reconstruction of south pier at Burlington Channel, Ont., involving building a retaining wall for 489 ft. The work consists of removing the old face piling and such stone, cribwork necessary to permit the driving of H beam main piles, timber sub-face piles, placing walings, stringer, block and tie rods, as well as concrete superstructure in practically the same alignment, refilling and grading with earth or other suitable material at the back of and to the top of the new concrete wall.

The Kirkwood Line Ltd., Montreal, has bought the s.s. Vaneyck, from Belgian owners, for service between Toronto, Montreal, Quebec, Halifax and St. John, in conjunction with the s.s. Greypoint. The Vaneyck, formerly J. H. Plummer, was owned formerly by Canadian Northern Steamships, Toronto, and later by Canada Steamship Lines, Montreal. She was chartered for overseas service in 1917, and subsequently sold to Belgian parties. She was built at Low Walker, England, in 1903, and is screw driven by engine of 210 h.p. Her dimensions are: length 246 ft., breadth 37 ft., depth 21.8 ft.; tonnage, 1,582 gross, 992 net.

The Reid Wrecking Co's s.s. Advance, laden with 57,000 bush. of wheat, from Port Colborne to Montreal, grounded in the narrows three miles west of Alexandria Bay in the St. Lawrence River, Sept. 20, was refloated and arrived at Prescott, where her cargo was reloaded. The Sarnia City and the barge Brighton of the Reid Wrecking Co. went to the assistance of the Advance and released her, lightening her cargo, which was taken to Prescott on the barge Brighton. Low water is believed to be partially responsible for the accident.

The Dominion Public Works Department received tenders to Sept. 20, for the construction of a section of the Bare Point rubble mound breakwater in the main harbor (north), at Port Arthur. This section will be about 2,000 ft. long, 32 ft. below, and 7 ft. above, the water line. The width at the bottom will be 126 ft., at the water line 30 ft., and at the top, 14 ft. The quantity of stone will be about 375,000 tons. The existing breakwater extends from Bare Point along the main harbor for 5,150 ft., 1,850 of which was completed in 1922. The extension will be a continuation of the line of the existing breakwater, along the main harbor, allowing for an entrance into the harbor of 500 ft., between the

end of the 1922 extension and the new extension.

The s.s. Watkins F. Nisbet, the last of the 10 steamships built in Great Britain for the Eastern Steamship Co. for the grain trade between Buffalo, Port Colborne and Montreal, was launched towards the end of August at Birkenhead, Eng. It was the original intention that this ship, together with the others ordered at the same time, should have been ready and in operation during June, but some delay occurred in the shipbuilding yards. She is a sister ship of the s.s. Nisbet Grammer, with hold capacity of about 130,000 cub. ft. grain measurement, on a mean loaded draft of 14 ft. and equipped for a speed of 10 knots. Her dimensions are: Length b.p. 253 ft., breadth over plating 43 $\frac{1}{4}$ ft., depth moulded to upper deck 20 ft.

Manitoba, Saskatchewan, Alberta and Northwest Territories.

Press reports state that construction will be commenced during the winter on a breakwater at Chipewyan, Lake Athabasca. There is no actual harbor there, and boats have at times been compelled to shelter in the river for several days during high winds. The work will, it is stated, be done under Dominion Government engineers, and the breakwater will be of logs which will be brought down stream. Its dimensions will be about 150 ft. long by 30 ft. wide, and it will probably be enlarged later.

Preparations were made during September for the closing of navigation on the northern rivers and lakes, so far as far northern points are concerned. One of the Northern Trading Co.'s motor boats, with a scow, sailed from Fort Norman, early in the month, for Aklavik, this being the last sailing of the season for the Arctic. The company's s.s. Northland Trader, on her arrival at Fort Smith, later in the month, was berthed for the winter, while the motor boat Northland Pioneer made another trip to Fort Rae, and the auxiliary powered schooner Speed is scheduled to sail from Fort Smith about Oct. 10, for Fort Resolution. The Alberta and Arctic Transportation Co.'s s.s. Distributor arrived at Fort Norman early in September from the north and was berthed for the winter. The company's motor boat Lady Mackworth was scheduled to make her last trip for the season, from Fort Smith to Fort Resolution and Fort Rae, at the end of September, or early in October.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during August:

Welland Ship Canal Construction.—A. J. Grant, chief engineer, Welland Ship Canal, who addressed the Rotary Club, St. Catharines, Ont., recently, is reported to have stated that with a 25 ft. draft, the canal would when completed, be capable of passing 95% of the ships now engaged in ocean trade. In connection with the construction, 22 bridges will be built, 13 of which will be highway ones. In the course of construction, 41,000,000 cu. ft. of earth excavation is necessary, and 8,000,000 cu. ft. of rock excavation, and approximately 30% of this excavation is completed. Of concrete work, of which approximately 3,000,000 cu. yd. will be required, 30% is completed. It is anticipated that locks 1 and 2 will be finished before the winter; locks 6 and 7, with their entrance piers, are 43% finished.

British Columbia and Pacific Coast.

The C.P.R. s.s. *Princess Patricia* commenced her autumn schedule of four trips a day between Vancouver and Nanaimo, Sept. 15.

The Union Steamship Co. of British Columbia is reported to have ordered a day passenger steamship in Montrose, Scotland, for early delivery.

Furness Withy and Co.'s s.s. *Tuscan Prince* which was wrecked off Austin Island, Barkley Sound, Feb. 15, and was considered a total loss, has been sold to Alaska Junk Co., Bellingham, Wash.

The Consolidated Whaling Corporation reports that on the whole, the whaling season has been good, the company's ships being kept busy during the season, which will end about the middle of October.

The motor tugboat *Lucienne*, which was bought by Wallace Shipbuilding and Drydock Co., North Vancouver, recently, from Dutch owners, and brought out from Holland, has had her name changed to *Norshore* and has been registered at Vancouver.

The s.s. *Selkirk*, operated by Frank Waterhouse & Co., ran ashore at Hearst Island, off Vancouver Island, at the end of August, and has been declared a total loss. She carried supplies to various canning factories on the coast. She was built at Victoria, B.C., in 1898, and was screw driven by engine of 12 h.p. Her dimensions were: length 95.6 ft., breadth 24 ft., depth 7 ft.; tonnage, 142 gross, 86 net.

Puget Sound Navigation Co. is reported to be having a motor car ferry built for operation across the Strait of Juan de Fuca, between Port Angeles, Wash., and Victoria, B.C. It is said that she will be equipped with a Diesel engine and make at least two round trips a day, and that there will be accommodation for 23 automobiles. This route is now being served by the s.s. *Sol Duc*.

Negotiations are said to be proceeding between Vancouver City Council and the C.P.R., regarding the provision of a fire-boat for use in the harbor. A committee is reported to have taken the matter up with F. W. Peters, General Superintendent, British Columbia District, C.P.R., and it is said that the company may provide a boat, with captain and engineer, provided the city supply the hose crew.

Furness, Withy and Co.'s s.s. *Siberian Prince*, which ran on the rocks at Bentinck Island a few weeks ago, has been refloated and taken to Esquimalt for general examination and survey. She is stated to be considerably damaged, the rocks having penetrated through the bottom to the depth of 20 ft., and shell plates having been forced through the tank tops. It is expected that tenders for repairs will be asked shortly.

The port of Vancouver, according to a press report, shipped during the first 7 months of this year 149,370,838 board feet of lumber, compared with 98,277,515 in the corresponding period of 1922. The Orient was the largest customer, consuming 9,000,000 feet more lumber this year than last, or a total of 69,096,000 ft. In the shingle business there was an increase of 700,000 bundles, totalling 1,327,729 bundles exported, compared with 597,891 in 1922, the greatest market being the Atlantic coast, which absorbed 1,290,071 bundles.

Dominion Marine Association's Executive Committee Meeting.

The Dominion Marine Association's executive committee held its regular monthly meeting in Montreal, Sept. 12, those present being the President, T. R. Enderby, G. J. Hadden, W. J. McCormack, J. Waller and A. A. Wright.

Consideration was given to the Inland Water Freight Rates Act, 1923, and reports were made as to the situation, particularly with reference to the compliance of members with the act's requirements and to the continued refusal of United States owners to enter the Canadian grain trade on account of them. After full discussion it was determined to let matters take their course at present and to take no action at that meeting.

The breaking of gates in the Lachine Canal on Aug. 29, and the delays permitted to take place in the repair work, were then considered at the instance of the President, who had already communicated with the department at Ottawa during the course of the work. It was resolved to ask for an investigation, in order that provision may be made for the future, so that when other accidents occur traffic may be resumed with the least delay possible.

Correspondence was read relating to the improvement of the Morrisburg Canal upper entrance, a letter having been received from the Comptroller of the department, advising that the Association's recommendation for the moving of the lock farther down the canal had been considered by the department's engineers, who stated that they could not recommend it. It was decided to renew the recommendation and to ask for a statement of reasons from the department as to why it could not be accepted.

The regulations of June, 1923, with reference to drinking water for use on ships were again considered. Instances were cited regarding the difficulties to be encountered in making the requested changes, and the meeting expressed the feeling that members of the Association should have been consulted before the adoption of the regulations. It was resolved to ask that their enforcement be deferred pending some consultation, and in order that opportunity might be given for the necessary installations to be made without requiring docking during the navigation season.

An ice breaking contract was reported to have been made with the Canadian Towing & Wrecking Co. upon the expiration of the previous five year contract in July last. The expired contract was considered, and it was decided to ask for a copy of the new one for consideration at the next meeting, and to express the hope that previous recommendations had been incorporated.

Correspondence regarding the improvement of the Belleville-Prince Edward bridge was considered, the Public Works Department's District Engineer having asked for opinions as to navigable width of span required. Certain particulars had been procured, but the meeting decided to ask for further details with reference to the location of the work proposed, and the protection to be afforded, before expressing an opinion as to the navigable water required.

Consideration was given to low water levels prevailing in the lakes and St. Lawrence, and it was decided to communicate again with authorities at Ottawa, particularly with the Railways and

Canals Department, calling attention to the Association's protest regarding the Chicago Drainage Canal, asking for opportunity to consider any plans proposed, and urging action.

It was decided to interview the Minister of Marine at an early date, to ask for the abolition of compulsory payment of pilotage dues below Montreal, and for this purpose it was agreed to hold the next regular meeting of the committee in Ottawa in October, if the Minister could then receive a deputation.

Tonnage statements were considered, with special reference to the requirement that each member enroll the full amount of his tonnage, and it was decided to revive the question at the next meeting, when it was hoped all members will be present. Suggestions were made as to the new members and directions were given for further correspondence with parties already contemplating enrollment or likely to be interested.

Hydrographic Survey Work for 1923.

We are advised that the Marine Department's Hydrographic Survey has been operating the s.s. *Acadia*, under Capt. F. Anderson, in the southwest approach to the Bay of Fundy, to obtain accurate sounding for the use of ships entering St. John, N.B., harbor in thick weather. The s.s. *Bayfield*, under Mr. Fraser, has continued its survey of the waters surrounding the Magdalen Islands, in the Gulf of St. Lawrence. The s.s. *Cartier*, under C. M. Savary, is charting the western approach to the channel, north of Anticosti Island, as a continuation of his work down the St. Lawrence River. The s.s. *Lillooet*, under H. D. Parizeau, was engaged for the greater part of the season in surveying the southeast approach to Hecate Strait, in the vicinity of Aristizabel and Banks Islands on the Pacific coast. During the earlier part of the season, before the fine weather set in, he completed the chart of the entrance to Victoria and Esquimalt harbors, swept the first narrows, Vancouver harbor, and attended to various other small surveys required in connection with the development along that coast. The s.s. *Restless*, under Commander Knight, has continued the survey of the Seaforth channel and Gunboat Passage, much of which was done last year.

Labrador Gold Fields Ltd., which was incorporated about a year ago to develop gold claims on the Labrador coast, that are reported not to have materialized, was placed in liquidation by order of the Superior Court at Montreal, Sept. 11, on the ground of lack of assets. The company arranged an ambitious scheme for development of the claims, which involved the transportation from Canadian and U.S. ports of a large number of men and material, for which considerable investment was made in steamships by outside parties.

The United States Shipping Board, according to a London, Eng., press dispatch, has decided to part with a very considerable part of its merchant ships, and is in negotiation with a well known British ship breaking company, for the sale of certain ships, aggregating 10,000,000 tons. It is stated that the ships to be sold are all steel, and would have to be in fit condition to cross the Atlantic under their own power.

Canadian Pacific Railway Ocean Steamship Services.

The s.s. Montclare arrived at Quebec, Sept. 7 with 1,734 passengers, 590 being cabin and 1,144 third class. This is stated to be the largest number of passengers brought to Canada on any ship during 1923, the second place being held by the White Star-Dominion Line's s.s. Doric, which on one trip brought 1,712 passengers.

Following the accident to the s.s. Empress of Scotland, when she struck an obstruction between Hamburg and Southampton, towards the end of August, the company chartered the Ellerman Line s.s. City of Paris, to take some of the Canadian passengers, who had booked on the s.s. Empress of Scotland. Other passengers for Canadian points travelled by the Majestic, Resolute and Melita.

The s.s. Montreal which had not been in service for some little time, is reported to have been chartered by the British Government to embark British troops at Constantinople. She sailed from Glasgow, Scotland, Sept. 14 for Turkey. The s.s. Marglen is also reported to have been chartered by the British Government for the movement of Indian troops, and sailed from Southampton, Sept. 14.

The s.s. Empress of Canada, running between Vancouver and the Orient, is, it is reported, to have the Todd system of oil burning equipment installed, consisting of 60 burners. A similar system, consisting of 42 burners, was installed in the company's s.s. Empress of Australia, last year. The work will be done at Seattle, Wash., on the return of the ship from the Orient in October.

The company has issued its winter steamship schedule, showing 40 sailings out of St. John, N.B., an increase of 6 over last winter. The winter season there will be opened with the sailing of the s.s. Montclare for Liverpool, Dec. 7, followed by the s.s. Melita for Cherbourg, Southampton and Antwerp, Dec. 13, the s.s. Montcalm for Liverpool, Dec. 14, and the s.s. Marloch for Belfast and Glasgow. All these ships will land passengers on the other side in time to celebrate Christmas at their respective destinations.

Canal Traffic Statistics.

The Dominion Bureau of Statistics, Transportation Branch, has issued the following summary of canal statistics for July:—

Sault Ste. Marie.—14,389,161 tons of freight passed through the Canadian and U.S. locks at Sault Ste. Marie during July, 1923, an increase of 4,154,676 tons over July, 1922. As in June, the increased traffic in coal and iron was the contributory factor to the betterment. During July, 14,284,720 bush. of Canadian grain from Fort William and Port Arthur, consisting of 10,617,935 wheat, 1,479,580 oats, 1,204,808 barley, 36,523 flax and 945,874 rye, were shipped through the canals, 10,816,772 bush. to Canadian ports, and 3,467,948 to U.S. ports. Canadian bottoms transported 12,977,978 bush. and U.S. bottoms 1,306,742.

Welland.—Traffic for July was 125,897 tons greater than for July, 1922. The principal increases were in grains, coal and sand.

St. Lawrence.—740,963 tons of freight were carried in July, against 638,844 in July, 1922. Rye, pulpwood and coal

showed the chief increases, while corn and petroleum registered decreased traffic.

All Canada.—The aggregate freight traffic on Canadian canals from the opening of navigation to July 31, 1923, was 4,677,050 tons, an increase of 446,441 tons over the same period of 1922.

Navigation Aids on Great Lakes and St. Lawrence River.

All Canadian lights and fog alarms on Lake Superior will be kept in operation until the close of navigation, on Dec. 14 at 6 p.m., when the Sault Ste. Marie canals will be closed for the season, with the exception of Caribou Island, which will be closed Dec. 5; Otter Head, Daviaux, Quebec Harbor, and Michipicoten Island, east end, which will be closed Dec. 10, and Ile Parisienne, which will be closed Dec. 12. All Canadian lights and fog alarms on Lake Huron, Georgian Bay, Lakes St. Clair, Erie and Ontario, and connecting waters, will be maintained in operation until the close of navigation, except the southeast shoal light-ship, Lake Erie, which may be moved after Dec. 1, and also Lonely Island light, Georgian Bay, which may be closed before the general close of navigation. All Canadian lights on the St. Lawrence River will be in operation until the close of navigation. All gas buoys and other floating aids to navigation will be kept in position as long as ice conditions will permit, and in cases where it is necessary to remove gas buoys before the close of navigation, the more important points will be marked by spars.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Crude Oil Engine Co. of Canada, Montreal, has been appointed Canadian and Newfoundland distributor for British Kromhout oil engines for marine and industrial purposes, and is represented at Vancouver by J. Lockhart.

Hydro Salvage Syndicate, Niagara Falls, Ont., which is operated by Canadian Equipment Co. and F. H. Hopkins and Co., Montreal, has issued in book form a sales inventory of the construction equipment accessories and supplies released by the Hydro Electric Power Commission of Ontario from the Queenston-Chippawa development, and which the Syndicate still has for sale.

Transportation Meetings, Etc., in 1923 and 1924.

The names of persons given below are those of the Secretaries, unless stated otherwise:—

Oct. 8 to 12.—American Electric Railway Association, Atlantic City, N.J. J. W. Welsh, 8 West 40th Street, New York, N.Y.

Oct. 9, 10.—Canadian Tickets Agents' Association, Montreal. E. de la Hooke, London, Ont.

Oct. 16 to 18.—American Railway Bridge and Building Association, Seattle, Wash. C. A. Lichty, Chicago & Northwestern Ry., 319 North Waller Avenue, Chicago, Ill.

Oct. 17 to 20.—American Society of Civil En-

gineers, Richmond, Va. J. H. Dunlap, 33 West 39th Street, New York.

Nov. 6 to 9.—Association of Railway Electrical Engineers, Chicago, Ill. J. A. Andreuccetti, Chicago and Northwestern Ry., Chicago, Ill.

Dec. 4.—National Association of Railway and Utilities Commissioners, Miami, Florida. J. B. Walker, 49 Lafayette St., New York, N.Y.

Dec. 10 to 12.—American Association of Port Authorities, New Orleans, La. T. S. McChesney, New Orleans.

Jan. 15 to 17, 1924.—American Wood Preservers Association, Kansas City, Mo. P. R. Hicks, 1146 Otis Building, Chicago, Ill.

Jan. 17, 18.—National Association of Railway Tie Producers, Kansas City, Mo. J. T. Penny, T. J. Moss Tie Co., St. Louis, Mo.

March 11 to 13.—American Railway Association, Division IV, Engineering, Chicago, Ill. E. H. Fritch, 431 South Dearborn St., Chicago.

March 13, 14.—American Railway Association, Division IV, Signal Section, Chicago, Ill. H. S. Balliet, 30 Desey St., New York, N.Y.

April.—American Railway Association, Division VII, Freight Claims, New Orleans, La. L. Pilcher, 431 South Dearborn St., Chicago.

May.—Association of Railway Claim Agents, West Baden, Ind. H. D. Morris, Northern Pacific Ry., St. Paul, Minn.

May 14 to 16.—American Railway Development Association, Savannah, Ga. W. H. Hill, Agriculture Agent, New York Central Rd., Chicago, Ill.

May 20 to 23.—Master Boiler Makers' Association, Chicago, Ill. H. D. Vought, 26 Cortland St., New York, N.Y.

June 3.—American Association of General Baggage Agents, Montreal. E. L. Duncan, 332 South Michigan Ave., Chicago, Ill.

June 18 to 20.—American Association of Railroad Superintendents, Buffalo, N.Y. J. Rothschild, 400 Union Station, St. Louis, Mo.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries, unless otherwise stated:—

American Association of Port Authorities.—T. S. McChesney, New Orleans Port Commission, New Orleans, La.

Bureau of Explosives.—A. H. McMullen, Inspector, lines east of Port Arthur, 354 New Union Station, Toronto.—D. W. McNabb, Inspector, lines west of Port Arthur, C.P.R. station, Winnipeg.

Canadian Car Demurrage Bureau, Eastern Lines.—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal. Western Lines.—F. W. Thompson, Chairman, 805 Boyd Bldg., Winnipeg.

Canadian Electric Railway Association.—D. N. Gill, 248 Albert St., Ottawa, Ont.

Canadian Freight Association.—Eastern Lines, G. C. Ransom, Chairman, 909 Shaughnessy Building, Montreal.—Western Lines, F. W. Thompson, Chairman, 805 Boyd Bldg., Winnipeg.

Canadian Industrial Traffic League.—H. W. Blahout, 950 Woodbine Ave., Toronto.

Canadian Passenger Association.—Eastern Lines, G. H. Webster, 54 Beaver Hall Hill, Montreal.—Western Lines, E. J. Stone, 306 Union Station, Winnipeg.

Canadian Railway Board of Adjustment No. 1.—R. Chapple, 263 St. James Street, Montreal.

Canadian Railway Club.—W. A. Booth, 53 Rushbrooke St., Montreal. Meetings at Montreal 2nd Tuesday, each month, except June, July and August, at 8.30 p.m.

Canadian Ticket Agents' Association.—E. de la Hooke, London, Ont.

Dominion Marine Association.—F. King, K.C., Counsel, Kingston, Ont.

Engineers' Club of Montreal.—C. M. Strange, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto.—R. B. Wolsey, 84 King Street West, Toronto.

Engineering Institute of Canada.—F. S. Keith, 176 Mansfield Street, Montreal.

Express Traffic Association of Canada.—C. N. Ham, 137 McGill Street, Montreal.

Great Lakes and St. Lawrence River Rate Committee.—A. E. Storey, 310 Canadian National Rys. General Office, Montreal.

Hydro Electric Railway Association of Ontario.—T. J. Hannigan, Guelph, Ont.

Niagara Frontier Summer Rate Committee.—James Morrison, Canadian National Rys., Montreal.

Quebec Transportation Club.—A. F. Dion, 131 Dalhousie Street, Quebec, Que.

Railway Association of Canada.—C. P. Riddell, General Secretary, 263 St. James Street, Montreal.

Western Operating Committee, E. J. Stone, 806 Union Station, Winnipeg.

Shipping Federation of Canada.—Thomas Robb, Manager, 42 St. Sacramento Street, Montreal.

Transportation Club of Toronto.—W. J. Hotrum, 595 Runnymede Road, Toronto.

Transportation Club of Vancouver.—C. A. Dorfner, 450 Hastings Street West, Vancouver, B.C.

Winnipeg Traffic Club.—A. J. Barber, 114 Cado-min Bldg., Winnipeg, Man.

Montreal Tramways Company.

Report of President and Directors for the year ending June 30th, 1923.

To the Shareholders:—Your Directors beg to submit their twelfth Annual Report, accompanied by the Financial Statement, which shows the following results:—

REVENUE:	
Allowance from Contract.....	\$2,392,986.22
Other Revenue	37,238.90
Gross Revenue.....	\$2,430,225.12
EXPENSES:	
Interest on Bonds and Loans.....	\$ 990,855.80
Interest on Debentures.....	874,352.74
Other Expenses	16,982.96
Total Expenses	\$1,882,191.50
Net Income	\$ 548,033.62
Less Dividends for the current year:—	
2½% for the quarter ending Sept. 30, 1922	\$ 99,947.50
2½% " " " " Dec. 31, 1922	100,000.00
2½% " " " " Mar. 31, 1923	100,000.00
2½% " " " " June 30, 1923	100,000.00
Total	\$ 399,947.50
Surplus for the year.....	\$ 148,086.12
Add Surplus at June 30th, 1922.....	844,893.09
Total	\$ 992,979.21
From which has been appropriated:	
For Reserve Account.....	\$ 400,000.00
General Surplus.....	\$ 592,979.21

The Revenue of the Company for the year amounted to \$2,430,225.12, from which deducting the sum of \$1,882,191.50 for interest on Bonds, Loans, Debenture Stock and other Expenses, leaves a balance of \$548,033.62, from which there has been declared four quarterly dividends of 2½% each amounting to \$399,947.50, leaving a balance carried to the credit of the General Surplus Account of \$148,086.12, which added to the amount of \$844,893.09 at the credit of this account last year makes a total of \$992,979.21, from which there has been appropriated and placed to the credit of the Reserve Account the sum of \$400,000.00, leaving a balance in the General Surplus Account of \$592,979.21.

FINANCIAL

REDEMPTION OF UNDERLYING BONDS.—During the year the Company deposited with the Bank of Montreal the necessary funds to redeem the balance outstanding of the issue of One Hundred and Forty Thousand Pounds sterling (£140,000) 4½% Underlying Bonds, maturing on the 1st August 1922, of which there were then outstanding One Hundred and Twenty Thousand Pounds sterling (£120,000) or Five Hundred and Eighty-Four Thousand Dollars (\$584,000.00). This payment, together with the payments made last year, takes care of the whole of the Company's Underlying Bonds.

ISSUE OF BONDS.—During the year the Company, in conformity with the terms and conditions of the Trust Indenture covering its 5% Thirty Year Gold Bonds, issued and had certified by the Trustees, Three Million One Hundred and Sixty-One Thousand Dollars (\$3,161,000.00) par value of its 5% Thirty Year Gold Bonds, the same being issued to replace a like amount of the 4½% Underlying Bonds redeemed and cancelled. The balance of the 4½% Underlying Bonds amounting to One Hundred and Twelve Thousand Dollars (\$112,000.00) will be exchanged in like manner when they are all presented.

General Balance Sheet

ASSETS	
Cost of Road and Equipment.....	\$43,549,752.27
First and Refunding Mortgage 5% Gold Bonds certified and unsold.....	3,161,000.00
Guarantee Fund.....	400,000.00
Investments	74,433.75
Accounts Receivable.....	\$ 692,008.05
Stores	451,283.00
Cash	440,538.94
	1,583,829.99

N.B.—The contract provides that the City shall receive out of Gross Revenues a sum of \$500,000.00 per annum and that there shall be paid annually into a Contingent Reserve Fund 1% of the Gross Revenues until such Fund shall amount to \$500,000.00. There has accrued to the above accounts since the commencement of the Contract to June 30th, 1923:—

For the City of Montreal.....	\$2,692,694.05
For the Contingent Reserve Fund	500,000.00
	\$3,192,694.05
Less earned to date.....	1,760,360.87

\$1,432,333.18

which amount or any portion thereof will only be payable when sufficient revenues are received from the operations of the Contract over all prior charges under the Contract.

\$48,769,016.01

The Three Million One Hundred and Sixty-One Thousand Dollars (\$3,161,000.00) par value of 5% Bonds above referred to are available to provide funds for the Company's operations when and as required.

ISSUE OF DEBENTURE STOCK.—Under the authority of a Resolution of the Shareholders of the Company, adopted on the 30th September, 1911, your Directors authorized an issue of \$4,000,000.00 of the 5% Debenture Stock of the Company to be disposed of from time to time as required. During the year the amount of \$500,000.00 was disposed of, which, together with the issues of \$150,000.00 sold in the year 1921 and \$1,000,000.00 sold in the year 1919, leaves a balance of \$2,350,000.00 to be sold as required.

GUARANTEE FUND.—Under the terms of the Contract, the Company has to provide from its own funds a Guarantee Fund amounting to \$500,000.00 in amounts of not less than \$100,000.00 per year. Your Directors beg to report that the sum of \$100,000.00 has been paid into the Guarantee Fund since the close of the Company's fiscal year, making \$500,000.00 now in said Fund, which completes same, according to the terms of the Contract.

DIVIDENDS.—During the year the Company paid its usual quarterly dividends on its Common Stock, at the rate of 2½% per quarter.

OPERATIONS UNDER CONTRACT.—Your Directors are pleased to report a continued improvement in the affairs of the Company. The Gross Revenues under the Contract have again been sufficient to meet the requirements of the said Contract and to provide a Surplus of \$347,553.75 compared with a surplus of \$187,947.51 last year, as shown by the statement of Operations under the Contract. This Surplus has been applied to the reduction of the shortage accrued in previous years which amounted to \$1,779,886.93, leaving an accrued shortage amounting to \$1,432,333.18 at the close of this year, consisting of accruals for City Rental and the Contingent Reserve Fund as provided under the terms of the Contract, which amounts are payable only when the revenue received by the Company is sufficient to pay these charges after payment of all prior charges.

GENERAL.—Your Directors desire to report that it was decided during the year to install a second 12,500 K.W. Steam Turbine Unit with necessary auxiliaries, also two new Boilers with Stokers and necessary auxiliaries at the Hochelaga Power House, and work has been commenced on same since the close of the year.

The Company, during the course of the year, commenced the construction of two additional stories to its Office Building, the work on which is practically completed, and also purchased the property on the north-east corner of Notre Dame Street West and Cote St. Paul Road, to be used for the future requirements of the Company.

In conclusion your Directors desire to place on record their appreciation of the valuable and faithful services rendered by the Officers and employees of the Company.

Respectfully submitted on behalf of the Directors,
E. A. ROBERT, President.

Increased Capacity Without Added Weight

—the Heart of the Locomotive

WHILE every railroad executive desires more power in his locomotives, he keeps his eye carefully on weight.

But weight can be quickly dismissed in considering Nicholson Thermic Syphons.

Syphons are equivalent to a large increase in the firebox heating surface, while negligible from the weight standpoint.

Syphons are so placed in the hottest part of the firebox and so designed to stimulate boiler circulation that they mean 10 to 20% more steaming power.

Here is increased capacity that is available in no other way and can be had at the next shopping period.

The Power of Advertising

It is often difficult for an advertiser to realize what he is actually paying for, because he cannot project his imagination into the thousands of homes and offices and see his advertisement doing its work. The advertiser does not pay for ink and paper. These are merely mechanical essentials. He pays for the effect upon people's minds, and that is as intangible as air, but as permanent as a towering structure of steel and concrete.

Sylvester Manufacturing

Company Limited
LINDSAY - ONTARIO

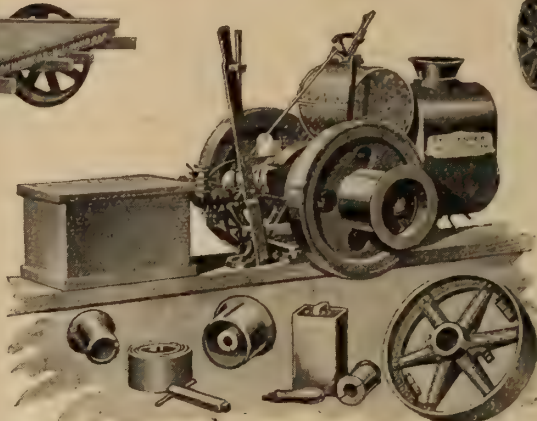

No. 1 Sylvester Standard Section Hand Car, fitted with Hyatt roller bearings or plain bearings and 20 in. pressed steel wheels.

No. 3 Sylvester Motor Car fitted with engine and Angle Iron Seats. This makes a complete outfit for Section Foremen, B&B Supervisors and for heavy duty. This car is very strongly braced and trussed and will handle heavy loads.

No. 4 Sylvester Standard Section Push Car. Fitted with extra large platform.

Change your hand car into a motor car by the use of a Sylvester Engine. Built in 4, 4 3/4 and 6 H.P. size. Sold on Easy Payment Plan. Write for prices and catalog today.

No. 7 Light Motor Car fitted with 4 H.P. Engine and seat. Weight 490 lbs. This is a new principle in motor car value and construction.

"GOLDEN GLOW" Headlights make night like day on the right - of - way

On both steam and electric railways Keystone "Golden Glow" Headlights are giving a service decidedly superior in that—

The Keystone Reflector is of glass, accurately ground to a true parabola, silvered on the back like the finest French mirror, and adequately protected from moisture, gases and temperature. Its beam is permanently of maximum intensity, highly concentrated and free from dark spots.

The peculiar greenish-yellow glass of the reflector throws a beam of soft, golden light, free from dazzle and glare, wonderfully easy on the eyes, and more revealing than white light. This "Golden Glow" has remarkable penetration in fog, dust and smoke.

Focusing can be done with one hand with the Keystone Type C Focusing Device, which provides quick, accurate adjustment of the light centre, and "stays put."

Upkeep of Keystone Headlights is almost negligible. The reflector never needs polishing—only an occasional wipe. It is so thoroughly annealed and carefully mounted that breakage is very rare.

We are always ready to prove by actual demonstration that Keystone Golden Glow Headlights ARE superior in all-round efficiency.

**"Golden Glow" Headlight
Type T, Portable**

For Double End Electric Railway Cars, or for easy removal during daytime. Made with 9" and 12" Reflectors.

**"Golden Glow" Locomotive Headlight
Type EF-1412, 14" Reflector**

Made in Armco Iron or Copper Body. Doors and Fittings Cast Iron. Forged Steel Feet.

RAILWAY TRACK MATERIAL

**Angle Bars
Tie Plates
Spikes
Bolts
Nuts**

THE
STEEL
COMPANY
OF
CANADA
LIMITED

HAMILTON MONTREAL

Track supports for the new Union Station in Chicago are of concrete. This picture shows one of the tracks laid on short concrete cross ties mounted on a ten-foot wide concrete base.

25 Acres of Concrete in Chicago Union Station

Practically all tracks in the new Union Station in Chicago, for the joint use of four large railroads will be placed on concrete slabs.

In the train shed proper the rails will rest on short ties embedded in concrete roadbed, that in turn rests on a concrete slab 10 inches thick and 14 feet wide. All approach tracks, with the exception of one section 800 feet long, laid three years ago, will be laid in ballast on top of a 10-inch concrete slab. The total area of concrete slab track support will be slightly over 25 acres.

On many of the Chicago Union Station tracks, a concrete base is used and the track laid and ballasted on it in the usual manner.

Four Chicago Railways Invest In Permanence And Safety

PROBABLY no other railway tracks in the world will be subject to more severe wear than those now being completed at the new Union Station at Chicago. For that reason practically all tracks will be laid on concrete slabs.

The officials of these railways found such a striking reduction in maintenance costs effected by a section of concrete track support laid in 1920, they did not hesitate to adopt concrete construction for this subsequent work.

The use of concrete for railroad construction has long since passed the experimental stage. Each year sees a decided increase in its use for this type of construction where permanence and lower maintenance cost is the paramount consideration.

Railroad officials have come to realize that the same qualities that have won for concrete nation-wide recognition as the ideal paving material to insure Highways of Permanence are the qualities necessary to insure for railroad construction low maintenance cost, permanence and safety.

Personnel Organization—
Industrial Management—

THE success of the International Correspondence Schools in Business Training, as well as in technical subjects, has been due not only to the personal, problem-solving method of instruction of which they were the originators, but also to the high business and professional character of the men behind the courses.

Among the more than 300 men who have contributed their experience and advice to the preparation of I. C. S. courses are:—

J. LEE NICHOLSON, First President of the National Association of Cost Accountants; EDGAR P. TRASK, Assistant Naval Architect, The William Cramp & Son Shipbuilding Co.; CHARLES J. NASMYTH, F.A.A., C.P.A.; Dr. OWEN L. SHINN, Professor of Chemistry, University of Pennsylvania; STANLEY RHOADES, Telephone and Telegraph Engineer, New York Central Railroad; J. H. KING, Research Engineer, Babcock & Wilcox Company, New York; BRADLEY STOUGHTON, Mining Engineer and formerly Secretary of the American Institute of Mining Engineers; S. G. WHITEHEAD, Special Traffic Agent of the American Express Company; A. HAMILTON CHURCH, the well-known industrial engineer; EDWARD P. MOXEY, Jr., A.M., C.P.A., Professor of Accounting at the University of Pennsylvania, and Dr. CLARENCE STRATTON, Director of English in the Cleveland Public Schools.

Whatever the course, if it is an I. C. S. course, you can be sure it represents the best thought of men who are leaders in that particular field, and is drawn from their practical experience.

Why not at least find out what the I. C. S. can do for you? It takes but a moment to mark the work of your choice, tear out and mail the coupon printed below. There's no obligation and not a penny of cost, yet that one single act may be the means of changing your whole life. To-day—not "To-morrow"—is the day to take your first definite step towards Success.

Come to the Big Game Country Canada

The Big Game Hunter's Paradise

PACK up your rifle and kit and come to the place where real sportsmen test their skill. Here there's game fit for the steel of men who feel the "kick" of hunting the Grizzly, outwitting the crafty Mountain Sheep and Goat and bringing in the prize Moose or Deer. Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Alberta, British Columbia are each the haunt of big game, easily reached by Canadian National Railways.

"Where to Hunt, Fish and Paddle in the New North" will give you helpful details in planning your trip this year. For this and information as to fares, open seasons, etc., enquire of nearest Agent, or write C. K. Howard, General Tourist Agent, Montreal, P.Q.

Canada Welcomes United States Tourists. No Passports Required.

The Cost of Installing and Maintaining

your electric transmission lines might be materially reduced if you were to investigate the advantages of laying such lines directly in a trench in the ground.

STANDARD Steel-Tape-Armored Cables

may solve this problem for you. STANDARD Steel-Tape-Armored Cables have in many cases shown a 50 per cent. saving in installation cost over single runs of lead-covered cables laid in conduits.

Write our nearest office for Bulletin 680.

Dake Snub Line Winch for Canal Steamers

To handle the heavy wire snub line. Takes up very little deck space and drum holds 120 ft. 1 1/4 in. wire. For a safety and labor-saving device it has no equal. A money-saver for the vessel owner and a godsend for the master in canalling his vessel through the St. Lawrence and Welland Canals. Send for special booklet and price. We also make a full line of Marine Machinery. Complete Catalogue of Dake Machinery on request.

Service shows the most successful car roof to be the

All Steel Dry Lading Roof

which made possible the following specifications:

No. 1. That should be weather-proof under all conditions, also rust-proof, fire-proof and burglar-proof.

No. 2. That should not require maintenance for at least ten years.

No. 3. That should be of low deadweight and give the car a low center of gravity.

No. 4. That should lessen strain on the superstructure of the car when the car is in motion.

No. 5. That should strengthen, rather than detract, from the strength of the car frame.

No. 6. That should give the greatest interior capacity and the lowest clearance limits.

No. 7. That should be flexible enough to conform to every service condition of the car.

No. 8. That should be possible to use again on the same or another car, even in case of partial or total destruction of the rest of the car by fire or wreck.

No. 9. That should not require roofing boards.

No. 10. That should be of low first cost.

No. 11. That should permit of inspection on the part of any shipper by merely closing the doors of the car and if no rays of light are seen through the roof, the shipper to consider it a weather-tight roof.

No. 12. That should be so constructed that the carlines, purlines and ridge, tie the sides and ends of the car together firmly, so that the weather-proof roof has only the one duty of protecting the contents of the car from the elements.

Heavy Duty Plain Radial Drill

*is strong
where most
Radial Drills
are weak*

Because—

This Drill is regularly built with single pulley belt drive and all thirty-six spindle speeds and feed changes are made on the carriage within the reach of the operator. Therefore, the speed of the drive through the frictions is always constant, delivering just as much power to the spindle on the low speeds as on the higher, an unusual but very valuable feature on a Radial Drill.

This is just one of its good points. Our illustrated bulletin tells about the rest.

"I give it up!"

WHAT CANADIAN RAILWAYS BUY

An industrious man of an enquiring mind once set himself to the task of making a tabulated list of the different things that a Canadian steam railway purchasing agent has to buy.

When he got to the sixty thousandth item he gave it up, feeling that he had made only a beginning!

Just a glance down the list of groups of things the R. P. A. has to buy and let your imagination conjure up, if it can, some few things that he does not have to buy!

Question: What is the right way to sell to a Canadian railway?

Answer: Give information, information and yet more information.

Question: Yes, but to whom?

Answer: To everybody, from the section foreman up to the President.

Question: How?

Answer: By descriptive, information-giving advertising, carried on unceasingly, in

Canadian Railway and Marine World

Tell only one story at a time, for two reasons:

First, because the human mind, however highly trained, finds it difficult to grasp and hold more than one concept at a time.

Second, so that your ads may be clipped by officials interested and filed or pasted in books under their proper classifications.

But, by all means, tell the truth; tell it simply, without abusing your competitors, and keep on telling your business stories, one by one, knowing that the men you are most eager to reach are the very men who will be most eager to read and preserve every item that will make them better posted men in this field of work.

Perfection Signal Oil

**The safe and serviceable oil
for use in hand lanterns**

Perfection Signal Oil has such a long-established reputation for safety and good service that it is the accepted standard for motion signalling on all representative railroads.

Manufactured from highest grade materials, it produces a clear, long-burning service flame that will withstand the most severe weather conditions and the varied positions peculiar to the signal code, without being extinguished. No smoking or charring of wicks.

Prepare for the long winter nights by ordering your supply now and insure prompt delivery.

*Perfection Signal Oil is manufactured
and marketed only by this company*

What C-G-E Arc Suppressor Plates Do

C-G-E Arc Suppressor Plates are installed opposite the fingers where there is the most arcing. They narrow the arc passages, which increase the resistance of the arc and the cooling effect of the plates.

NOTE the difference in time required to disrupt the arc in a K-35 controller as shown by actual test. This difference means there's considerably less burning of controller fingers, segments, and arcing plates when the equipment is protected with C-G-E Arc Suppressors.

Consider the value of these auxiliary plates in reducing maintenance costs. They reduce carbonization and eliminate much of the trouble from pitting of contacts. Modern controllers are equipped with them to give better, longer service.

Arc Suppressor Plates can be used to advantage in any C-G-E- controller having individual finger blow-outs. Installation requires only a few minutes. They are inexpensive. Try them.

*On duPONT SIMPLEX STOKER—
fired engines, stack loss is
reduced to a minimum.*

KILL
LAST AD.

BURN YOUR COAL DON'T USE IT FOR BALLAST

CINDERS scattered over the right of way indicate the enormous coal loss due to finer particles of coal leaving the stack unburned.

Fires also are costly.

With the duPONT SIMPLEX STOKER the spark loss is less than with hand firing.

The coal is introduced just above the

firebed and well below the Arch where the draft is lowest.

Then downwardly acting steam jets direct the fuel towards the firebed.

Regardless of the kind of coal fired, the duPONT SIMPLEX STOKER insures maximum locomotive capacity and minimum fuel loss.

Scientific Treatment of Boiler Feed Water

Dearborn

On the Use of Water Softeners

When exceptionally bad waters of certain types are encountered, where analysis shows that treating plants would be the most effective method of handling, Dearborn recommends accordingly.

But if a road has failed to get results by adding various chemicals to the water supplies, without scientific analysis and understanding such as Dearborn provides, it does not follow that a treating plant is needed.

Don't Make This Mistake

There are many districts on which water softeners have been built in the belief that they would eliminate water troubles. In actual operation these plants are only partially effective, but representing an investment of thousands of dollars, they are kept in use, although inadequate, and the equipment and operating cost suffer accordingly.

We Will Investigate For You

We will make a survey of your water conditions, including complete mineral analysis, and submit recommendations looking to the greatest possible benefits for you. If we recommend Dearborn Treatment, we guarantee results. Dearborn Treatment costs less than the chemicals required in a treating plant, and calls for no investment in plant or equipment. There is no expense other than the cost of the treatment.

Roads using Dearborn Treatment have at their command at all times the services of the Dearborn Laboratory and expert engineers.

Operating executives who let Dearborn work with them never have to defend a bad purchase or an ineffective remedy.

Our Standing Offer

Let us make our laboratory analysis of your water supplies. Let us place our recommendations before you. Consider our methods, our laboratory control. Compare the expense and THEN decide. Write us direct, sending water samples.

NOTE: Dearborn Treatment is being used in a number of cases in conjunction with water softeners to give them increased effectiveness

The NEWS and NOTHING but the NEWS

A B P STANDARD No. 4

"To refuse to publish 'puffs,' free reading notices or paid 'write-ups'; to keep his reading columns independent of advertising considerations, and to measure all news by this standard: 'Is it REAL NEWS?'"

RATHER sweep-
ing in its pro-
visions but neces-

sary if our papers are to hew to the line marked out by Standard No. 1 of our decalogue, which provides that a member of the A B P must "Consider FIRST the interests of the subscriber."

This does not mean that a publisher may not print news about manufacturers and their products, and mention both by name. The makers and vendors of raw and finished products in this field are a part of the industry, a vital part; you are

entitled to all the information about them and their

goods which will aid you forming intelligent decisions.

It is the business of your business paper to bring you this news, but to present it **wholly** from the standpoint of its NEWS value to you. It is the avowed purpose of every A B P paper to keep its news columns free and clear of the least taint of advertising considerations.

The interests of the subscribers must be paramount.

WHAT IS THE A B P, ANYWAY?

It is a voluntary organization of independent trade, technical and class publications, in Canada and the United States, banded together to promote the highest possible publishing standards. Membership is contingent upon the acceptance and maintenance of its standards.

Electrification—

The Contact System The Transmission Line The Rail Bonds

The broad opportunity offered in the development of the Contact System (overhead or third rail), of the Transmission Line—in the application of Rail Bonds—in connection with Electrification, should be approached with full appreciation of possible extremes in these phases of the work.

Adaptation of proven electrification materials to contemplated work—and

inventive ability applied to special problems—are part of our service to electrifying roads.

Specialists trained in all phases of the Transmission, Distribution and Collection of power from generator to motor, are at your service. Projects already in operation have profited from this service. Experience and knowledge gained through this actual contact is yours.

RAIL FIRMLY**

"Surest and best rear end train protection ever offered"

(Endorsement of Railway Official)

OFFICIAL TEST

As reported to the Board of Railway Commission for Canada, by Chief Inspector of the Explosive Division, Department of Mines, Dominion of Canada:—

The Detonation was found to be reliable under trials, the conditions of which were more severe than those likely to be encountered in actual service.

The volume of sound is well above the average, sharp and arresting, accompanied by a brighter flash than given by any other torpedo tested, and plainly seen from the cab of the locomotive.

The detonation was not affected after the signals had been subjected to special treatment, for exposure to rain, snow, steam, saturated atmosphere and rough usage. No "dangerous" debris was projected at the trials, and the results were superior to those obtained with any other torpedo tested.

The brass wire swivel spring is of a form which renders the operation of attaching the signal to the rail simple and quick and cannot be knocked off by the wheel of the locomotive.

After tests under service conditions on the Canadian Pacific Railway, from the Atlantic to the Pacific, practical railroaders affirm that no engineman can possibly run over one of these signals and fail to recognize that a signal is intended. This opinion from men who are familiar with the use of track signals fully endorses all that has been said in favor of the "METEOR."

The "METEOR" differs from all other torpedoes. It appeals to three senses—Hearing, Seeing and Smelling—and thereby makes assurance trebly sure.

The "METEOR" has been adopted as "Standard" on the Canadian Pacific Railway over the entire 18,000-mile system, also by the Grand Trunk Railway and other Canadian Railways.

More Light— Better Business For the Publisher

THE more light the publisher gives the advertiser on his publication—the greater consideration he receives when it comes to placing advertising.

The facts embodied in an A.B.C. report are those which the advertiser wants to know—facts that he *must* know to buy space intelligently. He cannot afford the time or expense necessary to collect them either by correspondence with the publisher or by financing his own investigation.

Therefore, the uniform, easily-accessible A.B.C. form, packed with complete dependable facts, is a ready solution to the problem of how to locate the most desirable mediums with the minimum of effort and expense.

The long-established commercial rating agencies have furnished financial information for years. Banks are audited periodically. The Audit Bureau of Circulations performs a similar function by collecting and verifying circulation information for the advertiser.

Publishers subscribing to the A.B.C. standards are helping to stabilize and organize advertising in the way that, by long experience in other commercial lines, has proved to be Good Business.

The Canadian Railway and Marine World is a member of the A.B.C. and would be pleased to submit a copy of the latest circulation report

CLEARING THE ROAD

FIFTEEN miles per hour within the first train length is the acceleration attained by one road with Booster-equipped Mikados hauling 7,000 tons.

Consider the effect of this acceleration in keeping terminals free from the obstruction of slow-starting freights.

Consider the effect of this faster operation in keeping the long grades clear.

Consider the effect on schedules if this accelerating power is applied to passenger trains to compensate for station work. It will eliminate the danger of excessive speed to regain lost time.

Then you will appreciate why a thousand Boosters have been bought by railroads keen for improvements in operation and a better general average at the end of their year.

Apply Thermic Syphons at the Next Shopping

Hauling capacity is often handicapped by lack of steam.

But how can steam-making ability be increased?

If the grates are being forced to their limit, only one thing remains—to quicken the circulation of water and thereby stimulate heat transfer.

This is the function of the Nicholson Thermic Syphon.

It not only speeds circulation but also adds firebox surface where it does the most good.

Apply Syphons to any engine and 10 to 20% greater steaming power results.

Here is the possibility of a large increase in earning power from every locomotive. Start it working at the next shopping period.

Sold in eighteen different sets, in sizes to cut from 1/4 in. to 1 in. thread, and furnished to conform to U.S., S.A.E., and Whitworth thread standards.

PRATT & WHITNEY Screw Plate Sets

These reasonably-priced sets of standard P & W taps and dies, consist of our regular product made up in various combinations to meet the requirements of the small shop, garage, service station and general tool-room.

They are unequalled for fast, accurate threading of all metals and will be found invaluable whether used occasionally or for every-day work.

The taps and dies that go into P & W Screw Plate Sets are of a high quality unusual in such general purpose outfits.

The taps are all made with the famous "con-eccentric" land—an exclusive Pratt & Whitney feature—that permits their re-sharpening on the face of the cutting edge without change in size.

Canadian Railway and Marine World

November, 1923.

Pacific Type Locomotives, Canadian Pacific Railway.

For some years prior to 1919, the C.P.R. had two classes of Pacific type passenger locomotives in service, the designs being very similar except in driving wheel diameter. On one class these wheels were 75 in. in diameter, and on the other 70 in., the tractive power developed by the former being 32,200 lb. and by the latter 34,500 lb. With the increase in passenger train car weights, and in the number of cars per train, locomotives of greater tractive power became necessary, and, as a result, after extended study of all requirements and conditions, which included operation under severe weather conditions, and the limiting factors of bridge and right of way restrictions, the G-3 and G-4 Pacific type locomotives were introduced in 1919, they also having 75 and 70 in. driving wheels, respectively, but both having tractive power greatly in excess of that of the former Pacific type. The G-3 type locomotives had 25 x 30 in. cylinders,

particularly during winter, the desirability of adequate locomotive boiler capacity in relation to cylinder requirements cannot fail to be evident. Where fast schedules have to be adhered to with heavy trains, reserve boiler capacity is always of advantage, but with the temperature at zero or below, the coal often containing a percentage of snow, and being frozen together, the steam heat line supplying a dozen or more passenger cars making big demands on the boiler, the air compressor requiring more steam on account of greater train line leakage, and with train resistance materially increased, necessity arises for greater cut-off and more throttle opening than would ordinarily be required, and it is then that large boiler capacity demonstrates its true value. That the C.P.R. fully recognizes this is shown by the fact that its latest Pacific type locomotives have boilers of more than 100% capacity (the figure being 101.8%, Cole's ratio) in

tube sheets are 18½ ft. apart, the front and back sheets being of ⅝ and ½ in. plate, respectively, and the combustion chamber is approximately 26 in. deep. The entire boiler exhibits an application of study in its design which has been successful in producing a steam generating unit which is not only highly efficient, but which experience with the locomotives built in 1919 demonstrates is low in maintenance cost.

The firebox door ring, flanged to large radius, projects through the flange opening in the back head, and is riveted thereto, this type of construction closely adhering to previously used standards on the C.P.R., it being the experience that with this design expansion and contraction produce the minimum of deterioration in the sheets. The fire door is the Franklin no. 8, air operated, the locomotives being hand fired. The brick arch with which the fire box is equipped is carried on 5 arch tubes of 3 in. out-

Pacific Type Locomotive, Canadian Pacific Railway.

and tractive power of 42,600 lb., and the G-4 locomotives, with 24½ x 30 in. cylinders, had tractive power of 43,700 lb. Ten G-3 and 18 G-4 locomotives were built at the C.P.R. Angus shops, Montreal, from 1919 to 1921, the G-3 being numbered in the 2300 series, and the G-4 in the 2700 series. After both classes had been tested thoroughly in operation, under all conditions and on many divisions, the G-3, with 75 in. driving wheels, were decided on as the C.P.R. standard for Pacific type passenger power.

As stated in Canadian Railway and Marine World for February, the C.P.R. ordered 16 Pacific type locomotives from Montreal Locomotive Works, the chief dimensions of which were given in our March issue. These locomotives are of the G-3c class, and in the main the specifications are the same as those of the G-3 built in 1919 at Angus, the chief differences between the two lots being in details of tank construction, design of tank holding-down brackets, commonwealth cast steel cradle, and in some minor engine details. The latest locomotives have a total weight of engine and tender of 489,000 lb., weight of total engine 300,500 lb., weight on drivers 181,500 lb., tractive power 42,600 lb., driving wheels 75 in. diam., cylinders 25 x 30 in., and factor of adhesion 4.26.

To anyone familiar with operating conditions on Canadian railways, par-

relation to cylinder requirements. The result of this relationship is that these locomotives are exceptionally free steamers, and there is no doubt that their steam making ability under adverse conditions will add greatly to the efficiency, not only of passenger train operation itself, but of operation on a complete division, by reason of trains of inferior class or right having their movements governed in such a great degree by passenger train schedules.

The boiler is of the extension waggon bottom type, with radial stayed firebox, and combustion chamber, and conforms closely to a design which has been standardized by the C.P.R. for locomotives equipped with trailing truck. With the dome located on the second course, not only has it been possible to simplify seam construction, but a shorter dry pipe has been made practicable, and increased steam storage space provided. The boiler is built in 3 courses, the back one being of ⅞ in. plate and 88 in. outside diameter, the taper one of ¾ in. plate and the front one of 11/16 in. plate and 79½ in. outside diameter. The exact location of the dome—one piece type and 33 in. inside diam.—on the second course is shown in the accompanying illustration of the right hand side of the locomotive. The boiler barrel opening is reinforced with a ¾ in. plate, flanged 3¾ in. deep all around. The

side diameter, the depth between arch and grates being such that firemen need not experience any of the difficulty in carrying a proper fire which is sometimes met with, particularly by inexperienced men, in arch-equipped locomotives with shallow fire boxes. The crown sheet, of ⅝ in. material, is continuous, extending to the end of the combustion chamber, and the side sheets, of 5/16 in. material, are welded to the crown sheet. The combustion chamber ring, of ¾ in. plate, is riveted to the back tube sheet, and, at its back edge, to the inside throat sheet, the sides of which are flanged. The wrapper sheet is of 9/16 in. material. The grates are of the butt finger type, and no dump grate is installed. The brackets used for supporting the grates are also used as ash pan supports. The superheater is type A, and there are 38 5½ in. superheater flues. The boiler is fed by two Hancock inspirators, type A, no. 10.

A feature of these locomotives is the rugged strength and solidity which have been built into the cylinder castings and their frame connections. In addition to the cylinders being double bolted through front and back flanges and saddle flanges, each cylinder casting is equipped with a flange at the back, through which pass bolts bolting the casting to a special lug created by a forward extension of the front end of the main frame. By

Elevation and Sections, Pacific Type Locomotive, Canadian Pacific Railway.

this means, great additional rigidity as between frames and cylinder castings is secured. The cylinders themselves are 25 x 30 in., and steam admission and exhaust is controlled by piston valves of 14 in. diameter and 7 in. travel, set so as to have $1\frac{1}{2}$ in. lap, $\frac{1}{4}$ in. lead and $\frac{1}{4}$ in. exhaust clearance, this setting producing exceedingly smart performance. The valves are actuated by Walschaert gear of compact and strong design. The cylinder castings are designed so that the horizontal distance between valve chest center lines is 10 in. greater than that between the center lines of the cylinders. Minimum resistance to steam flow in the casting admission and exhaust passages has been secured by making the passages of ample area and with easy bends. The cylinders are fitted with railway standard cock operating mechanism.

The frames of these locomotives are of vanadium cast steel, and of the single front rail type. They are 5½ in. deep between the pedestals, and 5¾ in. deep, the bottom rail being 4¼ in. deep. The lugs at the frame front ends, for bolting to back flanges on cylinder castings, have been mentioned above. At the back, the frames are designed to accommodate the Commonwealth cast steel cradle casting. The locomotives are equipped with the Vaughan trailing truck, and the cradle casting constitutes the first one-piece cradle to be used with a trailing truck of this type.

The good riding and tracking qualities which these locomotives exhibit are produced, in no inconsiderable degree, by the C.P.R. design of truck used, an illustration of which is given herewith. Its chief members are a center casting, and, bolted to it, 2 side frames of channel section, the journal box pedestals being cast integral with the latter. Each side frame has cast in it a spring seat, providing receptacles for the semi-elliptic springs, the ends of which rest on cast iron spring seats attached to the inner ends of the equalizers. The semi-elliptic springs are composed of 16 plates, 5 x 7/16 in. The equalizers are centered on the journal boxes, and the ends of the equalizers, removed from the semi-elliptic springs, support spring seats on which rest coil springs which transmit thrusts to the side frames. The hub faces of

the leading truck 60,000 lb., and on the trailing truck 59,000 lb. All 3 driving wheels on each side are joined in the same system of equalization with the trailing truck wheel, a long equalizer connecting the spring hanger at the rear of the no. 5 wheel with the spring hanger ahead of the trailing truck wheel. The extreme rear spring hanger, at the rear of the trailing truck wheel, is held in

which, in combination with the sharp slope of the ash pan sheets, and the absence of recesses in the pan to catch and hold ashes, makes fire cleaning easy. The ash pan doors are arranged to swing closed of their own weight, and the pan arrangement is such that the injector overflow may be easily directed into the pan for the summer months if desired.

The C.P.R. standard vestibule cab is

Back Head, Pacific Type Locomotive, Canadian Pacific Railway.

tension by a strong coil spring below the truck frame. The equalization employed produces exceptional riding qualities.

The Vaughan trailing truck which is

used, and the cab interior has been fitted with a view to not only efficient operation, but also to the crew's comfort. The illustration of the back head given herewith shows the way in which side boards

Boiler, Pacific Type Locomotive, Canadian Pacific Railway.

the truck boxes are equipped with double-faced cast brass liners. The leading truck journals are 7 x 13 in., and the wheels, which have cast steel centers, are 31 in. in diameter. The design of the leading truck, including coil and semi-elliptic springs in combination, has given every satisfaction.

The distribution of weight is such that the weight on drivers is 181,500 lb., on

used, has been long associated with C.P.R. motive power equipped with trailing truck wheels. A great advantage gained by the use of this truck, in combination with the Commonwealth cast steel cradle, is the large space provided for ash pan location. This space has been fully taken advantage of in equipping the locomotive with an ash pan of large capacity and good accessibility.

may be affixed for the winter, at the back of the locomotive man's and fireman's seats. Large lockers for the crew's use are also provided. All operating levers controlling the various devices are placed conveniently. The reverse gear is of the C.P.R. standard screw type, which provides for as finely graduated cut-off adjustments in both forward and reverse gear as are found

necessary in operation.

The tender, which weighs 188,500 lb. in working order, has a Commonwealth cast steel frame, and is supported on 4-wheel C.P.R. standard equalizer type trucks, equipped with cast steel bolsters and pedestals. The capacity of the rectangular style tank is 8,000 imperial gallons, and coal capacity 12 tons. The necessity of any mechanical means of passing the coal forward to within reach of the fireman is obviated by the design of the coal space, which is such that all coal gravitates to the shovel plate. The coal slope sheet is set at a 45 degree angle. The tanks of the last 16 of these locomotives have been changed somewhat in design from the ones built at Angus, and the holding down brackets used to secure the tank to the frame and prevent its movement in relation thereto have also been changed somewhat. The tender wheels, which have cast steel centers and steel tires, are 36 $\frac{1}{4}$ in. diameter, and the journals are 6 x 11 in.

A study of the illustrations given herewith and of the dimensions and equipment tabulated at the end of this article will convey the idea of a locomotive characterized by compactness, simplicity and rugged strength. While there is nothing radically different from any other modern locomotive about it,

Limiting height.....	15 ft. 5 in.
" width.....	10 ft. 8 in.
Weight in working order on drivers.....	181,500 lb.

Leading Truck, Pacific Type Locomotive, Canadian Pacific Railway.

it is evident that all details have been planned with both efficient performance and low maintenance cost in view. With a rigid wheelbase of 13 ft. 2 in., total wheelbase of 67 ft. 1 in., and weight on drivers of 181,500 lb., the tractive power which can be developed is 42,600 lb., and the weight per cylinder horsepower 133.4 lb. With simplicity predominant in all boiler and running gear details, with ample strength apparent wherever it is required, and with a boiler more than capable of meeting the cylinder demands upon it, the value of these locomotives in meeting the requirements of the present day standard of passenger service is apparent.

All of the 16 locomotives of this type have been delivered to the C.P.R. by the Montreal Locomotive Works, and assigned to service on various divisions. They are numbered 2310 to 2325, inclusive. One of them, no. 2324, was exhibited at the Canadian National Exhibition in Toronto recently. Following are the principal dimensions and the special equipment:

Type.....	Pacific
Gauge.....	4 ft. 8 $\frac{1}{2}$ in.
Type of cab.....	Vestibule
Fuel.....	Bituminous coal
Service.....	Passenger

" diam.	14 in.
" lap and lead.....	1 $\frac{1}{8}$ in. lap, $\frac{1}{4}$ in lead
" exhaust clearance.....	$\frac{1}{4}$ in.
Cylinders, stroke.....	30 in.
" diam.	25 in.
Tractive effort.....	42,600 lb.
Factor of adhesion.....	4.26
Weight per cylinder horsepower.....	133.4 lb.
Boiler evaporation: steam requirements.....	101.8%

Tender.

Weight of tender in working order.....	188,500 lb.
Capacity of tank.....	8,000 imp. gall.

Blow off cocks.....	Baco

We are indebted to C. H. Temple, Chief of Motive Power and Rolling Stock, C.P.R., and his staff, for supplying the dimensions and figures used in this article, which was prepared in Canadian Railway and Marine World's office, and for the photographs and blueprints from which the accompanying illustrations were made.

The Minister of Railways on Imperial Communications.

Hon. G. P. Graham, Dominion Minister of Railways and Canals, responded to the toast "Imperial Communications" at a dinner given in the Mansion House, London, Eng., by the London Chamber of Commerce, on Oct. 3. A press cablegram reports him as having said, in part, as follows:—"As far as transportation of freight and passengers is concerned, Canada is probably better equipped than any other country in the world per head of population. He described what Canada was doing in regard to aerial navigation and the wireless, remarking that care had to be taken that government-owned wireless systems, where they existed, and the ones being operated privately, should work in harmony. The great usefulness of the cable, though some might think it old-fashioned, must not be forgotten. After all, it was a powerful means of communication between the different parts of the Empire and had been a pioneer in welding the links of communication more firmly. He suggested that the majority of people were looking forward anxiously for the time when communication by mail could be carried on at a lower rate. It was not unreasonable to hope that further development would take place in long-distance telephonic service. Speaking generally, the idea of binding the Empire more closely in its everyday life was not only practical, but such a step would probably tend more than anything else to a better understanding of each part regarding the particular conditions of the other."

Freight Car Location Statistics.

The Railway Association of Canada has issued a report on location of freight cars on Canadian railways on Oct. 1, based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National (including Grand Trunk Pacific); Canadian Pacific; Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Kettle Valley; Napierville Jct.; Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo, as follows: number of cars owned, 211,700; home cars on Canadian foreign lines, 10,317; home cars on U.S. lines, 35,659; home cars on home roads, 165,724; Canadian-owned foreign cars on home lines, 8,182; U.S.-owned foreign cars on home lines, 28,086; total cars on lines, 201,974; per cent. on lines to total owned, 95.4; deficiency on lines to total owned, 9,726; home cars in bad order, 11,489; foreign cars in bad order, 369; total cars in bad order, 11,858; per cent. in bad order, 5.8; privately-owned U.S. cars on lines, 2,354; privately-owned Canadian cars on lines, 1,581.

Another Connection Across the Niagara River for Canadian Pacific Railway and New York Central Lines.

A project for the construction of a double-track railway about 20 miles long, including a new crossing of the Niagara River about midway between Buffalo and Niagara Falls, is the latest step to be announced by the New York Central System in its plans to meet the requirements of its rapidly growing traffic. It is being undertaken jointly by the New York Central and the Canadian Pacific, and extends from a connection with the Michigan Central Rd.'s existing line near Welland, Ont., crossing the east and west branches of the Niagara River and Grand Island to a connection on the United States side with the New York Central's Niagara Branch and Tonawanda Branch, near Tonawanda, N.Y. Two corporations have been created to carry out the project, the Canadian Niagara Bridge Co. for the section of approximately 9 miles in Canada, and the American Niagara Bridge Co. for the 11 miles on the U.S. side of the International Boundary. The last named

from the west has to be made over the congested Niagara Branch, either from Suspension Bridge or Black Rock. The Niagara Branch, a double track line between Buffalo and Suspension Bridge, carries a heavy traffic. From North Tonawanda to Suspension Bridge it carries the Lehigh Valley traffic in addition to the N.Y.C. business, and has an average daily movement of about 50 passenger trains and about 30 freight trains. From Black Rock to Tonawanda it has an average daily movement of about 48 passenger trains and about 14 freight trains. The capacity of the Niagara Branch is also limited by an awkward connection with the bridge over the gorge at Suspension Bridge, which requires all trains passing from the bridge to the branch, or vice versa, to back around a wye. In addition to the routes mentioned above, there is the West Shore, extending from East Buffalo, with a double track line that is not now used to capacity on account of the lack of suitable

this bridge has become extremely heavy and has increased to a point beyond efficient and economical operation. During periods of heavy traffic, as many as 98 passenger trains and about 90 freight trains cross the structure daily. This traffic moves between the New York Central; the Delaware, Lackawanna & Western; the Erie, and the Pennsylvania on the east, and the Michigan Central, the Pere Marquette, the Grand Trunk, and the Wabash on the west. The large industrial development at Black Rock makes it impossible to expand the yards there beyond their present limits, and their operation is hampered by the existence of three street grade crossings, so that serious delays occur in handling traffic. Frequently, during times of heavy traffic, over 2,300 cars are handled per day at the various railways' Black Rock yards, which have a standing capacity for only approximately 1,600 cars. Buffalo and the Niagara frontier constitute the bottleneck through which the

Proposed New Crossing of Niagara River.

company will also be responsible for the construction of a large classification yard on Grand Island.

At present the traffic for the N.Y.C. moving through the Niagara and Buffalo gateways is carried to Welland over the Michigan Central main line and over the Toronto, Hamilton & Buffalo Ry., which is owned jointly by the N.Y.C., the Michigan Central and the Canadian Pacific. From Welland the Michigan Central has two lines, a double track one running northeasterly and crossing the Niagara River at Suspension Bridge, and the other crossing the Niagara River on the Grand Trunk Ry. international bridge, connecting with the railways on the U.S. side at Black Rock, near Buffalo. On the U.S. side of the river a large part of the traffic crossing at Suspension Bridge moves east over the N.Y.C., Rochester Division, Falls Branch, to a connection with the N.Y.C. main line at Rochester. The Rochester Division's Tonawanda Branch also extends from a connection with the Niagara Branch, at North Tonawanda, to a connection with the West Shore Rd. at Akron Jct., but this branch is little used, because, among other reasons, connection with it to and

through connections to it. These various N.Y.C. arteries of traffic are in addition to its 4-track main line which passes through Buffalo and carries a heavy traffic. On the portion west of the Buffalo gateway the daily average is about 50 passenger trains, with about 50 freight train movements, and on the portion east of Buffalo it is about 68 passenger trains and about 40 freight train movements.

At present two railway bridges are available to the N.Y.C. lines crossing the Niagara River between the U.S. and Canada. One is the Michigan Central cantilever bridge at Suspension Bridge, now being replaced by a steel arch double track structure, over which a heavy traffic moves between the N.Y.C., the Erie and the Lehigh Valley on the east, and the Michigan Central and Pere Marquette on the west, the daily movement being about 16 passenger trains and about 30 freight trains. The other is the international bridge owned by the Grand Trunk, which crosses the Niagara River between Black Rock, in the northerly part of Buffalo, and Bridgeburg. This is an old bridge, part of which has only a single track. The traffic crossing

great volume of the N.Y.C. freight must pass between the west and New York and Ontario and the Canadian Northwest. In addition to the N.Y.C.'s freight movement, there is a heavy interchange between that system and other railways, and also between the N.Y.C. and the lake steamship lines. In 1919, over 31,000,000 bush. of eastbound grain were transferred from ships to the N.Y.C. rails at Buffalo.

With the above facts before them, the N.Y.C. authorities have been endeavoring, for a long time, to develop a programme to relieve its busy main line through New York State by the construction of detour lines, for the by-passing of through movements around important gateways, to facilitate handling traffic at the large centers, and by the construction of connecting lines, to obtain greater use of the double track West Shore Rd. An important part of this programme is the construction, now under way, of the Hudson River Connecting Rd., forming a connecting link, south of Albany, between the main line and the West Shore west of the Hudson River and the Boston & Albany's Hudson

Division to the east. The situation has been met to a degree at Buffalo by the construction of the Buffalo Terminal Rd., extending from Blasdell, on the main line southwest of the city, to Depew on the main line east of the city, and consisting of a double track detour line about 10 miles long, with large classification yards at Gardenville, designed to handle the through movements around the city. Another part of the general programme is a connection now contemplated from the main line at Depew to the West Shore, involving the construction of a line about 2 miles long, making the West Shore Rd. available for the movement of some of the through traffic received over the Buffalo Terminal Rd.'s detour line.

The construction of the American Niagara Rd. is another natural part of this programme, in order to pass through business to and from the Michigan Central around the congested portion of the Buffalo gateway. This will be accomplished by routing the traffic over the new line and bridge to Tonawanda Jct. and over the Tonawanda branch to Akron Jct., and thence to the West Shore, making that double track line available for a heavy tonnage, whereas it now carries but little traffic. The Tonawanda Branch will be double tracked and the grade reduced to 0.25% eastbound for the handling of this traffic. The new line can also be used to advantage for certain traffic now moving on a roundabout route over the Suspension Bridge crossing, including the Lehigh Valley traffic, which moves over the N.Y.C. under a trackage arrangement, and perhaps also the Erie traffic, by means of a connection that may be made with the Erie just south of Tonawanda. The distance over the new line will be about 6½ miles shorter between Tonawanda Jct. on the east and Welland on the west than over the route via Suspension Bridge. Operations between the east and west will also be expedited by the new line, because its use in conjunction with the Tonawanda Branch and the West Shore will afford a route for heavy tonnage movements on a lower grade than via the present routes. The maximum grade on the new route will be 0.3% eastbound, compared to existing grades of 1.0% eastbound

on the present routes between Welland, Ont., and Rochester, N.Y.

The new line will relieve the N.Y.C. main line of a considerable amount of freight traffic, and will, in connection with the distribution and assembling of freight traffic in the new yard to be provided on Grand Island, improve the movement at Black Rock and East Buffalo, and shorten the time for the transportation of freight between the east and the west. To the extent that the new line will relieve the existing railway facilities, they will be more capable of serving the local needs of Buffalo, with its constantly increasing industrial development. The portion of the new route on the U.S. side will consist of a double track railway 10.36 miles long, the maximum grades on which will be 0.43% westbound and 0.25% eastbound, compensated, with a maximum curvature of 3 degrees.

While the plans for the bridge structure are in the course of preparation and are only preliminary, subject to the U.S. Secretary of War's approval, it is planned to carry the new line over the Niagara River's easterly branch by means of a 9-span steel structure of through Warren truss design. Eight of the spans are to be fixed, and each 205 ft. long, with a movable span over the channel 190 ft. long, of a direct vertical lift type, allowing 156 ft. of clear channel and 110 ft. vertical clearance. The substructure will consist of concrete piers on pile foundations, except for the lift spans, the substructure for which will be carried to rock. The bridge will provide for two railway tracks on a timber deck, designed for Cooper's E-70 loading, with a vehicular roadway of concrete floor construction on one side, designed for 15-ton trucks and 50-ton trolley loading, and with a walkway for pedestrians. The new line will cross all highways and existing railways at separated grade. The development in the large hump classification yard on Grand Island contemplates receiving, classification and departure yards of an ultimate capacity of 10,000 cars. The yard improvement will include two modern locomotive houses, with about 32 stalls each, with machine shop, blacksmith shop and repair facilities, together with a 1,000-

ton reinforced concrete coaling plant, sanding and ash handling facilities, the latter the circular wet ash pit type. The ultimate yard layout for eastbound movement will consist of 10 tracks of 110 cars capacity for the receiving yard; 32 tracks of 50 to 100 cars capacity for the classification yard, and 10 tracks of 110 cars capacity in the advance yard. A similar and symmetrical layout is planned for the westbound movement. The part of the new route incorporated as the Canadian Niagara Bridge Co. will consist of a double track railway extending from a connection with the American Niagara Rd., at the international boundary, westerly for 8.85 miles, to a connection with the Michigan Central a short distance east of Welland, Ont., with a tangent alinement for the entire distance and a maximum grade of 0.25% in each direction.

With the exception of the bridge over the westerly branch of the river, the construction work on this line will be comparatively light. The preliminary plans for the bridge over the Niagara River's west branch contemplate a main steel superstructure of 15 main spans. It is being planned to consist of 12 spans of semi-through Warren type trusses of 160 ft. each; 2 through truss spans of 205 ft. each, and a direct vertical lift span over the channel of 196 ft., providing a vertical clearance of 110 ft. The bridge will be designed the same as the one on the U.S. side over the easterly branch, for two railway tracks on a timber deck, designed for Cooper E-70 loading with a roadway for vehicular and trolley traffic.

Enabling legislation for both the Canadian and the U.S. Niagara railway corporations has been passed by the respective governments and applications for permission and approval to exercise the franchise of the U.S. corporation and for a certificate of public convenience and necessity have been filed with the New York State Public Service Commission and with the Interstate Commerce Commission. The Public Service Commission has recently granted that certificate. It will also be necessary for the bridge plans to be submitted to the Secretary of War and for financing to be arranged.—Railway Age.

Birthdays of Transportation Men in November.

Many happy returns of the day to:—

J. O. Adams, General Eastern Freight Agent, Canadian National-Grand Trunk Rys., New York, born at London, Ont., Nov. 21, 1872.

J. O. Apps, General Agent, Mail, Baggage and Milk Traffic, C.P.R., Montreal, born at Tara, Ont., Nov. 9, 1877.

H. E. Beasley, General Superintendent, Esquimalt & Nanaimo Ry., Victoria, B.C., born at Hamilton, Ont., Nov. 10, 1862.

J. R. Beck, District Passenger Agent, Canada Steamship Lines Ltd., Toronto, born at Gaspé Cove, Que., Nov. 4, 1829.

W. C. Blake, Auditor of Payrolls, Western Region, Canadian National Rys., Winnipeg, born at Liverpool, Eng., Nov. 28, 1865.

C. C. Bonter, Assistant Passenger Traffic Manager, Canada Steamship Lines, Montreal, born at Toronto, Nov. 13, 1884.

G. B. Burchell, Managing Director, Bras d'Or Coal Co., Little Bras d'Or, N.S., born Nov. 1, 1877.

J. R. Cameron, Assistant General Manager, British Columbia District, Western

Region, Canadian National Rys., Vancouver, B.C., born at Truro, N.S., Nov. 5, 1865.

F. H. Clendenning, Foreign Freight Agent, C.P.R., Vancouver, B.C., born at Montreal, Nov. 9, 1881.

F. Conway, City Freight and Passenger Agent, C.P.R., Kingston, Ont., born at Ernestown, Ont., Nov. 19, 1850.

W. L. Crighton, Assistant Manager, Advertising Bureau, Canadian National Rys., Montreal, born at Derby, Eng., Nov. 9, 1871.

E. C. P. Cushing, Purchasing Agent, C.P.R., Calgary, Alta., born at Ottawa, Ont., Nov. 13, 1886.

W. R. Davidson, General Superintendent, Montreal District, Central Region, Canadian National Rys., Montreal, born at Everton, Mo., Nov. 8, 1871.

W. R. Devenish, C.E., General Superintendent, Northern Ontario District, Central Region, Canadian National Rys., Toronto, born in County Tipperary, Ireland, Nov. 21, 1882.

A. C. Douglas, Assistant General Purchasing Agent, C.P.R., Montreal, born

there, Nov. 10, 1881.

W. Downie, ex-General Superintendent, Atlantic Division, C.P.R., now of Whitby, Ont., born at Rock Currie, Ireland, Nov. 12, 1850.

Jos. Dubrule, President, Prescott & Ogdensburg Ferry Co., and General Manager Canadian Pacific Car & Passenger Transfer Co., Prescott, Ont., born at Spencerville, Ont., Nov. 14, 1872.

R. L. Fairbairn, Manager, Passenger Service Bureau, Canadian National Rys., Montreal, born at Stillwater, Minn., Nov. 24, 1880.

W. Fulton, District Passenger Agent, Ontario District, C.P.R., Toronto, born at Ballinderry, County Antrim, Ireland, Nov. 13, 1870.

J. E. Gibault, Division Engineer, Canadian National Rys., Levis, Que., born at St. Jerome, Terrebonne County, Que., Nov. 16, 1887.

G. N. Goad, Superintendent, Nipissing Division, Northern Ontario District, Central Region, Canadian National Rys., Capreol, Ont., born at Toronto, Nov. 26, 1884.

Grant Hall, Vice President, C.P.R., Montreal, born there, Nov. 27, 1863.

G. L. Hodge, Chief Special Agent, Central Vermont Ry., St. Albans, Vt., born at Lowell, Mass., Nov. 3, 1879.

J. McMillan, General Manager of Telegraphs, C.P.R., Montreal, born at Liverpool, Eng., Nov. 2, 1866.

H. R. Mallison, Purchasing Agent and Secretary to President, Montreal Tramways Co., Montreal, born at Toronto, Nov. 14, 1873.

Oscar Masse, Trainmaster, Cornwall Subdivision, St. Lawrence Division, Montreal District, Central Region, Canadian National Rys., Montreal, born at Coteau, Que., Nov. 7, 1884.

R. C. Morgan, Superintendent, Winnipeg Terminals Division, Manitoba District, C.P.R., Winnipeg, born at Missisquoi Bay, Que., Nov. 12, 1864.

C. Murphy, General Manager, Western Lines, C.P.R., Winnipeg, born at Prescott, Ont., Nov. 20, 1865.

G. H. Nowell, Master Mechanic, Lethbridge Division, Alberta District, C.P.R., Lethbridge, born at Montreal, Nov. 13, 1885.

G. Pelletier, Assistant Superintendent, Canadian National Rys., Levis, Que., born at Isle Verte, Que., Nov. 28, 1872.

W. J. Quinlan, District Passenger Agent, Canadian National Rys., Winnipeg, born at Montreal, Nov. 21, 1883.

dian National Rys., Edmonton, Alta., born at Clinton, Ont., Nov. 29, 1880.

John Whitsell, Manager, Winnipeg Electric Ry., Winnipeg, born in Iowa, Nov. 30, 1868.

H. E. Whittenberger, General Man-

ager, Grand Trunk Western Lines, Canadian National Rys., Detroit, Mich., born at Peru, Ind., Nov. 9, 1869.

W. A. Whyte, Division Freight Agent, Canadian National Rys., Vancouver, B.C., born at Hornsey, Eng., Nov. 24, 1890.

Algoma Central & Hudson Bay Railway Line Revision.

The Algoma Central & Hudson Bay Ry. extends from Sault Ste. Marie, Ont., to a junction with the National Transcontinental Ry. at Hearst, 296 miles, crossing the C.P.R. transcontinental line at Franz, mile 195; and the Canadian Northern Ry. at Oba, mile 246. At miles 104.09 and 104.67 there are 2 large frame trestles, which are shown in the accompanying illustrations. They are of standard construction, built in 1911-12. The first one, at mile 104.09, is 1,050 ft. long and 75 ft. high and is built on a 12 degree curve; the second one, at mile 104.67, is 520 ft. long, 65 ft. high and is mostly on tangent. Both trestles span coulees high up on a range of hills fronting Agawa Bay, the main line there being 750 ft. above Lake Superior and 4 miles from the shore. The maintenance of these trestles is very costly, and after considering the cost of filling them in, the management decided that it would

being done under the direct charge of B. E. Barnhill, Construction Engineer, with L. C. Maxwell, Engineer Maintenance of Way, under the general supervision of R. S. McCormick, General Superintendent and Chief Engineer, Algoma Central & Hudson Bay Ry., to whom we are indebted for the information on which the foregoing is based.

Freight Car Condition and Supply.

Any delay or congestion in the handling of the 1923 grain crop which may occur, will certainly not be caused by the condition of the Canadian railways' freight cars, as is evidenced by a report issued by the Railway Association of Canada, which shows that, on Oct. 1, there were only 5.8% of the total freight cars on lines in bad order, there being only 11,858 in need of heavy repairs out of a total on line of 201,974. The report

Trestles on Algoma Central & Hudson Bay Ry. which are to be eliminated. The trestle on the left is 104.67, looking south. The one on the right is 104.09, looking north.

J. W. Reid, Inspector of Railway Safety Appliances, Board of Railway Commissioners, Calgary, Alta., born at Harvey, N.B., Nov. 12, 1892.

J. L. Roberge, General Manager, Levis Ferry Ltd., Quebec, Que., born at Burlington, Vt., Nov. 25, 1874.

J. J. Rose, Passenger Department, Robert Reford Co., General Agents, Cunard, Anchor and Anchor-Donaldson Steamship Lines, Toronto, born there, Nov. 22, 1878.

G. H. Shaw, ex-General Traffic Manager, Canadian Northern Ry., Toronto, born at Smiths Falls, Ont., Nov. 25, 1859.

P. D. Sutherland, General Passenger Agent for the Orient, C.P.R., Hong Kong, China, born at Toronto, Nov. 2, 1879.

L. C. Thomson, Chief of Stores, Canadian National Rys., Montreal, born at Kingston, Ont., Nov. 25, 1882.

H. P. Timmerman, ex-Industrial Commissioner, Eastern Lines, C.P.R., Montreal, born at Odessa, Ont., Nov. 6, 1856.

Guy Tombs, ex-Assistant Freight Traffic Manager, Eastern Lines, Canadian National Rys., now of Guy Tombs Ltd., transportation agents, Montreal, born near Lachute, Que., Nov. 22, 1877.

T. D. Utley, Car Foreman, C.P.R., Hardisty, Alta., born at Leytonstone, London, Eng., Nov. 1, 1890.

T. W. White, District Engineer, Cana-

be more economical to eliminate these structures by building a deviation, the plans for which were approved by the Board of Railway Commissioners on Sept. 29.

The revised location is from mile 103.80 to mile 104.79. It will shorten the line about 500 ft., and will cut out five 12 degree curves, totalling 201 degrees 42 minutes of curvature. The revised line starts on an 8 degree curve, increasing to a 12 degree one, at the site of the first trestle, then a 6 degree curve, and will regain the present line on a 6 degree curve. The grading will be principally solid rock, in 3 big cuts, the estimated quantities being 18,000, 50,000 and 20,000 cu. yd., respectively, the excavated material being used in the fills, which aggregate about 120,000 cu. yd. The contractors for the grading are McNamara Bros. and Thornton, Sault Ste. Marie, Ont. The tracklaying will be done by the company's forces, and it is expected to have the revision completed and in operation in June, 1925. The old track and trestles will then be taken up. The complete work is estimated to cost \$187,000, which is approximately the same as it would have cost to fill in the trestles on the old line. The work is

states that there was, on Oct. 1, a car shortage of 502, compared with a shortage of 553 on Sept. 1; 543 on Aug. 1; 750 on July 1; and 350 on June 1. These figures show that traffic is so heavy as to tax the railways' facilities to handle it, and that the railways are handling it with only a minimum of car shortage present.

The American Railway Association's Car Service Division reports that, out of 2,256,765 freight cars on line on Sept. 15, there were 165,284, or 7.3%, in bad order, compared with 7.7% on Sept. 1. Out of 1,036,566 box cars, 73,621, or 7.1%, were in bad order, compared with 7.4% on Sept. 1; out of 45,098 refrigerator cars, 4,111, or 9.1%, were in bad order, compared with 9.6% on Sept. 1; out of 958,151 gondolas, 71,856, or 7.5%, were in bad order, compared with 8% on Sept. 1; out of 81,421 stock cars, 6,608, or 8.1%, were in bad order, compared with 8.6% on Sept. 1, and out of 91,381 flat cars, 6,704, or 7.3%, were in bad order, compared with 7.7% on Sept. 1. The U.S. class 1 railways are successfully handling the largest traffic in their history without car shortage. Total loadings have been running at a million cars a week or over for some time, and continue to do so.

Railway Operating Revenues, Expenses and Other Statistics for Six Months Ended June 30, 1923.

Canadian Railway and Marine World for October published a comparative table for the 6 months ended June 30, 1922 and 1923, which had been prepared from information supplied by the Dominion Bureau of Statistics, Transportation Branch. We have since been advised by the Bureau that "a corrected report has been received from the Canadian National Rys. for the 6 months, January-June, which also affected the data for all railways." We have, therefore, prepared another table, which is given below.

The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There has been no change in the roads operating, but the 1922 figures, given in the reports this year, include certain revisions, and are

not in all cases the same as reported in 1922.

The column headed "Canadian National" gives the figures for the combined steam railways in Canada, under the Canadian National Ry. Co.'s directors' management, including the former Canadian Northern System; the Intercolonial, Prince Edward Island, National Transcontinental and other Canadian Government Rys., the Hudson Bay Ry. and the Grand Trunk Ry. of Canada and the Grand Trunk Pacific Ry. It includes all G.T.R. lines in Canada and 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Province Line Ry., 9.77 miles, and Black Rock terminal. It does not include the Central Vermont, other lines in New England, nor lines west of the Detroit and

St. Clair Rivers.

The column headed "Canadian Pacific" includes also the Montreal & Atlantic and Esquimalt & Nanaimo Rys.

The first six items under the heading "Operating revenues" include rail lines only and not water lines. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. Total train miles include freight; passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, baggage, parlor cars, etc.

Railway Operating Revenues, Expenses and Other Statistics.

All Railways, First Half of 1923.—Canadian Railway and Marine World for October contained, on page 465, a comparative table, prepared in its office from information supplied by the Dominion Bureau of Statistics, Transportation Branch, showing the operating results of all Canadian railways, and of the Canadian National and Canadian Pacific separately, for the first half of 1923 and 1922. The Bureau has since advised us of the receipt of a corrected report from the Canadian National Rys., which also affected the data for all railways, and we have, therefore, prepared a revised table, which is given on page 520. A comparison of this table with the one published in October, of course, shows that the great majority of the changes are in the Canadian National figures, which also affected the figures for "all railways." The changes made in the C.P.R. figures are only in connection with daily averages per mile of road operated, being evidently necessitated on account of an error in calculation.

A comparison of the two tables shows that the changes in the figures are not such as necessitate any change in the opinion expressed in our last issue as to the progress Canadian railways are making in their uphill fight to get revenues and expenses on a proper basis, nor do they affect the accuracy of the statement in our October issue, that Canadian railways furnished a lot more transportation service in the first half of 1923 than in the first half of 1922, and charged less per unit for it; that, notwithstanding this, due to better train and car loading, and to efficient handling of the traffic offered, the railways secured much larger net earnings than in the first half of 1922, furnished employment to a greater number, and paid out much more in wages, and that, finally, the comparison between the first halves of 1923 and 1922 furnishes a practical demonstration of the almost axiomatic proposition that the movement of a large volume of traffic at reasonable rates is far better for all concerned than the movement of a restricted volume at high rates.

All Railways in July.—The Bureau of Statistics statement shows that Canadian railways as a whole obtained freight traffic in July which was 17% greater than in July 1922, and passenger traffic 7% greater. Due to rate reductions, however, freight revenue was only 11% greater, and passenger revenue 6% greater. Total revenues were 8.2% greater, but operating expenses were only 4% greater, with the result that net earnings increased from \$2,530,761 in July 1922 to \$4,195,732 in July 1923. This meant a reduction in the operating ratio of from 92.92 in July 1922 to 89.15 in July 1923. The number of employees in July this year was 181,408, against 167,248 in July 1922, while the pay roll was \$21,277,752 in July this year, against \$19,478,009 in July 1922. Freight train loading showed some betterment, the average revenue trainload being 449.7 tons in July 1923, against 435.5 tons in July 1922. Car loading was also better, the average carload in July this year, 24.2 tons, being 1.9 tons better than in July 1922. Despite the increased trainload, the earnings per freight train mile in July 1923, \$5.39, were 8c less than in July 1922, due to freight rate reductions. The average receipt per revenue ton mile

was 1.198c in July 1923, against 1.256c in July 1922. The lowered rates on grain came into effect on July 6, 1922, so that that decrease is only partly applicable as between the two months, but as the decrease in general commodity rates did not apply until Aug. 1, 1922, it was fully applicable in reducing the average rate as between the two months. The same remarks as are applied to the railway earnings for the first 6 months of 1923, compared to the first six months of 1922, can also be applied to a comparison between July 1923 and July 1922. The railways carried more freight and passengers; the public paid lower unit charges, but the railways derived better net earnings, and work was furnished an increased number of employees.

Canadian National Rys. in July.—According to information furnished by the Dominion Bureau of Statistics, Transportation Branch, the Canadian National Railways Canadian lines, which include the Canadian Northern, Intercolonial, Prince Edward Island, National Transcontinental and other Government railways, the Hudson Bay Ry., the Grand Trunk Ry. in Canada, the Grand Trunk Pacific Ry., and 36.16 miles of the G.T.R. in the U.S., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Province Line Ry., 9.77 miles, and the Black Rock Terminal, but not other U.S. Grand Trunk lines, or the Central Vermont Ry., earned net operating revenue in July this year of \$765,743. In July 1922 they had an operating deficit of \$57,781. This improvement was responsible for decreasing the operating ratio from 100.35 to 95.70. This is the group of lines covered by the heading "Canadian National Railways" in the table on page 520, giving the results for the first 6 months of this year, compared with the first 6 months of 1922, and as shown therein, these lines had an operating deficit for the first 6 months this year of \$2,998,582. July was the fourth successive month in which this group had net earnings, but the operating deficits of the first 3 months of the year were larger than the net earnings of the last four. As pointed out in our October issue, the Canadian National Rys. as a whole would have had an operating deficit for the first half of the year if it had not been for the Grand Trunk Western Lines, and the July results show that the latter lines earned more in that month than did the Canadian group as detailed above, the Grand Trunk Western Lines' net for July being \$863,809. The New England Lines lost \$169,018 in July, while the Duluth, Winnipeg & Pacific had net earnings of \$11,694. For the entire Canadian National system, viz., the Canadian lines as specified above, Duluth, Winnipeg & Pacific, New England Lines and Grand Trunk Western, July gross earnings were \$21,002,849; operating expenses were \$19,530,619, and net earnings were \$1,472,229.

Canadian National Rys., Jan. 1 to July 31.—The Bureau of Statistics report shows that the Canadian National Rys. Canadian lines had a net operating deficit of \$2,232,839, compared with a deficit of \$5,158,665 in the first 7 months of 1922, while the Grand Trunk Western, Duluth, Winnipeg & Pacific and New England Lines had net earnings of \$5,217,299, compared with \$2,955,673 in the same period of 1922, making net

earnings for the whole system, for the 7 months, \$2,984,460, compared with a deficit of \$2,202,993 in the same period of 1922.

Canadian Pacific in July.—The Bureau of Statistics report shows gross earnings \$1,193,488 greater than in July 1922, operating expenses \$1,101,427 greater, and net earnings \$92,061 greater. Freight traffic increased 21%, but freight traffic revenue increased only 12%, due to rate reductions. The payroll increased \$631,592, or 8.5% over July 1922, and the number of employees increased 5,187, or 8.2%. Passenger traffic increased 7%.

Canadian Pacific Ry., January to July 31.—As pointed out in our October issue, C.P.R. net earnings to the end of July this year were not so good as for the same period of 1922. The net for the first seven months of 1923 was \$133,585 less than for the same period this year.

Canadian National Rys. in August.—Page 522 of this issue contains a table prepared from figures furnished by the Canadian National Rys. management, which shows that in August the system as a whole, including express and hotel departments, and a number of subsidiary companies, but not the Central Vermont Ry. and car ferries and steamboats, had gross earnings of \$21,968,294, an increase of \$1,566,123, or 7.7%, over Aug. 1922; expenses were \$19,940,909, an increase of \$575,632, or 3%, over Aug. 1922, and net earnings were \$2,027,385, an increase of \$990,491, or 95.5%, over Aug. 1922.

The Canadian National Rys., from Jan. 1 to Aug. 31, for the system as a whole, as specified above, is reported by the management to have had gross earnings of \$159,749,815, an increase of \$17,242,068, or 12.1%, over the same period of 1922; and operating expenses, \$154,737,970, were \$11,064,125, or 7.7%, greater, so that net earnings, \$5,011,845, compared with a deficit of \$1,166,098 in the first 8 months of 1922, show an improvement of \$6,177,943.

The Canadian Pacific Ry. in August, as shown by the table on pg. 000, had larger gross earnings than in Aug. 1922, and a smaller proportionate increase in expenses, with the result that net earnings, \$3,117,058, were \$170,621 more than in Aug. 1922.

The Canadian Pacific Ry. in the first 8 months of 1923, as shown by the table referred to above, had gross earnings \$6,263,210 greater than in the same period of 1922; operating expenses \$6,232,174 greater, and net earnings \$31,037 greater. The increase in net in August brought the net for the first 8 months of this year above that for the same period last year, this being the first time since the end of April that C.P.R. 1923 net has been better than that of 1922 for corresponding periods.

General.—As pointed out in our October issue, the Canadian National Rys. have accomplished a large improvement over 1922, the greater part of it being brought about on the Grand Trunk Western Lines. As also pointed out, U.S. railways have secured improvements in their earnings in the last year which have not been duplicated in Canada. There is no doubt that the rate reductions now in effect in Canada are cutting into railway earnings very heavily. While the C.P.R. had a better month in Aug. 1923 than in Aug. 1922, it has a long way to go before results are as good as in pre-war years, as evidenced

by the following comparison of C.P.R. net earnings for the first 8 months of each year back to 1910, viz.: 1923, \$14,753,452; 1922, \$14,722,416; 1921, \$17,580,621; 1920, \$15,248,484; 1919, \$18,961,349; 1918, \$20,085,627; 1917, \$28,574,094; 1916, \$29,086,612; 1915, \$20,143,767; 1914, \$22,256,095; 1913, \$27,192,655; 1912, \$27,094,096; 1911, \$21,861,720; 1910, \$20,946,372. The results in the first 8 months of 1923 were, with the exception of those of the

same period of 1922, the most unfavorable since 1910. From this comparison it is evident that, while some small improvement was effected, compared with last year, more must be effected if the railways are to be maintained in a position to provide needed future improvements, and it is for that reason that a greater population and more traffic are things greatly to be desired if present low rates are to remain in force.

Canadian National Railways' Earnings and Expenses Detailed.

Canadian Railway and Marine World for October published a table containing figures issued by the Dominion Bureau of Statistics, Transportation Branch, showing the Canadian National Rys. steam lines operation results, both in Canada and the United States, for June, 1922 and 1923, and for the 6 months ended June 30, 1922 and 1923. Since its publication the Bureau has issued a notice stating that a corrected report has been received from the Canadian National Rys., the revised figures of which are given below.

The Canadian lines include the combined steam railways in Canada, under the Canadian National Ry. Co.'s directors' management, embracing the former Canadian Northern System, the former Intercolonial, Prince Edward Island, National Transcontinental and other Canadian Government Rys., the Hudson Bay Ry. and the Grand Trunk Ry. of Canada and the Grand Trunk Pacific Ry. It includes

all G.T.R. lines in Canada and 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Province Line Ry., 9.77 miles, and Black Rock Terminal. It does not include other lines in New England, or lines west of the Detroit and St. Clair Rivers. The New England lines include the portion of the Montreal-Portland, Me., line from Norton Mills, Que., on the Sherbrooke Subdivision, Portland Division, Montreal District, 132.11 miles from Montreal, to Portland, 165.15 miles, and the Lewiston and Norway Subdivisions, Portland Division, in Maine, 6.68 miles, a total of 172.01 miles. They do not include the Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles, and Vermont & Province Line Ry., 9.77 miles, a total of 33.16 miles, which are included under the C.N.R. Canadian lines.

Operating Revenues	Month of June		Six Months to June 30	
	1923	1922	1923	1922

Montreal-Toronto Locomotive Runs.—Particulars of the Canadian National Rys. management's intention to operate the mountain type passenger locomotives through between Montreal and Toronto, and vice versa, were given in Canadian Railway and Marine World for September, when it was stated that the crews would be changed at Belleville, 208.4 miles from Montreal. That decision has been changed, and crews are being changed at Brockville, 125.64 miles from Montreal, and also at Belleville. Six of the mountain locomotives are in service between Montreal and Toronto, and are performing very satisfactorily on the long runs. No trouble is experienced in making the trip without having to take coal en route.

Extraordinary Action Against the C.P.R.—The executors of the late J. R. Cowell, formerly clerk of the Alberta Legislature, have filed a writ in the British Columbia Supreme Court to recover \$15,000 from the C.P.R. Co. The allegation is that Mr. Cowell's death, which occurred April 16, was caused by food eaten by him in the railway restaurant in Vancouver.

C.P.R. St. John's Ambulance Association.—C.P.R. employees in Montreal who have passed examinations in first aid under the St. John's Ambulance Association's direction, were given medallions and labels at the Windsor St. station, Oct. 5, by F. L. Wanklyn, General Executive Assistant, who presided in the absence of Grant Hall, Vice President. Fifty-nine men received medallions, having passed the third year examination, and 34 received labels, having passed the fourth and subsequent years' examinations. Inspector Monsell, who has had charge of the classes, was given an illuminated address of appreciation by the members of the classes. The C.P.R. commenced its first aid classes in 1909, since when about 20,000 employees have received instruction.

A Boy's Derailing of Canadian National Rys. Train.—A Campbellford, Ont., high school boy was arrested there, Sept. 26, and pleaded guilty on the following day to placing an obstruction on the track which brought about the derailment of a C.N.R. train on Sept. 22. On paying the costs and promising to be of good behaviour for the future, he was released on suspended sentence.

Railway Earnings and Expenses.

Canadian National Railways.

The following table was compiled by Canadian Railway and Marine World from statements supplied by the Canadian National Rys. management. We are officially advised that the figures show the earnings and expenses of the Canadian Northern Ry. system, including Duluth, Winnipeg & Pacific Ry.; Canadian Government Rys., including Intercolonial and Prince Edward Island Rys., and various local lines in the Maritime Provinces and Quebec which have been acquired by the Dominion Government; Grand Trunk Pacific Ry.; Grand Trunk Ry. lines both in Canada and the United States, but not Central Vermont Ry. or electric lines. They also include the express and hotel departments and a number of subsidiary companies, the names of which are not given, but not car ferries and steamboats, nor the telegraph department.

	Earnings	Expenses	Net	Increase or decrease
Jan.	\$18,765,458	\$19,362,197	\$* 596,739	\$1,273,039

July	92.90	96.30	
August	90.77	94.92	
Eight months to Aug. 31.....	96.86	100.82	

The C.N.R. Publicity Department has issued a statement, from which the following figures are taken:—The gross earnings for August increased \$1,566,123, or 7.7%, over Aug. 1922. After deducting operating expenses, \$19,940,909, the net operating revenue for Aug. 1923 was \$2,027,385, compared with \$1,036,894 for Aug. 1922. The August net was \$555,157 more than for July 1923, and \$95,500 more than for Aug. 1922. The net earnings for the first 8 months of 1923 were \$5,011,846, compared with a deficit of \$1,166,098 for the first 8 months of 1922.

The C.N.R.'s Publicity Department further states that gross earnings from Jan. 1 to Sept. 30, 1923, were \$181,558,228.49, an increase of \$17,175,882.62, over the corresponding period of 1922. Gross earnings for September, \$21,808,412, were \$66,187 less than for Sept. 1922. Gross earnings from Oct. 1 to 7 were \$5,566,728, an increase of \$80,433 over the same period last year.

The C.N.R. corrected official figures, as reported to the Dominion Bureau of Statistics, for six months to June 30, for practically Canadian lines only, are given on pg. 520 of this issue and for the whole system on pg. 522.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1923, compared with those for 1922. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimalt & Nanaimo Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World:—

	Gross	Expenses	Net	Increase or decrease
Jan.	\$13,148,914	\$12,428,888	\$ 720,026	\$ 236,549
Feb.	"11,159,865	"10,664,371	"495,494	"*158,994
Mar.	13,585,763	11,606,049	1,979,714	*440,793

Incr.	\$6,263,210	\$6,232,173	\$31,037	

*Decrease.
C.P.R. approximate gross earnings for September were \$17,125,000, a decrease of \$705,000 from Sept., 1922.

Tampering With a Switch Punished.—Edward Barby, 19 years of age, was sentenced to 3 years in Kingston penitentiary, by the Tweed, Ont., Police Magistrate, Sept. 15, for tampering with a C.P.R. switch at Hungerford, Ont. Prior to that offence he had broken out of the Tweed jail, and had previously been detained in the Mimico Industrial School for placing a poker on C.P.R. tracks at Smiths Falls, Ont.

Board of Railway Commissioners' Judgments on Grain Rates from Prairie Points to Pacific Coast Ports, for Export.

Canadian Railway and Marine World for October contained, on page 486, Dominion order in council 1848, passed Sept. 12, respecting export grain rates from points in Alberta, Saskatchewan and Manitoba to Vancouver and other British Columbia coast points, stating that the Privy Council's committee considered that, as the movement of grain is of the utmost and pressing importance, an enquiry as to the rates should be made by the Board of Railway Commissioners, and that the matter be referred to the Board for immediate consideration and such effective action as it might deem necessary. The Privy Council's committee made a further report, which was approved by the Governor-General on Oct. 2 and passed as order P.C. 2007, as follows:—The committee of the Privy Council having had under consideration a certain petition to the Governor in council by the Attorney-General of British Columbia, acting on behalf of that province, and by the Attorney-General of Alberta, acting on behalf of that province, by way of appeal from the Board of Railway Commissioners general order, dated June 30, 1922, made as the result of a general investigation and enquiry as to railway rates in Canada, directed by order in council 2434, dated Oct. 6, 1920, upon hearing counsel for the petitioners, for the Manitoba Government and the Winnipeg Board of Trade, and for the railway companies interested; and it appearing that the question as to the rates on grain from points in Saskatchewan and Manitoba to Vancouver and other British Columbia coast points for export was not specifically dealt with in the Board's said judgment, the committee, therefore, recommends that the subject of export grain rates from points in the said provinces to Vancouver and other British Columbia coast points be referred to the Board for immediate determination and such effective action as it may deem necessary. The committee further recommends that the order in council 1848 of Sept. 12, 1923, be rescinded.

The principal portion of order in council 2007, as given above, is practically the same as order in council 1848, which it rescinded, the only important variation being that order 1848 stated that "the committee of the Privy Council considers that, inasmuch as the movement of grain is of the utmost importance, an enquiry as to the said rates on grain should be made by the Board," while order 2007 omits that and states that "the committee recommends that the subject of export grain rates from points in the prairie provinces to Vancouver, and other British Columbia coast points, be referred to the Board for immediate determination and such effective action as may be necessary." The Board's judgment was given on Oct. 9, being concurred in by Hon. F. B. Carvell, Chief Commissioner; S. J. McLean, Assistant Chief Commissioner; Hon. W. B. Nantel, Deputy Chief Commissioner; and Messrs. A. C. Boyce and C. Lawrence. After reciting order in council 2007, as given above, it is as follows:—

In Oct. 1920, this Board was directed by the Governor in council, by order in council 2434, to enter into an investigation as to whether or not discrimination in the general rates of the railway companies existed as against western

Canada, as compared with those in existence in eastern Canada. The Board started an immediate investigation, and some time thereafter the Province of British Columbia asked to be heard, claiming that their domestic rates, based upon the mountain scale then existing, were discriminatory as compared with prairie rates, and asking generally that mountain rates be abolished and prairie rates substituted in lieu thereof. Incidentally, on two or three occasions, during the hearing and the argument, reference was made to export rates on grain, but the Board did not feel they had been sufficiently developed to justify any special finding thereon; but as the judgment referred to in the said order in council was issued within a couple of days after the enacting the Statutes of the Parliament of Canada, chap. 41, 1922, being the statute referring to the Crowsnest rates on grain, so-called, for that year, the Board realized there would be complaints against the size of the spread between eastbound and westbound movements of grain, if there were no reduction made in the export rates on grain to Vancouver, and so informed the representatives of both the Canadian Pacific and Canadian National Railways. As a result of these conferences, the railway companies voluntarily made a general reduction in export rates between prairie points and Pacific coast points of 20%. Later on, the Province of Alberta joined with the Province of British Columbia in an appeal to the Governor in council, in which they asked not only that local rates between the two provinces be placed upon the prairie rate basis, but that Crowsnest rates be applied on all grains to be shipped from prairie points to Vancouver and other Pacific ports for export; and this is the real question which the Governor in council has referred to this Board for decision; and, as under the Railway Act, sec. 38, the Governor in council has this right, the Board is now taking the earliest steps possible, in order to comply with such request.

The export rate situation in the United States has an intimate relation to the export rate situation in Canada. Taking grain as a characteristic commodity, and taking Chicago as a common point, grain, for export to Europe, may find its export points at Montreal, Portland, Boston, New York, Baltimore, Philadelphia, and Newport News. In connection with the movement through New York, the rate from Buffalo is exceedingly important, and has a controlling effect as a maximum on the movement from Canadian Georgian Bay ports. In addition to the movement easterly and southeasterly, which has been referred to, the effect of the southbound movement to the Gulf of Mexico should be borne in mind. For example, there is an extensive corn movement from Milwaukee to Georgian Bay ports for export, via Montreal. There is also a movement from Milwaukee, for export, by route combined of water to Buffalo and rail to New York; and there is also a water route by way of the lakes and the St. Lawrence. Milwaukee ships wheat to Georgian Bay ports and also by the St. Lawrence route. At times, it draws from as far south as Kansas, and may also draw from eastern Colorado; but if there is a large volume of tonnage offering for ports in the

Gulf of Mexico, for example, Galveston, the result is that a combination of the lower ocean rate and the rail rate works farther north, thus coming closer to the lakes and taking traffic southbound which ordinarily might move either by way of Buffalo or by way of Georgian Bay ports and through Canada. The situation, then, is that in the easterly half of the United States, taking a line drawn south from Chicago, say, to Galveston, thus embracing a dense traffic territory, there is a range of ports, from Galveston and New Orleans on the south, to Montreal on the north, all in a competitive situation; and the rate adjustment which affects one affects the others.

Further, as bearing upon the effect of the southbound movement, it may be said that if a point is taken, say, about Superior, Wis., and a line drawn southeasterly, swinging down along the west shore of Lake Michigan on to Savannah, Georgia, all points west of this line would be closer by direct rail mileage to the Gulf ports and South Atlantic ports than to New York. This, again, is a factor which has a bearing upon the rate combinations working through Buffalo. The effect of the port competition has been recognized in many decisions of the Interstate Commerce Commission. A brief reference to these may be made: It has recognized the justifiability of differentials existing at the North Atlantic ports. For example, in dealing with flour and grain rates from western ports to Boston, Philadelphia and Baltimore, it has held that the inland rates should be so adjusted as to enable each port according to its advantages to compete for export traffic.—*Re-Differential Freight Rates* (1905) 11, I.C.C.R., 13.

Again, in dealing with the question of the movement of grain, flour and provisions from western points to Atlantic seaports, it said in 1898 that the principle upon which the differentials were based was legitimate, viz.: competition between inland carriers; and it held that the existing differentials were not lawful.—*New York Produce Exchange vs. B. & O. Rd. Co. et al*, 7 I.C.C.R., 612.

It was stated that the export rate is really a portion of the through rate which must vary according to the cost of water transportation from the port to the foreign country.—*Hecker-Jones-Jewell Milling Co. vs. B. & O. R.R. Co.*, 14 I.C.C., 356-360.

Whether export and import traffic will move through a particular port depends upon the combined rail and water rate to a foreign destination.—*New England Investigation*, 27 I.C.C., 560 and 615.

In dealing with the differential system already referred to, it has been said that it is intended to adjust on a practicable basis the rivalries of the northern seaports on export, import and domestic traffic.—*Scott Paper Co. vs. P.R.R. Co.*, 26 I.C.C., 601-602.

Referring to the Gulf rates, of which mention has already been made, it has said that export rates to the Gulf are based on established differentials under the through rates to the North Atlantic ports, the Baltimore rates being taken as a standard.—*Chicago Board of Trade vs. I.C.R.R. Co.*, 26 I.C.C., 545-546.

In a case of involving export rates on steel from Chicago to Pacific ports, as compared with rates from Pittsburg to Pacific ports, it was said, on behalf of

the Director-General of Railroads, that the export rates were not made upon any consideration of reasonableness of rates in and of themselves, and length of haul and cost of transportation were not controlling factors; but that the rates were established to effect a better distribution of export tonnage between ports.—*Inland Steel Co. et al vs. Director-General of Railroads*, 55 I.C.C., 462, 464.

It was recognized in this case that there was a water route available to Pittsburg on the east; that is to say, a combination of the rail-haul to the Atlantic seaports with a water route to the Pacific was available. The following language was used: "The distance from Chicago to its nearest port from which ocean routes to the Orient operate is considerably greater than the distance from Pittsburg to its nearest port, and whatever disadvantage industries at Chicago may operate under is not attributable to the defendant in this case; and in our view of the situation the cancellation or increase of the rate from Pittsburg to Pacific coast ports would not remove such disadvantage."

In dealing with export rates on cotton, the following language was used: "The export cotton rate adjustment as set out is the result of many years of tariff construction based on experience. The rate from a common point to each port is made with relation to the rate to some other port, so that a reduction in a rate to any one port entails the readjustment of the rates to all other ports, and a consequent reconstruction of this whole rate adjustment."—*Mobile Chamber of Commerce et al vs. Mobile & Ohio Rd. Co. et al*, 32 I.C.C., 272, 275.

The mileage factor is not the dominating one. This is seen, for example, in the fact that prior to the establishment of Federal control in the United States, San Francisco, Cal., and Seattle, Wash., were on a rate parity as to export traffic.—*Mitsui & Co. vs. Director-General et al*, 64 I.C.C., 4.

In dealing with the matter of import rates, this Board has had to recognize the situation arising out of port competition. The rate from Montreal is governed by the rate available from U.S. ports. If it exceeds this, the traffic will move by U.S. ports. In dealing with import rates, the Board has had to recognize that any change in a rate schedule which would advance the railway import rate, which represents part of the through movement, would simply mean that the business that is today done at the Canadian port would move through New York or some other port in the U.S., unless similar advances were made by U.S. carriers.—*Canada China Clay Co. vs. G.T., C.P. and C.N. Rys. Cos.*, 18 Can. Ry. Cases, 347, 349. The references made to the Interstate Commerce decisions are concerned with setting out from official documents the practice which exists in the U.S.

In the export movement by way of Montreal, there is, as has been pointed out, the necessity of interaction between the rates from the North Atlantic ports in the U.S. and the rate that can be charged from Montreal. Further, the rates from the North Atlantic ports are keyed into a rate structure in which are included the South Atlantic ports and the Gulf of Mexico. Back of all this rate adjustment is the fact that the commodities concerned are being exported to a common market, and the ability of the product produced in one section to compete in a common market with the product produced in another section is

affected by the total rate combination by land and by water. This is especially recognizable in the case of grain, and the interaction of rates on the eastern section of North America, to which reference has been made, has been concerned with an endeavor to allow the portions of the commodity produced in different sections to compete on as even a keel as possible in a common market. The rate adjustment so arrived at, taking these facts into consideration, are rate adjustments in a territory where the volume of traffic is the most dense per mile of line on the North American continent; and, further, is concerned with the movement to ports where there is a large and established volume of ocean tonnage much in excess of that offering to Pacific ports; that is to say, the existing rate adjustment is effected and modified downward by volume of traffic and volume of ocean tonnage.

In the Western Rates Case, a decision which was the outcome of a lengthy investigation dating back in its inception to Nov. 14, 1911, and decided April 6, 1914, an exceedingly comprehensive study of Canadian rate structure was made. Since then, on account of increases in costs, rates have been increased by percentages, but the Board has been more than glad when from time to time it has been possible to reduce somewhat the increases which conditions had rendered necessary. Subject to the changes so made, including a reduction in British Columbia standard rates, the rate structure today is the one which was sanctioned and directed under the Western Rates Case.

The Western Rates judgment said, under the heading of "Grain to Vancouver for export": "A tariff designated 'Special Proportionate,' is on file containing the rates charged from Alberta and Saskatchewan to Vancouver on grain and grain products for export to all countries, except the United States and Alaska. These rates are lower than those to Vancouver on the same commodities for domestic consumption referred to above as having been disproportionately depressed by the stress of competition. Comparatively, then, this export schedule cannot be criticized as being excessive. Counsel for the province attempted to show that unjust discrimination existed to the extent that the local rates exceed the export. But this Board, as well as the Interstate Commerce Commission, has frequently ruled that a lower rate on export traffic is, in itself, no evidence of unjust discrimination, provided that the local rate is a reasonable one. It is quite conceivable that a carrier would prefer to withdraw from co-operation in seeking the foreign market rather than sacrifice its legitimate revenue on the local traffic to the port of exportation, and, perhaps, to its intermediate interior points also. Counsel sought to show that the comparison of the export rates to Vancouver should be with the company's rates to the Lake Superior ports; but, if any comparison be useful, it should be between the Pacific port on the one hand and the Atlantic ports on the other. Fort William is an intermediate transfer point on the way to the eastern destination, and the rates to that port are, as described in the tariffs, proportionals of through rates from the grain fields to the eastern consumer. It is true that a negligible fraction of the entire cost may find its way into the local Fort William or Port Arthur market; but an exceptional tariff for this fraction is

hardly possible, seeing that the railway company loses control once the grain is delivered to the terminal elevators."

The principle laid down above is based on the principle of competition of ports which have developed in the U.S., and which of necessity have been accepted in Canada. In dealing with the competition of ports on export traffic, conditions arise which are entirely different from those affecting domestic traffic. It has been recognized both by the Interstate Commerce Commission and by this Board that there is no necessary relation whatever between domestic rates and export rates. In dealing with export rates on traffic moving through a number of competing ports, the factor of mileage has in many cases to be almost entirely disregarded. Given a certain movement through a port favorably situated in regard to mileage, another port with a longer mileage must meet that rate or go out of business. It must be recognized that on export movements the rail rate to the point of export is only one factor in getting the product to its destination. The other factor, so far as transportation is concerned, is the cost of ocean carriage. Wherever a product like grain, affected by world competition, is concerned, it is impossible to take mileage as a final criterion of the rate adjustment. Having this in mind, and having further in mind the care which was taken in arriving at the decision in the Western Rates Case, the opinion is justified that in arriving at a revised basis for grain for export by way of Vancouver, it is proper to take into consideration the export rate basis by way of Montreal. Summarizing what has already been said, there is reflected in the rate basis by way of Montreal the effect of the larger rail tonnage; the effect of the control exercised by export rates through U.S. ports; and, the greater volume of ocean grain tonnage offering from Montreal. The basis of adjustment so recommended goes further than has been laid down in any specific case in which the Interstate Commerce Commission has been concerned. At the same time it is justifiable, not only from the standpoint of principle, but from the standpoint of the particular needs involved.

It was claimed before the Governor in council, by representatives of the two provinces hereinbefore mentioned, that the Crowsnest rates should be applied upon all grains for export, moving from prairie points westward, as well as eastward, and that brings the Board to a consideration of the Crowsnest rates, their origin, and to what extent they should be and are binding upon this Board in arriving at just and reasonable rates, as between the transportation companies and the public. In 1897, by the Statutes of Canada, chap. 5, an agreement made between the Canadian Pacific Ry. and the Government was ratified, by which the Government agreed to grant the company a subsidy of \$3,630,000, to help to build a railway through the Crowsnest Pass, extending from Lethbridge, Alta., to Nelson, B.C., and in consideration thereof, the C.P.R. agreed that there should be a general reduction of 3c per 100 lb. in the then existing rates on grain and flour, eastward, from the most westerly point of the prairie production to Fort William; one-half of the reduction to take place immediately, and the other half the next year. In addition, there was a somewhat lengthy list of other commodities from Fort William and points east thereof, to

western Canada, to which fixed rates were applied, and the agreement provided that at no time in the future should these respective rates be increased.

These rates were not increased, but so far as grain was concerned, they were somewhat decreased a few years after, as a result of the Manitoba agreement, which was entered into between the Manitoba Government and the Canadian Northern Ry.; but, in 1918, by this Board's order, the rates were brought back to the Crowsnest Pass basis, and by order in council 1863, in Aug. 1918, the restrictive provisions of the Crowsnest agreement were for the time suspended, and the Board was given full power to make whatever rates it considered just and reasonable under the then existing conditions, regardless of the agreement. This continued during the continuance of the War Measures Act, and when the Railway Act was codified, effective July 6, 1919, an amendment was added to sec. 325, which provided in substance that, notwithstanding any previous legislation, this Board would have the power to regulate rates for three years from the date thereof. Just prior to the expiry of the three years, or on June 28, 1922, Parliament passed an Act to Amend the Railway Act, chap. 41 of the statutes of that year, which reads as follows: "1. Subsection 5 of section 325 of the Railway Act, 1919, shall, notwithstanding the proviso thereof, remain in effect until July 6, 1923, and may be continued in force for a further period of one year by order of the Governor in council published in the Canada Gazette; provided that notwithstanding anything herein or in said subsec. 5 contained, rates on grain and flour shall, on and from July 6, 1922, be governed by the provisions of the agreement made pursuant to the Statutes of Canada, 1897, chap. 5." The effect of which was, that the rates on grain and flour, after July 6, 1922, were governed by the provisions of the agreement made in 1897; and, therefore, so far as rates on grain and flour from all C.P.R. points in western Canada to Fort William are concerned, there can be no question that they are, and must be, governed by the provisions of the Crowsnest agreement, and as a matter of railway policy, as the Canadian Pacific and Canadian National Rys. are so intertwined in different parts of western Canada, the Canadian National is, as a matter of business, practically compelled to adopt whatever rates have been applied by Parliament to the C.P.R., and, therefore, Crowsnest rates become universal from prairie points to the head of the lakes.

It is significant as showing the intention of Parliament, when passing the Crowsnest Pass Act of 1897, to limit its rate-fixing legislation to the exact terms of the contract between itself and the railway company, that by the same act, sec. 1, ss. (c), it was stipulated that the agreement should provide that all other rates and tolls on the railway and its connections as therein mentioned, as well as on its steamboats in British Columbia, should be first approved by the Governor in council (this Board not being then in existence) "or by a railway commission if and when such commission is established by law." Apart from the very plain reading of the act itself, and of the provisions of the Railway Act, the intention is clear that the rates established by Parliament for particular reasons, and under special conditions, were not to be taken as the basis or standard of other rates, especially

so with regard to the westbound Crowsnest Pass Ry. to British Columbia, and also that the powers of the Governor in council, or of this commission (if and when established), should not in any way be affected or restricted by the special rate-fixing clauses of the act, under the special circumstances named. The effect, therefore, of the legislation was that, solely in respect of the specific articles and products to be included in the agreement, and as to which, by the agreement and for the consideration of subsidy in the act mentioned, the railway company reduced its rate, within the specified territory, but that as to other tolls and rates, they were to be fixed by the rate-fixing tribunal in the fullest and widest exercise of its jurisdiction to fix just and reasonable rates upon all other traffic upon all railways within its jurisdiction.

The Crowsnest Pass agreement was not binding upon any other railway then or subsequently operating in that territory, although its provisions affected them, neither is there anything in the act or agreement which defines those rates, within that territory, as just and reasonable, having regard to general traffic conditions, or which could limit, or restrict this Board in the establishing of such rates on other railways within the same territory which to this Board might, from time to time, appear to be just and reasonable. Then the legislation of 1922 simply provides, after an interruption of the currency of the agreement by its suspension as hereinbefore mentioned, that the provision of the agreement governing such rates, as an incident of the transaction of 1897, should remain in force. That is, that the terms of the agreement of the railway company made in 1897 should continue to govern these rates. If, therefore, the contention of the two western provinces were concurred in, rates on grain and flour made 26 years ago, as the result of a special agreement, for a valid consideration, in specific territory, and in a certain direction, should be the basis of all other rates from the same territory westward, as well as eastward and in territory not included in the agreement. It would hardly seem that such an argument would be tenable and, therefore, the Board should proceed by some other method to arrive at "just and reasonable rates" for the transportation of these particular commodities to the Pacific coast. If we exclude the Crowsnest rates as the proper basis, we must then look for some other method of arriving at what would be considered a just and reasonable basis, and perhaps no better method could be adopted than to go to other parts of the continent where grain is moved in very large quantities under competitive conditions, both as to other railways, and as to water carriers. If we do, we find the following as being some of the outstanding rates answering to these conditions:

From	To
Edmonton	Vancouver
Buffalo	New York
Bay Ports	Montreal
Fort William	Montreal
Fort William	Quebec
Minneapolis	New York
Duluth	New York
Morse, Sask.	Vancouver
Windsor	Montreal
Morley, Alta.	Vancouver

It should be mentioned in passing that no reference has been made to the rates on grain and grain products to St. John and Halifax, which, if figured on the basis of the rate per ton per mile, would be very much lower than any rates men-

tioned above, but these rates are compelled by the fact that as all rates on grain from lake ports to the Atlantic seaboard are governed by the rate from Buffalo to New York, it therefore follows that the rate from Canadian Georgian Bay ports to St. John and Halifax must be the same as the rate from Buffalo to New York, otherwise none of the commodities would move through these ports, and while the distance is much greater, the rate is the same; and therefore is no criterion of what would be a just and reasonable rate in any portion of the country in which there are no such compelling factors to determine the rates. An examination of the Crowsnest rates shows that they again are based upon no fixed principle in arriving at the rate per ton per mile; but, generally speaking, the rate is reasonable at Winnipeg, tapering to an extremely low rate from Moosejaw west to Calgary, as compared with other rates hereinbefore quoted. Following out the same method of rates per ton per mile, we find the same to be about as follows:

		Rate in cents	
To Fort William	Miles.	Rate.	per ton per mile
Winnipeg	419	14c	.666
Brandon	552	16c	.577
Broadview	684	18c	.526
Regina	777	20c	.514
Swift Current	929	22c	.475
Medicine Hat	1076	24c	.446
Calgary	1243	26c	.418

Following up the principle hereinbefore quoted, as laid down in the Western Rates Cate, we must consider the export point to be Montreal, or some other Atlantic coast port, and as the Montreal rate is practically 1c lower than the rate to New York, Portland, St. John, Halifax, etc., therefore it would be the most favorable point upon which to make a comparison. Taking the mileage from Port McNicoll to Montreal with its existing water and railway compelled rate of 14.34c, and add to that the mileage and rates from a number of points west of Fort William, we would have the actual rail rate from these specific points to Montreal, of course, eliminating the lake movement, as follows: Winnipeg to Fort William, 419 miles, rate 14c; Port McNicoll to Montreal, 371 miles, rate 14.34c; total mileage 790, rate 28.34c, which figures out at a rate of .717c per ton per mile, and the mileage is not very different from that of Edmonton to Vancouver. Take next, Brandon to Fort William, 552 miles; Port McNicoll to Montreal, 371 miles; total mileage 923, with a total rate of 30.34c, which figures out at a rate of .675c per ton per mile. Thirdly, Broadview to Fort William, 684 miles; Port McNicoll to Montreal, 371 miles; total mileage 1,055, with a total rate of 32.34c, or a rate per ton per mile of .613c. It will, therefore, be seen that the present rate from Edmonton to Vancouver, 771 miles, with a rate per ton per mile of .648c, is lower than both the rate from Brandon and Winnipeg computed on this basis, and slightly higher

Miles	Rate	Rate per ton per mile
771 (C.N.)	25	.648c
396 (shortest)	15.17	.766c
410 (average)	14.34	.699c
997 (C.P.)	34½	.692c
1145 (C.P.)	31½	.602c
1330 (shortest)	35½	.533c
1378 (shortest)	35½	.515c
994	29	.58c
568	23½	.83c
600	24	.80c

than the rate from Broadview. The Board would not obtain much information by making comparison with grain rates to the Pacific coast in the U.S., because they are invariably higher than the present prairie point rates to Vancouver,

and, of course, the same is true to a greater degree when we compare all Canadian prairie point rates to Fort William and Port Arthur with U.S. prairie point rates to Duluth and Minneapolis.

Having thus given a large number of actual rates, both in eastern and western Canada, it will be seen that no absolute rate can be chosen as the measure of what would be a just and reasonable rate from prairie points to the Pacific coast; but, perhaps, the fairest method would be to take a point midway between Fort William and Vancouver and establish therefrom to Vancouver a rate based on the rail-haul eastbound to Montreal. Taking Cantuar, on the C.P.R., 942 miles from Fort William, and 944 miles from Vancouver, the all-rail rate eastbound gives the following figures: 942 miles to Fort William, 23c; 997 miles, Fort William to Montreal, 34.5c; total 1,939 miles, 57.5c, equals a rate per ton per mile of .593c. Applying this rate per ton per mile for the shorter distance, Cantuar to Vancouver, produces a rate of 27.98c. The present rate is 28c. A large percentage of the Canadian haulage of grain from the prairies is by rail to the head of the lakes, thence by water to Georgian Bay ports, thence by rail to Montreal. Eliminating, therefore, the water-haul and taking the rail-haul eastbound from Cantuar, via the shortest route, the C.P.R., being that portion of the haul over which this Board has jurisdiction, the figures are: 942 miles to Fort William, 23c; 371 miles, Port McNicoll to Montreal, 14.34c, which equals a rate per ton per mile of .568c. By applying this basis from Cantuar to Vancouver, Vancouver obtains all the advantages of the Crownsnest basis to Fort William, plus the advantage of a water and Buffalo-New York compelled rate from eastern Canadian Georgian Bay ports to Montreal. This basis would make the rate, Cantuar to Vancouver, with its shorter haul, of 27c per 100 lb. By adopting this 27c rate as basis, Cantuar to Vancouver, 942 miles, and then computing rates from other points of less or greater distance from Vancouver by applying the same rate difference as now exists in the rates to Fort William for equivalent mileages from points on the C.P.R. main line, rates would be produced to Vancouver as per the following examples:

From	Miles	Present Rate	Proposed Rate
Calgary	642	25c	22c
Bassano	721	26c	23c
Edmonton	771	25c	24c
Medicine Hat	818	27c	24c
Vegreville	844	27c	25c
Cantuar	944	28c	27c
Swift Current	957	29c	27c
Moose Jaw	1067	31c	28c

By the above method, the Edmonton to Vancouver rate shall be 24c, compared with 22c from Calgary, and on a strictly mileage basis the Edmonton rate would be about 20% higher than the Calgary rate; yet in practice both rates have been built on the basis of the shorter mileage. If the above described method were pursued, it will, therefore, be seen that it will amount to a reduction in some cases of slightly over, and in other cases slightly under, 10% of the existing rates, and in order to preserve the present rate structure, probably the fairest rates could be obtained by making a general reduction of 10% in those existing at the present time.

While the order in council made no reference to grain products, yet, as they have always been connected together, it is the Board's opinion that grain products

should be treated the same as grain, including milling-in-transit privileges at 1c per 100 lb., and all railways subject to the Board's jurisdiction engaged in this traffic should file rates, effective not later than Oct. 22, making a general reduction of 10% in the existing rates on grain and grain products, to Pacific coast ports for export; also grant the milling-in-transit privilege of 1c per 100 lb., as at present contained in the tariffs. In applying these rates, fractions shall be disposed of as provided for in Privy Council order 1863. An order should be issued accordingly.

Commissioner Oliver's Dissenting Judgment.

Hon. Frank Oliver, the newly appointed commissioner, from Edmonton, Alta., gave the following dissenting judgment on Oct. 10:—The Commission is sitting to consider a reference by the Railway Committee of the Privy Council of an appeal made by the Provinces of British Columbia and Alberta for an equalization of rates on grain from prairie points to Vancouver with those on grain from prairie points to Fort William, over the same mileage. The rates on grain, as they stand from prairie points to Vancouver, are the result of a general decision of this Board dated June 30, 1922. From the rates so fixed, the Government of British Columbia, and jointly that of Alberta, appealed to the Privy Council. The Privy Council has taken no action on the appeal as to rates on other commodities, but has referred the subject of export grain rates to B.C. coast ports to the Board "for immediate determination and such effective action as may be necessary." I am compelled to assume that the Privy Council saw special merit in the appeal for equalization of export grain rates, or it would have either disallowed the appeal, as a whole, or deferred further consideration of grain rates, as it did of the other rates in regard to which equalization was applied for.

The present eastbound grain rates from prairie points to Fort William were made effective by a statute passed in 1922. As the present rates are substantially lower than those formerly prevailing, it must be assumed that in the judgment of Parliament, they were suitable to the conditions then and still existing, having due regard both to the cost of the service and the requirements of the trade in transporting prairie grain to its nearest point of export. The present grain rates eastbound to Fort William are the same as were established by the Crownsnest Pass agreement, but that agreement is not now in effect, and its enforcement has not been insisted on by either of the parties to it. It fixed rates on many commodities other than grain. The 1922 statute gives force and effect to rates on articles other than grain, which rates differ from and are greater than those provided in the Crownsnest Pass agreement. Parliament having exercised its right to vary the rates of the agreement in one set of particulars, must accept equal responsibility for the single provision which continues the rates of the original agreement. Therefore, I respectfully contend that the rates on eastbound grain now in force on the prairies, as long as they continue, are entitled to be considered without regard to the agreement by which they were first brought into force, and as having been fixed by the Parliament which sat in 1922, on its sole responsibility.

The British Columbia Government argues that the proper standard of comparison for westbound rates on the trans-continental railways, is the eastbound rates, as established by Parliament from common points for like distances over the same railways. I dissent from this, to the extent of suggesting that only where the operating conditions are on an approximately equal basis, should this comparison hold. As I understand the Board's duty, it is to prevent discrimination, and I recognize that cost of railway service depends upon other factors, as well as mileage. The operating conditions on the Canadian National Rys. between the prairies and the Pacific ports of Vancouver and Prince Rupert are not more costly or difficult than those existing on the same system, or on the C.P.R. between the mountains and the lake ports of Fort William and Port Arthur. I am entirely in agreement with the contention of the provinces of British Columbia and Alberta that the grain producer of the prairies, the bulk of whose product must find an export market, has the right to an equal per mile rate over the National Railways westward to the ocean ports of Vancouver and Prince Rupert, as has been given him by Parliament over the same system to the lake ports of Fort William and Port Arthur.

At one time Fort William and Port Arthur were merely points on the Canadian line of transportation extending to Montreal. That condition no longer exists. Practically two-thirds of the western grain crop, exported by the eastern route, is transferred to ships at these lake ports, and passes absolutely and finally out of Canadian hands and out of rate control by this Board. Of the part that follows the all-Canadian line of transportation to Montreal, the conditions of lake shipping, as to service and rates, are such as to preclude effective control of the through rate to Montreal by this Board. For all practical purposes, and particularly as to control of rates of transportation by this Board, Fort William and Port Arthur are export ports, as well as Vancouver and Prince Rupert, and therefore there is no justification for instituting a comparison between export grain rates east of the lakes and those west of the lakes.

The operating conditions on the C.P.R., between the prairies and the Pacific, are more difficult than those which exist on that railway between the mountains and Fort William. Therefore, the comparison made in regard to the Canadian National Rys. does not hold in regard to the C.P.R. Because of this condition, it has been the practice, in making rates in the past, to concede a higher rate in the mountains than on the prairies. So long as the C.P.R. was the only railway through the mountains, that was, in my opinion, a perfectly sound principle, and should be continued, with such adjustments as may be proper from time to time, as far as that railway is concerned. But I cannot admit, that because mountain rates are proper on the C.P.R., which has to surmount high altitudes, by means of difficult grades, that, therefore, they are warranted on the Canadian National lines, which were conceived and built for the express purpose of avoiding these conditions, as they in fact do avoid them.

Under the 1922 statute, the railways are compelled to convey the total grain crop of the prairies to Fort William as required. The rate for that service has been fixed by the highest authority. If we order the railways to render the

same service at the same rate per bushel, and per mile (making due allowance for a mountain rate on the C.P.R.), when called upon to transport a part of that grain to the Pacific coast, we are not putting a cent of extra burden on the railways, and we are adjusting a discrimination against the prairie producer that is a serious bar to the further development of the more westerly portion of the prairie area, which is approximately two-thirds of the whole. The haul from the railway centres of Edmonton and Calgary, the first important points east of the mountains, to the head of the lakes, is approximately 1,250 miles. The eastbound rates at present in force diminish the charge per mile of haul with increase of distance from the lake ports. From Fort William to Vancouver, by the National line, is approximately 2,000 miles. The point of middle distance on the Canadian National main line is about Scott, Sask. Grain hauled eastward from points west of Scott, that is to say, from the western part of Saskatchewan and the whole of Alberta, to Fort William, pays a lower per mile rate to the railway, under present conditions, than it would if it were hauled westward at the rates which now apply for the like distances on the eastbound haul. In other words, if the eastbound rates from Scott easterly to Fort William were applied to westbound traffic from Scott westerly to Vancouver, the railways would earn an increased rate per mile on every car of grain produced in Alberta and western Saskatchewan, over the rate they now receive on the haul of that grain to Fort William. The maintenance of a higher rate westward than eastward, with the diminishing scale of rates on the longer haul, has the effect of placing a higher gross charge against the grain of Alberta and western Saskatchewan, and requiring the railways to haul it eastward at a less remunerative rate.

In regard to westbound rates over the C.P.R. from prairie points to Vancouver, it is not necessary, in discussing this reference, to exactly define what they should be. Such definitions should follow an expert enquiry as to what would be a fair mileage or percentage allowance in computing a mountain rate, according to the conditions that are entitled to be considered. The wording of the portion of the British Columbia appeal, which has been referred to this Board, is as follows:—"To cease from making and charging higher tolls, for the transportation of wheat, corn, oats and other grains, flour and other mill products, hay, straw, flax, and other agricultural products from points in Alberta, Saskatchewan and Manitoba, to points in British Columbia, than are charged for the transportation of such wheat, corn, oats and other grains, flour and other mill products, hay, straw, flax and other agricultural products from points in Alberta, Saskatchewan and Manitoba and Ontario, and as far east as, and including, Fort William and Port Arthur, over the same or similar distances."

The importance of the application to the producers of Alberta and western Saskatchewan can only be clearly understood by a comparison of the westbound with the eastbound rates now prevailing:

	Rate per cwt.	Distance miles
Edmonton to Vancouver.....	25c	771
Regina to Fort William.....	20c	777
Tofield to Vancouver.....	27c	811
Moose Jaw to Fort William.....	20c	818
Chauvin to Vancouver.....	28c	931
Swift Current to Fort William.....	22c	929
Landis to Vancouver.....	29½c	1016

Maple Creek to Fort William....	23c	1013
Saskatoon to Vancouver.....	31½c	1098
Asquith to Vancouver.....	31c	1073
Medicine Hat to Fort William....	24c	1076
Watrous to Vancouver.....	33c	1187
Bassano to Fort William.....	25c	1165
Jasmine to Vancouver.....	33½c	1244
Calgary to Fort William.....	26c	1243
Edmonton to Fort William (distance approximately same as Calgary to Fort William).....	26c	

For the reasons above given, I feel compelled to support the application of the provincial governments regarding export grain rates, and therefore dissent from the Board's majority judgment.

General Order 384, issued Oct. 10, in conformity with the Board's majority judgment, is given in full under "Traffic Orders by Board of Railway Commissioners" on another page of this issue.

Passenger Traffic Officials' Duties, Canadian National Railways.

H. H. Melanson, General Passenger Traffic Manager, C.N.R., has issued a circular defining officials' duties, as follows:—

W. S. Cookson, Manager, Passenger Tariff and Ticket Bureau: Will supervise issuance and distribution of passenger tariffs, tickets, ticket supplies and accessories, for the system. In co-operation with passenger traffic officials of the regions affected, and Legal Department will deal with railway commissions and other public bodies, in connection with questions relating to passenger tariffs. Will issue and receive passenger concurrences from other transportation lines. Will handle passenger division matters for the system. In co-operation with passenger traffic officials of the regions, will deal with the Accounting Department regarding interpretation of tariffs, agents' discrepancies, etc.

R. L. Fairbairn, Manager, Passenger Service Bureau: Will, in co-operation with Transportation Department and passenger traffic officials of each region, arrange regular passenger schedules and co-ordinate them as between the different regions. Will generally supervise the handling of government and railway business mails. Will have general supervision of baggage traffic matters. Will compile and distribute public time table folders and announcements of changes in schedules, in co-operation with the Advertising Bureau. Will act for the Passenger Traffic Department at hearings of the railway boards and other public bodies, in connection with regular passenger train schedules; co-operating with Transportation Department, passenger traffic officials of regions affected, and the Legal Department. Will handle the correspondence relating to regular passenger train service, and keep necessary records of passenger train statistics.

H. R. Charlton, Manager, Advertising Bureau: Will supervise the issuance and distribution of all advertising publications, maps and other literature. Will arrange for all forms of direct advertising, such as newspapers, magazines and other publications, exhibitions, office window and other displays, etc., also supervise regional advertising, in co-operation with system and regional passenger traffic officials. Will arrange for lectures, moving pictures, photographic work, advertising write-ups, and other authorized passenger traffic advertising; also co-operate with the freight, express, telegraphs, sleeping and dining car and publicity departments, hotels and other branches of the system, in respect to their advertising matter.

Toronto Union Station Contractors' Suit.

The Toronto Terminals Ry. Co. was sued in the Quebec Superior Court by Peter Lyall & Sons Construction Co., general contractors for Toronto union station, in warranty, to compensate them to the extent of \$72,316 in the event of judgment being given against the Lyall company in an action brought by R. H. Clarke & Sons, Ltd. The Lyall company let a sub-contract to the Clarke company for lathing and plastering to the amount of \$85,126, and additional contracts, bringing the whole up to \$128,668. There were considerable delays in the execution of the work, the sum finally involved being \$196,965, of which the Lyall company paid \$124,248, leaving \$72,317 due. The Lyall company alleged that the delays which caused the loss to the Clarke company were brought about by the Toronto Terminals Ry. Co., for which the station was being erected, in not supplying within a reasonable time documents and instructions to enable the work to be proceeded with, and finished within the times set in the contracts. The railway company replied by an inscription in law submitting that the contract entered into with the Lyall company did not hold it responsible in damages for any such delay as that complained of. Mr. Justice McLennan gave judgment Oct. 9, finding that the delay alleged by the Lyall company, under the contract, gave a right to an extension of time for the work, but did not entitle them to any further claim, or to any compensation by way of damages. The Toronto Terminals Ry. Co.'s inscription is well founded and maintained. The Lyall company's action was dismissed with costs, except the cost of the first contestation, which are against the railway company.

U.S. Railways' Financial Results.

The U.S. class 1 railways' net operating income in August was \$98,381,200, representative of an annual return of 4.94% on tentative valuation, compared with net operating income of \$51,475,400 in Aug. 1922, representative of an annual return of 2.64%. Operating revenues for Aug. 1923 were \$561,456,700, an increase of 19% over Aug. 1922, while operating expenses, \$424,751,400, were 10% greater than those of Aug. 1922. Net operating income for the first 8 months of 1923 was \$625,634,900, representative of an annual return of 5.4% on tentative valuation, compared with net operating income of \$466,447,100 in the first 8 months of 1922, representative of an annual return of 4.11% on tentative valuation.

Class 1 railways in the eastern and southern districts continue to enjoy better net earnings than those in the western district. In August, the eastern roads earned at the annual rate of 5.61% on tentative valuation; southern roads at the rate of 5.38%; and western roads at the rate of 4.6%. Freight traffic on the eastern roads was nearly 50% greater in Aug. 1923 than in Aug. 1922, on account of the miners' strike last year, while Aug. 1923 traffic on the southern roads was about 25% heavier than in Aug. 1922. On the western roads, freight traffic was about 15% heavier than in Aug. 1922. Car loadings on all lines continue to run at a large figure, and good earnings throughout the autumn and winter are anticipated.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a complete record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

34,147. Sept. 6.—Approving plan showing specifications of work to be done on drain no. 1, under C.P.R. in Lot 35, Con. 8, and under Canadian National Rys. in Lot 68, Con. D, and Lot 24, Con. 12, Minto Tp., Ont.

34,148. Sept. 7.—Authorizing C.P.R. to build its Leader Southeasterly Branch across certain highways between mile 44.65 and 49.23, Sask.

34,149. Sept. 7.—Approving Canadian National Rys. right of way and station grounds at Roe, Sask.
